THE MUTUAL SECURITY PROGRAM

TUESDAY, JUNE 26, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee room, New House Office Building, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we are meeting here this morning to begin hearings on the proposed Mutual Security Program legislation.

No bill has yet been introduced, but the text of the measure drafted by the executive branch has been included in the committee print of The Mutual Security Program for Fiscal Year 1952—Basic Data Supplied by the Executive Branch, which is before each member.

I would like to say for the information of the members that you will find the text of the measure starting on page 51 of this study we have here.

In the interest of orderly procedure we will use this proposed text as the basis for discussion during this hearing.

(The proposed draft of the bill is as follows:)

PROPOSED DRAFT OF MUTUAL SECURITY ACT OF 1951

A BILL To promote the foreign policy and provide for the defense and general welfare of the United States by furnishing assistance to friendly nations in the interest of international security

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mutual Security Act of 1951."

SEC. 2. The Congress declares it to be the purpose of this Act to promote the foreign policy of the United States by authorizing military, economic and technical assistance to friendly countries to strengthen the individual and collective defenses of the free world, to develop their resources in the interest of their security and independence and the national interest of the United States, and to facilitate the effective participation of those countries in the United Nations system for collective security. The purposes of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604), the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522), and the Act for International Development (22 U. S. C. 1557) shall hereafter be deemed to include this purpose.

TITLE I

EUROPE

SEC. 101. In order to support the freedom of Europe through assistance which will further the carrying out of the plans for defense of the North Atlantic area, while at the same time maintaining the economic stability of the countries of the area so that they may meet their responsibilities for defense, there are hereby authorized to be appropriated to the President for the fiscal year 1952—

(a) \$5,293,000,000 for assistance pursuant to the provisions of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604), for countries which are parties to the North Atlantic Treaty and for any country

of Europe (other than a country covered by another title of this Act), which the President determines to be of direct importance to the defense of the North Atlantic area and whose increased ability to defend itself the President determines contributes to the preservation of the peace and security of the North Atlantic area and is important to the security of the United States. In addition, unexpended balances of appropriations heretofore made for carrying out the purposes of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604), through assistance to any of the countries covered by this subsection are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this subsection.

(b) \$1,675,000,000 for assistance pursuant to the provisions of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522) (including assistance to further European military production), for any country of Europe covered by subsection (a) of this section and for any other country covered by section 103 (a) of the said Economic Cooperation Act of 1948 (22 U. S. C. 1502). In addition, unexpended balances of appropriations heretofore made for carrying out the purposes of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this subsection.

(c) Not to exceed 5 percent of the total of the appropriations granted pursuant to this section may be transferred, when determined by the President to be necessary for the purposes of this Act, between appropriations granted pursuant to either subsection: *Provided*, That the amount herein authorized to be transferred shall be determined without reference to any balances of prior appropriations continued available pursuant to this section.

TITLE II

NEAR EAST AND AFRICA

Sec. 201. In order to further the purposes of this Act by continuing to provide military assistance to Greece, Turkey, and Iran, there are hereby authorized to be appropriated to the President for the fiscal year 1952, not to exceed \$415,000,000 for furnishing assistance to Greece and Turkey pursuant to the provisions of the Act of May 22, 1947, as amended (22 U. S. C. 1401-1410), and for furnishing assistance to Iran pursuant to the provisions of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604). In addition, unexpended balances of appropriations heretofore made for assistance to Greece and Turkey, available for the fiscal year 1951, pursuant to the Act of May 22, 1947, as amended (22 U. S. C. 1401-1410), and for assistance to Iran pursuant to the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1601), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section.

Sec. 202. Whenever the President determines that such action is essential for the purposes of this Act, he may provide assistance, pursuant to the provisions of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604), to any country of the Near East area (other than those covered by sec. 201) and may utilize not to exceed 10 percent of the amount made available (excluding balances of prior appropriations continued available) pursuant to section 201 of this Act: *Provided*, That, any such assistance may be furnished only upon determination by the President that (1) the strategic location of the recipient country makes it of direct importance to the defense of the Near East area, (2) such assistance is of critical importance to the defense of the free nations, and (3) the immediately increased ability of the recipient country to defend itself contributes to the preservation of the peace and security of the area and is important to the security of the United States.

Sec. 203. In order to further the purposes of this Act in Africa and the Near East, there are hereby authorized to be appropriated to the President for the fiscal year 1952, \$125,000,000 for economic and technical assistance in Africa and the Near East in areas other than those covered by section 103 (a) of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1502). Funds appropriated pursuant to this section shall be available under the applicable provisions of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522), and of the Act of International Development (22 U. S. C. 1557).

Sec. 204. Not to exceed \$50,000,000 of the funds authorized under section 203 hereof may be contributed to the United Nations during the fiscal year 1952,

for the purposes, and under the provisions, of the United Nations Palestine Refugee Aid Act of 1950 (22 U. S. C. 1556): *Provided*, That, whenever the President shall determine that it would more effectively contribute to the purposes of the said United Nations Palestine Refugee Aid Act of 1950, he may allocate any part of such funds to any agency of the United States Government to be utilized in furtherance of the purposes of said Act, and any amount so allocated shall be a part of the United States contribution to the United Nations Palestine Refugee Agency.

TITLE III

ASIA AND PACIFIC

SEC. 301. In order to carry out in the general area of China (including the Republic of the Philippines and the Republic of Korea) the provisions of subsection (a) of section 303 of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1604 (a)), there are hereby authorized to be appropriated to the President for the fiscal year 1952, not to exceed \$355,000,000. In addition, unexpended balances of appropriations heretofore made for carrying out the provisions of title III of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1602-1604), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section. Not to exceed \$50,000,000 of funds appropriated pursuant to this section (excluding balances of appropriations continued available) may be accounted for as provided in subsection (a) of said section 303.

SEC. 302. In order to further the purposes of this Act through the strengthening of the area covered in section 301 of this Act (but not including the Republic of Korea), there are hereby authorized to be appropriated to the President for the fiscal year 1952, \$262,600,000 for economic and technical assistance in those portions of such area which the President deems to be not under Communist control. Funds appropriated pursuant to authority of this section shall be available under the applicable provisions of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522), and of the Act for International Development (22 U. S. C. 1557). In addition, unexpended balances of funds heretofore made available for carrying out the purposes of the China Area Aid Act of 1950 (22 U. S. C. 1547), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section.

SEC. 303. (a) In order to provide for the United States contribution to the United Nations Korean Reconstruction Agency, established by the Resolution of the General Assembly of the United Nations of December 1, 1950, there are hereby authorized to be appropriated to the President not to exceed \$112,500,000. In addition, unobligated balances of the appropriations heretofore made, and available during the fiscal year 1951, for assistance to Korea under authority of the Far Eastern Economic Assistance Act of 1950, as amended (22 U. S. C. 1551, 1552, 1543), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section.

(b) The sums made available pursuant to subsection (a) may be contributed from time to time on behalf of the United States in such amounts as the President determines to be appropriate to support those functions of the United Nations Korean Reconstruction Agency which the military situation in Korea permits the Agency to undertake pursuant to arrangements between the Agency and the United Nations Unified Command in Korea. In computing the aggregate amount of such contributions by the United States, there shall be included the value of goods and services made available to Korea by any department or agency of the United States for relief and economic assistance after the assumption of responsibility for relief and rehabilitation operations in Korea by the United Nations Korean Reconstruction Agency.

(c) The provisions of subsections 304 (a) and (b) of the United Nations Palestine Refugee Aid Act of 1950 (22 U. S. C. 1556 (b)) are hereby made applicable with respect to Korean assistance furnished under this section.

(d) Unencumbered balances of sums heretofore or hereafter deposited in the special account established pursuant to paragraph (2) of article V of the agreement of December 10, 1948, between the United States of America and the Republic of Korea (62 Stat., pt. 3, 3788) shall be used in Korea for such purposes as are consistent with United Nations programs for assistance to Korea and as may be agreed to between the Government of the United States and the Republic of Korea.

(e) The functions of the Economic Cooperation Administrator under the provisions of section 3 of the Far Eastern Economic Assistance Act of 1950, as amended (22 U. S. C. 1551), shall hereafter be performed by such departments or agencies of the Government as the President shall direct.

TITLE IV

AMERICAN REPUBLICS

SEC. 401. In order to further the purposes of this Act through the furnishing of military assistance to the other American Republics, there are hereby authorized to be appropriated to the President for the fiscal year 1952, not to exceed \$40,000,000 for carrying out the purposes of this section under the provisions of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604): *Provided, That*, such assistance may be furnished only in accordance with defense plans which are found by the President to require the recipient country to participate in missions important to the defense of the Western Hemisphere. Any such assistance shall be subject to agreements, further referred to in section 402 of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1573), designed to assure that the assistance will be used to promote the defense of the Western Hemisphere; and after agreement by the Government of the United States and the country concerned with respect to such missions, military assistance hereunder shall be furnished only in accordance with such agreement.

SEC. 402. In order to strengthen friendship and understanding among the peoples of the American Republics through the furnishing of technical assistance in furtherance of the purposes of this Act, there are hereby authorized to be appropriated to the President for the fiscal year 1952, \$22,000,000 for assistance under the provisions of the Act for International Development (22 U. S. C. 1557) and of the Institute of Inter-American Affairs Act, as amended (22 U. S. C. 281).

TITLE V

GENERAL PROVISIONS

SEC. 501. Whenever the President determines it to be necessary for the purposes of this Act, not to exceed 10 percent of the funds made available under any title of this Act may be transferred to and consolidated with funds made available under any other title of this Act in order to furnish, to a different area, assistance of the kind for which such funds were available before transfer.

SEC. 502. The President, pursuant to section 404 of the Act for International Development (22 U. S. C. 1557b), may make contributions on behalf of the United States to such technical cooperation programs of the United Nations and the Organization of American States as he determines will further the purposes of this Act in a total amount not exceeding \$13,000,000 from funds made available under authority of sections 101 (b), 203, 302, and 402 of this Act and the use of such contributions shall not be limited to the area covered by the section of the Act from which the funds are drawn.

SEC. 503. Funds made available for carrying out the provisions of Title I of this Act shall be available for the administrative expenses of carrying out the purposes of all of the titles of this Act, including expenses incident to United States participation in international security organizations and expenses of domestic programs under the Act for International Development. Any currency of any nation received by the United States for its own use in connection with assistance furnished by the United States may be used by any agency of the Government without reimbursement from any appropriation for the administrative and operating expenses of carrying out the purposes of this Act. Funds made available for carrying out the purposes of this Act in the Federal Republic of Germany may, as authorized in subsection 114 (h) of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1512 (h)), be transferred by the President to any department or agency for the expenses necessary to meet the responsibilities and obligations of the United States in the Federal Republic of Germany.

SEC. 504. The proviso in the first sentence of section 403 (d) of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1574 (d)), is hereby amended to read as follows: "*Provided, That* after June 30, 1950, such limitation shall be increased by \$250,000,000 and after June 30, 1951, by an additional \$450,000,000."

SEC. 505. Section 414 of the Act for International Development (22 U. S. C. 1557 (1)) is amended by inserting between the words "Act" and "until", the words "for a period to exceed three months".

SEC. 506. The President, from time to time while funds appropriated for the purposes of this Act continue to be available for obligation, shall transmit to the Congress, in lieu of any reports otherwise required by law, reports covering each six months of operations in furtherance of the purposes of this Act, except information the disclosure of which he deems incompatible with the security of the United States. The first such report shall cover the six-month period commencing on the date this Act becomes effective. Reports provided for under this section shall be transmitted to the Secretary of the Senate or the Clerk of the House of Representatives, as the case may be, if the Senate or the House of Representatives, as the case may be, is not in session.

SEC. 507. Section 115 (b) (6) of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1513 (b) (6)), is amended (a) by adding in the second proviso after the words "shall be used" the words "to promote military defense, or shall be used"; (b) by adding in the last clause of the second proviso the words "and operating" after the word "administrative"; (c) by striking from the last clause of the second proviso the words "within such country"; and (d) by substituting in the fourth proviso the words "upon termination of assistance to such country under this Act" in place of the words "on June 30, 1952".

SEC. 508. Assistance to any nation by means of funds authorized under this Act may, notwithstanding the date specified in section 122 of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1520), continue as long as such funds remain available for such assistance, unless sooner terminated in accordance with the requirements of section 405 of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1576), or section 118 of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1516), or section 411 of the Act for International Development (22 U. S. C. 1557 (i)).

SEC. 509 (a). As used in this section:

(i) the term "invention" means an invention or discovery covered by a patent issued by the United States, and

(ii) the term "information" means information originated by or peculiarly within the knowledge of the owner thereof and those in privity with him, which is not available to the public and is subject to protection as property under recognized legal principles.

(b) Whenever, in connection with the furnishing of military assistance in furtherance of the purposes of this Act,

(i) use within the United States, without authorization by the owner, shall be made of such an invention, or

(ii) damage to such owner shall result from the disclosure of information by reason of acts of the United States or its officers or employees, the exclusive remedy of the owner of such invention or information shall be by suit against the United States in the Court of Claims for reasonable and entire compensation for unauthorized use or disclosure. In any such suit the United States may avail itself of any and all defenses, general or special, that might be pleaded by any defendant in a like action. In addition, in any suit for damages for use or disclosure of such information, any written description, model, drawing, or other recorded teaching in the files of any department or agency of the Government, which

(i) has a provable date either

(A) prior to the making of the invention, or

(B) more than one year before the filing of the application for the patent in suit, or

(C) before the disclosure to the United States by the owner thereof of the information upon which the suit is based, and

(ii) constitutes a sufficient description of the invention used or information disclosed upon which the suit is based to enable others to practice said invention or employ such information, unless such teaching consists of information obtained directly or indirectly from the patentee or owner of the information upon which the suit is based,

shall constitute a complete defense for the Government against the claim for compensation. Except as otherwise provided by law, such teaching shall not invalidate any patent covering the invention or impair the property in such information.

(c) Before such suit against the United States has been instituted, the head of the appropriate department or agency of the Government, which has furnished military assistance in furtherance of the purposes of this Act, is authorized and empowered to enter into an agreement with the claimant, in full settlement and compromise of any claim against the United States hereunder.

(d) This section shall not confer a right of action on anyone or his successor or assignee who, when he makes such a claim, is in the employment or service of the

United States, or who, while in the employment or service of the United States, discovered, invented, or developed any invention or information on which such claim is based.

(e) No officer or employee of the Government, including civilian and military personnel of the military departments, shall be held liable for any fine or penalty under the Act of June 25, 1948 (18 U. S. C. 1903), by reason of his disclosure, in the discharge of an official duty or assignment in furnishing military assistance in furtherance of the purposes of this Act, of any confidential information which is in the official possession of the United States, its officers or employees and which concerns or relates to trade secrets, processes, operations, style of work or apparatus of any person, firm, partnership, corporation, or association.

Sec. 510. Section 408 (e) of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1580), is hereby amended by adding in the first proviso thereof, after the words "of which it is a part", the words "or in United Nations collective security arrangements and measures", and by changing the figure at the end thereof to "\$500,000,000."

Sec. 511. Upon a determination by the President that it will further the purposes of this Act, not to exceed \$10,000,000 of the funds made available pursuant to section 203 of this Act and not to exceed \$25,000,000 of funds made available pursuant to section 302 of this Act may be advanced to countries covered by said sections in return for equivalent amounts of the currency of such countries being made available to meet local currency needs of the aid programs in such countries pursuant to agreements made in advance with the United States: *Provided*, That except when otherwise prescribed by the President as necessary to the effective accomplishment of the aid programs in such countries, all funds so advanced shall be held under procedures set out in such agreements until used to pay for goods and services approved by the United States or until repaid to the United States for reimbursement to the appropriation from which drawn.

(b) In order to assist in carrying out the provisions of the Economic Cooperation Act of 1948, as amended, not to exceed \$50,000,000 of funds made available under the authority of this Act for assistance pursuant to the provisions of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522) may be used to acquire local currency for the purpose of increasing the production of materials in which the United States is deficient.

Sec. 512. (a) In order to carry out the purposes of this Act, there may be employed one person at an annual rate of compensation not to exceed \$17,500, and any person so employed shall be appointed by the President, by and with the advice and consent of the Senate.

(b) Subsection (e) of section 406 of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1577 (e)), is amended to read as follows: "For the purpose of carrying out the provisions of this Act, there may be employed not to exceed four persons at a rate of compensation not to exceed \$15,000. Any person so employed shall be appointed by the President, by and with the advice and consent of the Senate."

Sec. 513. In order to carry out the purposes of this Act, not to exceed three positions may be placed in grades above grade 15 of the General Schedule established by the Classification Act of 1949 (5 U. S. C. 1112), and said positions shall be additional to the number authorized by section 505 of said Act (5 U. S. C. 1105).

Chairman RICHARDS. For the information of the committee I would like to say we are going to proceed strictly under the 5-minute rule, to begin with. We are going to hew to that line for the first questioning period.

The only exception to that will be where it takes the witness longer than 5 minutes to answer the question which has been asked within the 5 minutes.

The first witness this morning is the distinguished Secretary of State.

Mr. REECE. Mr. Chairman, would you permit an interruption?

Chairman RICHARDS. Yes, sir.

Mr. REECE. Did I understand the chairman to say that each member would be allotted only 5 minutes? Does that include the answer also?

Chairman RICHARDS. That is right. That will be the first time around. After that there will be an unlimited period for each member to ask any question he wishes of each witness.

Mr. REECE. That practically means no questioning at all. It is very easy for an answer to consume the better part of 5 minutes, Mr. Chairman.

However, I am not willing to interpose an objection.

Chairman RICHARDS. That is the usual way.

Mr. REECE. Some of us are not members of the committee that went abroad.

Chairman RICHARDS. That is the usual committee procedure, I will say for the benefit of the gentleman from Tennessee. We intend to adhere to it.

I am afraid he does not understand, though, that he will not be at any disadvantage at all, because he will have full time to ask any questions he wishes a little later on.

The first witness is the distinguished Secretary of State, Mr. Acheson. Mr. Acheson.

STATEMENT OF HON. DEAN ACHESON, SECRETARY OF STATE

Secretary ACHESON. Mr. Chairman and members of the committee, the mutual-security program is an essential part of the total national effort to build our national security.

I believe it represents an economical, practical, and efficient program, carefully worked out to give this country maximum security per dollar cost.

The funds requested total \$8.5 billion, of which \$6.3 billion are for military aid and \$2.2 billion are for economic aid. This assistance to other free nations will yield a larger and faster return in terms of our national security than we could obtain by increasing the budget for our own Armed Forces by the same amount. I urge you to judge the program by that test. It is the test we have applied in working it out.

This program has been developed to protect the immediate and long-term interests of the United States. The practical steps to help build strength abroad under this program are essential to our own safety and well-being, as well as to the security of our allies abroad.

This national program is part of a great effort by the free nations to rid the world of war and to make peace secure.

That is our positive goal. That is the purpose which unifies the free nations.

Weakness invites aggression. Now and in the future, strength is the precondition of peace. The free nations must be militarily strong to deter attack by the enemies of freedom. They must be politically and economically strong to support the military forces needed for defense and to defeat attempts to subvert their institutions. They must also be strong of spirit, to keep on with their efforts to bridge the present dangers and to build toward a better and a safer future.

These factors of strength—military, political, economic and spiritual—depend on each other. That is why we have brought together in the mutual security program the continuing elements of our various aid programs.

This is not essentially a new program. What is new is the pulling together of economic-, technical-, and military-assistance programs into one bill which directs all these going programs into the building of strength, adapts them for flexibility and efficiency in meeting changes in the situation, and requires the administering agencies to employ these resources in a single-purposed drive for peace and security.

I want to underline the interdependence of these different factors of strength. Military strength is important and costly, and military assistance is the largest component of the mutual security program.

But we have seen time and again how political and economic deterioration and loss of morale can rot the fibers of military strength. And we have also seen how political and economic recovery bring an upsurge of morale and an increase of military strength.

While it is necessary to consider the needs of individual countries and areas separately, the relation of the parts of the program to the program as a whole should not be lost sight of.

The parts interlock—between countries and areas, and within them. Frankly, what concerns me most at this time is that too narrow a view might be taken of this problem of building strength, and that economic and technical assistance might be reduced because of a failure to demonstrate or recognize how essential this aid is in underpinning military strength.

This program has been developed over a period of many months by teamwork between all the departments and agencies concerned. They had available to them a vast amount of information assembled by them here and abroad, as well as the plans and data of many international agencies in which the United States is represented—such as the North Atlantic Treaty Organization, the Organization for European Economic Cooperation, the Inter-American Defense Board, and various United Nations agencies.

This program as it stands is the result of the screening of this material and its coordination with our own plans and programs. The judgment of our highest authorities in military, economic, and foreign affairs is that the program is needed in our own interests, that it will efficiently contribute to our own security, and that we have the means to carry it out.

The presentation of the program to your committee will, like the preparatory work, be a teamwork job. Following me, you will hear General Marshall, Mr. Foster, General Bradley, Mr. Harriman, and Mr. Cabot.

Then the political, military, economic, and administrative aspects of the program in Europe, the Near East, the Far East and the Western Hemisphere will be presented by officials of State, Defense, and EOA, with assistance from other agencies on particular subjects of concern to them.

Several witnesses from overseas will give on-the-spot reports on conditions and prospects abroad and will discuss how the program will work in their areas.

This teamwork will be carried over into the administration of the program, and will obtain a continuity of thought and of action which will result in a single-minded application of funds to promote the security of our Nation and of the free world as a whole.

We are proposing that the mutual security program be administered under existing legislation, brought together and amended to further the objectives of the program. The Mutual Defense Assistance Act, the Economic Cooperation Act, the Act for International Development, and other assistance acts provide adequate foundation for a mutual security program.

They were all designed to further the national interests and national security of our country, and they can be linked together to increase their effectiveness.

The organizational arrangements under which the program will be operated also link to the arrangements under which these acts have been administered in the past. Using the interdepartmental International Security Affairs Committee, we intend to make use of the valuable experience gained in operations under existing legislation, and permit the new program to be carried out with minimum disruption of current operations, but with maximum speed and efficiency.

The amendments proposed to the existing acts are not many in number, but they are important. All are designed to make the application of our resources more effective in furthering mutual security.

The men who will testify in support of this program and who will be entrusted with its administration will not assert that it is a perfect program. In a task as large and complex as this there will always be room for improvement and development—which is the reason why we seek some flexibility in the use of the funds requested.

What we are prepared to show is that requirements exceed resources; that they have been trimmed to fit our capabilities; and that funds have been requested only where there is a need, a clear opportunity, and the means to build strength. This strength is important to our own security; it could not be obtained without our aid; and it could not be matched by any use of the same funds here at home. These are the tests.

The basic idea of this program, as of our foreign policy as a whole, is that time is on our side if we make good use of it. The vast potential of the free world is adequate to the job. The mutual security program is part of our effort to make the best use of the time we have, and to lead the way in using the potential of the free world to rid the world of war and make peace secure.

I would like to review with you, very briefly, the ways in which this mutual security program is designed to support the basic elements of our foreign policy.

All our actions abroad, whatever form they may take, have a single purpose. That purpose is to advance the security and welfare of this country. There is no other possible justification for any policy or program. There is no other justification for asking the American taxpayer to finance any foreign policy or program.

To recognize the enlightened self-interest in these activities does not detract from the humanitarian character of some of them, nor from their contribution to the common goal of peace and security.

Security begins at home. No foreign policy can insure national security unless the nation has adequate defense forces. But in the world in which we live, no national defense policy can insure security unless the nation has strong and reliable friends and allies.

We cannot afford to underestimate the importance of our friends and allies to our own security. The United States is a rich and power-

ful Nation. We have an energetic, courageous, and resourceful population, loyal to our institutions and ideals, and fiercely determined to defend the way of life which we have created here. The United States occupies a favorable geographical position. Its total strength, actual and potential, is perhaps greater than that of any other country in the history of mankind.

And yet no nation, including our own, is strong enough to stand alone in the modern world. Despite the great advantages with which our country has been blessed, we are not self-sufficient.

Our population is limited in numbers. We are dependent on other areas for many vital raw materials. The oceans which have shielded us in the past have dwindled to lakes in the sweep of modern technology.

Even our unparalleled industrial establishment, mighty as it is, could not match the industrial power which would be leveled against us if a major part of the free world should be incorporated within the Soviet Empire. Finally, we know that we could not continue to be the kind of a country we are, if we were to withdraw into a cave of isolation.

The great majority of our people fully understand and appreciate these facts. But we must be sobered by the realization that the men in the Kremlin are no less aware of them. They have shown this by their persistent efforts to split us off from our allies. Using a combination of political, psychological, economic, and military tactics, the Soviet rulers are out to divide and conquer. In the case of the United States particularly, their first effort appears to be to isolate us.

To put it bluntly, the Soviet Union wants to see the United States try to "go it alone." By sporadic aggression, by cautious retreat, by unending propaganda, by economic sabotage, by seizing control in one area, by playing on differences in another—by all such acts, the Kremlin seeks to produce a situation in which the United States will ultimately be pushed into a position of trying to "go it alone."

That is why, at the same time we are converting some of our potential military strength into actual military strength, our security program requires us to make sure that we have strong and reliable friends and allies.

This interlocking character of foreign policy and national defense policy was formally recognized by the Congress when it established the National Security Council.

The foreign policies and programs of the United States have been adopted by the President, after all the interdependent factors, domestic and foreign, political and military, have been fully considered by the members of the Council.

They are continuously reviewed and, when necessary, revised; policies and programs cannot remain static in a dynamic world.

In reviewing our policy, we might begin with our own country, a center of strength in the free world, and work outward from it to the other areas affected by this program.

The supreme test of our ability to survive is our ability to win if war is forced upon us. We must be prepared for that supreme test, and preparation for it offers the best chance of avoiding it.

The danger of war can be measured by the readiness or lack of readiness to meet an attack upon our vital interests. The history of recent years should teach us that a dictator does not launch an attack

against a state or a coalition of states unless he can calculate that he has the power to win and to hold his objective.

His calculations are sometimes wrong, as Hitler's were. But the error is usually an error of political judgment. He thinks that the free nations are disunited, or will not unite against him, and that he can pick off his victims one or two at a time. Or he thinks they will not have the determination to resist him in his conquests.

I do not think that the rulers of the Soviet Union will make this mistake. The reaction to the attack on Korea has made it clear that the free nations will not acquiesce in a strategy of piecemeal conquest. It has reduced the likelihood of further creeping aggressions.

The determined effort by the United States and other countries to prepare for defense against aggression—preparations which have been greatly speeded up by the provocative action in Korea—can reduce the danger of general war. That danger requires, however, greatly increased preparedness before we can be confident that the strength of our defenses will be so clear as to prevent foolhardy calculations by the Soviet rulers.

The core of our national policy is a rapid development of strength in our country, and the maintenance of that strength so long as the threat continues. That is the purpose of the \$60 billion defense budget which the President has requested for the coming fiscal year.

The record of our accomplishment in building strength has the most direct and significant bearing on foreign policy and the world position of this country. It heartens our friends and discourages our foes. It reinforces the means of winning through to a successful conclusion of the Korean conflict and of preventing new outbreaks of violence. It is a solid backstop for our foreign-policy efforts abroad to guard the Nation's security.

Let us look now at the world with which our foreign policy is concerned.

In the present state of the world, the crucial problem of war and peace centers around the challenge presented to the rest of the world by the policies of the Soviet Government.

Historically, the Russian state has had three great drives—to the west into Europe, to the south into the Middle East, and to the east into Asia.

When it has been held in one area, it has sought opportunities in another. We have seen examples of this in the postwar period—in Czechoslovakia, in Iran, in China, and Korea.

Historically also the Russian state has displayed considerable caution in carrying out those drives. The Russian rulers liked to bet on sure things; to be in a position to cut their losses when events showed that they had overreached themselves. They have not wanted to risk everything on a single throw of the dice.

The Politburo has acted in this same way. It has carried on and built on the imperialist tradition. What it has added consists mainly of new weapons and new tactics—the weapons of conspiracy, subversion, psychological and ideological warfare, and indirect aggression, and tactics skillfully designed to employ these weapons.

It has been, given its aims and its power, cautious in its strategy. It still prefers to bet on a sure thing. Their discovery that Korea was not a sure thing was undoubtedly a great shock to the Politburo, which called for some sudden changes in their planning.

Three other aspects of Soviet policy need to be mentioned: First, Russian policy makers, Czarist or Communist, have always taken a very long view. They think in generations where others may think in terms of a few years or a decade at most.

Second, they are land-minded and have a deep and abiding and, on the historical view, justified confidence in the vastness of Russia as a factor in their security.

Third, the ruling power in Moscow has long been an imperial power and now rules a greatly extended empire. It cannot escape the difficulties that, history teaches us, befall all empires.

This is the challenge our foreign policy is required to meet.

It is clear that this process of encroachment and consolidation by which Russia has grown in the last 500 years from the duchy of Muscovy to a vast empire has got to be stopped.

This means that we have to hold, if possible, against its drives wherever they may be made. To hold means to hold against armed attack; it equally means to hold against internal attack—which is the new weapon added to the Russian arsenal by the Communists.

This also means that we have to develop collective strength and the political relationships which support collective strength so as to deter Soviet drives against nations which, if they were standing alone, might fall easy prey.

Meanwhile, doing all in our power to deter and to hold, we have to proceed confidently and positively with the orderly development of our political, social, and economic institutions in the free world. If we push ahead vigorously with this part of our program, and demonstrate the superiority of the free way of life, we shall be able to face the future with confidence. Although we cannot predict the final outcome of this conflict, we can be confident that free societies can outbuild, outproduce, and outlast societies based on tyranny and oppression.

The strength of the free nations is potentially so much greater than that of the Soviet Union that it would be folly for all our nations to invite war by leaving this potential of strength undeveloped and unorganized. The free world includes over two-thirds of the total population of the earth.

The free world encompasses nearly three-quarters of the world's land area. The total productivity of the free world is many times that of the Soviet Empire. And, most importantly, the free world has resources of mind and spirit incalculably greater than those under the totalitarian control of the Kremlin.

The countries and the regions of the free world are interdependent, and if there can be created unity of purpose, resolution to meet the present danger, and the great strength that can come from mutual security efforts—and this is what we are now doing—then the threat that faces us can be reduced to manageable proportions. Our United States policies are aimed at helping to bring about these conditions.

Let us take the situation in the Western Hemisphere.

No one should misinterpret our interest in the defensibility of the Americas. They are a vital base area for the free world's effort to achieve collective security. It is the part of prudence and sound strategy to ensure the defense of this base and to develop its potential. We are blessed with good neighbors to the north and south. Our relations with them are so close and are based on such deep common

interests and shared experience that our energies can be devoted to working cooperatively on such problems as arise. This is a unique and highly advantageous situation.

The American states have long been engaged in developing a set of international relationships which are a model of what is possible when states approach their problems with firm respect for and trust in each other and with determination that adjustments of difficulties should be accomplished by peaceful means.

This did not just happen. It is not just an historical accident. It should not be taken for granted. It is the result of good will, patience, fair dealing, and hard work. Our foreign policy toward our neighbors in the Americas is to develop and strengthen these relationships so that the Western Hemisphere shall have the security which will enable all of us to pursue our national ideals and purposes free from external and internal threats.

Canada is a partner with us in the North Atlantic Treaty, is associated with us in the Organization for European Economic Cooperation, and has sent forces to Korea. She has been, along with us, a large provider of aid to our European allies in the postwar years. She is a bulwark of strength to the north.

We and our neighbors to the south are members of the Organization of American States. That Organization has a history extending back over six decades and is founded on common interests which were recognized far earlier. The ties of cooperation are close.

Inter-American cooperation in military and other defense preparations was emphatically reaffirmed at the recently concluded meeting of foreign ministers in Washington, where it was agreed that the American Republics should, through self-help and mutual aid, direct their military preparations so that those armed forces best adapted to collective defense would be strengthened. The decisions of this meeting, which build upon the solid foundation for cooperative action previously established in the Rio treaty, also include the approval of a directive to the Inter-American Defense Board to prepare military plans for the common defense of the hemisphere as rapidly as possible.

There are certain tasks of hemisphere defense—such as the protection of key installations and key sources of raw materials—which we believe our partners to the south are ready and willing to take over. Coordinated plans are being developed by the Inter-American Defense Board.

The mutual security program provides for the first time for military assistance on a grant basis to the Latin-American countries which conclude bilateral agreements to undertake defense tasks in the Western Hemisphere. By performing such tasks, they will serve their interests and ours. This will relieve our forces so that they can perform essential defense tasks elsewhere.

Many of the Latin-American Republics are relatively underdeveloped economically. The bulk of the job of economic development, so far as outsiders can help, can and will be done by private investment on a risk basis supplemented by private and public loans.

These countries are now very important suppliers of materials to us, having furnished us in 1950 with 35 percent of our total imports, including nearly half our wool imports, three-fifths of our oil imports, and more than half our imports of copper, lead, and nitrates. They can and will become even more important suppliers in the years ahead.

Certain loans from the Export-Import Bank and some of the technical assistance to be provided under the Mutual Security Program are directly or indirectly related to the expansion of production of these basic materials needed by our economy; and, for our part, we will have to make sure that the Latin-American Republics get a fair deal in obtaining the goods they need from us to keep their economies healthy.

The greatest part of the small technical assistance program will be used to help the governments of our sister republics improve agriculture and food production, health, education, and other essential services.

I wish that I had time to illustrate the great benefits which have flowed from past programs of this kind. It is a story full of hope and challenge. These advances are the positive and promising way to meet the future and the surest way to combat the efforts of subversive elements to exploit present tensions and economic difficulties.

There are areas of unrest and dissatisfaction which could become troublesome if neglected. This part of the program falls in the ounce-of-prevention category. I wish that we had acted in this way in similar situations before the Second World War, and I believe that if we had, our problems might be simpler today.

This part of the program, amounting in all to \$62 million, will help to keep the New World a symbol of hope for men everywhere, an evidence of man's ability to build a peaceful and secure and progressive way of life. It is well worth while.

Let us look now at Europe, where there has been a substantially new development of United States policy in the postwar years. We are all familiar with the evolution of this policy from the Greek-Turkish programs through the European recovery program to the North Atlantic Treaty, and which now finds American units participating in an integrated force for the defense of Western Europe, with General Eisenhower as Supreme Commander of that force.

Every reading of American public opinion shows that our people recognize the strength of the policy we have been following. They support this policy as essential to our national security because they are aware that Europe is one of the most decisive and critical areas.

Europe contains the greatest pool of skilled labor in the world and industrial capacity second only to our own, and its more than 200,000,000 people share with us a fundamental community of interest which extends to every sphere of activity.

Moreover, what happens in Europe has direct and profound political, economic, and military repercussions elsewhere in the world—in Africa, the Middle East, the Far East, and Latin America. A Europe united in purpose, and strong economically, spiritually, and militarily, can serve, particularly when associated with us, as a strong deterrent to all forms of aggression, not only in Europe, but in other areas as well.

The primary emphasis in our policy toward our European partners in the North Atlantic Treaty is to make common use of the foundation of economic recovery to build up collective armed defenses rapidly to the point where Soviet aggression would be foolhardy—where all Western Europe can be held.

The Soviet rulers make a great to-do about what they call the aggressive character of the North Atlantic alliance. This commotion

is a clue to their ambitions but not to our intentions. They do not want Western Europe to be defensible.

They know that the North Atlantic Treaty countries are not even trying to build a force which could be used to invade the Soviet Union. They know that the force being built will be strong enough to hold on the ground and is already strong enough to retaliate with prompt and terrible power if Western Europe is attacked.

In Europe, as elsewhere, the basic idea of our policy is that the future belongs to freedom if free men will make good use of their time.

The program of aid to Europe totals nearly \$7 billion, of which \$5.3 billion are for military aid and \$1.7 billion are for economic aid. The former is composed almost entirely of military end items which will be used to equip forces now being raised and trained to use them.

Most of the latter is also directly related to defense, for they are primarily concerned with the resources and the political and economic stability necessary to support the defense effort.

We are encouraged by the significant increases which our European partners have made in their military budgets over the past year. We understand and appreciate the problems created for our partners by the impact on their economies of great increases in defense expenditures.

We feel that progress has been made toward dealing with these problems, but even larger effort is necessary. We believe that we can, by cooperation and the utmost effort by all of us, achieve greater progress toward a level of military expenditure and production which will be adequate to ensure our common safety.

Along the southeastern reaches of Europe and into the Near and Middle East, the problems of foreign policy are to make even stronger the several strong points, and to help other countries to strengthen themselves against the dangers of internal subversion. We are proposing military aid of \$415 million and economic aid of \$125 million for these purposes.

Russian ambitions in this area are centuries old; so too are the internal problems which threaten the stability and security of this area. Our policy toward this vital area of the Near East is to help the governments and peoples of this area to build the kinds of military, political, and economic strength that will discourage aggression from without, protect them against subversion from within, strengthen their will to achieve stability and progress, and help to remove some of the causes of unrest.

It is our aim to provide aid programs of an impartial character, that will enable the governments and peoples of this area to work out their own solutions to their problems.

We have long recognized the vital importance of Greece and Turkey, and are ready to assist them further in developing their armed forces and in maintaining economic stability. Economic aid for Greece and Turkey is included in the total for Europe.

The program takes into account the possible need for limited military assistance to countries of the Near East for the development of internal-security forces.

We are also proposing to help the governments and peoples of this important area through the provision of some technical and developmental assistance. This impartial aid will strike at the conditions of

unrest and instability in which the agents of the Kremlin find opportunities for subversion.

We continued to strive for an adjustment of the current dispute between Iran and the United Kingdom which will recognize the right of the Iranian people to control their oil resources and at the same time protect legitimate British economic interests, thus insuring continued flow of Iranian oil to the free world.

We reaffirm our interest in and concern for the independence and security of Iran and our readiness to assist the Iranian Government in building conditions of political and economic stability and resisting Communist subversion.

We also have reason to be concerned with the importance of developing important resources in Africa, and the mutual security program includes modest sums for that purpose.

The remaining part of the program consists of \$930 million, for military and economic aid to Asia and the Pacific area.

In the great crescent which reaches from Japan to Afghanistan, there live almost 700 million people—about 3 out of 10 people who inhabit the earth.

This area includes South Asia—India, Pakistan, Afghanistan, Ceylon and Nepal; Southeast Asia—Thailand, Burma, Indonesia, and the Associated States of Indochina; and the Philippines, Formosa, and Korea.

But it is not only its large population which gives this area significance in a survey of the defenses of the free world. In this crescent are large resources of strategic materials essential to the productivity of the free world—tin, rubber, jute, petroleum, and many other materials.

The location of this crescent is also of significant importance; astride the vital Pacific Ocean lines of communication, and bordering the Communist-dominated central land mass of Asia.

Of key importance too is the industrial potential of Japan, which lies within this area but is not included in this aid program, since its needs are met in other ways.

Our broad national objective in this area is to help the people develop independent and stable governments, friendly to the United States.

The several elements of the Mutual Security Program for this area have been carefully worked out to further this aim. According to the different needs of these countries, both military aid amounting to \$555 million and total economic aid of \$375 million are proposed under the program.

The entire area is under direct threat of Communist imperialist pressures. In addition to the internal pressures of subversion and political penetration, the area is now confronted with the rise of a militant, Chinese Communist imperialism.

The immediacy of the military need is apparent. Open armed conflict is a reality in Indochina as well as Korea. The arms and ammunition being provided under this program to our friends and allies in Indochina and the Philippines are in actual and immediate use against the enemies of freedom.

Without the aid that we have sent during the current year to Indochina, there is little doubt but that Indochina would long since have been overrun by the Communist forces of aggression, and the

whole of southeast Asia might either have been absorbed by this Communist force or be in immediate peril of such absorption.

Substantial military aid is also proposed for Formosa, pursuant to the President's policy statement of June 27, 1950. Supplementing this aid, which is deemed essential for the military defense of the island, it is proposed that economic assistance also be provided, in further support of the military effort.

But military aid to these countries I have mentioned, and to Thailand, are only part of the problem of strengthening the security of this crescent in relation to the Communist land mass which it borders.

The other part of the problem relates to the way people live—and in many respects, this part of the program affects not only the people with whom we deal directly, but also those millions whom we cannot reach directly, but who are watching what we do in Asia.

As the false champion of Asian nationalism and economic improvement, the Communist movement has been successful in capturing some of the leadership of the nationalist movements in these countries. Communism thrives on the wretchedly low standards of living that prevail in most parts of this area.

Poverty, disease, illiteracy, and resentments against former colonial exploitations—these are the turbulent forces that seethe in Asia, that move people powerfully. The Communist movement has exploited these forces, and in the vital crescent I have described, it seeks to create attitudes ranging from neutralism to subversion, as part of its expansionist drive.

Our first job, if we are to achieve our objective of helping the people of this area to maintain independent governments friendly to us, is to understand these forces at work in Asia, and to assure that the forces of nationalism and of the drive for economic improvement are associated with the rest of the free world instead of with communism.

That is why an essential part of the Mutual Security Program in this area is designed to help the people of Asia to create social and economic conditions that will encourage the growth and survival of non-Communist political institutions, dedicated to the honest fulfillment of their basic needs and aspirations.

Vast and challenging demands are now being made upon the leadership of free Asia arising from the new and heavy responsibilities of national independence.

There are serious economic dislocations in the area resulting from the recent war and from changing production and trade patterns. There is a great lack of teachers and of schools, and a lack of trained technicians and administrators both in the governments and in economic life.

The pressure of population on food supply, antiquated agricultural methods, disease, the lack of capital—these and the other difficulties I have described combine to threaten freedom and independence and to create opportunities for subversion.

American materials and technical aid are needed to help the people of the area in dealing with these urgent economic problems. Our programs are designed to help build the economic, political, and social components of national strength and will provide a stimulus to maximum self-help in the area.

This aid will enable the people of this area to develop their own rich resources for their own benefit, as well as that of the rest of the free world.

The Mutual Security Program in Asia complements United States policies in the Pacific. In relation to the conflict now raging in Korea, there is included in the program that you are considering, a recommendation that authorization be given for \$112.5 million in support of the United Nations Korean Relief and Rehabilitation Administration.

It is planned that the approach to the relief and rehabilitation operations in Korea will be made on an international basis in cooperation with other members of the United Nations which are contributing funds and supplies to the program.

In considering the over-all security of the Pacific, as it relates to the Mutual Security Program, we also have in mind the importance of restoring sovereignty to Japan.

The committee is familiar with the progress we are making in the preparation of a treaty of peace for Japan as the essential first step in this direction.

Deter, defend, and develop. These are the lines of foreign policy which the Mutual Security Program is designed to support. We seek to deter war; for peace, not war, is the only full answer to our present danger.

We shall do what we can and shall cooperate with others to defend the free nations against the twin menaces of external and internal attack.

We shall do what we can and cooperate with others in the spirit of the Charter of the United Nations to develop the economic, political, and military strength of freemen and the extent of free institutions.

By comparison with any other course, this approach is more promising of success and it is more conservative of the lives and resources and ideals of freemen than any other open to us.

No guaranty of success goes with it. But no other course will do as much, with the vast but not yet realized potential we of the free world have, to build the conditions of success, whatever turn events may take.

Thank you, Mr. Chairman.

Chairman RICHARDS. Thank you, Mr. Secretary. I think that was a very strong and able statement.

I would like to ask one or two questions at this point. It has been suggested that the so-called Mutual Security Program, on account of its all-inclusive nature, should be placed under a single Administrator, answerable only to the President and the Congress. What do you think about that?

Secretary ACHESON. Mr. Chairman, I should be glad to give my analysis of some of the elements of that problem.

Might I start with the suggestion that, although we might talk about it now for a while, it might be more helpful for the committee to go through the program, analyze what is called for by the program, and then consider the administrative situation after the full impact of the program has been developed by the hearings and the testimony.

Answering your question, may I first say a few words about the problem here?

The amount of \$8.5 billion is divided into two great portions. One is the \$6.3 billion for military use, and the other is the \$2.2 billion for economic. Now, a very small part of the \$2.2 billion is in what is known as the technical assistance program; the greater part of it is in economic aid, which goes along with the military aid.

So far as the actual administration, that is, the handling of these sums, the procuring of the goods, the direction of the programs in various countries is concerned, whatever administrative changes are made in the Government, it will still be necessary, as it is the practice at the present, for the Defense Department to handle the defense requirements.

In other words, it is only the military who, working with the military officials of NATO and with the individual countries, can really determine what is needed; it is only they who can go out and put it into production; it is only they who could inspect it and know it is well built; it is only they who can deliver it and teach the recipients how to use it.

So, whatever superstructure is built up, the real heart of the military program will be administered and directed, controlled by the military department; the same thing is true about the economic aid, in a broad sense, that is, in the ECA.

Whether in the ECA, under its present name, or under some other name, there will be an administrative economic organization which will be dealing with the economic representatives of NATO, and of OEEC, and of the foreign countries, to gear in their production with their military requirements, and be sure that our military aid helps them in expanding their military needs.

So that the actual operations of the two essential parts of this program must be carried out by a military group, on the one hand, and an economic group on the other, as is the present case.

That brings us then to the consideration of the technical assistance program. That I should rather like to leave for Dr. Bennett later on in the hearings to develop more closely.

What we can point out now is, as a practical matter, that the technical assistance program, which absorbs a very small amount of this great sum, is carried out by the ECA, in countries where there is an ECA program.

We do not have Dr. Bennett's group going into a country where there is already an ECA mission. The technical mission is turned over to them. Dr. Bennett's group works in countries where it or its predecessors have always worked, and are continuing to work now. There is no duplication of effort.

You come then to the coordination of the military part of the program with the economic part of the program. At the present time that is done under the International Security Affairs Committee. The Chairman of that Committee, Mr. Cabot, is an official who is in the State Department.

On his Committee are the leading people under the heads of the various departments concerned with it, that is, the ECA, the Military Establishment, the Treasury, sometimes others.

On occasion, the heads of those departments meet. When they do meet, I act as the Chairman. We have worked out a relationship here which is satisfactory, which produces decisions in 99 cases out of 100 by agreement.

Where a decision is not reached by agreement, it is immediately referred to the President for decision, and his decision is immediately picked up and put into effect.

I think a great deal of this talk about a single agency revolves around two questions. One is whether the ECA should be ended and some new organization should be created. That I do not want to discuss at the present time. Others are much better qualified to discuss that than I am.

The other point is, should the coordination of this work be lodged in some other agency, either a new economic one or a new super-duper one, which would be over all of these agencies, or should it be where it is now.

My strong recommendation to the committee would be to leave that coordination where it is now, because the coordinating element in this thing is foreign policy.

Either that foreign policy has to come from the President, through the department which is created to deal with foreign policy, which is the State Department, or you get a new department and abolish the State Department, and give it some other name.

But the coordination must be in terms of foreign policy. There is not any other element which coordinates. How do you know just exactly about the economic and military aid in relation to the French effort? When you get through with all the technical parts of it, the last question involved is the question of foreign policy, to what extent can the French nation do what is being asked of it, and to what extent will asking more than you think it can do interfere with our relations?

That must come from us or from us under a different name.

The program is working. It is working harmoniously and well. As long as it is working well, my advice is to let it continue to work that way.

Chairman RICHARDS. Thank you, Mr. Secretary. I have a few questions to ask later on that. My time is up. Dr. Eaton.

Mr. EATON. The Secretary has opened up such a vast selection of problems it is difficult to know where to begin with the questions.

I just want to make sure of one position on our part. Are we here today recognizing the fact that we are engaged in a world conflict of ideas and ideals, in which America will either become the leader of freedom in a free world or Russia will become the leader of slavery in a slave world? Are we dealing with that problem here today?

Secretary ACHESON. Yes. I think we recognize that situation fully, Dr. Eaton. I tried to bring it out in my statement, that what I referred to in the statement as the "present danger," is the danger to which you referred, and it is a danger to all free peoples.

We, in view of our fortunate history, our great geographical position, both from the point of view of resources and from the point of view of defensibility, our tremendous industrial establishment, our spiritual and moral history, are in a position where we are required to put forward the great effort of leadership, whether we wish to do so or not, if freedom and liberty are going to survive in the world.

Mr. EATON. So we are not here simply discussing economic policies as to how to better our world trade; we are here to lay a foundation for world policy, to determine whether liberty or slavery is to dominate over all mankind?

Is that the foundation of this legislation?

Secretary ACHESON. I think you have put it very correctly and very forcefully.

Mr. EATON. Praise from Caesar is praise indeed. I thank you very much.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. I want to thank you for your comprehensive statement. I have one question.

Now that we are getting into full swing on defense production do you think that our chances of obtaining our goal for world peace are brighter now than they were a year ago?

Secretary ACHESON. What was the first part of your question?

Mr. GORDON. Now that we are getting into full swing on defense production.

Secretary ACHESON. Yes, sir. I think there have been great advances made in this year. I happen to be here with you this morning on the anniversary of the day following the attack in Korea.

A vast amount has happened to stimulate the defenses of the free world in that year. I believe there is both a greater consciousness of the danger which faces us, which Dr. Eaton was talking about a moment ago, and there is a much greater foundation of the power, economically and militarily, necessary to protect the free world.

Mr. GORDON. Do you feel the cooperation of the other countries is necessary?

Secretary ACHESON. The cooperation is very what?

Mr. GORDON. Is the cooperation of the other countries important and necessary in this defense production for defense of those countries?

Secretary ACHESON. It is very important?

Mr. GORDON. Yes.

Secretary ACHESON. It is essential, Mr. Gordon. I think it is absolutely essential. Progress has been made in that direction over the past year. It is not nearly as much as we hope or believe will occur in the immediate future. But an encouraging start has been made.

Now we have to press forward with that start, and press it more fully.

Mr. GORDON. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Chipperfield.

Mr. CHIPPERFIELD. No questions at the present time, Mr. Chairman.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Thank you, Mr. Chairman.

Mr. Secretary, we are all very much interested in Malik's proposal, indicating the possibility of a cease fire in Korea. In case it is possible to settle the Korean War and it will take all of the ingenuity and strength at our command, would that lessen the need for this Mutual Security Program?

Secretary ACHESON. No, sir; I do not think it would lessen the need. The solution of the Korean problem would enable us, the whole world, to draw back from what may be very close to the edge of the precipice.

It does not mean that danger has been removed. It does not mean any lessening of the need for effort in building our defenses.

It means that the disaster is not quite as close as it would be if the war continued.

Mr. BATTLE. As a matter of fact, one of our greatest dangers is the tendency to slack off in our efforts and determination to stop atheistic communism in the United States and elsewhere.

Mr. Secretary, I assume that a lot of thought has been given to our capacity, that is, our capacity to help the other nations of the free world. I am wondering if you believe that our economy can stand this impact of \$8.5 billion without cracking up?

Secretary ACHESON. Yes, sir. I am not an expert in these matters, but I am convinced from the work which has been done within the Government, and which will all be laid before you gentlemen, that we can well stand this effort.

Mr. BATTLE. Thank you, Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, a great many things have been touched upon in your reply to my distinguished colleague's last question.

The peace bid from Moscow with its play on semantics could well be a camouflage for a beclouding of our vision of what is going on in Iran, to say nothing of Burma, Indochina and so forth and so on, and the whole Near East.

Secretary ACHESON. We are doing our best to get clarification of what was meant by that speech the other day.

Mrs. BOLTON. I hope sincerely you will not be tempted to feel that the silver lining of that cloud is as heavy and shining as some people would like to have us believe.

As you know, my subcommittee on this committee is the Near East and Africa. The short title, No. 2, relative to the Near East and Africa, spells out very little of what is contemplated under this bill for the very explosive area of the world.

The Iranian situation, which has called the attention of the world to the vital importance of the Near East, to freedom in the Western World.

May I ask you to throw your mind back to the original Marshall plan consideration. At that time we were told, in words of one syllable, that Near East oil was vital to the rehabilitation of Western Europe. Is the Department still of that opinion, that Near East oil is essential?

Secretary ACHESON. Yes. That is our view, Mrs. Bolton. I think that has been inescapable. The oil of the Near East is a most vital and important resource for the free world. It is one of the reasons—not the only reason, but one of the reasons—why the present situation in Iran is so critical. I regret to say that every indication is that it is moving directly along the road to disaster. I see no bright spots ahead at all in that. But the oil in Iran, in Iraq, in Kuwait and Saudi Arabia, and that whole section of the world, produces the fluid which powers a great deal of the effort of the free world.

Mrs. BOLTON. Of course, we know the Russians well enough to know that they never actually withdraw. When they say they are out of Iran, they merely advise us that they have made themselves invisible. Anyone who knows the carefully worked out strategy of the Kremlin knows that they are underneath the Iran situation more grimly than ever. We have every reason to feel that some of the present situation is due to the infiltration of their ideas, and the use they make of local disputes in their effort to get us out of there.

I am not off the beam, am I, in my thinking?

Secretary ACHESON. I think, as you say, there is a deep and continuing interest in Iran on the part of the Soviet Union.

Mrs. BOLTON. It was particularly gratifying to have you say that aid to the countries of the Near East is to be an impartial aid. I find my people wanting to be assured that each country will be considered separately, rather than considering all Arab countries as one country?

Secretary ACHESON. I think that Mr. McElhee will be able to lay that out very fully before you, in detail, Mrs. Bolton.

Mrs. BOLTON. I see.

Secretary ACHESON. There is one matter which is being dealt with separately here in which I know you are particularly interested, and that is the refugee matter.

Mrs. BOLTON. Very definitely.

Secretary ACHESON. That is being dealt with in a way which I think will please you, because it is directed toward a solution of the matter and not merely temporizing.

Mrs. BOLTON. Then, of course, the oil, as you suggest, of Kuwait and Iran, and the new oil lines across the Arabian Peninsula to Haifa, and so on, are in your opinion of rather vital importance to the free nations of the world, are they not?

Secretary ACHESON. That is correct. Yes.

Mrs. BOLTON. Therefore the policy of our Government will be to assure the people of the Arab world that we are intending to have a truly impartial situation set up.

Secretary ACHESON. That is the basis of our policy.

Mrs. BOLTON. Thank you, Mr. Secretary.

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. Mr. Secretary, I wish to join the rest of the Members in their expressions as to your statement. First I hope you will continue in your monumental task, despite the criticism, for you are doing a very great service to our country. I would like to pursue the question that Mr. Battle and Mrs. Bolton proposed to you.

I believe they asked questions in regard to the present offerings of peace in Korea by the Soviets and you gave an answer in that regard. However, should it come to pass that we would have an honorable, negotiated peace in Korea, would you say that this proposed mutual defense assistance and security program is still very vital for the future?

Secretary ACHESON. Very much so, indeed, Mr. Zablocki. I think that this program would not be minimized and would not be reduced in any way by a solution of the Korean problem. In fact, the program has in it, as I mentioned in my statement, a \$112,000,000 contribution for the United Nations program in Korea. That would be needed at a very, very early date if you had a solution of the fighting, because Korea is in bad shape as a result of this war.

Mr. ZABLOCKI. Is it reasonable to state, Mr. Secretary, that continuation of our efforts for the free world will not only be a deterrent to future Soviet aggression, but also an avenue of hope and encouragement to those nations who today are under the yoke of communist domination?

Secretary ACHESON. I think that is true, Mr. Zablocki. Yes, sir.

Mr. ZABLOCKI. A definite hope and encouragement?

Secretary ACHESON. I think so.

Mr. ZARLOCKI. That is all, Mr. Chairman. Thank you Mr. Secretary.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Secretary, I would like to allude to the statement made by my colleague, Mrs. Bolton, with reference to Iran. I think there is a disturbing report to the effect that four American destroyers have left Singapore and they are on their way to Iranian waters. Now, I am wondering what the purpose of these four destroyers is in going to that particular area at this time. One newspaper has referred to it as the "show of the flag." Are we attempting to exert any influence in the present situation?

Secretary ACHESON. I have heard nothing about such a report, and I should hesitate to accept it.

Mr. SMITH. You know nothing about the movement of these destroyers from Singapore?

Secretary ACHESON. No, sir. I never heard of it.

Mr. SMITH. Now, on page 4, Mr. Secretary, you referred to or you say:

Finally, we know that we could not continue to be the kind of a country we are, if we were to withdraw into a cave of isolation.

What do you mean by that?

Secretary ACHESON. I think it would be clear to all of us that if the process which seemed to be well advanced just before the Marshall plan was put into effect, that is, the collapse of Western Europe through internal weakness, had been allowed to go forward; or, if now through lack of effort on their part, or our part, they should collapse, and with them the areas with which they have been historically connected also were brought under Soviet influence, you would find that the American Hemisphere would be left in a position of isolation and weakness in a world which would be dominated by ideas which go back 2,000 years and more, and by a force which we would not be in a position to deal with.

Such a situation in Western Europe would have a profound impact on the other American Republics. The effect of such a situation upon our own country would be most destructive. If we were going to survive even physically we would have to move in the direction of such a change in our whole conception of government and life, so that we would really not recognize the America of that sort of a future as the America of the past or the America of the future which we would like to have.

Mr. SMITH. Now, on page 6 you refer to the successful conclusion of the Korean conflict. If we are to stop at the thirty-eighth parallel and agree that all fighting is to cease at that point, would you say we have successfully concluded the Korean conflict in the absence of the fact that we have failed to unify all of Korea?

Secretary ACHESON. Yes, sir. I should say that we have had a successful conclusion of the effort. We had occasion to discuss this matter quite fully before the combined committees of the Senate some weeks ago, and I would be very glad indeed to go over some of those ideas with you now.

There are two purposes in Korea. One, the military objectives and purposes there, grows out of the resolutions of the 25th and 27th of June 1950. The other is the great continuing purpose which the United States has had ever since the Cairo Declaration and which the

United Nations has had ever since 1947, when the General Assembly passed the resolutions looking forward to the unification of Korea.

A year and 2 days ago Korea was divided. It was at peace. There was no idea that the United States or the United Nations should call out troops and go into Korea for the purpose of unifying Korea by armed force. That was not United Nations policy, nor was it United States policy.

The attack on Korea occurred, and the United Nations passed two resolutions in the Security Council. One of them called on the North Koreans to withdraw behind the thirty-eighth parallel and cease their aggression. When they failed to do that, the other resolution branded the attacks as aggression against the Republic of Korea, and called on all nations to furnish forces in order to help South Korea to repel the aggression against them, and to restore peace and security in the area.

From the military point of view what we are doing and have been attempting to do is to repel the aggression and restore peace and security in the area, which remains the policy of the United Nations, to unify Korea, if that can be done. But it is not its policy that it must or should try to unify Korea by armed force.

Now, after the Inchon landing the military operation was such that it was necessary to go into North Korea. With the landing at Inchon the North Korean forces were cut in two. About half of the forces were bottled up in South Korea. The other half withdrew north of the parallel and continued fighting. There were guerrilla operations in South Korea by which the United Nations forces continually reduced this North Korean Army. However, very considerable portions of the enemy would melt away, putting on civilian clothes and throwing away their rifles, and go through those mountains and join up with the remnants that were in the north. General MacArthur went north under the directions of the Joint Chiefs of Staff in order either to capture or destroy this North Korean force, and that had been practically accomplished at the time of the Chinese intervention.

Now, I pointed out that if he had been able to do that, and if there had been no intervention by the Chinese—which were “ifs” of considerable size—then there would probably have been a unification of Korea as a result of the combat; but the combat was not for the purpose of doing that. It was for the purpose of eliminating this aggression by rounding up people who refused to surrender and who refused to lay down their arms and refused to do anything except keep on fighting.

If this aggression is stopped and if you have adequate assurance that it will not be resumed, and if those who are doing it will withdraw so that we know that there is not any immediate danger of resumption, then you would have repelled the aggression and you would have established peace and security so far as that can be done by military means in the area.

Therefore I should think that the United Nations would believe it had accomplished what it set out to do. It would then have before it the same task which it had before it on June 25, 1950, of attempting to unify Korea.

MR. SMITH. I regret I cannot agree that there will be a satisfactory conclusion of the Korean War.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Secretary, in your comprehensive, excellent statement, with which I am in almost entire accord, I observe that you say the primary objective of our foreign policy must always be to guard our Nation's security. Is that correct?

Secretary ACHESON. Yes, sir. That is correct.

Mr. JUDD. Do you agree that our country today has less security than at any time in its history since it achieved its independent existence?

Secretary ACHESON. No. I think that the world in which we live is a very, very dangerous world. I do not think we have less security than many times in our history when we have been threatened or we have been closer to the verge of the extinguishment of our independence than we are now.

Mr. JUDD. Well, I thought I remembered your stating to a group of us last year in your office that we were in greater danger then ever before and you spoke of Gettysburg, and of Valley Forge by name, and you said the threat was greater today than it had been on those occasions.

Secretary ACHESON. There is a greater power, perhaps, opposed to us than in the past.

Mr. JUDD. Put it this way. Leaving out the degree of danger, our country is not secure today. Is that correct?

Secretary ACHESON. It is not secure? Well, there are great dangers opposed to us. If we can put forward our efforts we can meet this danger.

Mr. JUDD. To the extent we are not secure, our foreign policy has not been successful?

Secretary ACHESON. Well, I should not think it follows.

Mr. JUDD. That does follow, does it not?

Secretary ACHESON. I do not think that really follows.

Mr. JUDD. Well, if the most important objective of our foreign policy is to make us secure, and if we are not secure, then the policy has not been successful. Will you tell me how you can escape that conclusion?

Secretary ACHESON. Yes. I think there are a great many things that arise that are not a result of foreign policy, and foreign policy has to meet them.

Mr. JUDD. Well that is a good, evasive answer. Or rather, it is an evasive answer, but not a good answer.

The thing I want to congratulate you for is that in your statement it appears that you have at last joined those of us who have been critical all these years because the administration has not, in our judgment, paid sufficient attention to the Asian parts of the world with which you have dealt at length, and from which the threat has come that put us into actual conflict.

For the record, I should like to read a statement from the hearings a year and a half ago, when you were before us advocating extension of the ECA, and I expressed my conviction that failure to have a similar program in Asia would threaten the success of our program in Europe. I said there:

The reason I am more concerned now than I have been at any time previously is partly because we have not made the same kind of effort in China, and we are not

making in southeast Asia now the kind of vigorous effort we have made and you are advocating with respect to Europe. That is what disturbs me—that we are going all out in the one place and not really trying in the other.

This was before Korea.

I am afraid that the half-heartedness of the effort in Asia will ruin the all-out effort in Europe. I want you to have the same kind of determination with regard to southeast Asia that you have with regard to Europe.

You were gracious enough to say:

You keep working on me.

So I have been working on you, Mr. Secretary. I am grateful that in your statement you have now put in its proper proportion, that area of the world where the 700,000,000 people live who control the world balance of power. On one side of the balance is Russia with 800,000,000 under her control, and on the other side is the free world with roughly 800,000,000, and it is these 700,000,000 living in the crescent from Japan to Iran, or as I have usually described them, in the 12 fingers that lie on the borders of China which is the hand—it is these 700,000,000 who control the balance of power. I congratulate you. We have supported you in Europe, where events have proved you right; and we have opposed you in Asia, where events have proved you wrong. Now you have joined us with respect to Asia, and if your Department exerts vigorous effort in that direction, I hope we can get again a bipartisan foreign policy that I believe would be in the interest of the United States, and better achieve the security which you and I both want.

I have no questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. Thank you, Mr. Chairman.

Mr. Secretary, considering the aid which has been extended to France and Italy in the postwar period, are you of the opinion that we are to be encouraged or otherwise by the results of the recent elections in those countries?

Secretary ACHESON. Yes, Mr. Burleson. I think those elections are encouraging. I think the election in France was both a percentage decrease and a numerical decrease in the Communist vote. Since the election was largely fought on the basis of the Communists' attitude, and the whole North Atlantic Treaty program, and since as a result of that they lost in numbers and lost in percentages, I think that we can have a feeling that the great bulk of the French people are thoroughly in support of the program. I think the municipal elections in Italy showed the same trend.

Mr. BURLESON. I have this further question: Although the numerical strength of those elections were, as I understand them, not radically changed, I assume encouragement comes from the coalition of power?

Secretary ACHESON. The municipal elections in Italy, I think, were important in showing Communist decreases in the important areas in the north, of which they had control before.

Mr. BURLESON. In the course of these hearings, Mr. Secretary, it seems to me that we of this committee and, of course, Congress, should be able to answer the question that is evidently in the minds of most of the American people, which is to this effect: Western Europe, looking at Western Europe broadly, comprises approximately, I believe, 250,000,000 people, with a far greater industrial potential than

Russia and her satellites. The question is, Why should this country of 150,000,000 people be called upon to support them when, if they had their potential industrial might and their moral strength united, they would do a much better job, with much less assistance from us, than they are doing.

Now, I hope in the course of these hearings we will be able to answer that question. Do you agree?

Secretary ACHESON. I think that will be very fully brought out, Mr. Burleson.

Mr. BURLESON. It seems to me to be the core of this entire effort and these entire hearings, and that we should be able to have that developed without question before the end of the hearings. I direct that suggestion to my committee as well as to yourself, Mr. Secretary.

Secretary ACHESON. I think it will be brought out fully as to the nature of the problem that we all have to face in Europe. Although you have this large population, depending on what part of the area you want to bring in—take the whole OEEC group, and it is about 275,000,000. If you take the North Atlantic Treaty partners only it is about 175,000,000; and as you add you can move up from 175,000,000 to 275,000,000.

Now, although you have this large population, and although it is a population which is industrially trained and proficient in production, and although there is a large amount of industrial equipment there, there are several very serious problems that they face.

One is that there are lacking certain raw materials which have to be brought in from the outside. That is to some extent true in our own country, but not nearly to the extent that it is true in Western Europe. Also, the total area of our North Atlantic Treaty partners is about one-third of our own. Also, the per capita wealth of that area is about one-quarter of our own. Also, this area has been through two very devastating wars, the last one resulting in the occupation of all of the continental part of our North Atlantic Treaty partners, so that they have had in the 5 years since the end of the war a great struggle to build up from the destruction, the loss of trade relationships, the loss of their political connections with other parts of the world, and bringing a standard of living which had fallen very low up to a degree where it would support democratic life.

During that time many of our partners have had great troubles of their own in other parts of the world. The Dutch have been through their difficulties in Indonesia. The French have been carrying on a struggle with communism in Indochina in which they have suffered about as many casualties as the United States has suffered in Korea. This war has been going on for 4 years. It has had a very great drain on French military effort.

The British have had very considerable troubles in various parts of the world. All of those are things which have to be met. All of those indicate the necessity for assistance and help from the outside. But I think with all of that there has still been very commendable progress; not as much as we must have, but very commendable progress.

Mr. BURLESON. I realize we are not facing a simple problem. Thank you.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. Mr. Secretary, we are glad to see you here today. We will go through many days of testimony, so there must be an effort to keep going.

I think we people of good will in the United States who want to protect the security of the people, as distinguished from being architects of either side of the 1952 election campaign, must look for an American policy. In that American foreign policy there must be an over-all United States policy rather than either a Democratic or Republican policy, or any individual's personal policy. Do you not agree?

Secretary ACHESON. I agree with that. Yes, sir.

Mr. FULTON. I might say to you we people who work on foreign policy, while we do have disagreements with you, nevertheless we respect your integrity as an American citizen, and your honesty. I should also point out we Republicans differ among ourselves too, because we have Eisenhower Republicans and Taft Republicans, and we have our share of disagreements too.

Now, the question has come up here of the possibility of a quick settlement in Korea because of Malik's statement. I wish you would put as a condition, Mr. Secretary, on dealing with or making any negotiations for settlement, that the North Koreans and Chinese Communists will first respect the Geneva Convention on the prisoners of war which we and our allies have lost to them. They must first show they are protecting those boys, and giving us the names and addresses, and letting the packages go through, and let these families know where they are, and what condition they are in. And, don't talk, Mr. Secretary, unless you get that kind of assurance.

Secretary ACHESON. That is one of the most vital questions in any possible talk.

Mr. FULTON. The burglar with his hand caught in the till or cash register wants to compromise. I think if we allow someone in that position to negotiate with us we should take the treaty and show them what it means to be decent, and the things they have not been living up to with regard to international law. Otherwise we are further compounding the felony that has already existed. Do you not agree?

Secretary ACHESON. Yes. It is a very important question indeed.

Mr. FULTON. Again I would ask you as Secretary of the Department not to use the people of free Formosa as a bargaining element, or a makeweight in any decision to obtain a decision in Korea. I hope you can this morning say to us that that will not be a bargaining element or a pawn in our trying to get any settlement in Korea.

Secretary ACHESON. I think we have always taken that view, and we will continue to do that.

Mr. FULTON. You will continue to do that?

Secretary ACHESON. Yes.

Mr. FULTON. I have a further question. In Iran the Government of Iran is the sovereign power. In Britain the Government of Britain is the sovereign power. In Britain they have socialized the industries of coal and steel. I come from Pittsburgh and have an interest in that, and we watched it very closely. In fact, I might say to you, Mr. Secretary, one-half of the audience today are students of the University of Pittsburgh—foreign-policy students seeing how the Foreign Affairs Committee and the Department operate.

The Government of Iran has the right to act as a sovereign in its own country. Why then, when the Anglo-Iranian Oil Co. is in Iran as a private company, cannot the Government of Iran, equally as Britain has done, socialize the oil industry in Iran, as against a private company, the Anglo-Iranian Oil Co.? That question has been asked of me many times, and I would like to know if you can answer it. If Britain can socialize her basic industries, why cannot the Iranian Government do the same in Iran?

Secretary ACHESON. Mr. Fulton, there are two parts to the question which you have asked today. One is a legal part, and the other is the great question of international relations.

On the legal side, I do not want to get into this because this has now been referred to the World Court, and the World Court is able to take jurisdiction, and I presume will decide it. The argument revolves around the question as to whether a contract entered into by a sovereign nation is not also something that the sovereign nation must take into consideration and carry out. Are there no legal rights which arise out of a contract?

I do not think that at the present time either the British Government or the Anglo-Iranian Oil Co. is taking any action contrary to the idea that the Iranian sovereign may do or take this action to nationalize the company with their own oil resources. They do say, however, they have certain contractual rights which are legal and binding and were entered into freely, and those must be respected.

Quite apart from that part, and coming to the other question, the problem is how can the interests of Iran and Great Britain, which as a nation owns about 52 percent of the Anglo-Iranian Oil Co., be harmonized here, so that the Iranians can do what they think is necessary for their own self-interest, and also so that the oil properties can operate.

The Iranian Government has in the past—although it does not seem to be doing this today—in the past it has seemed to say this argument was not about who should operate the wells. They thought the company was the only group that was able to operate. The question was, Under what terms should they operate? The British offered terms the other day which seemed to be a very sensible basis for negotiation. To our deep regret the Iranians rejected those without any real consideration. They considered them 20 minutes and then rejected them.

Now they are getting into a position where it looks as though the properties might not be operated. That hurts everybody. The Iranians do not get oil; they do not get the profits from the oil; 80,000 people employed may be thrown out of work. All of this will lead to great uneasiness and unrest in the country.

It has seemed to us if the Iranian Government would put its mind on its real interests in this matter, that the problem could be worked out. I think the events of the last 2 weeks have seemed to indicate that was what the British representatives were prepared to do.

I do not know whether I have answered the question. I have just talked about problems.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Roosevelt.

Mr. ROOSEVELT. No questions.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Secretary, joining my colleagues in welcoming you here in this very important matter, I would like to ask you whether you believe that the vote on this bill—this big bill—represents or does not represent—and I would like your answer to it—a fundamental decision as to whether we will have allies with us, or whether we are going to go it alone in the world?

Secretary ACHESON. I think it does, Mr. Javits.

Mr. JAVITS. So that this is the payoff vote in the so-called great debate that has been going on, is it not, as a fundamental question of the policy of the United States?

Secretary ACHESON. I think this raises that debate to a concrete issue. Yes.

Mr. JAVITS. Do you see any indication from the news we get from Korea that the Russians, who have been back of this North Korean invasion of South Korea, having found armed aggression unprofitable, may now, as they have the power to do, being a dictatorship, shift the gears and go over into a broad-scale program of internal revolution and subversion, due to the fact that they apparently have not been able to make external armed aggression pay? Do you see any major shift in Soviet emphasis from this situation?

Secretary ACHESON. No. I think it would be a mistake to regard that speech the other night as a change in their policy, or strategy, or purpose. It may represent a sincere desire to end the fighting in Korea. If it does represent that, I do not see any reason to believe it goes any further than that; or, it may not represent that at all. We are now trying to find out, as I said in answer to Mrs. Bolton, by the most direct questions to the Soviet Government, as to what it does mean by this.

Mr. JAVITS. So that you feel we must still be prepared for possible other external aggressions, either directly or by proxy such as in Korea, at the same time as we also are prepared to and do work against other internal revolutions or subversions fomented by the Soviets by a program such as this?

Secretary ACHESON. I think so. Yes, sir, Mr. Javits.

Mr. JAVITS. Is this program then of \$8½ billion as compared with \$60 billion, which is the sum total of the President's budget for the armed services, designed to balance our preparations against those two real threats?

Secretary ACHESON. Yes, sir. You are quite correct about that. This is the part of the total security program which strengthens our allies so that we have a mutual security arrangement rather than an individual one.

Mr. JAVITS. So that if you did not do this you are preparing for one way in which the Kremlin can conquer the world with external military force and leaving yourself open for the other way, in which they can conquer the world by internal subversion?

Secretary ACHESON. I think that is right.

Mr. JAVITS. You would agree with that?

Secretary ACHESON. Yes.

Mr. JAVITS. Is that the basis on which the administration proposes to fight for this program?

Secretary ACHESON. Yes, sir.

Mr. JAVITS. I noticed that the program does not speak of or contain provisions for capital investment, though it, I assume, has paid some

attention to it, and if it has not, it certainly should. The reports of the Gordon Gray committee and the International Development Advisory Board with Nelson Rockefeller, as chairman, have been made both boards appointed by the President to deal with this question.

Could you tell us to what extent the recommendations of these two bodies have been taken into consideration in proposing this program?

Secretary ACHESON. I mentioned very briefly in my statement the place that private capital investment would have in the development of the program. That will be brought out much more fully before you by the witnesses who will follow me and go into more of the details of the matter.

The investment of private capital is the means through which we hope that the real development will take place in those parts of the world where private capital can safely go. There are many parts at the present time where a private investor would be rather reckless to invest his money. There are other parts where particularly with the development of the treaties which we are working on now, and which we are having considerable success with, in the development of those treaties there will be an expanding area where private investment will be protected and where private investment will carry the load of the development.

Mr. JAVITS. May I ask one other question?

Chairman RICHARDS. You have 1 minute.

Mr. JAVITS. You are going ahead now with this program for economic reconstruction and we have all understood that the great problems of Asia are nationalism and social and economic reforms. The fact is that problems of land tenure and social problems of welfare, health and education, have been the points of greatest irritation in that area. What is the administration's idea of what we are going to do to try to bring about really needed social reforms in this great crescent which we are now beginning to aid in an economic way by this program?

Secretary ACHESON. We have been keenly aware of the need for those reforms and have pressed them, and were very successfully doing that in Korea, as you recall, at the time of the attack. It was estimated by the end of 1950, if this attack had not occurred, the land reform program in Korea would have been carried out to the extent of over 90 percent. That was all upset by the war, and the people being driven from their homes, and all that sort of thing.

It is the No. 1 item in dealing with that country. It has also been proceeding much more satisfactorily in Formosa than it has been in the past. It is one of the questions which the ECA has been taking up. They are working very strenuously with the Philippine Government and progress is being made legislatively and administratively in the Philippines.

I am not familiar with the situation in Indonesia. However, you are right in believing that this is one of the fundamental questions which our economic missions take up and work with the local governments about in carrying out our aid program:

Mr. JAVITS. Thank you, Mr. Chairman.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman. I join with my colleagues, Mr. Secretary, in welcoming you here this morning. I will only ask one question. I realize that time is short.

What means, if any, have we planned to educate the peoples of Europe to the objectives of this noble program other than the Voice of America?

Secretary ACHESON. I think so far as the direct education of the people is concerned, there is a direct or indirect way, or perhaps they are all indirect. We have, in addition to the Voice of America, a very considerable work being done through our ECA missions and the diplomatic missions in working directly with the press and radio of the countries concerned, so that they are continually being given the full facts about the situation, as we see it, and the efforts we are making, and the efforts which we think are necessary for other people to make.

We then have a very considerable program of exchange of persons. Recently we have had here a very large group of German journalists who have been in this country. Some of them were here for a year, and some go to school in the Midwest, and Northwest, and some in the eastern universities at schools of journalism. The others come here for 2 or 3 months. They are taken all over the United States and shown the whole country. I think some of them have visited you up here at the Capitol to get an idea of how our National Government works. They go to the States and to the municipalities, and they see all branches of American life.

We are doing the same thing on a much slower basis through students. We have a very considerable number of exchange programs.

Now, there are other ways in which this is being brought home to people. The military missions which we have abroad, which operate with the armies of Italy, France, Belgium, Holland, and Norway, and in a number of other countries, in showing them the new American equipment, are real sources of education. Those people—the enlisted men, and the officers—get out with the troops of the Nation involved and get to know them, and talk with them, and talk about their own country, and our own purposes, and through them you get into the Armed Forces an understanding of what is going on.

There is a very considerable and rather diverse group of efforts which we are conducting.

Mrs. KELLY. Thank you, Mr. Secretary, I understand our programs have not been too successful. I wonder if you had given any thought to a direct program of the Voice of America emanating directly out of the country, to which we give assistance. We should use speakers and writers who think in the language of the people we want to reach. It seems to me we have not reached the peoples of the world.

Secretary ACHESON. I am just not able to answer that, Mrs. Kelly, but we will have that answer for you in the course of these hearings.

Mrs. KELLY. Thank you. I have one more question. Do you believe the termination of the contracts of the Iranian Government with Great Britain will have any effect on the lack of desire of Americans or American private enterprise to invest in these undeveloped areas?

Secretary ACHESON. Very much so. Very much so, indeed.

Mrs. KELLY. And the outcome of this Iranian situation is very definitely affecting this program?

Secretary ACHESON. If an investment is not secure in an area, people are not going into it.

Mrs. KELLY. In our agreements with those nations, are there any provisions taking into account the possibility of a change in their government?

Secretary ACHESON. Yes. That is one of the matters which is worked out very carefully in these treaties, so that it is provided either that nationalization will not occur in certain industries for certain periods of time, or that if it does, prior compensation in the currency which was invested will take place.

Mrs. KELLY. Thank you, Mr. Secretary.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Secretary, in this very significant presentation you have made to us with respect to the program for the coming fiscal year, you outlined a program that envisages military aid and economic aid, to bolster military aid for a 1-year period only. When the ECA came before us it was worked out very carefully, as well as that kind of calculation can be made, for a 4-year period, with a descending scale of aid at the end of the 4-year period.

In the course of the hearings, is it possible to anticipate that we will have presented to us the program as it is being worked out over a period of years, so that we can feel within "X" period of time the security of Western Europe can be reasonably assured by the operation, say, of a 3- or 4-year program, or whatever it may be, and so that we will have in front of us a complete picture? It necessarily cannot be final, but at least we can visualize a program that has some sort of a terminal or something, so that we can see the whole picture and not necessarily just this fiscal year.

I ask that because if the military determined that so many divisions, with so much equipment, and so much air power, and so much sea power, are adequate to maintain a defensive position, then presumably how much is done in each year to achieve that position becomes a part of the same program. If you cut a piece of it in one year you merely have to add it to another if you are going to achieve that eventual goal.

I wonder how you visualize this presentation being made to us?

Secretary ACHESON. I think it can be made during the course of the hearings and probably the committee would wish to have that done in the executive sessions. In the past years it has not been possible to do that because there have been some parts of the program which were just unknown. Those are now becoming clearer, and I think it will be possible for those who have been working in this future projection to give an estimate which will have to be, as you say, an estimate, because you cannot actually foresee the immediate costs or the speed with which you can work 2 or 3 years from now. I think they can give the committee a pretty concrete idea as to the length of period that the program will take and the costs of the program during that period, and the time when the program can be very greatly reduced, and when you can expect it will be largely in the field of maintenance.

Mr. HERTER. Just one other question along the same line. The end items that are provided for, which represent a very large part of this program, are merely a percentage of what comes off our production lines, and may be applied to Korea, or may be applied to Indochina, or to the training of our own troops here, or may go to the effort in Europe.

Under lend-lease the so-called end items in the way of military equipment went to various countries, but title remained in the United States. This program, as I understand it, envisages giving away of the end items without retaining title in any way, shape, or form.

I am wondering in connection with the whole NATO set-up in Europe, when you have a single commander in chief, whether some consideration should be given to the question of title to the equipment remaining within the organization rather than with individual nations. There are possible differences that might arise from that point of view in the future, in reallocating end items, where you might need them for security purposes.

Secretary ACHESON. I know thought has been given to that, Mr. Herter. I do not know what the weight of the considerations are, but I will have that brought out in the course of the hearings before you.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. Mr. Chairman, there are some questions which I do want to ask, but the House is about to have a roll call and I presume there will be opportunity later on for me to ask these questions.

Chairman RICHARDS. There will be, but if the gentleman wants to take his 5 minutes now, he can also do that.

Mr. REECE. I might ask one question that does not relate to the details of this bill. It is a question that I have found in the minds of the people all over the country, and it touches on the suggestion which the gentleman from Minnesota propounded a while ago.

At the close of the war some 6 years ago we and our allies had won a complete and overwhelming victory. Toward this victory the United States had contributed a very substantial percentage of the effort. We had produced possibly as much, or more, matériel as all the rest of the Allies put together. We stood at the pinnacle of our strength. We were looked to by all of the nations for our inspiration, support, and guidance. We stood on the very pinnacle of our history.

Today our own security is threatened. Civilization itself is said to be endangered. Now, what policies have we followed, or what policies have we failed to follow, that permitted this tremendous change in our world position within so short a period of time? That is a question that has the people of America very much disturbed.

There must have been some policies that we followed or some policies that we failed to follow which have brought about this great change in world conditions in so very short a time.

I would like to have your comments on it, since you have been in the position of great responsibility during this period.

Secretary ACHESON. Mr. Reece, I think that a part of the matter has to do with Soviet foreign policy and Soviet military policy. At the end of the war, as you correctly say, we were at a pinnacle of power, but you must examine a little bit the nature of that pinnacle.

At the end of the war, of the three great military powers outside of the United States, two had been destroyed—Germany and Japan. Germany and Japan had been on either side of the Soviet Union and they had been destroyed as military powers.

At that time their place in the military world was taken by 12,000,000 Americans who were under arms; the greatest American fleet—the greatest fleet of any nation or all nations which ever sailed

the seas—was in commission and in battle order; and the greatest air force that had ever been brought together was in operation.

If it had been the will of the American people to maintain those 12,000,000 citizens under arms, and that air force, and that navy, then many of the things which have happened might not have happened. It was clearly not the will of the American people. We are a peaceful people. We do not want to live in a garrison state. Our men do not want to spend their lives under arms.

So, that force was demobilized and they were brought home and returned to civilian life. The ships were put up in mothballs and the airplanes became obsolete.

Mr. REECE. If I may interject, if by maintaining the 12,000,000 men under arms, by maintaining our great fleet, and by maintaining our great air power that would have enabled us to have held the balance, then by our failure to do so—and I am not indicating what influences caused us not to do it—in what way did that contribute to the building up of this great strength on the part of the totalitarian forces which now is threatening the peace and security of all the world or of all free governments?

Secretary ACHESON. Well, you see, the military power of the Soviet Union was in existence at the end of the war. It was there. The Soviet Union did not follow the demobilization policy which we followed. It maintained for a very considerable time almost its full wartime mobilization, and now has a very considerable mobilization.

Its troops, being in occupation of what are called the Eastern satellites, proceeded to organize those Eastern satellites into Communist states which were under Soviet control and proceeded to build up their military power. In one case, Poland, they have even put a Russian general in actual command. So that that military power continued to exist.

We, who were in occupation of Europe and of the Far East, withdrew our forces and demobilized them. Therefore, you had a military force left in that great land mass going from the Elbe to the maritime provinces of the Soviet Union. All we maintained were two or three divisions in Europe and four divisions in Japan, and the fleet was mostly put up in mothballs.

I am not doing more than answering your question. You say, why was there this imbalance of military power. It was because the power which had defeated the two existing military empires was demobilized. Those military empires ceased to be military empires. The Allies which we had in the war were very weak as a result of the war.

The whole purpose of our foreign policy was to prevent the use of force for the settlement of international questions and that was what we directed our attention to through the United Nations.

As we began to see that was not the course of Russian policy, we developed the treaty with our Latin American allies, and the North Atlantic Treaty, and the military assistance program, and we are now filling this void which was created to the loss of opposing power—

Mr. REECE. During this war period it was necessary for us to furnish all these other nations, including Russia, tanks and airplanes and most of the matériel for war. They were then helpless. Now they threaten to dominate the world.

Chairman RICHARDS. The gentleman's time has expired but he will have an opportunity tomorrow to pursue that line of questioning. The Chair wishes to state that there is a roll call on the floor now. Right after that roll call there will come up a bill in which many committee members are interested. For that reason we want to suspend these hearings right now and plan to come back at 10 o'clock in the morning.

Mr. Secretary, would you be available at 10 o'clock in the morning?

Secretary ACHESON. Whenever the committee wishes; yes, sir.

Chairman RICHARDS. The committee will adjourn then until 10 o'clock in the morning.

(Whereupon, at 12:13 p. m., the committee adjourned until 10 a. m. the following day, Wednesday, June 27, 1951.)

THE MUTUAL SECURITY PROGRAM

WEDNESDAY, JUNE 27, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee room, New House Office Building, at 10:13 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please. I would like to say to the members of the committee, and the witnesses too, that the reporters had a little trouble getting what was said yesterday over the microphones.

I hope the members of the committee, and also the witnesses, will sit a little closer to the microphones.

We have the same witness before us today that we had yesterday, the distinguished Secretary of State. Mr. Secretary, we are mighty glad to have you again with us this morning.

We finished questioning under the 5-minute rule yesterday. Now we are going to proceed with the system we have for unlimited questioning as to time. I hope it will be limited in some other respects.

I have been informed by some of the members of our committee that there appeared in one of our newspapers, on Monday last, an article to the effect that I favored a \$3 billion cut from the figure proposed here for foreign aid. This statement is entirely erroneous. If I ever made any such statement, it was in my sleep and I knew nothing about it.

I have said the figures presented here should be cut as far as possible could be done without injury to the program. We owe that to the people who pay the taxes. But when it comes to the question of cutting this Mutual Security Program over one-third, my opinion is it simply cannot be done and should not be done. To my way of thinking, the Marshall program and the arms aid program have been preeminently successful. I would hate to think of the situation in the world today if these two programs had not been inaugurated.

Of course, this committee does not wish to adopt figures that have just been taken out of the air. We want these figures substantiated by evidence. In short, my view is that the basic provisions of this Mutual Security Program are just as necessary to the security of the United States as the program called for in our defense budget itself. In the interest of our own economy, all of these programs must be carefully scanned and the useless limbs and deadwood cut off wherever found.

Mr. Secretary, I am going to turn you over now to the tender mercies of my good and dear friend, the former chairman of this committee, for questioning.

Mr. EATON. I will be extremely tender because I have no questions at the present time. I recognize that we are in a great strategic moment in history, and we have to organize our national resources, first of all to defend our own safety and security in the world, and, secondly, to discharge our obligations to civilization, if it is to persist throughout the world.

Consequently, I would like to have the Secretary of State, who is a notable originator of ideas, to further discuss this program before further questioning.

Chairman RICHARDS. Mr. Secretary, I will refer you for further illumination to the gentleman from Montana, Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, unfortunately I was not able to hear all of your testimony yesterday, but I read it last night. As usual, I was very much impressed.

I understand that there was some question raised as to whether or not the possibility of peace negotiations would entail a stopping at the thirty-eighth parallel. I understand further that your answer was, in general, "Yes."

I would like to call to the committee's attention, and for the record, a speech which I made in the House on March 20, 1951, in which I stated, in effect, that the thirty-eighth parallel in Korea should be the line where the fighting would stop.

I would like to quote from that, if I may, Mr. Chairman, because I think it bears a little bit on this question, at least as far as I am concerned.

I am quoting now as of last November 1950:

Last November I urged that a buffer area be created along the Manchurian-Korean frontier; that the UN troops stop short of it and that the buffer area be occupied by South Korean troops.

Since that time, conditions have changed markedly. I now wish to urge that the United States forces advance as far as the thirty-eighth parallel and stop there so that the original Republic of South Korea can once again be established in its own right.

I further recommend that South Korean forces be sent into the area north of the thirty-eighth parallel up to the thirty-ninth parallel so a defense line can be established which will increase the defensive strength of South Korea and establish a status quo which can be maintained.

Furthermore, if and when this is done, a warning should be issued against any further attempts to disturb the situation as thereby created. A move to the thirty-ninth parallel by South Korean forces and a declaration of maintenance for the status quo will, in my opinion, be a long step toward stopping Stalin's plans to involve us in an all-out war in Asia; it will allow the UN to start rebuilding South Korea and will have served notice to the world that aggression does not pay.

It might be well to point out that recent remarks by Gen. Douglas MacArthur and Gen. Matthew B. Ridgway indicate that in their minds there is no longer any serious thought of attempting to liberate all of Korea.

General Ridgway has stated: "If the Korean War ends at the parallel, it would still be a tremendous victory for the United Nations."

Mr. Speaker, the most important result of the Korean War to date is that not since it began have the Russians or any of their satellites launched any other act of territorial aggression.

This does not mean that they will not do so, but the fact remains that they have not done so. Perhaps one of the reasons for this is because not one but a number of nations have stood up and insisted that aggression be resisted.

Russia, with her Communist Chinese and North Korean allies, has not been allowed to win a cheap and swift victory.

It is too soon, perhaps, to say that the war in Korea has prevented a world war, but it seems safe to assume that our resistance in Korea has put off a general war and has won for us time to build up our strength and to continue to work to prevent a world war.

We have had to pay a high price to put down aggression in Korea but we have pointed out to the Russians that a satellite cannot commit an act of aggression with immunity.

The North Koreans and the Communist Chinese have gained nothing except a frightful loss of life and prestige. While the unification of all Korea is the ultimate possibility in that part of the Far East, yet it is of greater importance to us that we discharge the Russian bloc from further adventures which would sooner or later launch an atomic war.

I just wanted to put in the record that my opinion at that time was that the factor which we are now considering should be given deep thought and consideration.

Now, Mr. Secretary, according to the Washington Post this morning the following statement is contained therein in regard to the Malik proposal:

It may represent a sincere desire to end the fighting in Korea. We are now trying to find out by the most direct questions to the Soviet Government as to what it does mean.

This statement is attributed to you, Mr. Secretary. Would you mind amplifying on that, if it is true?

STATEMENT OF HON. DEAN ACHESON, SECRETARY OF STATE—
Continued

Secretary ACHESON. Mr. Mansfield, we were looking in the record just before the hearing began. We were looking to see if we could find the passage, because there was some question as to just what I did say.

We have not been able to find that particular place. But we have found on page 59 of the record a statement that we are doing our best to get clarification as to what was meant by that speech the other day.

Mr. MANSFIELD. A member of the staff has given me the record of yesterday's proceedings, and evidently in answer to Mr. Javits you had the following to say, which seems to come the closest—

Secretary ACHESON. What page is that?

Mr. MANSFIELD. Eighty-one. It is in the second paragraph, the last part of it. That seems to be the material most closely akin to the quotation in the Post.

Secretary ACHESON. The one which says:

We are now trying to find out—

as I said in answer to Mrs. Bolton—

by the most direct questions to the Soviet Government as to what it does mean by this.

Mr. MANSFIELD. Yes.

Secretary ACHESON. That is the place I am sure they had in mind. I think it is hardly necessary or perhaps desirable for me to expand on that statement.

The statement is quite correct. We are trying to find out, and by the most direct possible means, from the Soviet Government as to what it meant by Mr. Malik's statement.

We have not yet succeeded in doing that. I hope that today will bring forward some further light on the matter.

Mr. MANSFIELD. Mr. Secretary, then would it be safe to assume that so far as this Government is concerned, all that we know, in effect, is what Mr. Malik has said in his speech?

Secretary ACHESON. That is absolutely correct, Mr. Mansfield. There is no further light on the subject at this moment than Mr. Malik's statement. Mr. Malik's statement, as you can see from reading it, is somewhat vague.

Mr. MANSFIELD. That is all. Thank you, Mr. Secretary.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. If I do not shout loud enough, I hope the chairman will advise me.

May I ask you what you feel has been the attitude of this committee in the matter of cooperation with you and your Department in relation to this bill?

May I give you the background of the question? There have been some comments on the air to the effect that the executive department has had absolutely nothing to do with the delay on this very important measure, that it was entirely due to the Foreign Affairs Committee, which was apparently unequal to the task and giving very little cooperation to your group.

Actually, the chronology is that the committee print came to the Foreign Affairs Committee in mid-May. The President's message was sent down on May 24. The executive branch did not have its material ready for presentation by the end of May or early June.

You yourself were kept very busy at the other end of the Capitol and could not give this any attention. The decision for a visit to Europe was made about June 5, at the request of the various departments. The committee members left on June 8 to return on the 19th.

The committee has been in its own consciousness waiting many weeks for yesterday; indeed since February.

May I ask you if that is confirmed by your own understanding?

Secretary ACHESON. Yes, Mrs. Bolton; that is quite correct. I have been working with this committee for a little over 10 years now. I have never found anything except the greatest cooperation from the committee.

A very great step was made some years ago, for which you were largely responsible, Mrs. Bolton. That was the creation of the subcommittees of this committee, which has made it possible to work much more closely on matters which did not deserve the attention of the whole committee.

On this particular bill I think we attempted a new development, which was most useful. And that was to have consultations with the committee in advance of the formulation of a program or a bill.

You are quite right, that difficulties in the preparation of the material at the Executive end were the cause of delay, and the committee has always been pressing us throughout this whole period to master those delays as quickly as possible and get forward with our work.

The chairman was ready weeks ago for the hearings, and discussed that question with me.

The committee has been on its toes and eager to go forward through all this matter. It has been a very great help to us. I think the

effort of the committee in taking the study trip to Europe was a very great step forward in the development of material on its own initiative in advance of hearings.

Mrs. BOLTON. I am very grateful for that exposition from you, because I think it is very essential that in these serious days that the country understand that this committee and your Department have been working increasingly closely together, that you have been coming to us for consultation, and that we have had some opportunity to discuss with you many of the features that were eventually put into the various bills.

At the present time, of course, we do not have a draft of a bill, as we have had in the past. We have only this proposed draft, which has been put into the Mutual Security Program, the basic data, supplied by your executive branch, as the chairman stated at the opening of these hearings.

May I thank you for this clarification. I hope it will be clear to the country.

I have no real questions at this point, Mr. Chairman.

Chairman RICHARDS. Thank you. I want to thank the gentleman from Ohio for bringing that point out. There has been the utmost cooperation between the legislative and executive branches in regard to this particular bill.

As the Secretary just brought out, there is a mass of data and information that has to be gathered, not only from the different divisions of the State Department, but also from other departments of the Government, such as the Department of Defense.

Primarily the thing that held this thing up was that the executive branch had not accumulated the facts that they thought should be presented to the committee.

Then the Secretary of State was called before this committee over on the other side, the joint committee. Just about the time they were ready it was suggested that a group be sent to Europe to look into this thing.

Mr. Secretary, I appreciate your making that clear, that the fact that this bill is just being brought up now is not due to the dereliction of the chairman or any of the members of the committee. Dr. Morgan.

Mr. MOROAN. Mr. Secretary, what are we doing to mobilize public opinion both at home and abroad in favor of this program?

Secretary ACHESON. Mr. Morgan, I was discussing that a little bit with Mrs. Kelly yesterday. She asked me a question which I was not able to answer. Perhaps I can bring the answer out now in response to your question.

As I stated to Mrs. Kelly yesterday, we are carrying on through the regular channels of information the clarification to people abroad of our whole program and our whole attitude in creating collective security.

That involves the Voice of America work; it involves our information services in the various foreign countries, which work very closely with editors of local papers, giving them information from this country on that point; it involves the exchange of editors of foreign countries coming to the United States, and American editors, radio commentators, and others going from here abroad; it involves an exchange of newspaper people, labor representatives, and a great many other people.

In addition to that, we are now going into various other programs. Mrs. Kelly asked me yesterday if we were broadcasting locally, that is, I think she meant other than short wave from New York.

The answer is that we are—in two ways. In one form of broadcast it is originated in New York but is picked up in the foreign country and put on long wave so that it can be received through the ordinary receiving sets.

Another thing that we do is to appear on local programs in European countries, not as the Voice of America, but upon the various programs in France, Belgium, Holland, Italy, and virtually all the countries of the free world.

There we have people, only some of whom work for the State Department, who come from the United States, and who appear on such programs and tell the people of that particular country about what is being done in the United States and what is the attitude in the United States on problems of common interest.

That is proving to be very effective, especially in the Allied countries. In the countries behind the iron curtain the Voice of America is eagerly listened to, because they do not get the truth over their own radio and the people want to get the real news. But in the Allied countries the people are more inclined to listen to the programs to which they have been accustomed to listening. So they listen to those programs.

We are doing something which is very effective in the field of publications. We are working closely with sympathetic groups in foreign countries. These are sometimes civic groups, sometimes religious, sometimes labor, sometimes business, or sometimes societies which are formed, for example, for United States-French, United States-Italian, or Dutch friendship.

We are giving to those societies, and those groups, a great deal of material. We are giving them editorial help, and other help, so that they are able to put out publications over their own names. These publications, which are in fact their own publications, carry more weight in a country than some foreign document.

In doing that we believe that we have made a really great step forward in the development of getting information to people in other countries.

There is no trick about this. This is not a front which is put up. We are working with bona fide groups which really share the same point of view we have, and we are assisting them to explain to their own people what the American program is, as well as their views on many things.

I think that gives a fuller answer to you and to Mrs. Kelly than I was able to give yesterday.

Mr. MORAN. That is all, Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Secretary, I thought hearings were to be largely on the foreign aid program, but inasmuch as we have gotten into Korea and Iran, I should like to ask this question:

You said yesterday that our objective in Korea—in line with the resolutions adopted by the United Nations last June—was to repel aggression and restore peace and security in the area, with adequate guaranties that the aggression would not be resumed. My question is: What kind of guaranties is it possible to get that would insure that the aggression would not be resumed?

Secretary ACHESON. Well, I think the greatest guaranty would be the withdrawal of Chinese troops. That would probably involve a phased withdrawal of all foreign troops from Korea.

That might take a little time, because you would have to strengthen the forces of the South Korean Government in order to have them be able to resist anything which occurred.

I think that is the basic element. There is also the important fact which would underlie such a settlement, which would have to be the conviction on the part of the Chinese that they could not succeed in what they had been trying to do, which was to drive the United Nations forces out of Korea, and take over that whole peninsula as a Communist state.

I think there would have to be a realization that if there was a settlement, and if it was disturbed again in Korea, it would be a very dangerous step and would endanger world peace.

That would not be by accident. If it happened again, it would happen as a calculated design. That would have to be fully understood.

If you had those facts and those general policies put into effect, and then began first with a cease fire, and moved on to an armistice, a settlement of the Korean questions, and the phased withdrawal of troops—

Mr. JUDD. What did you say?

Secretary ACHESON. A phased withdrawal. Everybody would not withdraw at once.

Mr. JUDD. Step by step?

Secretary ACHESON. Yes, forces would be reduced as Korea became stabilized and stronger.

Mr. JUDD. I do not see how that would give any guaranty that it would not be resumed. It might be making it easier to resume.

They would withdraw across the Yalu River and we would withdraw across the Pacific Ocean. I am sure the Secretary is aware, as is everybody else, that it is conceivable that one objective behind this maneuver by the Soviet Union is to get themselves out of a position where they are not strong enough to win, in order to maneuver around to some other position where they would be relatively stronger and closer and we would be weaker and farther away, and thereby improve their chances of achieving their objective instead of reducing them.

Would you care to comment on that?

Secretary ACHESON. I would say, Dr. Judd, of course it is impossible to get a guaranty in the sense that you have complete assurance that the aggression cannot and will not be resumed.

It is not possible in this fallible world, particularly when you cannot rely upon the word of the people with whom you are dealing.

If you have an arrangement in which the self-interest of the people with whom you are dealing is deeply involved, there is a greater degree of assurance on your part that what has been done will be maintained.

I do not think that you are quite right in saying that they would withdraw across the Yalu River and we would withdraw across the Pacific Ocean.

I would think there would be considerable withdrawal to Japan, and that is not far away.

Mr. JUDD. We are getting a peace treaty with Japan where we will not maintain forces in Japan in anything like the strength we have had in the past, is that not correct?

Secretary ACHESON. No; I do not think that is correct. I do not think anything has been said about the size of the forces at all.

I think Mr. Dulles has pointed that out in connection with the Japanese Peace Treaty, that we would have an arrangement with Japan ourselves, arrangements also with other countries in the Pacific of a security nature.

But if the self-interest of the Soviet Union and the Chinese is involved in not resuming this particular hostility because of the consequences which it may produce, then you have greater assurance that it will not be resumed.

Mr. JUDD. What are those consequences that it might produce?

Secretary ACHESON. That the conflict might be general.

Mr. JUDD. If they resumed the conflict, it would be a reasonable expectation that they would be extending the conflict as well as resuming it?

Secretary ACHESON. It would be a serious thing, and I think it would be recognized by everyone.

Mr. JUDD. How much consideration do you give to the thought that they may be trying to get out of a bad situation in Korea in order to start a more effective and vigorous operation in Indochina or Burma for example, where actually they could do us more damage than they could in Korea?

Secretary ACHESON. Those all are possibilities which have to be weighed, Dr. Judd.

Mr. JUDD. You said yesterday that time was on our side. Well, obviously the Russians seem to think it is on their side, because all their maneuvering ever since VJ-day has been to produce delay—for instance, at numerous conferences.

They have just finished one in Paris where months were consumed in gaining them time. I do not know whether they are more accurate and realistic in their estimates than we are. I hope we are, but their record for realism is better than ours.

I am not sure that time necessarily is on our side in a situation like that in the Far East. I think you will agree that, as was said yesterday, they would not have come into Korea if they had not expected they could get a quick victory and that we and the free world would not fight back.

Now that we have fought back, they may think that they have gained all they can from that operation and it would be better to pick off Burma. By splitting India from the rest of southeast Asia, they would neutralize both of them, especially when they are also able to create trouble in Iran on the west of India.

Secretary ACHESON. Those are all dangers that have to be considered in matters of this sort. And in this particular age in which we live we do not have choices between something that is highly desirable and something that is undesirable. We have choices between undesirables, and we have to pick out the less undesirables.

With all the dangers you have mentioned, they are still less, I think, than continuing a fight which is getting hotter and hotter, and which itself may very shortly spread——

Mr. JUDD. And which is very possibly hurting us worse than it is the Chinese, although the general assumption is quite the opposite. I shall not argue that.

May I ask this question: You said on page 11 of your presentation yesterday:

We feel that progress has been made toward dealing with these problems—
talking about the European situation—
but even larger effort is necessary.

This bill is certainly larger than anything we have had previously. Can you give us any estimate of how much larger an effort is necessary? Are you referring just to this particular bill, or do you have something more in mind beyond this fiscal year?

Secretary ACHESON. May I find that?

Mr. JUDD. In the next to the last paragraph on page 11, "even larger effort is necessary." Well, this bill is about three times as big as any that we have had for this purpose. That is a considerable increase.

I am concerned to find out if you have any ideas as to a target amount and target date for the effort—how much larger, how much longer. Those are my questions.

Secretary ACHESON. I cannot seem to locate the quotation.

Mr. JUDD. The next to the last paragraph.

Secretary ACHESON (reading):

We are encouraged by the significant increases—

Mr. JUDD. Yes; third sentence.

Secretary ACHESON (reading):

We feel that progress has been made toward dealing with these problems, but even larger effort is necessary?

Mr. JUDD. Yes.

Secretary ACHESON. What I was dealing with in that paragraph, Mr. Judd, is the total effort which the entire group of nations is putting forward.

We point out:

We are encouraged by the significant increases which our European partners have made in their military budgets over the past year. We understand and appreciate the problems created for our partners by the impact on their economies of great increases in defense expenditures. We feel that progress has been made toward dealing with these problems, but even larger effort is necessary.

What I was talking about in that particular paragraph was not this bill, or any future bills, but the degree of effort which the whole group of countries cooperating must put forward in order to accomplish the NATO plans.

It is our judgment, which we would like to go into more with you in executive session, that it will take at least efforts as far as the United States is concerned in its relations with its allies comparable to those described in this bill, in 1953 and 1954, to accomplish the agreed plan.

We think that our allies in the plans which they are making and which we are working out with them, will be required to make a very considerably greater effort than is now being made.

The effort which is now being made constitutes a very great increase over what was being made in 1949 and 1950. In other words, I think they have doubled their efforts since 1949. It may have to be doubled, and a little more again, in order to make their achievement in the defense plan.

Mr. JUDD. Do I understand that we can assume bills for fiscal 1953 and 1954 will come forward of approximately the same size as this bill?

Secretary ACHESON. That I think is—

Mr. JUDD. That is 8.5 billion for this fiscal year, and something of that general order of magnitude for the fiscal years 1953 and 1954?

Secretary ACHESON. I think that is the probability.

Mr. JUDD. Then the program under the present expectations would run to, say, a total of \$25 billion. With the four or five that have been put in, the total would probably be approximately \$30 billion.

When we considered the Marshall plan, we talked in terms of \$17 billion over a period of 4 years. This is apparently \$30 billion over 5 years, because it has already had 2 years of operation, is that correct?

I think the American people and the Congress ought to have some idea as to what you have in mind and what they have to look forward to.

Secretary ACHESON. I do not happen to have the figures with me. We will go into that in very considerable detail. What I have said is essentially correct, that what would be required, as far as we can see at the present time, in 1953 and 1954 will be of the magnitude which is required in this bill, that is, if we are to achieve our common objectives.

Mr. JUDD. Mr. Chairman, I have some other questions, but inasmuch as the House is going into session early, I feel I should discontinue to give time to other Members. Thank you.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Thank you, Mr. Chairman.

Mr. Secretary, I have one question on Iran. But if you would rather have it dealt with in executive session, it is perfectly agreeable with me.

What I was wondering about is an article that appeared in the paper the other day indicating shipments of certain military equipment to Iran from the United States.

I am aware from a visit to Iran last fall, and from the newspapers, that it is an explosive situation over there.

I am aware that Ambassador Grady is on the job and doing a good job.

I know we have to do everything possible to help settle that situation in the interest of world peace. I am just wondering what our objective is in sending help, including military aid, over there and what we are trying to do in Iran at the present time.

Secretary ACHESON. Mr. Battle, I think in looking at the provisions which are made for Iran, as well as other countries, many other countries, in this bill, we must look at the long-range objective which we have in mind, and not the fluctuations from day to day of particular policies.

I think it is understood throughout this bill that conditions may develop in any of the countries which we are assisting which will make it impossible to carry out the provisions of the legislation that has been in the mind of Congress, and indeed, it is the great purpose of the

legislation to prevent those conditions from arising. Perhaps they may despite all our efforts.

Therefore, we consider the program in Iran apart from this particular crisis, knowing that this crisis may develop in such a way as to frustrate our efforts.

But the purpose of the program in Iran is to help that country in several ways. The principal purpose of helping it is to try and build up the independence of Iran from Soviet pressure and domination.

Iran is a country which is on the borders of the Soviet Union. It is a country which has a great many material prizes in it. It is a country which historically has not had a very strong government. It is a country where the people, the masses of the people, have been depressed, although it was seemingly within the possibilities of the riches of the country to develop them in such a way that everybody's standard of living would be raised.

That is the problem we have to deal with. So we have economic and technical programs here which are designed to improve the agriculture of Iran. We have a program now of work in 700 villages in Iran, to introduce the simplest things, from our point of view, but quite revolutionary from theirs, with regard to sanitation problems and others which will mean a complete change in the life of the village.

So far as the military program is concerned, the effort is to build such military forces as will maintain internal security, which is very important, because one of the great dangers is that there will be subversion of the government through the Tudeh Party, which is the Communist Party in Iran.

Iran probably cannot be put into a military position so that it itself could withstand an attack from its very powerful neighbor. But it could be put in a position where it could delay such an attack, and perhaps get itself to the point so that help would be effective.

That is the broad plan. All of that may be upset if this present controversy leads to the complete disintegration of the economy and government of the country.

We must act on the assumption that people will get over these emotional attitudes which they take, and will act upon their fundamental self-interest, because the fundamental self-interest of Iran, as well as of the British, is tied in this thing.

If the Iranians would approach the British offers with more of an open mind, I think the difficulties could be solved.

Mr. BATTLE. Thank you, Mr. Secretary.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. Just going a little further on Iran, Mr. Secretary, the bilateral agreement was entered on May 30, 1950, as part of the mutual-defense program. But the great quantities of the equipment have only been moving in 1951. We are supplying guns, tanks, trucks, and things of that sort, to Iran.

If the situation—

Secretary ACHESON. I am sorry. I cannot hear you.

Mr. FULTON. The cruiser *Mauritius* moved into the port of Abadan just recently. I wondered what would be the effect of continuing with the shipping in of such things as tanks, guns, and that sort of thing, with the situation boiling up as it is.

Has there been any position taken previously to cut mutual-defense equipment off, or is it intended to be cut off?

Secretary ACHESON. No, there has been no decision taken to cut it off. I do not think it would be in the public interest for me to speculate as to what might happen.

I think all we can say at the present time is that we cannot exaggerate the critical nature of the situation. You cannot exaggerate the vast importance of solving this crisis, because Iran is a most important country, as far as the free world is concerned.

Therefore, we are bending every effort to bring about, as far as we can help in doing it, a favorable solution and not a disintegration.

Mr. FULTON. As you know, there was an act of intervention in Korea by the Executive without coming to Congress first.

Can you assure the Congress and the American people that there will be no act of intervention in Iran prior to obtaining the consent of Congress by the United States Government?

Mr. ROOSEVELT. Will the gentleman yield? Mr. Chairman, I feel very strongly that some of the subjects being brought up here are subjects that should be considered in executive session.

Mr. FULTON. If the Secretary feels that way—

Mr. ROOSEVELT. I do not think it should be left entirely up to the Secretary. Perhaps it puts him in an embarrassing position to answer.

I would, if necessary, move that Iran and its present crisis be removed from discussions in open hearings at this time.

Mr. FULTON. May I comment there?

Chairman RICHARDS. Wait a minute.

Mr. FULTON. If there is any answer that the Secretary decides should not be given, I will be glad not to have the question answered.

Chairman RICHARDS. I would suggest, Mr. Secretary, that it is probably in the discretion of the chairman of the committee as to what testimony would be relevant.

In the field of security and foreign relations I would rather the Secretary himself determine whether the answer should be given in an open or executive session.

At this point I would like to ask the Secretary, does he object to that field of questioning for security reasons?

Mr. FULTON. That is my last question, by the way.

Secretary ACHESON. I think it would be much better, Mr. Chairman, if we discussed some of these matters which are questions of day-to-day development and operation in executive session, because, although I am willing to reply as fully as I can to Mr. Fulton, I must inevitably be somewhat vague about such matters.

He has asked me a question here, however, which I think I should not leave unanswered on the public record.

He has asked me if there is any intention of the United States intervening in Iran without coming to the Congress.

Chairman RICHARDS. I agree with that. I will sustain the point that was made.

Mr. Secretary, how about answering this question of Malik and Korea?

Mr. JUDD. I believe, Mr. Chairman, the Secretary was starting to make an answer on Iran.

Chairman RICHARDS. I beg your pardon.

Secretary ACHESON. What I was wishing to say, Mr. Chairman, is that there is no thought of the United States intervening in Iran either with or without congressional action. That is not part of our contemplated action.

I do not want to appear to indicate in a public record, by any failure of mine to answer Mr. Fulton, that we are thinking of doing something that we are not thinking of doing.

Mr. FULTON. I am very glad that the Secretary has made that clear on the record. I think it is an important part of our foreign policy on which the Congress should be informed.

Secretary ACHESON. I would also like to suggest that perhaps if the committee wishes to go more fully into the Iranian situation as it is developing from day to day, if they wish me to speculate about what the Soviet Government's intentions may be in regard to Mr. Malik's speech, I would prefer to do both of those in an executive session.

Chairman RICHARDS. I think that is a good path to follow and I want to request all members of the committee to confine their questions to the bill. Inevitably, on some questions you may say security is involved. The chairman does not want to place anybody in a strait-jacket but, of course, every member of the committee understands that situation.

Did the gentleman have any more questions?

Mr. FULTON. Yes. May I just finish my comments on Iran? Of course, if the United States is now sending equipment into Iran under this program I think that is a point of public interest, and if we are not intending to intervene I think the public should know that.

Chairman RICHARDS. Will the gentleman talk a little closer to the microphone, please?

Mr. FULTON. I would like to move to Europe and ask you whether you think the Eisenhower mission on the NATO program, and what has been developed to date, is successful?

Secretary ACHESON. Yes, Mr. Fulton. I think General Eisenhower's mission and his setting up of his command structure has been very successful. I think it has only brought us to the threshold of the great developments which must take place, but I think he is laying a very strong and sensible and firm foundation for those developments. We are happy to see some of the things which are at the very bedrock of military development taking place, for example, the lengthening of the periods of service, which has been done in the various countries—

Mr. FULTON. May I interrupt? Do you think the European countries have been cooperating sufficiently with Eisenhower and the NATO organization to date, then?

Secretary ACHESON. I should not say sufficiently. I think they have been cooperating with General Eisenhower. I think it really never would come to a point where you would say it is sufficient, because they must always be pressing forward to do more. There are some things which General Eisenhower wishes to achieve on which not much progress has been made, and there we are continually trying to help him by pushing and prodding to get those things done. But in other cases very good progress has been made, and I think it is encouraging.

Mr. FULTON. I was going to ask you that. You think on the whole, then, progress and the cooperation of the European countries have been encouraging to date in the NATO program?

Secretary ACHESON. Yes, I do, Mr. Fulton.

Mr. FULTON. Now, on the question of World War II reparations that there might be among the various nations. For example, the Philippine Government is asking \$8,000,000,000 of Japan by way of reparations, with the American taxpayers making up the deficit of Japan's imbalance. If that reparations claim is made valid it will mean the American taxpayers are actually standing the bill for making up that Japanese deficit.

Is there any intention in the Department's position on this new legislation to try to integrate the present reparations questions with the Mutual Defense Assistance or Mutual Security Program?

Secretary ACHESON. As you know, the United States authorities have taken a very firm position with regard to the Japanese Peace Treaty against monetary reparation, and pointed out the very factors which you mentioned this morning. I do not think it is necessary to try—I do not know how to integrate it unless you say, "We won't give you military assistance if you press your claims for reparations"; and that is not a wise way of going at it.

Mr. FULTON. Do you think it should be a factor in the discussions with these countries, that is, the amount of aid you might be giving to the particular country that we are going to help defend itself? Of course, we have to look at Japan and see that its economy is good, so that it defends itself too.

Secretary ACHESON. There are a lot of things you can discuss, but I do not think there ought to be any official or legislative connections.

Mr. FULTON. Between the two?

Secretary ACHESON. Yes.

Mr. FULTON. So you would exclude those reparations claims from this bill for our consideration?

Secretary ACHESON. Yes.

Mr. FULTON. Then on the matter of Korea and the thirty-eighth parallel. If we settle at the thirty-eighth parallel we are accepting what was just a military commander's decision on the method of taking over Korea from the Chinese troops. The thirty-eighth parallel was not a division of the country originally, as I believe, but was merely the method arrived at between the military commanders on a strategic level for taking over the adverse forces in the area.

Why then settle on the thirty-eighth parallel as a method of dividing Korea? Why not take the waist of Korea, which is the shortest line and the best held militarily, and try to work something out from that? We might have to look ahead to see that South Korea will be sufficient to stand against aggression and maybe you ought to have the best line of defense rather than an arbitrary thirty-eighth parallel that cuts off the Onjin Peninsula from the rest of South Korea?

Secretary ACHESON. This gets into the area that I think I would rather discuss in executive session, if you do not mind.

Mr. FULTON. That is my last question.

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. Thank you, Mr. Chairman. I have no questions at this time.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Chairman, I do not know how much longer you want to prolong this hearing. I heard a roll call in the House.

Chairman RICHARDS. I understand a no-quorum bell sounded.

Suppose we go ahead for 20 or 30 minutes, and if you do not complete your questions you may continue at the next meeting.

Mr. HERTER. I would like very much to get one thing clear in my own mind. With regard to the military end items which we discussed briefly yesterday, as I understand our problem in this country, there is being worked out at the highest levels a program of production which it is assumed by Mr. Wilson and the other people who are working on the production end, is the maximum production that this country is capable of, granting the general over-all economic situation and the raw materials situation, and the controls situation, and so on.

This program here that is before us adds dollars to a production program without necessarily adding any goods, as I see it. The question this year is how much goods can come off our production lines, and where are they going to be distributed. In other words, a \$60,-000,000,000 program, that is, the military program next year, I assume is the maximum our production experts feel they are competent to squeeze out of our economy in a given year. What this bill provides for is additional dollars over and on top of that, which is merely a measure of what can come out of our production, it seems to me, rather than any production that could come off our lines.

I would like to get clear as to whether you feel that the dollars here represent additional production from the United States, or whether they are merely a measure of the total production which will be assigned to the European countries?

Secretary ACHESON. Mr. Herter, that is a very intricate matter which you are questioning me about, and it is one which has been the subject of a great deal of study in the Defense Department, with the ECA, the Treasury, and with the Bureau of the Budget, and with the State Department.

The very question which you asked was one which interested all of us, and we were very anxious to find out whether we were doing anything except fooling with words or figures here, or whether we were producing additional equipment.

The answer, I believe, is that we are producing additional matériel by this action here. I think General Scott can go into that in very considerable detail with you, and show you exactly why that is true and how that is true. I can't. I have looked at the conclusions and I have great confidence in those who reach those conclusions. We have worked them out with the Defense Department, particularly with Mr. Lovett, who is a person who is very knowledgeable on these matters, and I am convinced that the conclusions reached are right, but I am not able to prove it to you. I am sure General Scott can and will.

Mr. HERTER. I was raising that question at this time merely because I wanted to find out from you whether you think that is a profitable line for us to pursue to satisfy ourselves that more money is actually going to produce more goods, or whether this is merely a percentage measure of the total goods which will be produced anyway and allocated for Europe or the other areas of the world.

Secretary ACHESON. It is a very pertinent question indeed, and I think it is well worth asking and well worth pursuing. I know it can be answered to your satisfaction, and I think it should be. You have gone to the heart of this whole question.

Mr. HERTER. There is one other comment I would like to make which you may wish to comment on. I was privileged to be one of the members of this committee who went abroad recently to try to gather more information with regard to the whole program. There seemed to be unanimity among the higher persons abroad on one thing, and that was the great inadequacy of the information services. There is a general discontent. I think that went all the way along the line.

In connection with that also there was a considerable amount of discussion in regard to the declassifying of a great deal of classified material. Much of that classified material has leaked out bit by bit in a lot of undesirable ways, and not in an orderly way at all.

We ran up against a tremendous amount of classified material that in a sense hampers us in our discussions of our problems with our colleagues here, and others. I am hoping very much the whole question of what can be declassified can be given very much more serious attention than it has been in the past. I think it might be desirable for us to turn over the record that was taken overseas and has now just been made available to us as it was directly brought back here, which I think would point that up very strongly.

I think the Department ought to go over it extremely carefully and see if some of the policies with regard to classification cannot be revised. If the program is going to become a reality, it strikes me as one that ought to be clearly understood both in this country and abroad. To date it seems to me a great deal of the material is over-classified, and there is a lot that can be given to the American public. I merely raised that as a comment in connection with the whole program.

Secretary ACHESON. I have already taken that matter up, Mr. Herter. The chairman very kindly made available to me the material which was reproduced and which the committee collected in Europe, and I was very much struck with exactly what you mentioned, and I have already asked that that matter be looked into to see what we can do to improve that situation.

Chairman RICHARDS. Mr. Secretary, we have to go to the floor now. Can you come back here tomorrow and finish your testimony tomorrow morning?

Secretary ACHESON. Yes, sir. I shall be delighted to respond to any request of the committee. I will be here tomorrow at 10 o'clock, if you wish.

Chairman RICHARDS. If you can arrange your program so as to be here in the morning at 10 o'clock, we will appreciate it.

The committee will stand adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 11:15 a. m. the committee adjourned until 10 a. m. the following day, Thursday, June 28, 1951.)

(The following was submitted for the record:)

STATEMENT SUBMITTED BY SECRETARY OF STATE DEAN ACHESON ON USIE COVERAGE OF FOREIGN AID PROGRAMS, IN FURTHER RESPONSE TO A QUESTION BY REPRESENTATIVE KELLY

Ever since the North Atlantic Treaty Organization came into existence, the Department of State has used every means of disposal to keep the world informed of the progress being made and the extent of American aid.

The story of American economic and military aid to foreign countries has been one of the dominant continuing themes of the Voice of America. In fact, the proceedings before this committee yesterday constituted the lead item for the Voice news programs this morning. Every phase of the various assistance programs has been reported fully in broadcasts to all major areas of the world. The story has been told in all of VOA's language services, which now total 45. In reporting developments under the aid programs VOA has utilized numerous radio devices, including news, commentaries, economic surveys, interviews, documentaries, and special events. The departure and arrival of significant shipments of arms and material have been covered, for example, by on-the-spot reportage. The details of American assistance have been broadcast not only to recipient countries but also to nations behind the iron curtain. In the free areas many of the VOA programs have been relayed locally over the domestic facilities and in the indigenous languages of the nations concerned, e. g. France, Italy, Germany, Greece, Turkey, Portugal, etc.

In addition, the Embassy information staffs have been busy since the day the North Atlantic Treaty was signed publicizing it in many ways. The signing ceremony itself was shown as a documentary film by the USIE officers abroad within a few days after it took place. Pictures of shipments sent from the United States to various NATO countries have also served as the basis for a number of films which have been shown to a great many people in Europe.

For example, in Italy, let me cite a few of the steps which were taken by USIE since much the same pattern is followed in other countries. The Italian language versions of the USIE news bulletin which has wide distribution throughout the country consistently carries stories about the NATO stressing the fact that mutual security is the best insurance against aggression. During the first part of April the nine USIE offices in Italy and USIE film trucks traveling in all parts of the country showed the documentary film, Atlantic Pact. All USIE offices prominently displayed photo exhibits linking the delivery of three American war vessels to the Italian Navy with the measures being taken for the common defense. Italian reporters, radio commentators, and photographers were permitted to cover the ceremony and this resulted in much favorable publicity. One popular commentator's on-the-spot description and his account later in the evening were carried by 43 radio stations throughout Italy, and within a few days one newsreel company released a film which approximately 9 million Italians will see in their theaters during the next few months. Another documentary film made by the USIE office in Rome was placed on eight film trucks and shown in the rural areas and remote sections of Italy. Another technique used was to place copies of a photo poster of the warship transfer in 3,000 Italian post offices and in other locations in many Italian cities.

Just as the warship ceremony was set up in Italy, so also are other special events arranged in all NATO countries to attract local radio and press coverage. Tips are given to newsmen and material is fed out enabling the local stations to carry many programs about the Mutual Defense Pact. Although these programs do not carry an American label, they are nonetheless due to the efforts of our public affairs officers.

There are many other similar examples from other nations. For instance, The Hague USIE Office has for some time prepared a script describing American contributions to mutual defense for use on an official Dutch information service radio program called Searchlight on Western Defense. A trip arranged by USIE for Dutch journalists to inspect European troops of NATO resulted in 35 articles appearing in 18 Dutch newspapers with their combined circulation of over 1 million. And a Portugal USIE office recently opened a pavilion at the 1950 Lisbon popular fair. Communist aggression and expansion, the danger of threatening democracy in Western Europe and the greater potential strength of the NATO countries compared with the USSR and its satellites is shown to spectators through the displays and in a Portuguese pamphlet which is handed out. Within 2 days, more than 100,000 persons had already seen the displays and it is expected close to a million will visit the pavilion by October.

THE MUTUAL SECURITY PROGRAM

THURSDAY, JUNE 28, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee room, New House Office Building, at 10:12 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we are continuing the hearings on the so-called Mutual Security Program. The witness again today is the Secretary of State.

I believe that yesterday when we discontinued questioning, Mr. Herter, the gentleman from Massachusetts, was asking the Secretary a few questions. If he wants to continue that line of questioning, we will start with Mr. Herter today.

Before going into that, I would like to say, Mr. Secretary, that on account of the nature of this bill and the wide scope of the activities imposed under the program, a lot of the questions range all over the world, and naturally get into security matters that are more or less delicate.

The Chair has no disposition as to any line of questioning. Realizing the situation as I do, I would like to state to the Secretary of State that if he feels that any of these questions require answers that might affect our international relations in a harmful way, if answered publicly, if he will so state that he would rather discuss those questions in executive session, he may do so.

I would like to say to the committee, too, that I promised the Secretary that he would complete his testimony today, and we would complete our questioning in regard to that.

This is his third day here. He has an engagement about midday that he has to keep, and which he made based upon a guaranty that I gave to him that he would be finished by midday.

There will probably be a roll call shortly after 11 o'clock. We want to proceed with the hearings as long as we can today and finish up with the Secretary.

Mr. Herter, do you want to follow up?

Mr. HERTER. No; I think any questions I might have I can reserve for later. I think the Secretary's time is important.

Chairman RICHARDS. Do any of the other members—I am not going down the line—have any questions that they would like to ask of the Secretary? Mrs. Kelly.

Mrs. KELLY. Mr. Secretary, does the Mutual Security Program expenditure of \$8.5 billion include the entire United States commitment for foreign assistance?

I should rephrase that question. Is there any estimate of our commitments to the United Nations Organization?

STATEMENT OF HON. DEAN ACHESON, SECRETARY OF STATE—
Continued

Secretary ACHESON. Mrs. Kelly, I think so far as the contributions, the operating contributions to the United Nations are concerned, they are contained in the State Department Appropriation Act.

In this bill there are several items covering contribution to the United Nations efforts of a substantive nature.

One relates to the Palestine refugee contribution, which is in the bill. Another is for Korean reconstruction. Those are substantial items.

Point IV through the UN is in this bill, also. Those three items are in.

The contributions to the running of the UN organization, as such, are in the State Department appropriation bill.

Mrs. KELLY. Thank you, Mr. Secretary.

Secretary ACHESON. There is one other important item of United States assistance abroad, which is not in either of those bills. That is in connection with Japan. The Japanese effort is being handled through the Defense Department appropriations.

Mrs. KELLY. There is one other question, Mr. Secretary. In my own mind I question giving greater aid or assistance to the Yugoslav Government unless they grant further basic freedoms to their people.

Do you care to comment on that?

Secretary ACHESON. I would like to talk to the committee about the Yugoslav situation in executive session, if I might do that.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, I think there has been a great deal of confusion relative to the Palestine refugee situation, due largely to the fact that no mention is made of the fact in the name that the question is one of Arab refugees who have been expatriated since the partition of Palestine.

I call attention to this to make it clear that what you were referring to was the nearly million Arabs that are out in the desert; that United Nations help is what is in jeopardy at the moment.

Secretary ACHESON. That is correct, Mrs. Bolton.

Chairman RICHARDS. Is there anyone on this side who wishes to ask a question? Mr. Ribicoff.

Mr. RIBICOFF. Mr. Secretary, it seems to me that on the questions of Iran and Korea there has been quite a bit of confusion due to the misunderstanding of various phases of the operation of foreign policy.

There is confusion between policy and negotiation, and they get blurred in the public's mind. Would you care to comment on the difference between policy and negotiation, and what part they play in formulating the over-all policy?

You do not have to comment if you do not care to, but I think it gives an opportunity to clear up much of this confusion.

Secretary ACHESON. I am glad you asked that, Mr. Ribicoff. I had the same experience also in testifying at the other end of the Capitol on this same question.

There did seem to be in the minds of some of my hearers the idea that if you negotiated with somebody about a point, you were automatically given up your own position. That, of course, is not true.

In negotiations what you do is to state your own position as strongly and persuasively as possible, and stick to it and try to get it adopted.

The other side does the same thing. It may in many negotiations be possible to work out a compromise, or a meeting of the minds in some way. In other negotiations that often is not possible, so that negotiation does not produce the result you are hoping for in many cases.

But what we try to stress all the time is that our fundamental policy, and our fundamental duty under the United Nations Charter, is to settle international questions by peaceful negotiation.

The whole idea of the Charter is that settling questions by force is not the way, and that is not the way in the future we want to settle questions. Therefore, wherever we can, we do sit around the table, discuss, argue, and try to settle by negotiation.

That does not mean we abandon our position or give up positions which we believe to be vital to the security of the United States.

Mr. RIBICOFF. The process of negotiation, to be effective, often has to take place in so-called secret, where every word and syllable is not on television, or on the radio or in the press, but at the same time it has nothing to do with giving up your basic policy which has been announced by the Nation, concurred in by the Congress and the people in accordance with the democratic process. Is that correct?

Secretary ACHESON. That is quite correct, Mr. Ribicoff.

Mr. RIBICOFF. Thank you, Mr. Secretary.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Secretary, in view of the current possibility of discussions with respect to a cease-fire in Korea, would you care to restate for us, and for the country, the position of the United States on two major questions—the admission of the Chinese Communists to the United Nations Security Council, and the disposition of Formosa?

Secretary ACHESON. Yes, sir. I had the opportunity to state those before the joint Senate committees; I shall be glad to state them again.

So far as the admission of the Chinese Communists into the UN is concerned, we have steadfastly taken the position that those who claim to represent a nation in the UN should not be permitted to shoot their way into that organization.

Therefore, since the Chinese Communists have defied the UN, have opposed the UN forces militarily, have taken part in the aggression in Korea, we do not believe they should be admitted as the representatives of China in the United Nations.

I pointed out to the joint Senate committees that we have taken that position. At the time I testified I think there had been 76 votes in UN organs and agencies on this matter. Since then I believe there have been 3 more, so there have been either 79 or 80 votes on this question.

In all except one vote the vote went against the admission of the Chinese Communists to any one of the 34 or so agencies connected with the United Nations; and in the one case where the vote went the other way, it was later reversed. So at the present time the National Government of China represents the nation of China in all of the agencies of the UN.

In regard to Formosa, the President's declaration of policy of the 27th of June 1950 stands as the Government's policy in regard to Formosa, that is, we recognize the Government of China, the National Government of China, which is in authority in Formosa.

We have interposed the Seventh Fleet between Formosa and any attack from the mainland, and we have said that no attacks on the mainland should be undertaken from Formosa, the idea being that the Formosan question should not be settled by force.

If anyone attempts to settle it by force, we will interpose our own force.

Mr. JAVITS. That we are sure is how it should not be settled?

Secretary ACHESON. We proposed to the last session of the General Assembly that the Assembly should discuss the question with all the interests connected with Formosa, and that the United Nations should come to a conclusion about it.

After the Chinese intervened in Korea, the political committee of the General Assembly decided to adjourn debate sine die on the Formosa question.

Mr. JAVITS. Assuming that the Korean situation resulted in a cease-fire, are we still of the same mind with respect to having the Formosan question settled by the United Nations?

Secretary ACHESON. We are still of the state of mind that it should be settled by peaceful discussion; it should not be settled by force.

The President has said that there are two ways in which the peaceful discussion could take place. One is the Japanese Peace Treaty, and the other is the United Nations. If it has to do with the Japanese Peace Treaty, that merely delays the peace treaty with Japan, and therefore, the ultimate solution of it would have to be by negotiation, either in the United Nations or in some other form.

But, of course, that involves a negotiation in which you do have a meeting of minds between the authorities on Formosa, the Formosan people and anyone else who is directly interested in the settlement. It does not mean we give up our position, that Formosa should not be forcefully put under a regime that it does not wish to submit to.

Mr. JAVITS. Do you not think, Mr. Secretary, it would be well for us to emphasize to the Formosan people their part in the decision, and how we think it should be obtained, either by plebiscite or some other form, to make it clear?

Secretary ACHESON. We have tried to do that, Mr. Javits. I brought that out in my speech last December at the UN.

Mr. JAVITS. Would the Secretary care to say anything about whether we would use the veto to keep the Communist Chinese out of the UN?

Secretary ACHESON. I spoke about that at considerable length before the Senate committees. What I pointed out before the committees is what I have just said in answer to your question, that in order to maintain a position in the United Nations we are dealing with between 35 and 40 agencies or organs or institutions of the UN, in all of which the question of who shall represent a country is dependent on some sort of majority vote. In some cases it is a simple majority, some two-thirds, with the exception of the one organ, the Security Council of the United Nations.

In the case of the Security Council there is a disputed question. It can be argued that there must be a vote in which all the permanent members concur in order to change the seating of some representative.

On the other hand, there are arguments which can be put forward that this is not a question which requires a majority of all of the permanent members.

Therefore, when you are approaching the question of the Chinese Communists in the UN system, you have to realize in order to carry your position you must have a strong and persuasive position which will carry a majority with it.

Sometimes it is a two-thirds majority in a great many of the organs of the UN. One cannot concentrate one's mind on one organ in which the veto will apply. What it means is that if one permanent member votes against it, then the resolution does not carry.

So, you must attempt to maintain a position which persuades and brings along with you the great majority of the members of the UN. That is what we have succeeded in doing. That is what we must continue to try to do.

If you got to the position where the veto became an important question, and if in the Security Council you were in a minority of four or less, that would probably mean that you were in a great minority in the other organs of the UN, and that you would lose in that situation.

If, however, the battle were continued in the Security Council, the question would then arise, and we would continue to vote as we have voted, whether our vote constituted a defeat of the resolution or not, then the only way in which there could be an authoritative decision on that matter would be through the World Court.

Because if you were a minority of four on the question of whether the Chinese Communists should be admitted, you would probably be in a minority of four or less as to whether your vote constituted a bloc.

Therefore, if, as and when it appeared that this was going to be a relative question, we would do our best to get that taken to the World Court and have the World Court decide the question.

Mr. JAVITS. Mr. Secretary, I have just one other question. I happen to feel that one of the greatest dangers to be faced right now is a slackening of our defense mobilization efforts because of this current talk about the possibility of a cease fire. Would the Secretary care to say anything about what he thinks on that subject, as to whether there is any justification for the slackening, and if not, why not?

Secretary ACHESON. I should be very glad indeed to respond to that question, Mr. Javits, and say just as vigorously as I possibly can say that there should be no slackening whatever. If anything, there should be an increase of our defense efforts. If a truce is brought about in Korea it does not lessen the need for this great effort which we have been making on our own part, and have been making with our allies, and which our allies have been making. The need continues to just as great a degree as it ever did—if anything, to a greater degree. Because if the danger of the spreading of the war which has grown out of the Korean effort, is postponed or stopped, then there is nevertheless the vast need of building our defense forces to the point where the outbreak of similar aggressions in other parts of the world, or the temptation to engage in general hostilities, becomes most unattractive. If and when we reach that point, then I believe the understanding I was talking about with Mr. Ribicoff becomes possible, and that then some of the underlying questions here which

cause the great tensions of the world may reach a point where they can be discussed and settled by negotiation. But I believe that that cannot be done as long as there is a great disparity in power which makes negotiation seem to be unnecessary to one side, which causes them to believe they can accomplish their purposes without it. Such a situation means a continuing danger to the United States, and we must make a continuous effort to step up our preparations.

Mr. JAVITS. So you think parity of power is an essential prerequisite to the negotiation of the fundamental differences between us and the Soviet Union, which negotiations would have a chance for success with honor and justice?

Secretary ACHESON. That is what I believe; yes.

Mr. JAVITS. Thank you. Thank you, Mr. Chairman.

Chairman RICHARDS. I would like to ask the members of the committee for the benefit of the reporter to speak a little closer in the microphone.

Does anybody on this side want to ask any questions?

Mr. SMITH. Yes, sir, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Secretary, what is going to be our policy so far as the prosecution of the Korean aggressors is concerned?

Secretary ACHESON. I find that difficult to answer, Mr. Smith. You mean, are we contemplating war trials?

Mr. SMITH. Yes. I am afraid we have set a precedent at Nuremberg, and I am wondering if we are going to follow the same practice in Korea.

Secretary ACHESON. I know of no plan to do that, although, of course, insofar as people are violating the rules of war, that is another question.

Mr. SMITH. Now, I think the American people are somewhat concerned about what has transpired in the past in the matter of the destruction of property from war damage. We have bombed the daylight out of various areas in the world, and now we asked the American taxpayers to rehabilitate and restore these same areas. This does not make sense.

As I read the bill before us, we are going to start a rehabilitation in Korea. I am wondering, is that going to be a continuing policy of ours? Must the taxpayers of this country bear this burden all over the world?

Secretary ACHESON. I think our policy in Korea, Mr. Smith, is that it is a United Nations obligation undertaken by the United Nations to do all that they can to rehabilitate Korea. This is a great joint effort in which all the nations have joined. We believe that if we can bring about peace in Korea and can reestablish the Korean economy and the Korean people as a great demonstration of democratic life and freedom in Asia, we will have done a great thing for the development of our whole position in the world. I do not think that establishes any precedent for any future actions, and I hope there won't be such a necessity for precedents.

Mr. SMITH. Of course, so far as the American taxpayer is concerned, he picks up the check. He is the goat in the New Deal foreign policy which has once more taken us from peace to war.

Secretary ACHESON. In this particular case we have very substantial help from the other nations of the world. I think they have done very well in this regard.

Mr. SMITH. Thank you.

Mr. MANSFIELD. Mr. Chairman.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, apropos of the question raised by the gentleman from Wisconsin, is it not true that the peoples of the world do not want to be liberated in the sense that they were liberated during the Second World War, and in the sense that they are being liberated in Korea—in South Korea—today?

Furthermore, is not one of the main tenets behind the Mutual Defense Assistance Program, which covers the greater portion of the bill now before us, the idea of helping to create a position of strength on the part of our allies in Western Europe who comprise the membership of the North Atlantic Treaty Organization and allied groups, so that the possibility of a liberation which will entail great destruction is thereby curtailed considerably, and because of the defensive position of strength assumed by those countries and ourselves we will be able to forestall such a happening in the future? Is that correct?

Secretary ACHESON. That is correct, sir.

Mr. MANSFIELD. The idea is to keep these people, in so far as collectively we are able to do so, from once again being liberated at a price of great destruction, and in the meantime creating a position of strength which will enable them to stand up against communism in that part of the world?

Secretary ACHESON. That is true. Yes, sir.

Mr. MANSFIELD. That is all.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. I am interested, Mr. Secretary, in protecting the Chennault company planes at Hong Kong, which a United States court decided belong to the American company and a British court has decided belong to the Communist Chinese Government. I am interested in seeing that those planes are not delivered to the Communist Chinese Government which is now fighting us in Korea.

Can I ask you whether you believe that the delivery of those planes would be within the ban of the United Nations embargo on the delivery of strategic materials?

Secretary ACHESON. I believe it would. Yes, sir.

Mr. FULTON. They would then be within the ban of that embargo, even though this question does not involve what we usually think of as exports? Because, here are articles that belong, according to the British court, to somebody over on the other side, and are simply in custody of the Hong Kong Government. I believe the embargo itself mentioned the export of goods. In a technical sense it might be argued that "export" could be just the delivery of title or sale of goods.

Do you believe then that the word "export" or the term "embargo" could also include what might be alien property—that is what this would be—in the possession of either the British or American Government?

Secretary ACHESON. I am just giving you a very first impression. I have not studied this matter at all. I think so far as our present concern is involved here we are well satisfied with the fact that it can be appealed in the highest courts. There is an injunction against delivery, and there will be no delivery. I will look into this matter and be glad to discuss it with you further.

Mr. FULTON. I want to bring up the point that this is a little different from the ordinary extension of the word "embargo." I feel the United Nations embargo should be extended to alien property which might be within the possession of the United Nations, on the order of our alien property laws.

The other thing was this: So far in the hearings I have not heard mentioned the Latin and South American ----

Secretary ACHESON. I am sorry. I did not hear that.

Mr. FULTON. I have not heard mentioned the Latin and South American angles. Could you give us just a few ideas on how this will establish cooperation with those countries, and how it will assist our defense south of the border in our mutual defense of the hemisphere?

Secretary ACHESON. I did refer to that in my opening statement, Mr. Fulton. I referred to that title in the bill which deals with cooperation with the American republics. Two types of assistance are described. There is military equipment to be transferred on a grant basis to the South American countries in connection with the plans of the Inter-American Defense Board. These plans have been worked out by all the chiefs of staff of all of the American countries, and you will have testimony presented to you here in detail about them. Later testimony will show how the efforts which will result from the increase in the efficiency of the armies of our Latin American neighbors will contribute to the defense of this hemisphere, and will relieve the United States from military tasks which it had to undertake in the last war.

There is also economic assistance of the nature which has been going on between the United States and the other republics of this hemisphere for the past ten years so successfully, and that also is developed in this bill.

Mr. FULTON. Does it involve too the extension and completion of the correlation and standardization of armaments among the republics?

Secretary ACHESON. Yes, sir.

Mr. FULTON. My last question is on Germany. Is any attention being given to the fact that West Germany is now doing a great amount of exporting to the South American countries, and it seems to have the free capacity to do it, while our industrial firms here are having to turn more and more to defense contracts as a matter of patriotic duty?

Has that question been investigated as to the markets, as between the British, ourselves and West Germany, and what is the policy on that?

Secretary ACHESON. I think that that can be dealt with in much greater detail when we come to that portion of the bill. It is true that Germany is recovering its industrial productive power and its exports. That is all to the good, from our point of view, for two reasons: One is that it helps Germany support itself, rather than having Germany a continuing burden on the American Treasury. Also, at this time of shortage it is very important to our South American neighbors that they get materials. If they cannot get them from here, it is essential they get them from some place. All of this has been taken into consideration, and I think we can give you satisfactory information about it.

Mr. FULTON. All right.

Chairman RICHARDS. Mr. Secretary, I would like to ask you a question right here.

Mrs. KELLY. Will the gentleman yield?

Chairman RICHARDS. I yield.

Mrs. KELLY. I would like to bring to the attention of Mr. Javits a report which was printed by the committee or a subcommittee of the Committee on Expenditures in the Executive Departments dealing entirely with the United States relations with international organizations, including a summary of the results of the meetings of the Foreign Ministers of the American Republics. It is a very excellent pamphlet.

Mr. JAVITS. Thank you.

Chairman RICHARDS. Does the gentlewoman want to call that to the attention of the committee? Is that correct?

Mrs. KELLY. Yes.

Chairman RICHARDS. Thank you very much.

Mr. Secretary, the Economic Cooperation Act of 1948, section 114, subsection (c), says this:

In order to carry out the provisions of this title with respect to those participating countries which adhere to the purposes of this title and remain eligible to receive assistance hereunder, such funds shall be available as are hereafter authorized and appropriated to the President from time to time through June 30, 1952.

When that act was passed, it is my understanding that the plan was to terminate economic assistance on June 30, 1952, which is the end of the fiscal year of 1952.

In the Mutual Security Program proposal we have here today, there is no termination date at all for economic assistance. What do you think about putting a termination date in there definitely?

Secretary ACHESON. I think that is a question of judgment which the Congress will, of course, exercise. If the termination date were put in, it would probably be desirable to pick out one which would permit the program which we have in mind to be carried out. There is a good deal to be said in favor of putting such a date in.

One cannot peer into the future with any great accuracy. If one took a date in 1955 that might be a desirable thing to do, with the knowledge that this was something which nobody could guarantee, and that it might very well be necessary to extend the date a little further.

So far as the activities here are concerned—and we are now dealing in the economic field——

Chairman RICHARDS. Yes, sir.

Secretary ACHESON (continuing). There would be several types of work which would be going on. One of these is the strictly Marshall-plan activities. Now, those, I think, with the exception of one or two countries, would be finished by the date mentioned in the original act. The countries which might not be finished include Austria, where there are very special circumstances. Austria's future depends on our getting a satisfactory peace treaty, so that Austria can again be a united and independent country. It cannot be economically self-sufficient when it is divided as it is now and the Soviet Union takes so much out of eastern Austria.

We hoped in 1949 that we had an Austrian treaty which would be completed with one more meeting of the Foreign Ministers, but all our efforts to get the Soviet Union to complete that treaty have been in vain. We now have to go along with the situation which has been forced upon us.

In Italy the economic recovery problem is greater than with the other countries being assisted; but that should not continue to be the case very long.

Greece, again, is a country where there are special circumstances; but again I think the situation in Greece is looking up. Unless there is great military disturbance in the world, it should not take too long for our economic aid task in Greece to be completed.

Now, those are the problems which remain under the old Marshall Plan Act—the Economic Recovery Act.

So far as economic assistance for the purpose of military production is concerned—the peak of that, I believe, should be in the next few years, while the rearmament program is going on. Thereafter there could, I believe, be very substantial reduction of economic assistance, and perhaps the ending of assistance in many cases; but it is too speculative to say anything definite.

Assistance programs in other countries involves much less in funds than what we have been talking about in the Marshall plan or in the direct economic assistance for military production. These programs, which might last over a considerable period of time, constitute a wealth-producing program. This is a program by which we are helping other nations to develop the technical competence, the improvement of agriculture, the improvement and development of their raw materials, which makes them more and more self-sufficient.

If the Congress believed that it was desirable to have some termination date for the purpose of requiring a reconsideration of all matters at a particular time, I could well understand why that would be a desirable thing to do. If the Congress wished to say it would reconsider the whole matter anyway without putting in a termination date in 1954 or 1955, that again would be a wise and sensible way to go about it.

I think it is a question of judgment, Mr. Chairman.

Chairman RICHARDS. Well, Mr. Secretary, suppose Congress does that and puts in the termination date. Of course, there will be equipment and supplies in the pipe lines and there will be some counterpart funds. I was just wondering why we could not put the termination date in there and then any residue or any part that has not been opened up can be turned over entirely to economic production for military purposes, and let that fall right over into the MDAP program of the NATO countries, and go on as smoothly as it ever did?

Secretary ACHESON. That might be possible. I think if the Congress puts the termination date in, it ought to do it with the realization that what it is really thinking about now is forcing a reconsideration of all these questions on that date, and without trying now to foresee what steps you would take at some time 2 or 3 years from now. The future is too uncertain to be able to plan now what you would do to terminate some activity on a particular date. The important thing, I think, would be to say that here is a program which in so far as we see will last two or three years, and after that we do not know, but we will reconsider the whole matter at that time.

Chairman RICHARDS. You do agree then, Mr. Secretary, that as far as possible this program should be terminated on the date that was specified when the Marshall plan first was inaugurated?

Secretary ACHESON. I think we are getting a little mixed up. I thought you were asking me whether there should be a termination

date on the whole extended program we are talking about in this bill. Your last question suggests that you mean should the ECA be terminated on the 30th of June, 1952?

Chairman RICHARDS. Yes.

Secretary ACHESON. Is that what you asked?

Chairman RICHARDS. That is right. ECA.

Secretary ACHESON. I am sorry. I misunderstood you, Mr. Chairman. I was answering a question which you did not ask.

Now, if I may go back and straighten myself out?

Chairman RICHARDS. It was my fault.

Secretary ACHESON. So far as terminating the ECA on that date, I think you are faced with the problem that I spoke about in answer to the very first question that the committee asked me, when you asked me about the administration of the program.

The economic assistance which is being furnished here—the great bulk of it for the military rearmament program will have to be administered through an economic organization. What the President has suggested here is that in order to create the least possible disturbance you merely take the existing ECA Act and extend the period of time and let the ECA be the agency which administers this economic assistance.

If you do not do that, but terminate the ECA, I think you will have to create another economic organization; and if you do that, there will be a period of confusion in between. People who are now working in the ECA will not know whether they are going to continue working. You will have people leaving, and just at the time when it is most important to get the whole effort of this thing focused, and going forward with great vigor, you will have confusion and uncertainty in the agency which has to administer the program for helping our friends to economic health.

Therefore, the President's suggestion in his message to Congress was that you continue to use the ECA by extending its existence for such period of time as you wished to. That, I believe, is the least disruptive way of getting the job done which has to be done.

There are considerations—and the Congress can go into them all in these hearings here—there are considerations of a psychological nature which are relevant, which say that you started the ECA out doing a particular job. It will have done that job pretty much by the 30th of June 1952, and, therefore, you have to end the ECA and start something else.

My own judgment—this is all a question of balancing factors here—my own judgment is that the confusion which would be put into the program by ending one organization and creating another exactly like it, and the loss in personnel, and all of that sort of thing, would outweigh any psychological advantage which came from saying, "We have done a job now and, therefore, we will end the organization that did it." I think a much better and fuller light can be thrown on this question by Mr. Foster, who is right in the heart of this matter, than by me. I have given a good deal of thought to the question, and since you have asked for my opinion on it, I would say that the wisest thing to do here would be to extend the period of time for the life of the ECA. Change its name, if you wish, to something else, if you want to, to indicate it has somewhat new functions, but keep the organization and the personnel intact so that we will not find our-

selves coming to a slow-down in the 12 months ahead where we should really be putting forth the most tremendous effort to stimulate our allies into great production.

I say that because what is done in the next 12 months is really going to determine the success or failure of this program. If things are not really humming by the middle of 1952, then you can be pretty sure that you will not get the forces and equipment which you have to have by the end of 1954, because some of these items are long-lead items, and they have to have adequate economic organization and productive capacity behind them, and the plans drawn and everybody at work.

I regard the next 12 months as very critical for the success of the mutually agreed defense plan. That is a plan which calls for the greatest possible effort by our allies, as well as by ourselves. As pointed out the other day, our allies have already doubled their production since 1949. In a military way they will do possibly as much or more again as they have already done.

They will need an organization working very closely with them to help them through these periods in the next year, and I think that organization will work better if it does not have over it the cloud that its whole efforts are going to terminate and somebody else will pick them up 12 months from now.

Chairman RICHARDS. Thank you, Mr. Secretary. The reason why I asked you that question is that I am sure the Congress understood, and the people of this country understood, and the recipient countries of economic aid understood that the Marshall plan was a 4-year program.

Secretary ACHESON. That is correct.

Chairman RICHARDS. Economic aid for military purposes and military aid are different from economic aid, as such.

I can readily understand the point you made as to the difficulties which will be involved in this period of transition and in this twilight zone between what is primarily economic aid and what is economic aid for military production. You will have plenty of trouble. I am certain that experts who have handled the first phase of this program, if this other program goes into effect, should be retained because their services are too valuable. However, that issue is not plain to the country, and the world, and the Congress itself. I think it should be made plain. The best way to do it is by putting a termination date in there and indicating how you are going to take up that burden. That is the only reason I asked that question, but there are a lot of difficulties involved there.

Mr. JUDD. Will the gentleman yield?

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. I would like to pursue this matter for just a moment, because we took it up in every European country we visited recently. In general our political people all wanted it to end officially, whereas the economic people—the ECA people—in general wanted it to continue. There were exceptions in both cases.

We were told frankly that the ECA in its original sense had ended its work. In fact, ECA, as we set it up, is already finished, because of the shift in its operations to support of the defense program. Originally the concept was that economic aid was an alternative to a military program. Economic recovery—that was the way in which it was presented—was designed to give these countries stability.

Of course, it was too late, as some of us warned at the time. ECA is not an alternative to a European military program, but it is in support of a military program and has been from the beginning.

The question is whether to be honest with the Congress and honest with the people and say that ECA as originally envisaged has completed its work, and what we now have to have is an economic program in support of the defense program or else it falls to the ground. Shall we lay the cards on the table and do it forthrightly? I myself believe that should be done.

As to the wind-up date, I was convinced by Ambassador Dunn in Italy we should not end ECA now but we should at the end of fiscal 1952, when the law says it should end. It has become a symbol of American interest in the welfare of European people, he said. The people of these countries in which ECA is working believe that it helps their living standards. The mutual-defense program does not go beyond support of the military effort. They may know that in general their country is being strengthened, but they do not see anything they themselves are getting out of it, whereas the ECA was a program to help them recover from the poverty and the unemployment and the dislocations of the last war.

Now, if we say we are not going to carry ECA through 1952 as originally planned and intend to end it in 1951, they are going to say, "See. They do not care anything about us. It is just part of a great power struggle between the United States and Russia as rival imperialistic giants," and so forth. I think we ought to keep ECA through fiscal 1952, but I believe strongly there are two arguments for ending it then that have greater importance than you gave them in your statement.

One is the importance for the long-term future of for once ending a foreign-aid program when we said it was going to end. It is always said that it will be a short temporary program and that the coming year will be the most urgent one. Then, at the end of that year, it is the following year that is going to be the most urgent one and so on. That develops cynicism in the Congress toward the Departments and in the country toward the Congress. It is like the old fable of the boy who cried "Wolf" too often. Congress tends not to believe the Administration when it comes here and says, "This is to be a 1-year, or 2-year, or 3-year program." I think it would be most helpful if, since we said it was to be 4 years, we finish it in 4 years.

At the same time we should explain frankly why there should be a new program similar to ECA. The people are intelligent. I think they are both more intelligent and more patriotic than many people give them credit for. You understand the need, and I understand it; what makes any one think they will not understand it? If it appeals to our patriotism to the point of our supporting it, theirs is just as good.

That is reason No. 1. The second is this: If we continue ECA beyond 1952, it plays right straight into the hands of the Communists, who have said all along: "This is not a sincere effort to help you people in Europe. It is a blind and a facade. It is really a military program." If, in fact, we now make the economic recovery program only a military program, the Communists seem proved right, even though you and I had no such intention at the beginning.

I myself think those two considerations, one, integrity in Government and playing fair with our people and, two, not giving the Communists the right to say that this was all along a deception and part of a military program rather than an economic program, ought to outweigh the dislocations and uncertainties, which I do not think need be very serious, that will follow from such a change.

If you would care to, I would like to have your comments on those two arguments which were presented to us most forcefully by various persons in Europe, both our people and the representatives of the countries we visited.

Secretary ACHESON. I attempted to make, not as vigorously as you have done, Mr. Judd, the very points you have made. The thing I was also pointing out is that you will need some kind of people grouped together—

Mr. Judd. That is right.

Secretary ACHESON (continuing). In an organization to do this work.

Mr. Judd. And we ought to preserve them as an organization because it is the best job, I think, of effective management our country has ever carried out in such a field.

Secretary ACHESON. What I was pointing out is: You will need some people to do this work after June 30, 1952, because the administration of our country's economic help to military production will continue through 1954 anyway, and possibly longer.

I am not asking the committee to adopt any one theory, but I am asking them when they solve this problem to have prominently in their minds also the need of having these capable people who have worked so well, as you said, for the Government, continue in their efforts and helping these countries in the military and economic assistance for military production after 1952.

Therefore, if you consider only the points which you and I have mentioned which lead to the desirability of showing that this old program has come to an end and we are on a new program, and if you consider only those considerations and say that ECA ends on June 30, 1952, period, then everybody is discharged and everybody leaves the Government. Then we come to 1952 with no organization existing which is able to carry our plans forward, and that I know the Congress does not want to have.

Mr. Judd. I do not either. We do not need to say that, or to discharge everybody.

Secretary ACHESON. If you can work out something or other so that these people can be assured their services will be needed for a different program after 1952, and that the program which is starting now will be continuing, you will have achieved the purpose I want to.

Mr. Judd. We have about three alternatives. We can keep three organizations in these countries as at present: The regular Foreign Service, ECA, and MDAP. Or we can merge MDAP and ECA into a security-aid organization with an economic branch and a military end-item branch. Or we can put both of them under the Foreign Service; that is, under the complete direction and control of the State Department. I judge that you prefer keeping the coordinating system we have at present. Those are the three main possibilities. It is our problem to work them out with the maximum benefit and minimum dislocation, and I am grateful for your views.

Secretary ACHESON. There are modifications of those three alternatives. You could say that the ECA, as such, under its present legislation, will continue until 1952. At that point it will go over to this other task. Its name will be changed and its functions will be restated by legislation at that time. Therefore, people working for ECA would know that they would in some way or other be continuing in this effort.

Mr. JAVITS. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. JAVITS. I just wanted to make the point that the International Development Advisory Board, headed by Nelson Rockefeller, came up with a specific recommendation that we set up a United States Overseas Economic Administration. I would like to point out, too, that I would like to associate myself with Dr. Judd's views on this question and advocate that we do go to a new agency and call it the United States Overseas Economic Administration.

The third reason for that is that this is a new program and it ought to be emphasized it is a new program and policy we are consciously embarking on, and, therefore, the views of the chairman are so pertinent as to the time limitation. I also feel strongly we have got to end ECA when we promised. This committee was gracious enough to give me the ball to carry on the 1952 date in the ECA 1948 debate. The House, in passing the bill, did say the program should end in 1952. I am for ending it in 1952, and let us with our eyes open go into this new Mutual Security Program. We have a blueprint for it in this recommendation of the International Development Advisory Board.

Mr. JUDD. If we end it in 1952, we are not cutting it off. It is because it has done its job, thank God.

Chairman RICHARDS. I remember when the bill came up in 1948 the gentleman from New York proposed an amendment be put in this provision to promote that, but there is certainly an implied obligation on the part of the committee and the Congress to do all we can to terminate it on that date.

Are there any questions on this side?

Mr. HAYS. Mr. Chairman.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. Mr. Secretary, in the Mutual Defense Assistance Act of 1950, there is provision for the President transferring as much as 10 percent of the funds from one item to another, and a provision that when this power is exercised he shall notify the Committee on Foreign Relations of the Senate and the Foreign Affairs Committee of the House, and also the Armed Services Committees of both Houses.

In title V, General Provisions, section 501 of the draft bill we are considering, no such provision is made for notifying the two committees of each House. I just wondered if there was any reason why that was omitted.

In other words, we found that was rather helpful to be advised of these transfers. I want to know if there is any reason why that procedure should not be followed.

Secretary ACHESON. I think there would be no objection to following that same procedure.

Mr. HAYS. Yes. We had in the Yugoslavia transfer, for example, some contacts with the executive department that were very helpful

in the understanding by the committees of that action. I wanted to pursue just a little the comment that you made, sir, the first day, with reference to the Italian and French elections, which you found encouraging. Is not the problem one largely of acquainting the people with the beneficial results of the program? That is where we lost ground.

For example, in Sicily it is not because there was any failure of the program, really, to extend it widely. We were not able perhaps to get that out among the people. Is that a fair appraisal of it?

I am pointing out that while it is true, of course, as you said, that there were gains in the municipal elections, there were also losses in localities. Do we not need to give more attention to acquainting the people with the fact that we are giving substantial aid to that group?

Secretary ACHESON. Yes. I agree entirely, Mr. Hays, and I think you are quite right about it, and we are redoubling our efforts to do that. We are already looking into matters that were brought up in questions to me yesterday, and I think in the very near future we will greatly improve our service along that line.

Mr. HAYS. Then it is true in Sicily, for example, that the benefits have been widely spread, as I understand it, and peoples that were in need of economic aid have participated?

Secretary ACHESON. I think that is true. Yes, sir.

Mr. HAYS. I think sometimes, Mr. Secretary, that we are rather timid in touching things that are delicate from a political standpoint. Take land reform, for example, of which the Communists have made so much. We have been too timid in espousing the American plan of greater equality of opportunity. Many of us were impressed with what you have done, for example, in Formosa, to correct abuses in the agricultural system, not by a sweeping change but by a more equitable division of income and less exorbitant rents.

I think a monumental job has been done in Formosa that we ought to capitalize and find ways of letting the peoples who are subject now to the Communist propaganda know how well the American system works when we put our hands to the problem.

I do not want to be too lyrical about the Formosan matter, but from what I know of our work in rearrangements in the agricultural system there it has been very effective.

Secretary ACHESON. That is quite right. I agree with you thoroughly, Mr. Hays.

Mr. JUDD. Except that it was almost entirely done by the Chinese. Our help was under a provision that is my baby, the Joint Commission for Rural Reconstruction, of which Mr. Moyer is the head. With just a little advice from us on how to do it, they did it.

Mr. HAYS. It was done by the gentleman from Minnesota, who is an American, and not a Chinese.

Mr. JUDD. It was conceived largely by some Chinese, especially Jimmy Yen. I was responsible for getting into the ECA bill a provision to set up a Joint Commission, with three Chinese and two Americans, which is the way to do such a job, to work with them and not to try to tell them. Because, if the two Americans are any good, their views will prevail. The Americans furnished the technical know-how, and the Chinese operated the program. It is the kind of thing that can be done in all these underdeveloped areas by imaginative leadership and sympathetic help, rather than by orders from the

top, or humiliating exposures of their inadequacies. Under those circumstances you do not get results.

Chairman RICHARDS. I was sure the gentleman from Minnesota could not go along without breaking out on that subject.

Mr. JUDD. Mr. Chairman, I thought I had been exhibiting extraordinary restraint.

Mr. HAYS. The gentleman from Minnesota and I are not too far apart, but I do not want him to be too modest, because this is an American plan, and I am even willing to give the Republicans credit for inaugurating it.

The Formosan action is highly significant, and we ought to capitalize on it and let the people of Asia know we did a job for the underprivileged people there.

Mr. JUDD. It is the only place where real land reform benefits have come to the farmers. The Communist program is a phony, and always was a phony. We give them real help.

Mr. HAYS. Yes.

Chairman RICHARDS. I should like to say for the benefit of the audience that these two gentlemen are very close friends, and there is something fishy about the whole thing.

Are there any question on this side?

Mr. REECE. Mr. Chairman.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. If I may, I would like to ask the Secretary if, after the Kem amendment was passed and before the National Security Council acted in setting it aside substantially, if the State Department communicated with the other countries concerned to the effect that the Kem amendment probably would be set aside and to disregard it?

Secretary ACHESON. No; we did not communicate to that effect and indeed the National Security Council has not set the Kem amendment aside, Mr. Reece.

Mr. REECE. I said "substantially."

Secretary ACHESON. No. I would like to state in a moment exactly what has been done, because I do not want any misunderstanding about that.

We have called in the representatives of all the countries except three, and those three have no substantial problems in connection with the Kem amendment. We pointed out to them what the requirements of the act were. We pointed out that we had this list certified by the Secretary of Defense, and that it would take a very considerable time even to get that list printed in English, and a longer time to get it translated into various languages that were necessary.

We pointed out to these representatives what the purposes of the Congress were in connection with the Kem amendment, the purposes for which we had been struggling for a long time and toward which their governments had made substantial progress.

We asked them on an urgent basis to get in touch with their governments to be able to establish exactly what they had already done toward accomplishing the purposes of the Congress; what further steps they could immediately take; and what were the greatest problems facing them in connection with the amendment.

Now, what the National Security Council did, Mr. Reece, in regard to the Kem amendment, was, to give an extension of time in order to give an opportunity to find out these very facts I have been talking

about, and to put in the hands of the foreign governments the list with the indication of what parts of that list are vital, and what parts are less vital. This was done by granting a general exception for a limited period of time. The National Security Council was faced with the proposition that you had to do one of two things. You either had to stop all aid while you set the machinery in motion, or you had to continue all aid while you got the machinery in motion. It seemed to us that the choice would have to be taken in the direction in which we took it. For the effects upon the whole program of stopping everything while the list was translated and put in people's hands, and while they were able to report to us what they could do in meeting it, would be disastrous, particularly at a time when we were pressing all these countries to extend their military effort.

But we will within the 90 days have these reports. We will take the matter up on a country-by-country basis, and do our very best to achieve the purposes of the Congress, which are also the purposes of the administration.

Chairman RICHARDS. Are there any other questions?

Mr. JUDD. Yes, Mr. Chairman. I have some questions.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Secretary, when the Marshall plan was originally before us, the whole philosophy and system of counterpart funds was worked out in this committee. One of the questions I recall we voted up and voted down a half a dozen times before we finally decided was how the counterpart funds would be controlled.

Some favored complete control by us because they are what the people of the recipient countries pay for the goods that are furnished. Some were for turning them over wholly to the recipient governments. We finally compromised on joint control.

There are now suggestions from certain responsible organizations and people in our country that there ought to be a basic change in that policy and that counterpart funds ought to be solely under our own control. Some of the organizations, like the American Farm Bureau Federation, have particularly in mind the so-called underdeveloped countries which may be receiving more help in the future. For example, when it was proposed that we give grain to India as a gift and get counterpart funds in return, some people felt the real way to get beneficial reforms and developments in India was for us to control those funds in Indian rupees and make sure that with them the irrigation, or seed selection, or health or educational programs that are most beneficial, would be carried out effectively.

I think an argument can be made both ways, as is true of most questions. I would appreciate your comment, if you have given the matter thought.

Secretary ACHESON. I should like the real substantive answer to that to come from Mr. Foster and others. But what I would like to say from the point of view of foreign policy is that I most earnestly hope the present method will be continued, and for the reasons which you most effectively stated a few moments ago, when you were talking about the Formosa land reform program. That is, if we do these things on a cooperative basis with the country and work them out together, we will get infinitely further and have a much better attitude in the country concerned than we will if we undertake to say that this capital fund belongs to us, and we will deal with it in your country

as we Americans think wise, and we do not want to have to be bothered consulting with you. The second approach would not produce as good an attitude for the very reasons which you gave, and I could not agree with you more.

I think the way to do these things is to do them by cooperation and by joint effort. As you very truly said, if our representatives are not good enough to sell a sound idea, then we had better get some who are, because I am sure we can do that, and we have done it very effectively in dealing with the counterpart funds.

Mr. JUDD. I appreciate your answer. There is the further fact that perhaps Americans could go in with more efficient organization and methods and get certain things done more rapidly. But when the Americans moved out there would be nobody prepared to carry it on unless it has been a jointly developed and jointly operated program.

Secretary ACHESON. That is very true, Dr. Judd.

Mr. JUDD. In your statement on page 13 you make a statement which I think represents a certain change in our foreign policy. You say in the middle paragraph on page 13, talking about this whole great crescent of countries from Korea and Japan to Afghanistan—

Our broad national objective in this area is to help the people develop independent and stable governments, friendly to the United States.

The significant change is that you omit the word "democratic," which for many years was always included in a phrase "independent, stable, and democratic governments." I have always objected to it. It did not put first things first. I want to congratulate you on this change of policy, because our first national objective is that these countries be independent and friendly so that their resources cannot be used against us by an enemy. Whether they choose our form of democratic government right away is not the essential thing. It is desirable and we want them to be democratic. We must help them become so. But I think it was always a mistake and impossible of accomplishment to require that as the prerequisite for our aid they, first of all, become democratic and go through the motions of a constitution and an election, which they did not understand and did not know how to handle well. Democracy usually comes after stability, in my experience, rather than before.

I believe this represents a genuine forward movement in our thinking with respect to the countries in Asia. It took England, as I recall it, 700 years from the Magna Carta to universal suffrage, and these other countries are going to have to take some decades, if not centuries, to accomplish the journey.

Democracy is a goal, and not the condition of our aid. What it seems to me you are now saying is that security is first, then stability, then reform. If independent governments do not produce reforms beneficial to the people they will be overthrown, but they cannot produce reforms until they are secure and stable. Is that an accurate statement? Does your sentence mean that, or was it just an inadvertent omission of a word?

Secretary ACHESON. No; I do not think it was an inadvertent omission. I think it was consciously done. For one thing, in the battle of words which is going on in the world "democratic" has suffered many casualties. All the Communist regimes are called People's Democratic Republics, and I think you are quite right here in what you

state, that we have not withdrawn from the idea that representative government and free institutions are the goal for which we should press with other nations. We are stressing here that independence is the great thing to start with. If peoples are really independent and they are not satellites of anybody, then we can begin to work with them, because they have got something which we understand.

We want to be independent, and we want them to be independent. If they want to be independent then they are the sort of people with whom you can do some business.

As you correctly say, there has to be stability. Maybe to get stability you will have to go a long way on certain reforms, such as the land reform that you were referring to a little while ago.

Then, insofar as they can move to free institutions and representative government we will help them in every possible way, but we recognize that is something that cannot be done overnight.

Mr. JUDD. On page 14, in the middle of the page, you say,

Poverty, disease, illiteracy, and resentments against former colonial exploitations—these are the turbulent forces that seethe in Asia, that move people powerfully.

I want to make more of a comment than a question. I believe that the most powerful of those forces in Asia is resentment against former colonial exploitation. I think Americans are projecting too much of their own ideas into other people's minds when they assume that poverty, disease, and illiteracy are as powerful factors, or that the desire to be free from those conditions is as powerful a motivation throughout the common people of Asia as it is among ourselves. It is, of course, in the case of those leaders trained in England or the United States. It is not so true by and large with the people, because they are still too unaware that conditions could be better. The resentment against colonial exploitation I think you will find to be deep and universal in those countries, because human dignity is the most precious thing a man has, and it is just as precious to the poor and illiterate, if not more so than to the more advanced. The bitter resentment of the Iranians against Britain is not so much because of financial reasons, I am quite convinced, as it is because of Britain's refusal to yield on certain matters of prestige, such as allowing even one Iranian to be on the board of directors of the Anglo-Iranian Oil Co., or allowing the Iranians to look at the books of the company, even though the royalties paid the Iranian Government depend on what those books show. I am sure the British books are completely accurate, but they will not let the Iranians see them.

You said that if Iran would be less emotional and would consider more its own interests, the problem would not be insoluble. But, rightly or wrongly, what the Iranians consider as their most vital interests is not oil production. It is dignity and standing and equality of status. Sometimes I suspect the British Government has not learned anything in this sort of thing since it lost the Thirteen Colonies unnecessarily, because it would not yield on certain matters involving most of all, equality of status. While we are helping to overcome the poverty, disease and illiteracy in Asia—and I spent 10 years of my life working at that—I think we ought to emphasize more and more that the biggest thing is to give them equality of status and recognition. Without that all the other things will not succeed.

I had a good illustration of that recently in France in a shop not far from the American Embassy. The wife of the shopkeeper was an American girl, born in New York. I had to sign a check on the House of Representatives bank and they found out I was a Member of Congress. We got to talking and her husband said, "If France goes Communist"—and this was the day before the election—"If France goes Communist you Americans will be more to blame than anybody else."

I said, "Why is that?" He said, "Because you have not had imagination enough in your dealings with the French people." He said, "You have done a good, effective job of general economic recovery in your usual efficient American way, but the people do not understand it. They know that most of them are better off, but they do not realize that Americans had much to do with it. They think you have just aided the Government and businessmen. The Communists come in and give a little tin of powdered milk to a mother, or a little bottle of cod-liver oil for a child, and the people say, 'That is wonderful. They care about us.'"

I said, "Well, we had two possible courses. We could carry on the same sort of personal aid and propaganda job that might make you as individuals feel better, but would not solve your problem. Was it not better to work at the long-term business of restoring your production and getting you so that your country would be solvent?" He said, "You are succeeding economically, but you are not succeeding politically." Then he added, "And you spent enough money to do both if it had been spent more effectively and with less waste."

I thought it was rather illuminating for a well-educated and sympathetic Frenchman to recognize that and state it in a candid way. I feel more keenly than ever before that we have got to find better ways along the line of the remarks of the gentleman from Arkansas to make sure this program and knowledge of its benefits reach down into their homes, and that it is the best way for us to help them, rather than to send in little individual hand-outs which would give them something immediately, but would not improve their country's situation.

I am sorry Mr. Chairman, for this long monologue.

Chairman RICHARDS. We always enjoy the gentleman's very strong observations, particularly at this time.

Are there any other questions?

Mr. REECE. Yes, Mr. Chairman.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. I would like to ask the Secretary if you think there is any danger that this program, instead of being a deterrent to Soviet aggression against the Western European states, may encourage the Kremlin to move against those states before the NATO powers are well armed? There seems to be a general feeling from the expressions which have been made that Russia, with the divisions, of which it has several, in Eastern Germany and in that area, could move at this time. I am just interested in your thinking on that.

Secretary ACHESON. Well, that raises a problem which is raised in connection with anything which is done in this whole area, Mr. Reece. If one takes the attitude that if one attempts to become strong so as to resist Soviet aggression then one will provoke Soviet aggression, the conclusion is that one must give into it. That conclusion is unac-

ceptable. That is not a possible conclusion. Therefore, if there are any risks that the attempt to create enough strength to resist aggression is going to provoke it, we just have to run those risks.

Mr. REECE. I do not want to put myself in a position where my comment might be interpreted in that way. I think the gentleman will concede there is one great force that is discouraging aggression, and that is the productive capacity and the economic strength of the United States. As long as we are able to preserve that economic strength in the United States and preserve and build this productive capacity that results from this system of enterprise of ours, there is grave doubt, it seems to me, whether Russia would feel in the long run that she could win in a total conflict.

As you well said in your statement, I believe Russia figures on the long-range result and tries not to embark on any course where there is any substantial risk of losing in the long run. My own feeling is that as long as we maintain our position of great strength here in the United States, that Russia cannot help but estimate that in the long run she is running great danger in starting another total conflict.

Secretary ACHESON. Mr. Reece, I of course agree that the great productive power of the United States and its power to produce all sorts of materials, military and otherwise, is a tremendous factor in the world. It is not, however, in my judgment, an effective deterrent for war if it is not harnessed into the task of transforming some of this potential power into existing power, or power in being. In other words, if, as you say, we do nothing to create power in being to meet an aggression, but we simply wait until it appears and then put this whole great power into production, I am afraid you will not deter war, you may furthermore get yourself into a situation in which the same miscalculation might be made that has been made twice, and, that the United States would not get into the struggle until it was too late.

Therefore, I think we must proceed to use this power in order to create forces in being so that the aggression will never start.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. I was a little concerned with your discussion with Dr. Judd about stability and independence in these countries, and the aim of this program. If we aim primarily for stability and independence and then let the development of human rights wait rather than to have those developments join right away with this program, do you not think that we would just be trying to maintain the status quo? Then we would be trying to hold in power the maybe inefficient and corrupt machines, and possibly maintaining, by the force of our own arms that we supply, the suppression of human rights and liberties abroad?

Secretary ACHESON. I think if we took that attitude we would be open to the criticism which you suggest, but I do not think we are taking that attitude, Mr. Fulton.

Mr. FULTON. So that your reply then to Dr. Judd did not mean in any way the American people were going to ease up either now or in the program that is in progress, or in the future, in the development of human rights and human liberties abroad?

Secretary ACHESON. I did not understand Dr. Judd to make that suggestion, and I certainly did not make any response to that question.

Mr. FULTON. I want to make it clear that is not the case. In addition to that, the program itself is not aimed to support any par-

ticular regime, or any particular group or clique in any governmental body abroad, is it?

Secretary ACHESON. No, it is not.

Mr. FULTON. May I ask then finally, is there any agreement with Britain, whatever, that if they prosecute any of these atomic spies or atomic scientists who have violated our security, that we will then not prosecute? Do we have any agreement on a diplomatic level, for example, that when Klaus Fuchs is tried abroad under the British law for security reasons that we then do not bring him over here and try him for the claimed offenses against our Government which he committed in our country?

Secretary ACHESON. No, sir. There is no agreement of any such character.

Mr. FULTON. Is there any movement on now to extradite him before the Rosenbergs are executed?

Secretary ACHESON. I am just not informed about it, Mr. Fulton.

Mr. FULTON. That is all.

Chairman RICHARDS. Mr. Secretary, we thank you very much. You have been very patient and very frank. We will have Secretary of Defense Marshall as our first witness in the morning. When the committee adjourns it will be until 10 o'clock tomorrow morning.

We have five additional minutes. Dr. Judd would like to ask a question.

Mr. JUDD. In your statement, Mr. Secretary, and in all the discussions on this issue, emphasis is properly given to the great productive capacity of Western Europe. Second to ours, it is the best workshop in the world. Yet it is disturbing that we are having to produce and send to them out of our resources so many things they are capable of producing themselves.

What puzzles me is how to do the short-range emergency thing that needs to be done by us, and at the same time succeed in getting them to make the maximum effort for the long run.

I do not want to mention any specific countries, but here is an example. We were in a country which has a very considerable machine tool industry, and is able to produce a great deal of small arms and ammunition. Yet we are shipping to its neighbors small arms which it could produce just as well as we. At the same time we are constructing for that country some ships like mine sweepers, which can be produced in Europe by its neighbors. We are making brand-new ones and sending them over to it. Now, it would like to have orders to make small arms, but the other countries do not give it orders. If they bought from the country in question small arms and ammunition, they would have to pay for them. If they get 30-caliber ammunition made in the Twin City Ordnance plant in my State, they do not have to pay for it. You and I pay for it.

Now, how can we mobilize the full productive capacity of each country for the whole area, beyond its needs for its own rearmament? We discussed this time and again, and I am not satisfied with the answers.

When the original MDAP bill came along in 1949, four of us on this committee offered an amendment to reduce the actual appropriation by 50 percent until we saw whether they were going to do their part. It was not because we were against the full amount, if well spent, or were engaging in an economy drive. We were trying

to give them an incentive. We wanted to say, in effect, "We will advance our side of the line half way down the field. Now you come along with your part; and then we will go the rest of the way with ours." It was passed in the House but defeated in the Senate.

Now, I have been toying with the idea of whether we should not try something of that sort again. It is not to issue a threat, but to provide an incentive. It would be on this basis: "To the extent you mobilize to the utmost of what you can do, we will provide whatever amount is agreed upon. The more you do, the more we do," rather than say, "Here is our whole amount right now without any conditions." Do we not encourage them to rest on us more than they need to, if we pay it all in cases where they can do more themselves? There is no more troublesome problem in the whole situation than this one. Could you help us on that?

Secretary ACHESON. This is, as you say, one of the major problems with which we are concerned. I think it can be very fully discussed with you by the ECA witnesses, and by the military ones, when you get down into a detailed consideration of it. The problem is exactly what you stated. How is it possible to get all the productive facilities of Europe working on some sort of a pool basis? We are at this very moment having the most intensive work done in the Defense Department and in ECA with our people sitting in to see what possible way can be found to solve that problem. It will not, I think, affect the amount which we will need to send them now.

However, you are quite right, that there is productive capacity which at the present time is not being used. The problem is a financial problem. If that can be solved, then you can get these people to work. But there is just not enough leeway now of transferable funds to work that out. We are at work on it, and maybe we can find a solution. We have to find a solution because there is productive capacity that can and must be fully utilized.

Those who know far more about the solution of the problem than I do will be prepared to give you their best judgment on it.

Mr. JUDD. Thank you, Mr. Secretary.

Chairman RICHARDS. The committee stands adjourned until 10 o'clock tomorrow.

(Whereupon, at 11:45 a. m. the committee adjourned until 10 a. m. the following day, Friday, June 29, 1951.)

THE MUTUAL SECURITY PROGRAM

FRIDAY, JUNE 29, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee room, New House Office Building, at 10 a. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

We are continuing the hearings on the so-called Mutual Security Program. We are fortunate to have with us this morning the distinguished American, the Secretary of Defense, General Marshall, who will testify.

General, do you have a statement that you wish to make?

General MARSHALL. Yes, Mr. Chairman.

Chairman RICHARDS. Will you proceed, please?

STATEMENT OF GEN. GEORGE C. MARSHALL, SECRETARY OF DEFENSE

General MARSHALL. Three years ago, as Secretary of State, I appeared before the Congress in support of a plan to assist the countries of Europe to recover from the devastating effects of a major war.

These countries had emerged from the war with disrupted economies and war-weary populations. Congress, in recognizing the fact that this situation endangered the establishment of a lasting peace, enacted into law the Economic Cooperation Act of 1948.

As the reviving economies of Europe diminished the threat of internal subversion, the fear of external aggression became the great menace to the stability of our common effort.

The Mutual Defense Assistance Act of 1949 was a recognition of the existence of the disruptive element of aggressive force. Now in 1951 our goal continues to be a free world of nations with strong and healthy economies.

I am here today in support of a Mutual Security Program which integrates our programs of military and economic assistance as a bulwark against the threat of these aggressive forces.

There are in the world two great centers of power and influence. One of these is the family of the free nations. The other is the Soviet-controlled group. The United States is the keystone of the free world, and must be the leader in resisting the Soviet threat.

The strength of a nation does not depend alone on its armies, ships, and planes; it is also measured by its qualities of leadership, by its resources and industries, by the determination of its people, and by the strength of its friends and allies.

We are now engaged in building up our military and matériel strength, and as part of that effort we are assisting other nations in preparations for their own defense, those nations whose strength will contribute to our security.

The security of the United States rests on our own strength and on our unity with the other friendly nations. To develop unity this Government has joined in regional arrangements through the North Atlantic Treaty and the Rio Pact.

It would be quite unwise for us, in my opinion, to rely solely on our own strength. The most effective and least costly means of insuring the security of the United States is through collective security. Less than two years ago the Congress by passing the Mutual Defense Assistance Act and ratifying the North Atlantic Treaty, recognized this factor and formally endorsed the concept of collective security.

This has seen its greatest realization in the development of the North Atlantic Treaty Organization. The other free nations of the world are receiving our assistance to organize their defenses. This is a project of self-interest for this country, of the highest and most pressing urgency.

Our experience with the administration of military assistance to free nations since 1949 has been encouraging. The free world is stronger today because of such military assistance and the strength will grow.

I am not implying that we have solved all problems of mutual defense or that they will be solved completely in the next year, but I do believe that the results already attained justify further American investment in a Mutual Security Program.

I have stressed the word "mutual" because this must be basically a program of partnership. The nations that have been given assistance have joined with us in collective security measurements.

They are raising, training, and organizing troops to support mutual security. They lack certain items of military equipment that they cannot produce or cannot produce in time to meet planned mobilization schedules.

Our assistance basically consists therefore in furnishing them with certain matériel and equipment and of helping them to develop their own organization, training, and production facilities so that they can more readily take care of themselves. In other words, we propose to help them to help themselves.

The extent of the mutual assistance already given the free nations since the enactment of the Mutual Defense Assistance program in 1949 and through May 1951 has been significant.

There has been shipped more than 1,400,000 measurement tons of equipment, exclusive of aircraft and naval vessels delivered under their own power, as follows:

Eight hundred and ninety thousand tons to the countries of Western Europe; 380,000 tons to the Middle East, and 160,000 tons to the Far East. The major items of equipment already transferred include more than 4,300 tanks and combat vehicles, 2,750 major artillery pieces, 18,000 general-purpose vehicles, 850 aircraft, and more than 175 naval vessels and small craft.

Boxed and crated equipment included small arms, mortars, recoilless rifles, bazookas; electronic equipment, and millions of rounds of

ammunition. This equipment is valued at more than one billion dollars.

To insure proper use of the equipment and to provide a nucleus of instructors for improved training within their military establishments, our Armed Forces schools in this country and abroad are training, or have already graduated, as a part of the military assistance program, more than 12,000 foreign students.

With the aid of the military items already furnished, the nations concerned have now laid the foundation for their more effective defense. There should be a continuous growth of real strength as deliveries of military equipment are increased.

The campaign in Indochina offers an excellent example of the practical effect of such deliveries. In January, the Communist Viet Minh troops, equipped and trained by the Soviets and their satellites, were driving in full force against Hanoi, the capital of Tonkin.

The timely arrival permitted the use by the Franco-Vietnamese troops of planes, artillery, and napalm bombs supplied under the Mutual Defense Assistance Program in halting the Communist attack less than 20 miles from its objective. Some of the equipment was landed in Indochina less than 2 weeks before the battle.

While the courageous conduct of the French and Vietnam troops was responsible for this military success, the timely military aid may well have provided the needed margin for victory.

That victory has served Vietnam as a tonic. Since then it has steadily increased its armed forces. It has greatly expanded its training program. It has pledged 55 percent of its revenue to national defense.

While Vietnam is the most dramatic example of the impact of United States aid in stemming the aggressive aims of the Kremlin, the result of such support in Greece, Turkey, and the Philippines has been far reaching.

A crucial test of the success of the Mutual Security Program must be met in Western Europe. Military assistance to these nations offers the best prospect for the success of our collective security efforts.

The North Atlantic Treaty Organization has been in existence less than 2 years. The members have agreed to concentrate on the creation of balanced collective forces for the NATO area as a whole rather than attempt to build up in each country the forces deemed necessary for its own independent defense.

The acceptance of this principle involving difficult and often unpopular departures from national traditions demonstrated a willingness to rely on others for tasks vital to a nation's own defense.

The North Atlantic Treaty Organization has recently improved the machinery of its operations. It has taken affirmative steps to mobilize defense efforts. The military committee, its standing group and subordinate command headquarters have been established and are operating.

General Bradley, who represents the United States on the military committee, will discuss this subject with you.

The recommendations of the military committee as to the forces to be provided by each member country have been approved by the Defense Ministers and received governmental agreement as the desired objective.

The Defense Ministers have recommended to their respective countries the adoption of basic principles for effective training and mobilization procedures and measures for the maintenance of sufficient trained military manpower. The establishment of an integrated defense force has been approved and is in process of organization under the leadership of General Eisenhower.

The organization of the military procurement and production of the NATO nations is being pressed so as to secure the maximum production at least cost and in the shortest time possible.

All of the NATO countries (in Western Europe), except Iceland which has no army, have compulsory military service. Since the signing of the treaty, five have extended their training periods.

All of them have tightened the conditions for exemption from military service. Since the receipt of equipment from the United States, the quality of training among all of them has improved. Morale has improved. The confidence and the determination of our treaty partners has grown considerably in the past year. An added sense of urgency has been developed among them.

The United States has taken more positive steps to meet the dangers of our times than have the governments of Europe. I regret to report that some, for one reason or another, have not seemed to do all that they could do. They have their problems, of course, but so do we. I make this comment because we should not build up in any one country a false sense of security in the belief that present efforts are adequate.

In the Near East, in response to request for aid, we have entered on a grant basis into bilateral mutual defense assistance agreements with Greece, Turkey and Iran. Improved conditions in Greece and Turkey today are in great measure the result of such assistance.

We are continuing our mutual assistance to these three countries to enable them to maintain internal security and to increase their capability to resist external aggression.

The maintenance of stable conditions in this area is just as important as the development of military strength. Economic stability and military security taken together are the most dependable antidotes to communism.

In Asia, we are proceeding along similar lines. In Formosa we are strengthening its military defenses and have increased both the size and the scope of our military assistance advisory group to that island. In Indochina and in the Philippine Islands our military assistance continues to support successfully operations against the spread and influence of aggressive communism.

In the Western Hemisphere the need for cooperative defense has become increasingly clear to our American neighbors. Under existing legislation, we have been providing them with military equipment on a reimbursable basis. We have assisted Canada in her rearmament program. We have also made considerable progress in the standardization of equipment among the nations of the Western Hemisphere.

At their meeting in Washington earlier this year, the Foreign Ministers of the American Republics charged the Inter-American Defense Board with preparing as vigorously as possible the military planning for their common defense.

That task is now being rapidly carried forward. To assure a more active role in the defense of the Western Hemisphere by the Latin American Republics a plan of grant aid will have to be undertaken.

The full program should associate the military and strategic resources of the other American Republics with those of the United States and assure the delivery of essential strategic materials and the accomplishment of hemisphere defense tasks.

I have dwelt largely upon the military assistance aspects of the Mutual Security Program. Now I wish to emphasize the great importance of its economic features. Under the Economic Cooperation Act of 1948 the free nations of the world have made a remarkable economic and spiritual recovery.

Now when they are in a position to reap the advantages of their renaissance, they find themselves, just as we find ourselves, in a position where we must strain our economy to become sufficiently strong in a military way to deter, and if necessary to resist, aggression.

The need for prompt rearmament and the importance of giving economic support to the defense of the free nations make it essential that economic assistance be continued by the United States.

Economic aid in varying size for the individual nations will be required for the following general purposes:

1. To support rearmament programs among nations which might become impoverished if they had to depend solely on themselves.

2. To enable some nations to produce their own munitions, especially in Europe where armament facilities can be adapted to produce modern equipment. Such production could relieve the United States ultimately of a continuing grant-aid program.

3. To assist in the financing and building of civil facilities required to meet military plans, such as communications, airfields, and harbors.

4. To strengthen the underdeveloped areas of extremely low standards of living, low standards of literacy, poor conditions of sanitation and health and high death rates. There a large part of the world's natural resources are found and there the Communists are trying to exploit the impoverished situation to their advantage. It is the tradition of the United States to aid the aspirations of people to improve their lot. This is the time when American self-interest and the welfare of the peoples in the underdeveloped areas become a common cause which can be advanced by a judicious distribution of our economic assistance.

In urging these measures of foreign aid, the Defense Department is keenly aware of the cost involved and especially that this cost must be added to the funds required for the defense of this country and its interests overseas.

Foreign aid will represent about 15 percent of our total defense budget. We consider the investment necessary because we believe that it will strengthen the security of America and of the free nations.

The duration of the military assistance program, must depend on future events. All things being equal, and I realize that things will not remain static, I feel that the requirement for funds for our Military Assistance Program will be at least the same level in fiscal year 1953 and in fiscal year 1954 as is being requested for this fiscal year.

Thereafter most of the European countries should be in full production, their initial rearmament well under way, with general financial capabilities to maintain such a level of defense, so that their requirements for military end items from the United States can be substantially reduced.

The requirements of each of the nations participating in this Mutual Security Program have been examined carefully in the light

of our own plans and resources, and the capabilities of each nation to help itself. The program is designed to keep war from our shores, to discourage attack on ourselves and our friends, and to support the principles of freedom which are our heritage.

In brief, I believe that the Mutual Security Program, which will be presented to you by other witnesses in more detail, should be authorized by the Congress of the United States.

I would like to add more informally, Mr. Chairman, an expression of my feeling that this program is integrated with our general program, specifically our recent budget request of the Congress for some \$60,000,000,000. All of these matters have been considered together. At the present time I consider the foreign aid program of major importance to be done as quickly as it can be managed. It has tremendous importance—tremendous significance—and a great psychological influence on what happens in the world among our friends.

Chairman RICHARDS. Thank you, Mr. Secretary. We will proceed under the 5-minute rule now.

Concerning that last statement you made, I want to ask a question. You have a \$60,000,000,000 budget for our own defense establishment at home. You have a request here of \$8,500,000,000. Something over 6 million is for military aid, and over 2 billion for economic aid.

You testified very forcefully to the effect that you feel that the passage of this legislation is necessary, and a wise step in the interest of the security of the United States.

In your mind, Mr. Secretary, from the standpoint of security, how does this proposal compare with the \$60,000,000,000 budget request in importance? Would you say they are equally important, or is one more important than the other?

Secretary MARSHALL. With respect to timing I think this is the more important at the moment. Certainly it is hard to say that they are on equal ground or not on equal ground. As a matter of fact, I think this is the best answer I can give to your question: Both programs are part and parcel of the general plan, and they could have been put in a one-budget approach to the Congress. That, however, would not have been a favorable method of having them considered, because there is so much difficulty in making clear the various issues involved, and just what portion was foreign aid, and what portion was the \$60,000,000,000 program. They are all part and parcel of the same plan.

The \$60,000,000,000 program creates a reaction very specifically and naturally among the taxpayers. This bill does too, but \$60,000,000,000 is a much larger amount of money.

This particular bill will create a very impressive reaction all over the world among our friends. It is exceedingly important that they have the earliest possible assurance that we are going ahead with the general build-up plans. This is a part of these plans, of which the \$60,000,000,000 is a part. It is all, you might say, in the same fund because we are arming their men to fight in the common cause. I think we have to keep that in mind. The \$60,000,000,000 bill is in part for arms for our men. This bill is for arms for their men.

It certainly is common sense, I should think, that we carry out, or that we bring into useful employment, as much of the manpower of our allies as is practicable. That is greatly to our own advantage, that is, to the advantage of our own security, and it tremendously strengthens the situation of the free nations in the world.

All of that is involved in this, and further, I think you have to bear particularly in mind the tremendous psychological factor. Aside from the convenience of Congress in understanding the matter more clearly that would be one reason, for instance, to make this a separate bill. However, it might be lost if we would come in and ask for \$60,200,000,000, or whatever the exact amount is, which would be the approximate Defense Department budget, if these two are not separated, but they are all part and parcel of the same plan.

To put them into effect, the Congress has confirmed these treaties and our North Atlantic Pact procedure, and this is part of it. This enables us to go forward with that. That, I think everyone will concede, is of tremendous importance.

There are feelings, and I stated it very specifically in my formal comments, that some of the nations are not going forward as rapidly as we think they should, but even there I think we should bear in mind we are dealing with nations that have been under the aggressor's heel for years, and have had their wrecked economy to recover, and their spirit and their courage to revive. Their picture is quite different from ours in the human reactions. They have had great political complications, and I think gradually they have triumphed over all those difficulties. They are now at the crucial point, from which I think progress can be made far more rapidly than during the past year and three-quarters of organization.

Chairman RICHARDS. Then, Mr. Secretary, you feel from the standpoint of our own national defense that this proposal is just as important as the \$60,000,000,000 budget proposal itself?

Secretary MARSHALL. Yes, sir. It is part of the same plan.

Chairman RICHARDS. Dr. Eaton.

Mr. EATON. Mr. Secretary, I take it that your testimony is based upon the fundamental conviction that the whole world is engaged in a struggle between freedom, on one side, led by the United States, and slavery on the other side, led by Russia. Is that correct?

Secretary MARSHALL. Yes, sir. That is correct.

Mr. EATON. There are only two possible ways for us to go. One is for us to continue to fight until we win, and the other is to surrender and become enslaved. Is that correct?

Secretary MARSHALL. I am not trying to disagree with you, Dr. Eaton.

Mr. EATON. Can we exist half slave?

Secretary MARSHALL. We would find our way of life completely changed.

Mr. EATON. Our what?

Secretary MARSHALL. Our ways of life completely changed.

Mr. EATON. I have said your testimony is based upon the fact that we are facing one of the most serious moments in our history and the history of our world. Is that right, sir?

Secretary MARSHALL. I think it is one of the most critical periods of American history.

Mr. EATON. Yes. Thank you, Mr. Secretary.

Chairman RICHARDS. Dr. Morgan.

Mr. MORGAN. Mr. Secretary, in the testimony of the Secretary of State it was brought out that the cost of this program in the next 3 years would approximate over \$25,000,000,000. Do you believe that

the progress today of the NATO organization justifies this further investment?

Secretary MARSHALL. Yes, sir. I do.

Mr. MORGAN. Mr. Secretary, do you believe the admittance of Greece, Turkey, and Spain to this program immediately would add to its strength?

Secretary MARSHALL. I think it would. Of course, Greece and Turkey are recipient countries under this program.

Mr. MORGAN. That is all, Mr. Chairman. Thank you.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, may I follow up Dr. Morgan's idea a little? This is a tremendous expenditure of \$60,000,000,000, and the sum involved in this particular bill is \$8,500,000,000. I am wondering upon what basis you feel that the United States can stand the impact of that sum upon its economic life, remembering always that there are many other expenditures that have to be met.

Secretary MARSHALL. Mrs. Bolton, I think the financial and economic factors are of the greatest importance to us. In one sense we have not much choice. We are confronted by a situation. What are we going to do about it? Can our economy stand this further stretch?

Now, it is specifically for this reason that I exerted my efforts over a long period of years in connection with universal military training, because I felt if we did not have some such system we could never have an enduring system of defense, for we would be wrecked financially. So, my interest has been concentrated on so organizing our affairs in connection with our position in the world as to military posture, that it could be maintained through a period of years without ruining us financially.

Here we have a situation which, from my point of view, we cannot avoid. We have to do the best we can with it. What we have done is to conduct the most searching screenings abroad with these people, and here at home, to cut down all of the nonessentials we can locate, and in putting this in a form or in a manner that seemed best adapted to our general interests and security. However, I will repeat again that we have a limited choice unless we resign ourselves to a tragic situation.

Mrs. BOLTON. Do you feel that the country can take this truly terrible financial drain upon its resources.

Secretary MARSHALL. I feel it can take it, but I am quite certain it cannot take it indefinitely. That is one reason why when I was involved in the question of the European recovery program, I felt it must be put on a very definite basis of termination and no doubt about it. It has seemed to work out very well on that basis. I am told now—I am a very poor witness because I am not sufficiently familiar with all of the factors—but I am told now that except for Greece and Italy and one other country, they can pretty well get along by themselves.

Mrs. BOLTON. Mr. Secretary, you spoke of cutting down on non-essentials. I think that is one of the phases of this whole program which troubles a great many of us. We would like to see a more realistic approach to economy within the defense groupings of the United States. We do not like to find that blankets, for instance, are being sold as surplus at \$2, while new blankets and far better blankets than any of us have in our homes, are being stipulated as necessary at

twenty-odd dollars apiece for the new army. Why cannot the old ones be used?

One of the most responsible Members of the Congress told a group of us the other day that he has had the personal experience of seeing blankets being cut in two and then sewed together again by women employed for that purpose, so that they could be sold as surplus.

It is matters of this kind, Mr. Secretary, which reduce the confidence of the people in the whole defense planning. It is one of the reasons why some of the congressional group are determined on having cuts in the programs, because they feel that until the cut hurts, nothing will be definitely done about it.

Secretary MARSHALL. I would say, Mrs. Bolton, that this is a case where you must be very careful you are straight on both ends, that is, cause and effect, and particularly cause. You have expressed the term "Defense Department" two or three times. I do not think we are selling surplus property that has utility.

Mrs. BOLTON. Some of us, of course, had experience with the throwing away of matériel at the end of the war that we verified through the Department. We saw the utter wastefulness of it, and the utter, utter lack of any understanding of what it is to use what one has. It has left us with a very bad taste in our mouths for many of the things which are appearing today.

I mention this because I think it is exceedingly important that the Department of Defense become thoroughly aware of the attitude of the people of this country. They will not be willing to take on \$66,000,000,000 in that one item of expenditure alone unless they are certain that a great deal of it is not going down the drain or into the ocean, the way it did before.

Secretary MARSHALL. I will add to what I have already said, Mrs. Bolton. I do not know how many committees we have that are inspecting all over the country, trying to find where they followed the old conventional pattern of using more people than are necessary in doing this or doing that. Of course, we get a great many letters calling our attention to alleged wastefulness, and we also receive a great many letters from Members of Congress calling our attention to such matters. Each of us—Mr. Lovett and myself—has put somebody on the trail to find out just exactly what the true conditions are. I would say that 1 time out of 10 we find something that needs to be corrected urgently.

Mrs. BOLTON. The method of sale and the actual destruction of surplus goods has been a pretty bad business.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Mr. Secretary, it is good to see you this morning. Before I start I would like to say that I appreciate your posing for a picture with some of my good constituents and friends who are sitting in the back of the room. I hope I can get a copy of the picture.

I have one question, Mr. Secretary. Do you think there is a good chance that Europe can successfully carry most of the burden for the common defense of that area, considering both manpower and production, within the next few years?

Secretary MARSHALL. Well, of course, the first question is just exactly what do you mean by "the next few years." I have already stated that I think it will be advisable to recommend the appropri-

ation of a sum similar to that in this legislation for the 1953 and 1954 fiscal years. I would feel that there could not be a sudden drop-off at that time, but I do feel we will have accomplished all of the basic preparation, and I would hope we will have been able to arrange things so that the provisions as to raw materials and matters of that sort will be taken care of. We will have put recipient countries generally into production along these lines, and that maintenance could be very quickly taken over by those countries and thereby relieve us of that charge.

The eventual replacement of the major matériel that they probably would not be equipped to turn out will have to be considered at that time, but I should imagine we ought to get them into a condition where they can make that on a reimbursable and not a grant basis. It should be a phasing off.

I am going ahead with the feeling that we should be able to carry that out pretty rapidly. Of course, there are a great many imponderables and the situation changes from time to time. I am convinced that we cannot go on with this business indefinitely. That cannot be done. I am as convinced of this just as I was convinced that we could not go on with the ECA indefinitely, and that will not have to be done. I hope this works out on that same basis.

We are trying to consider the pros and cons very carefully and do it in such a manner in our agreements with them as to what we will do and what we will not do on the current supply basis, so that it will permit of the development of the situation along the lines I have indicated.

Mr. BATTLE. Is it true, Mr. Secretary, that there is a vast amount of manpower in Europe which will be available as soon as they can be equipped and supplied?

Secretary MARSHALL. Yes, sir.

Mr. BATTLE. This should relieve our burdens along that line considerably?

Secretary MARSHALL. It will, I hope, very much.

Mr. BATTLE. Thank you, Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Secretary, when you were testifying before us about 3 years ago, on the plan which bears your name, I asked you this question, and I bring it up because of the current negotiations or prospective negotiations with various countries regarding a cease-fire in Korea. I said:

If North China and Manchuria should be taken over and organized by the Communists, do you think our position in Korea will long be tenable?

You left out the word "long" in your answer and said:

It will not be tenable.

My question now is, if there is a situation where we and the Communists, including the North Korean Communists, and the one million or so Chinese, cease fighting in Korea, but they still control Manchuria, do you think it is possible for Korea to be secure and independent?

Secretary MARSHALL. Dr. Judd, I would say that to a considerable extent that is going to depend on our own state of power in the Pacific, and the status or military posture of the nations of the free

world. That is all involved in it. Geographically, Korea presents a very weak spot for defense by us and the other nations concerned.

Mr. JUDD. Or by itself.

Secretary MARSHALL. Well, by itself too. But I think there has to be taken into consideration what the situation is if we are powerful in the world. At the time I made that statement I think we had one and one-third divisions in the United States; and Korea, in my opinion, under conditions like that, was utterly untenable.

Mr. JUDD. If we are trying so hard to get out of Korea now, would you suggest we go back in—

Secretary MARSHALL. I am suggesting, Dr. Judd, that the chances of our having to go back in become very much more remote.

Mr. JUDD. Do you think the prospects of our going back in—

Secretary MARSHALL. I think, Dr. Judd, that a large part of the development of this Korean tragedy came from our weakness and the feeling in the world that we were weak and nothing would be done about it. From then on there came a great change in the attitude of the world, and our own position of strength, and that plays quite a part in the matter.

Geographically, as I said, there is a great problem of defense, but our own position of strength and that of the free world has a decided influence on what may or may not occur in Korea.

When you consider the subversive side of it and matters of that sort, that is quite a different problem.

Mr. JUDD. One of the reasons we are trying to get out of Korea and have been pursuing the Communists for months to try to get them to give us a chance to dicker with them is, I understand, in order to concentrate our strength in Europe, which is considered more important. If when we have greater strength, we move it to Europe, is that going to have much influence on events in the Far East?

Secretary MARSHALL. I think you have made a statement that a little overextends the situation. What we do not want to do is to commit ourselves on the continent of Asia any more than it is absolutely necessary that we should do.

Mr. JUDD. That is right.

Secretary MARSHALL. We are not talking about Japan at the present time, or places of that sort, but it is very unwise for us to have any serious commitments that may lead to greater commitments on the continent of Asia.

Mr. JUDD. You know that I have agreed with you on that for more than 3 years, and opposed sending our land forces where they are now.

What do you suppose the Communists in China are likely to be doing if they extricate themselves from their present difficulties in Korea?

Secretary MARSHALL. I think first they have to reorganize some armies pretty much from the ground up in order to recover some of the strength they had. I would hope they are going to have difficulties among their own people because of what has been suffered in this, although I realize their people learn very little about it except that their own intimate members of their families do not appear again, or do appear crippled. I think that while we need not expect an olive branch to be held out, we will be regarded with much more respectful consideration than we have heretofore.

Mr. JUDD. Do you not think that maybe one of the reasons they want to get out of Korea now, if they do, is so that they can reorganize their forces at home and also liquidate the increasing opposition there? Japan's great mistake was in attacking us before she had liquidated Chinese resistance in her rear.

Secretary MARSHALL. That would lead to the observation that we should not get out, and I do not agree with that at all.

Mr. JUDD. I am not trying to lead to that observation. I am trying to get your views because I know you must have considered all of the various alternatives and you are a military expert and I am not.

If the Communists get the opposition liquidated, as they probably could and would, and then a rebellion starts, say in Burma and they send a million Chinese "volunteers" into Burma, would you suggest that we organize a "police action" in Burma or urge the United Nations to go into Burma, and we be back on the continent again? Or would you let them take it?

Secretary MARSHALL. I would say at first they would be very hesitant to go into Burma, because they have had quite a lesson in Korea, and I think they would hesitate quite a bit before they would move into Burma, except by subversion and by methods of that kind.

However, what I would recommend on that I would not state here publicly anyway.

One of our difficulties is we are telling everything in the world that we think and are going to do, and we learn nothing whatever about the other side.

Mr. JUDD. And more often we tell what we are not going to do, which is even more dangerous.

Chairman RICHARDS. The gentleman's time has expired.

Mr. JUDD. I will be back later.

Chairman RICHARDS. All right. Mr. Zablocki.

Mr. ZABLOCKI. Thank you, Mr. Chairman. I have no questions.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. I am glad to see you, Mr. Secretary. I am one of those who has been opposed to many of the policies of the Administration, but I do respect you as a fellow patriot. I know you are doing the best you can for the United States. I am disassociating myself in my disagreements from people who are opposed to you in another fashion.

I would like to ask you about the fact that we need this military support abroad as well as the economic support that you had previously recommended. We have 7 percent of the world's population and we get a large part of the 65 strategic materials from abroad. Would you say it is necessary to the security of this country to have this program in order, first, to insure the defense of our shores; and, second, to insure that we have the sinews of defense, that is, the strategic materials?

Secretary MARSHALL. I would say that is correct; but, of course, you have to consider along with that, the factor of maintaining our friends in a free world. The fact that the great technical skills are there, and the manufacturing facilities are there, particularly in the Ruhr district, must be considered, and the fact that the loss of them to the Soviet regime would put our position with respect to matériel factors as well as to population resources in a very sad way. So, all of those things are involved, definitely. I am glad you brought out

the point that the strategic materials and the certain facilities that we are hoping to create in those countries for our use are of immense importance to us.

Mr. FULTON. In respect to Korea, might I recall to you that the thirty-eighth parallel happened to be an accident, because it was merely the method of taking over, as we all know, the adverse forces in North and South Korea. I wondered whether it would not be possible to disregard the talk of the thirty-eighth parallel if we are negotiating for a settlement and, rather, look at the best place where Korea might be held militarily and developed economically, and base our approach to it on that.

There is no doubt, I believe, that the best line would be, for example, at Tokchon, Anju, and Hamhung. That is a line from the west to the east along the waist of Korea. If that is the case, then in the part we would be holding there would be all of the northern industrial part of North Korea north of the thirty-eighth parallel, and in addition we would have a road across at the waist, running from east to west.

Now, on the other hand, if you take the thirty-eighth parallel and we retreat or move back from that, we then are left solely with the agricultural part of Korea that will not be able to support itself, because the industrial part will then be almost entirely in the North Korean part of it. The Communists hold that, and they will again subject to these pressures the thumbnail tip of Korea.

As between the thirty-eighth parallel as a line of demarcation, and a line that might run along the waist, solely as a military matter, could you tell us which would be the best to be held in the future for security?

Secretary MARSHALL. I think your analysis of the situation is very interesting. I take no issue with it, but I must say that I do not feel I should discuss here in open session a matter of that kind, at this particular time especially.

Mr. FULTON. I will not discuss that further. The South Koreans have certain reserves which we were talking about training and helping, numbering, I think, in excess of 100,000 men. Those reserves have been now in large part released. Why was that done? Why could we not train those South Koreans to help defend their own country and thereby relieve us of either asking for more troops from abroad or from supplying our own men?

Secretary MARSHALL. I would say in part when you use the word "reserves," that is a designation that was made politically in South Korea and does not quite fit the circumstances. That particular factor has been discussed, I think, quite frequently. So far as the military authorities are concerned on our side, it was felt to be both an impractical and unwise procedure. We were making every use we could of their people to the best effect that we could, it seemed, and I would not wish to state here in open session—

Chairman RICHARDS. Mr. Secretary, if you testify at all on that question, would you not rather testify in executive session?

Secretary MARSHALL. That is what I was going to say.

Mr. FULTON. I would be glad to have that done.

Secretary MARSHALL. It would be very disadvantageous to go into frank statements regarding that, except to say that the terminology used was a political terminology that did not fit the military circumstances.

Chairman RICHARDS. The time of the gentleman has expired.

Mr. Ribicoff.

Mr. RIBICOFF. Thank you, Mr. Chairman. I have no questions at this time.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Secretary, we are very glad to have the privilege of getting your views and opinions again. I am going to ask you a question. If you feel you would rather not answer it on security grounds, I know you will say so.

I gather from what you said in response to Dr. Judd that one of the limitations upon our freedom of action as to whatever we thought we would like to do with respect to the Korean situation, was our military inadequacy.

Secretary MARSHALL. That is correct, sir.

Mr. JAVITS. Therefore it is intimated now that we and the other free peoples may begin soon to proceed in terms of international guaranties of the inviolability of territory, because we will be able to back it up?

Secretary MARSHALL. That is correct, sir.

Mr. JAVITS. The arguments that have been made about the fact that we have not gone to the seat of the difficulty, that is, those who were fomenting this aggression, has been attributable to the fact that we could not militarily back up that kind of a big stick. Is that not a fact?

Secretary MARSHALL. That is a fact.

Mr. JAVITS. And as we get to the point where we can, we can deal more adequately with that situation?

Secretary MARSHALL. That is correct, sir.

Mr. JAVITS. Now, is the issue in this particular legislation, Mr. Secretary, whether we do or do not want allies?

Secretary MARSHALL. It amounts to that.

Mr. JAVITS. Is that the reason why the Secretary has said that this should be considered separately by the Foreign Affairs Committee—this issue? It is true we are going to be shipping to a large extent military end items, and that they will be a part of our total military end item production, which includes the \$60,000,000,000 appropriation; but it is a fact, however, we are putting these arms in the hands of people who are not United States troops and who are allies whom we must trust if we are going to arm them at all and that, therefore, that is a political and a diplomatic decision rather than a military decision?

Secretary MARSHALL. Primarily, yes.

Mr. JAVITS. So that as I asked Secretary Acheson I would like to ask you, too: Is it not a fact that this is the pay-off vote on the big debate? In other words, we are asked to decide whether we are to go it alone or have allies, and the Mutual Security Program represents saying that we want allies?

Secretary MARSHALL. That is correct, sir.

Mr. JAVITS. Would the Secretary care to make any statement through us here to the people as to the slackening off or the feeling that there might be a permissible slackening off in the whole defense mobilization effort in view of this talk of a truce in Korea?

Secretary MARSHALL. I am glad you asked that question because that is the most serious consideration that we have, or at least I have at the present time. I have gone through a great many of these slack offs. It seemed to me in the last war every time we won a success, beginning with Tunisia, I was in deep trouble back here on the question of civilian production, and things of that sort. It got worse and worse as we got on. This has had an immediate effect.

I am informed a great many, or most of the selective service centers around the country, are receiving letters from the young men to find out whether now they should report or not. General Hershey's office informs us they are getting a large number of the same sort of requests. In the Defense Department we are receiving letters from Reserve Officers under call who want to know whether now they should come forward.

Aside from the tragedy of the casualties, Korea is an incident in the world picture, and the indications at the present time in my opinion are that we should make greater efforts than we have up to date.

Mr. JAVITS. Would the General care to assign any reason for that in addition to what we all know to be the general situation, as to why we should make greater efforts than we have?

Secretary MARSHALL. Because the build-up, as we gather it, is rather ominous.

Mr. JAVITS. That is, the build-up on the other side?

Secretary MARSHALL. Yes, sir.

Mr. JAVITS. Make it more necessary for us, in more profound terms than Korea, to be even more prepared and vigilant.

Secretary MARSHALL. Yes, sir; that is correct, sir. I was asked a question a few minutes ago that led to what was going to happen when the Chinese Communist volunteers were released from Korea. One of the happenings I am worrying about is that we might relax as a result of this situation. That is the most serious consideration of all. How we meet that and how we meet that public reaction all of you can judge as well as I can, but it is very serious.

As I say, aside from the tragedy of the casualties, Korea is an incident, and the world picture requires us not only to continue to build up our strength, but I think in some respects to increase the effort.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Burleson.

Mr. BURLESON. Mr. Chairman, may I ask what the plan is for proceeding?

Chairman RICHARDS. I should state that. Mr. Secretary, we are going to have to stop these hearings here in about 20 or 30 minutes because we have a great deal of legislation on the floor. I will say that the clerk is keeping check on the time, so that we will have time enough to get there.

Mr. Secretary, would you be available Monday at 10 o'clock?

Secretary MARSHALL. Yes, sir.

Chairman RICHARDS. Thank you very much. Was there any other question you wanted to ask?

Mr. BURLESON. No, Mr. Chairman. I will just try to be brief in my questioning.

Chairman RICHARDS. Yes, sir.

Mr. BURLESON. Mr. Secretary, at the bottom of page 3 of your statement, in the second sentence of the last paragraph you say:

The members have agreed to concentrate on the creation of balanced collective forces for the NATO area as a whole rather than attempt to build up in each country the forces deemed necessary for its own independent defense.

Now, Mr. Secretary, does that mean that the United States will give greater emphasis to one or possibly two branches of our services at the expense, let us say, of another?

Secretary MARSHALL. I can illustrate. No. We have asked them to agree to build this up in a balanced manner not with respect to one country, but with respect to the whole.

The best illustration I can give you of that is this: I would like this to be off the record.

Chairman RICHARDS. That will be off the record.

(Discussion off the record.)

Mr. BURLESON. From there, General, we could probably go into a discussion of the airfields in Europe, which probably you would not want to discuss in public hearings. If so, I shall reserve questions for executive sessions?

Secretary MARSHALL. That did not apply to that solution. For instance, we would not recommend to you that we appropriate money for a strategic bombing force for some nation in Western Europe when we have an adequate strategic bombing force to provide that defense or offense for all of them. So we do not want their money spent that way. At least, we would not contribute to that, and in the general agreement which has been reached in the NATO discussions it has been to the effect that there be a common development here with each one doing the part it could do best for the whole. That is difficult to arrange in a country, because each one wants a complete defense of its own, so you are asking them, in a sense, to surrender a sovereign right.

Mr. BURLESON. But as it affects our own set-up, we would also, as a member of the NATO set-up, be obligated to furnish a particular force which will not cover our entire forces. In other words, would we not contribute a specialized force, whatever it may be?

Secretary MARSHALL. Yes. We are committed along these various lines, but I am talking about our building up forces which had better be left to somebody else to look after. That means they have to depend on somebody else to use those forces in their defense, and that is a very hard concession to obtain from any country.

Mr. BURLESON. In executive session with the general, Mr. Chairman, I would like to have borne in mind that I would very much like to discuss this airfield situation in Europe.

Some time ago, as you remember, General, 10 days or 2 weeks ago, there was a newspaper article intimating that we intended to surround the Soviet Union with airfields. I thought it was a most unfortunate bit of publicity.

Secretary MARSHALL. I hope this is held in executive session, sir.

Chairman RICHARDS. We will go into that a little later.

Mr. BURLESON. May I ask this further question, Mr. Chairman?

Chairman RICHARDS. You have one more minute.

Mr. BURLESON. At the bottom of page 4 you make reference to the Middle East, particularly Greece, Turkey, and Iran. Now, you

speak of the improved conditions in Greece and Turkey, and of course we can hardly say there are improved conditions in Iran.

What do you think, Mr. Secretary, should be our view with reference to the aid included for Iran in this program?

Secretary MARSHALL. We are making no change in our program at the present moment. This is an affair of the moment, and we hope it remains of the moment. We should not change every instant something goes this way or that way. So we make no changes at the present time.

Mr. BURLESON. But it would have to be flexible enough so that we could make those changes on short notice and upon immediate decisions?

Secretary MARSHALL. Oh, yes. But, to come to a decision at this instant would be premature.

Mr. BURLESON. Thank you very much, Mr. Secretary. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Chairman, I think the Secretary may want to correct one thing in his testimony as he presented it in written form here for the record, before it gets out too far.

On page 4, in the middle of the page, you have a statement:

All of the NATO countries, except Iceland which has no army, have compulsory military service.

I think you forgot Canada is also a NATO country, and Canada has no compulsory military service.

Secretary MARSHALL. Thank you very much.

Mr. HERTER. I thought you would want to correct that.

Secretary MARSHALL. We could add "in Western Europe."

Mr. HERTER. On page 2 of your testimony you give certain figures with respect to the tonnages that have been delivered under the Mutual Defense Assistance Program to various sections of the world. I am wondering if you could tell us just how those tonnage figures were arrived at? I do not mean in detail at all, but what the mechanics are within our own Government with respect to the making of the determination as to the sending of these end items to various countries.

In other words, does the process initiate in the Defense Department and then do you have to go through the National Security Council, or what exactly are the various steps that are gone through in determining what end items should be sent to what countries?

Secretary MARSHALL. The original calculations, of course, are made in the Defense Department. The general policy is one that is given confirmation in the National Security Council. Discussions then are held with the State Department as to the international implications of the procedure. Now we get down to the actual determination of what particular items should be included.

Now, as a rule the Defense Department's proposals have been preceded by examinations in the various countries, and we reach a conclusion as to how rapidly the unit can be organized, or will be organized to receive the aid, and matters of that character, which are outside of the purview of the State Department.

Our policy is not deliver to until they have the unit ready to receive, if it is a unit matériel requirement. Therefore, we go into

the question of will they be authorized to create the unit and in what time will they bring it into being, and then what should be provided for it.

Will you add to that whatever is needed?

**STATEMENT OF MAJ. GEN. S. L. SCOTT, UNITED STATES ARMY,
DIRECTOR, OFFICE OF MILITARY ASSISTANCE**

General SCOTT. The basis of the program, of course, is established by the Joint Chiefs of Staff, and the allocation of the funds is set up by the Joint Chiefs of Staff as to the amount for countries and the breakdown by the services.

Based upon the requirements of the Joint Chiefs of Staff the services prepare the programs. The programs themselves are then implemented and shipped in accordance with the priorities established by the Joint Chiefs of Staff.

Mr. HERTER. In effect then, the determination is made by the Defense Department in consultation with the other agencies of the Government from a political point of view, and from the point of view of preparations on the other side. However, the basic work all the way through remains within the Defense Department from the point of view of initiating the amounts that should go in making the final determination and in issuing final orders?

General SCOTT. The complete operating responsibility rests in Defense.

Mr. HERTER. And the question as to whom you consult is really a matter of the inner structure of our own Government?

General SCOTT. That is correct. When it comes to deliveries——

Mr. HERTER. But the full responsibility is within the Defense Department?

General SCOTT. Yes, sir.

Mr. HERTER. Thank you.

Chairman RICHARDS. Mr. Secretary, we have about 5½ minutes more, and I want to recognize a very fine Member of Congress who has been accused of riding to his office on a cloud every morning. If he gets up into the ethereal atmosphere, do not be surprised. Mr. Brooks Hays of Arkansas.

Mr. HAYS. Thank you, Mr. Chairman. With only 5 minutes left I have no opportunity for defense as to the cloud, but my feet are on the good earth this morning. I will reserve further comment on that for another time.

Mr. Secretary, on page 4 you say:

The United States has taken more positive steps to meet the dangers of our times than have the governments of Europe.

Then:

* * * some, for one reason or another, have not seemed to do all that they could do.

I assume that you do not mention them because mentioning specific nations would of itself tend to hold back the team spirit which General Eisenhower emphasizes. In other words, that is just one of the hazards of the way of life we are defending, is it not, to try to avoid recriminations, or tendencies to indict one of the team members?

Secretary MARSHALL. Yes, sir.

Mr. HAYS. I would like to ask you, however, if in the private councils or in the executive sessions, rather, everything is being done to bring up the nations that have lagged? Can we assure our people that this is a major effort of NATO?

Secretary MARSHALL. Very much so, and particularly at the present moment.

Mr. HAYS. Are there any official releases that would point up publicly the weak places? And does it become beneficial from the standpoint of the total effort to point to a specific lag? Are there any releases that point out where team members have lagged?

Secretary MARSHALL. I would not think so at the present time because really we are at the turning point right now. We are just at the point, I think, where the organization will begin to pick up momentum. My own opinion is that from now on we ought to gain speed rather rapidly, whereas up to now we have been moving very clumsily and very laboriously. When you have a set-up such as this you are at once involved in all sorts of complications of sovereignty and jurisdictional points. It is a long, tedious affair, as you know, in our dealings here, in reaching agreements within our own Government. Of course, with all of these various governments involved, and particularly with those who have a large Communist vote, which gives rise to much antagonistic propaganda and misleading statements, it is all very difficult.

I think now we are on the verge of getting started forward. I think General Eisenhower's problem up to the present time has been exceedingly difficult. He has carried it forward, I think, in a wonderful fashion, but he needs all of our backing now, and I think we can give it to him in a sufficient manner.

Mr. HAYS. I have used this analogy. It is a good deal like a football game. When we are out on the field, with the talk we engage in being listened to by the opposite team, we do not say much about the left end or the right tackle, but in the pep talks between halves—that is, our executive sessions—we speak of the weak places.

Secretary MARSHALL. That is all very frankly done.

Mr. HAYS. And we can have that assurance in this?

Secretary MARSHALL. Yes, I think you can.

Mr. HAYS. Thank you, Mr. Secretary.

Chairman RICHARDS. For the record, I would like to say, Mr. Secretary, we have to go to the floor now. We are on the second roll call. However, we will be privileged to have you with us Monday morning at 10 o'clock.

The committee stands adjourned until Monday morning at 10 o'clock.

(Whereupon, at 11:25 a. m. the committee adjourned until 10 a. m., Monday, July 2, 1951.)

THE MUTUAL SECURITY PROGRAM

MONDAY, JULY 2, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee Room, New House Office Building, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

The Foreign Affairs Committee is continuing hearings on the Mutual Security Program. We have with us again this morning the distinguished Secretary of Defense, who will continue and complete his appearance this morning.

I believe Mr. Reece is the next member on the list. We will proceed with unlimited questioning this morning. Mr. Reece.

Mr. REECE. General, what is the total amount of the proposed armed services budget, direct and indirect, including contract authorizations, which has been submitted to Congress for 1951 and 1952?

STATEMENT OF GEN. GEORGE C. MARSHALL, SECRETARY OF DEFENSE (continued)

Secretary MARSHALL. The total of what?

Mr. REECE. I will repeat the question.

Chairman RICHARDS. Will the gentleman get a little closer to the microphone?

Mr. REECE. What is the total amount of the proposed armed services budget, direct and indirect, including contract authorizations, which has been submitted to Congress for 1951 and 1952?

Secretary MARSHALL. There is the \$60 billion budget. There is the \$6 billion and a fraction involved in this particular bill that we are talking about now.

You would not include the Atomic Energy Commission's—

Mr. REECE. No; I do not have that in mind.

Secretary MARSHALL. I will have to delay answering that a little bit in order that I do not forget some item.

There is a request for about \$10 billion, I think, in facilities, installations, airfields, and things of that sort, which is now under hearing before Congress. That would be a total of 60 plus 10, plus 6, or 76 and a fraction billion.

Mr. REECE. Do you know if there is any other contract authorizations?

Secretary MARSHALL. No, sir. I would have to check up on that. I do not think there are.

Mr. REECE. On page 2 of your formal statement you enumerate the matériel which we have furnished under the mutual defense program. But the statement does not indicate what the NATO nations have done to support the mutual defense program.

On April 4 the Senate passed Senate Resolution 99, asking the Defense Department to give a report to the Senate showing what each of the NATO nations had contributed in both matériel and men.

I presume a report has been made to the Senate. I do not know if it is public. I am wondering if you can furnish us a copy of that report.

Secretary MARSHALL. I do not think it has been published. I do not believe it has been made.

Mr. REECE. Would it be feasible or proper to give us that information?

Secretary MARSHALL. I should think so. I will have it checked; if such a report has been made, I will have a copy sent to your committee.

Mr. REECE. I should think it would be very material in connection with these questions that we are considering.

Have not our casualties in all the joint actions in which we have engaged with the European nations been comparable to those of any other nation in World War I, World War II, and in Korea, where we have had altogether, all types of casualties, some 150,000, and all of the other nations have had a relatively small number, some 10,000?

I recall when lend-lease was proposed before World War II, England said, "Give us arms and we will do the fighting." But it did not turn out that way. We did our share of the fighting and suffered our share of the casualties in both Europe and the Pacific.

I am wondering just what you had in mind now, and if you would care to comment on the implications of the statement which you made?

Secretary MARSHALL. My comment, sir, was made with direct reference to this particular bill, which furnishes matériel to be used by the manpower of other countries.

It was not intended as a general statement or to have general application. In answering the first part of your question, as to whether our casualties were comparable to those of other countries, I should say in World War II, and particularly in Korea, they were not comparable for in a good many instances they have exceeded those of other countries.

In the First World War, of course, we came in in the latter part of the struggle, after the Allies had suffered tremendous losses. And they continued to suffer very heavy losses because of the size of the forces they had engaged. Our losses, in proportion to our strength, were heavy, but in proportion to the whole, they were small.

But my statement was in reference to this particular bill. We had been discussing the monetary phases, the costs, and I made the point that what we were doing in this specific bill was to provide the means for the armament of the men, the manpower, of our allies to fight.

Under the NATO plans the European nations are contributing 80 to 85 percent of the manpower for the defense of Europe.

This bill relates very directly to that, because this is matériel of the character that they cannot readily produce or cannot produce in time.

It is for that 85 percent that it is directed.

Mr. REECE. Have the manpower allocations between the different NATO nations been made so that you can give an estimate of the manpower that each nation is expected to furnish in making up the 60 divisions which have been referred to as possibly being required?

Secretary MARSHALL. I would not like to comment on that in open session, or really otherwise, because that is part of our general plan.

We will say at this time that we have in the negotiations been endeavoring to have each nation make as large a contribution of manpower as it could manage financially and otherwise.

Mr. REECE. It is not expected then that more than the six divisions of our forces will be required in Europe?

Secretary MARSHALL. There is no plan at the present time to increase that number on a peace basis. If we were involved in hostilities, then the issues at the moment will have to decide.

Mr. REECE. One reason I asked that question is from the information I have—the information came in such a way that I could not make it public, and I would not think it advisable to do so—which indicated otherwise.

I did not know the extent to which that had been discussed. What is the total amount which it is anticipated the United States will be required to furnish to meet the deficiencies of the NATO nations before they can become self-sustaining or before the program is completed?

Secretary MARSHALL. I referred to that in my statement, which was to the effect that it could be anticipated that the amounts required in the fiscal years 1953 and 1954 would be as large as those for the fiscal year 1952, which for the military factor alone is \$6 billion and a fraction.

Taking into account the additional economic requirements, it would bring the total to a little over \$8 billion.

Mr. REECE. Then you would anticipate that the burden on us—if we should refer to it as a "burden"—would be somewhere around 20 to 25 billion?

Secretary MARSHALL. In the end?

Mr. REECE. In the end.

Secretary MARSHALL. Yes, sir. I must qualify that expression, though, because beyond that period we have the problem of how rapidly we can decrease our contributions, to what extent the European countries will have been developed, particularly in production facilities so that the entire maintenance and replacement phases can be carried by them without depending on us.

Mr. REECE. In your statement, General, you stated, and I completely agree with you, that the economic stability and military security taken together are the most dependable antidotes to communism.

I think you will agree that it is the policy of the Kremlin to achieve its objective first by using the technique of internal disruption, that is, of destroying the economic and social institutions of the country, and then if that fails, by resorting to external aggression when she thinks the time is ripe for it.

Since it is recognized—and I think this is generally recognized—that the individual liberty, the economic strength and the productive ca-

capacity of the United States is the greatest deterrent to Russia in starting another global war, is it not one of the first policies of the Soviet Union to see to it that the United States dissipates its economic strength and impairs its productive capacity by extending beyond its ability and spreading itself thin all over the globe?

I am wondering if the Defense Department has taken into account the impact this whole program will have on the entire strength of the United States, that is, how far we can go without exhausting our economic resources to the point where Russia might feel that we are ripe for them by subversion or otherwise move in for the kill, so to speak?

Secretary MARSHALL. I think the Defense Department has taken that into most careful and continuous consideration.

I might call your attention, or invite your attention, to the fact that last November and December I personally was under considerable attack for not asking for enough for our defense, and not viewing the situation as seriously as it, in their opinion, really was.

That feeling was very general in Congress, I am assured by men up on the Hill that should know. That feeling was represented very largely in the press, particularly in the magazines, and carried to the point of demanding my retirement, because I did not realize to the full the seriousness of the situation.

What I did see, sir, is just what you are talking about, that it was mandatory that we have some plan that would not break our backs financially, to use the actual expression that I employed at the time, because that was one way the Kremlin could win its advantage, and possibly a permanent advantage, without actually going to war.

That is the reason specifically that I pressed in every way I could, and am still so doing, the development of a procedure of universal military training.

I saw and see no other way in the word that we can have an enduring military posture without ruining us economically, which is one way to lose in this struggle against communism.

So, I think the record proves that I am very much aware of the consideration you have just been talking about. I am deeply concerned that what we do is along the lines that we can maintain. We must have an organized system that will permit us to sustain an enduring program. Otherwise it will be a complete failure.

Mr. REECE. Mr. Chairman, over the week end I took home a study that I found on my desk. I do not know by whom it was made. It is "restricted." I do not think it is restricted in the sense that it is highly classified.

But in going through this study relating to all the NATO nations, and some of the others that are closely associated with the NATO nations, I was impressed by one thing, the percentage of the budget of the national product of all these nations which was being used for defense. That ranged from 2 to 10 percent.

I do not think any of them went over 10 percent, which is, of course, a very much smaller percentage of their national product than is our defense budget which for the fiscal years 1951 and 1952 is about 25 percent of our national product.

That is what I had in mind when I asked the earlier question about our total defense budget for 1951 and 1952, which, as I recall, would run a minimum of about \$76 billion.

Has your Department estimated what percentage of the national product is embraced by this \$76 billion?

Secretary MARSHALL. Yes, sir; I think we have that data. I do not know if I have it immediately available here. The total security expenditures, including deliveries of military goods to our military forces and to our North Atlantic Treaty partners and foreign economic aid, are now running at an annual rate of about \$30 billion, taking about 10 percent of our gross national product. By the end of this year approximately 15 percent of our national output will be required for these programs, and the proportion may rise to a peak of nearly 20 percent in the year 1952.

During the next year or so it should be possible to cover approximately two-thirds of the output going into security programs by increases in our total output. After the programs have reached their peak—presently contemplated to be in mid-1952—further increases in output would go to strengthen the civilian economy.

Mr. REECE. But our budget is about \$76 billion for the armed services, excluding the atomic energy and the scientific work related to that activity. That would be a greater percentage than 15 percent, would it not?

It would be just about 25 percent on any estimate of national product which I have seen.

Secretary MARSHALL. The difference here apparently between what I am saying and what you are stating is one between the actual expenditures and the other between the appropriations.

The money is not spent immediately. Some expenditures lag over for 2 years.

Mr. REECE. The figures of the NATO nations to which I referred, as I understand, were budget figures which would be comparable to our budget figure of some \$76 billion.

Secretary MARSHALL. As to that, these other countries and their percentages, I think one has to keep clearly in mind that their situation, particularly those on the European Continent, that is excluding England, is quite different from ours, in that they are recovering from a devastating experience, both as to personnel and as to their installations of one kind or another in their countries.

Just as they are beginning to lift themselves out of that depression, there is imposed on them the necessity for building up a very heavy charge against their economies for purely military purposes.

So they are in quite a critical state. One of the members of your—I do not know if it was this Committee or the Armed Services Committee, but it was a composite group that went over to Europe—made what I thought was a very pertinent comment and is illustrative of what I am talking about now.

He was talking about a flat reduction in the standard of living in order to make up for the build-up in the NATO plan.

He put it this way: It would be quite unfortunate to make a flat reduction. He said in the United States a 5-percent reduction largely meant you would not have quite as much money to spend for gadgets; with the Western European countries it probably meant the difference between white bread and black bread, which is quite a different matter.

That illustrates a good bit of the problem we have. We have had to go into it very carefully with the ECA. Mr. Foster and his staff should be consulted for estimates as to just what burden those coun-

tries could carry without pushing them over the edge into economic collapse, which would be most unfortunate.

There is one group in the NATO organization, the Finance and Economic Board, of course, on which we are effectively represented, which is studying continuously the problems of the financial sharing of the over-all burden.

There you are involved in the factors that I just mentioned, and there are also involved the political questions which at times can be very serious, because of the large communistic groups in those countries. Considerable delay has resulted from waiting for the French election to come to a head and be completed. That has overshadowed a great deal of the build-up of the NATO organization.

I think at the present time we are reaching the point where we can proceed much more rapidly than heretofore.

I would like to refer again to this problem of economics and its effect on appropriations. It has been a matter of the deepest consideration in the Defense Department, and by me personally, to the point of my whole position being assailed, because in the opinion of a great many I was leaning too much toward matters of economics and not sufficiently along the line of a more rapid build-up of our military position. This bill represents a very important factor in that rapid build-up.

Mr. REECE. I am speaking about conditions in the other countries. I know too, as everyone is aware, that there has also been a very considerable change here in the last few years. As I understand it, the Defense Department, as Mrs. Bolton suggested the other day, is now paying \$20 for a blanket which was obtained during World War II for \$5 or less.

Secretary MARSHALL. Might I address myself to that right now?

Mr. REECE. Yes. Surely.

Secretary MARSHALL. I looked into that. It was largely a question of reminding myself of conditions. I find that there have been blankets made up by sewing pieces together, and I find they were the end of the bolt, where there is not enough for a full blanket. Those pieced blankets have been sent to Greece. However, I was also reminded of the situation in which this whole problem developed. It was one of tremendous pressure by the people and by the Congress for rapidity of demobilization, which did not permit us properly to look after the supplies which were on hand.

There was also great congressional pressure brought to bear, which I had forgotten, to release to the civilian market many of these supplies, like blankets, because there were shortages of all such items, all of which went to or led up to the fact that tremendous quantities of supplies were completely abandoned in the jungles of the Pacific; and in this country they had to be disposed of as quickly as possible, because there was no one left to look after them.

Blankets, for example, require storage and require protection against moths, and they require individuals to look after them. That was made impossible in this extremely hasty demobilization.

I found out this morning from my assistant here, Colonel Beebe, who was then a general—we brought him back from the Southwest Pacific to help in expediting the demobilization—and he reminded me that he had to report to the War Department every night as to how fast they went through the procedure of individual discharges, in order

to meet the demands of the Congress for daily information. The disposal of surplus property under those conditions was one of the considerations in my mind when I mentioned to Mrs. Bolton, that I thought one had to consider very carefully the cause when judging the effects.

Mr. REECE. I did not have in mind in my queries the method of disposing of surplus property so much as I did in comparing what a blanket costs now and what it cost in World War II, showing that there has been a very great change in our economic situation here, and indicating that we have progressed a considerable way up the inflationary spiral. We may be reaching the point where the atmosphere is pretty rare.

It was stated by members of the Ways and Means Committee when presenting the last tax bill that some of the experts had said that this tax bill was scraping the bottom of the barrel and it was reaching into the last tax resources without going to a sales tax or manufacturers' excise tax.

I am one who feels the economic situation of this country is reaching a dangerous position and we may not be so very far from the precipice. As you stated, and as I think is generally accepted, our economic strength and its resulting productive capacity is the last bulwark, the last strong bulwark against communism so far as the free governments are concerned.

Do you feel concerning these other NATO nations that there are any of them that could not make available more than 2, or 3, or 5 percent of their national product for defense purposes under the circumstances, when we are doing such a very, very large share?

Secretary MARSHALL. We are making quite an effort to do just that at the present time, and an extra effort that has been developed during the last few weeks. I have here a note to the effect that the average European defense budgets are 160 percent pre-Korea.

Mr. REECE. What is your view as to whether Turkey, Greece, and Spain should be admitted to the NATO?

Secretary MARSHALL. I would like to see them in NATO.

Mr. REECE. Another thing I was impressed by was the study which was made which analyzed the situation in all the countries, but had nothing or no information whatever about Spain. Spain is one country that inherently seems to be against communism and when one needs help and is receiving a gift horse, the old saying is you do not look in his mouth. We are taking that same attitude with reference to NATO and the Yugoslavian Government. I am not expressing any disagreement with that, but Spain is occupying a very strategic position geographically. It is composed of a citizenry that has demonstrated it has a will to fight. It has shown it is violently opposed to communism, both from an ideological viewpoint and a religious viewpoint.

Do you not think we ought to find some way of utilizing the resources and the position of Spain in this effort? Of course, I realize their army may not be well equipped, and it would be necessary to modernize their army with a great deal of equipment. I wonder what your views are on that.

Secretary MARSHALL. I have already stated I would like to see them taken into the NATO organization. This Government has not been opposed to that procedure. It has been a matter of the posi-

tion of our allies and their political setup which has presented a very serious difficulty. While the situation remains in that state it would be ill-advised to force the question of bringing them in because it might actually upset certain governments. That would be a very serious matter. I think the affair is moving toward a solution, but the trouble has been political in other governments than ours.

Mr. REECE. Now, Mr. Chairman, I have other questions here which I think are of such a nature that they should not be asked in an open meeting. If the general does not mind my handing these questions to him I would like to have them answered before we go into executive sessions.

Chairman RICHARDS. The chairman will state that either the Secretary will be given an opportunity at executive session to answer those questions, or if it is satisfactory to you and the Secretary, if you will present them to him, he will furnish the answers to them.

Mr. REECE. I would be very glad to.

Chairman RICHARDS. Mr. Secretary, would you mind furnishing those answers as it in executive session, to the gentleman from Tennessee?

Secretary MARSHALL. Yes, sir.

Chairman RICHARDS. Is that satisfactory, Mr. Reece?

Mr. REECE. Quite so. I feel kind of a bond of sympathy with you, General. After the people were kind enough to send me to Congress in the 1920 elections you came to my office very soon after I took office, and as I recall you had the grade of captain. Perhaps you were a major, but I believe you were a captain. I have followed your career since with a great deal of interest. A great deal of water has gone under the bridge since that time.

I recall, Mr. Chairman, some people were unkind enough to say of me then that I was too young to come to Congress and now they are unkind enough to say that I am too old.

Chairman RICHARDS. The Chair does not agree with that last statement at all.

Secretary MARSHALL. I suffer from the same complaint.

Chairman RICHARDS. It is unanimous then. Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman.

Mr. Secretary, on the premise that assistance will be considered for the Yugoslav Government. There is great concern over the advisability of giving heavy arms in place of light arms to that country. This concern is based on a statement made recently that that country could be taken over by Russia at any moment. On that basis it might be better to give them light arms in order that they could retreat to the hills. Could you tell us if there is any change in this condition from last year?

Secretary MARSHALL. It would be very difficult for me to make an answer here in open session.

Mrs. KELLY. Oh, I am sorry, Mr. Secretary.

Secretary MARSHALL. On a question as delicate as that, because we have been in negotiations with that Government.

Mrs. KELLY. I am sorry, Mr. Secretary.

Secretary MARSHALL. It would be under pretty difficult conditions, and I do not believe I could state an answer here. I would be hesitant even in executive session. All of those matters have been taken under very careful consideration.

Mrs. KELLY. Thank you, Mr. Secretary. I have greater fear over the new, nationalistic, communistic governments like Yugoslavia than I have over the Russian-controlled governments.

Secretary MARSHALL. You said you had greater fear?

Mrs. KELLY. Greater concern over this new surge of nationalistic, communistic governments that are arising throughout the world, for instance, to a degree in India, and the type of Tito control, and possibly a combination of the Baltic States, than I have over this Russian-dominated communism. In the light of that, due to the patriotic feeling that the people have toward their main government, do you think that we have that to look forward to in the future, or should discard it at this moment?

Secretary MARSHALL. Apparently you find a great many trends in Europe, particularly along that line, certainly of a socialistic inclination. The build-up of this particular development you are speaking about is apparently a fact. How continuous that would be I do not hazard an estimate on at this time; and as to its general effect in comparison to the procedure of the Soviet regime in its effort toward world domination, that involves intricate considerations.

Whether or not it might in time be included, that is, that development be included in the Russian effort in the end, or whether it would break down this effort of world domination with one focus of power in Moscow, I do not know. We have the difficulty of the French Government with a very heavy communistic vote. There is a considerable Communist vote in a good many other countries. All of which requires a gaze into the future that is a little beyond me at the moment. I would not want to hazard an opinion.

Mrs. KELLY. Thank you, Mr. Secretary. I want to apologize for even asking military questions or military strategy. I believe in leaving them to you.

Secretary MARSHALL. Thank you.

Mrs. KELLY. Thank you.

Chairman RICHARDS. Mrs. Bolton, I believe you wanted to ask a question.

Mrs. BOLTON. Thank you, Mr. Chairman.

Mr. Secretary, you just said you had refreshed your mind on some of the earlier happenings, and I wondered if you would solve a question, or answer a question, which I have never been able to get actual factual information about. When an army is demobilized, who gives the orders, that is, the original orders for demobilization? Is that the Chiefs of Staff, is it the President, or from where does that order come?

Secretary MARSHALL. It comes, of course, from the President, presumably. I am just trying to recall what the instructions were at the time. It was the expression of the President's view in the matter that dominated, but the pressure as to rapidity and completeness, I think, came from up here.

Mrs. BOLTON. May I just suggest this, because I think in great fairness to the Members of the Congress that there are a great many of us who were entirely out of sympathy with that order. The first thing we knew was that it was done and men were being brought home. Then the pressure came, of course. When a man with so many points from one side of the street was home and another one with the same number from the other side was not, the question arose as to why was

he not home. Naturally, we inquired, and naturally we wanted to know on what basis this was being done. However, there were a very great many of us who felt and still feel that one of the worst things we have ever done to the world was the rapid demobilization of the strongest Army the world has ever seen.

I cannot help but feel a little disturbed when at this time, now, the blame is put upon the Congress for it. The order was issued before we had a word to say about it. Am I incorrect in this?

Secretary MARSHALL. I do not know how you could say you were surprised by this, because I remember personally I was called before Congress and I talked about an hour and a half covering the whole situation. Then had officers explain every detail of the only system we could conceive of to handle the matter.

Mrs. BOLTON. But the order had been issued by the Executive.

Secretary MARSHALL. In the first place, we had to discharge a certain number of men—and you spoke of the point system—because they were not needed.

Mrs. BOLTON. All right.

Secretary MARSHALL. Will you let me finish the answer, please, Mrs. Bolton?

Mrs. BOLTON. Yes, indeed, General.

Secretary MARSHALL. We were transferring troops from Europe to the Pacific, and we did not need all the men that we had in the ranks at that time. Therefore, some system had to be evolved which would determine how the discharges should take place. After studying all conceivable proposals that came forward, the point system was worked out. There may have been a better system, but nobody yet has ever demonstrated it to me.

The reactions you mentioned are natural reactions. If your boy does not come home and my boy does come home, that cannot be settled in an ordinary way, but we endeavored to find what was the best manner in which actually to do it. So the point system was developed and was explained in broadcasts, and in releases, and was explained by me personally and in my presence by the man who had principal charge of it to all the Members of Congress who desired to attend.

That presentation to the Congress was in a sense required of me by the Members of Congress. I went through that procedure.

Now, in the middle of that—and please keep this in mind—in the middle of that, before we had gotten well under way in this complicated transfer, which involved complete reorganization of the troops in Europe and the movements necessary to go out to the Pacific, and the furloughs which were insisted upon by public demand for the men going to the Pacific, the Japanese surrendered. That reversed all our arrangements. The better the plans were for the transfer to the Pacific, the worse they were for the immediate problems of demobilization. The men in this country who had been moved out of Europe were the last ones who should have been discharged. Yet, they were in this country and the other men were in the Pacific. The transportation facilities were limited, of course, in consideration of the vast numbers of people involved.

So we then became involved in trying to handle a situation that we had not entirely foreseen, that is, that the Japanese would surrender

at the moment that they did. The shock of the atomic bombs had precipitated the surrender.

As a result we had a confused, a very confused situation. We had the men in the Pacific now who were appealing for immediate release. Certain of their numbers who craved publicity took the stand and had a great deal to say of the rabble-rousing variety. This added to the confusion of the situation.

Now, from then on the pressures were tremendous from Members of Congress.

Mrs. BOLTON. May I just interrupt to say I quite understand that part of it, but I am asking you about the original order. You said it was determined there was no further need for these men. By whom was that determined?

Secretary MARSHALL. That determination was developed by the War Department, and to the extent it related to the problem, by the Navy Department, although they had heavier demands in the Pacific; and that was approved by the administration.

Mrs. BOLTON. Exactly. That is what I want to bring out, because the most unfortunate thing that ever happened was that we were not able to speak with material strength to a country that understands nothing but power.

Secretary MARSHALL. I do not think that applies, Mrs. Bolton, because the number of men we were letting out in proportion to the whole was not a very considerable number.

Mrs. BOLTON. How rapidly were the armies let out? As I remember it, very rapidly.

Secretary MARSHALL. That extreme rapidity developed with the Japanese surrender.

Mrs. BOLTON. But we had absolutely no conscience about leaving the whole matter open.

Secretary MARSHALL. We are leaving in Europe a considerable number of troops.

Mrs. BOLTON. Not enough to make any impression on the Kremlin.

Secretary MARSHALL. Oh, yes.

Mrs. BOLTON. I fear I must disagree with you, General. If we still had them we didn't use them intelligently for the Russians walked into one country after another.

Secretary MARSHALL. Because the demobilization went ahead and appropriations were reduced. My last appearance. ---

Mrs. BOLTON. But we of the Congress did not order the demobilization.

Secretary MARSHALL. Well, as your appropriations decreased, your men decreased.

Mrs. BOLTON. The Executive order did the demobilization, and that is all I wanted to bring out, Mr. Chairman. This has needed saying for a long time, Mr. Secretary. Inasmuch as you renewed this criticism of the Congress it seemed to me an important moment to clear the record once and for all and have it clearly stated that the Executive and not the Congress was responsible for the demobilization order.

Chairman RICHARDS. The gentlewoman should allow the Secretary to answer a question.

Mrs. BOLTON. I am sorry, Mr. Chairman, but I did not want the Secretary to repeat over and over the things he had already stated of which we are all very aware. I wanted to save his time.

Secretary MARSHALL. I will rest my case there, Mrs. Bolton.

Mrs. BOLTON. I am happy to rest mine there too.

Chairman RICHARDS. Is that all?

Mrs. BOLTON. Yes. That is all for now.

Chairman RICHARDS. Mr. Secretary, I want to ask a question here, but before doing so I want to make a statement for the record.

In regard to your service to your country I want to say that there are few men who have filled so many positions of military and civil responsibility, and few in positions of leadership who have accomplished so much as you have for your country. I think that is generally acknowledged, although you are getting some pretty hard knocks around here in some places now.

Mrs. BOLTON. Mr. Chairman, could I echo that?

Chairman RICHARDS. Yes. Certainly. The gentlewoman echoes that.

Certainly not the least of your achievements is the plan that you promoted for the welfare of this country, which was the so-called Marshall plan, which I think you proposed in early 1947. At that time I remember distinctly when the fight came up in Congress that this committee was under the very able leadership of the distinguished gentleman from New Jersey who sits at my left. It was during a Republican Congress. He led this fight in this committee for the Marshall plan.

Mr. EATON. I hope the reporter will take that down.

Chairman RICHARDS. I am just recapitulating a little there. The succeeding Democratic Congress carried that plan along.

As I understood it, when the Marshall plan was first proposed it envisioned a 4-year program. It was written in the original Economic Cooperation Act that in the opinion of Congress this plan should end on June 30, 1952.

I will not elaborate upon the Marshall plan's accomplishments. I think every thinking person, and everyone to whom I have talked, has admitted that if it had not been for the Marshall plan, Europe would probably be in Communist hands now. It cost a lot, but just think of what that would have cost the United States in the matter of the necessary build-up of our defenses in the face of a situation like that. When we get to talking about the money which it costs you have to speak from a comparative standpoint.

Mr. Secretary, do you not think that there should be written into this act a termination date for economic aid to Europe at the end of this fiscal year, that is, June 30, 1952?

Secretary MARSHALL. That there should be written into this particular act a termination date for the ECA?

Chairman RICHARDS. For the ECA, as such.

Secretary MARSHALL. As of July 1, 1952?

Chairman RICHARDS. That is right.

Secretary MARSHALL. It would seem so to me. Of course, Mr. Foster could give you more detailed information than I could possibly give, because that involves a good many considerations.

My understanding at the present time is that except for Italy and Greece, and possibly one other country, that it could be almost suspended now.

Now, what particular effect that would have on those two countries I mentioned and one other—I think it is Austria—as to the termination of it in the summer of 1952, I do not feel that I am sufficiently informed on that to reply.

I felt all the time, and I said a great many times in speeches I had to make while I was president of the Red Cross when I would be perpetually approached by the press in regard to this European recovery program, that I thought it should terminate as planned in 1952. I have been very much relieved to find that as to most countries it seems it could be terminated practically now. The reduction merely to three countries I think is quite a remarkable state of affairs.

However, I would rather that Mr. Foster would give you the detailed report on what he thinks would happen in connection with those countries I have just mentioned.

Chairman RICHARDS. Of course I know—and I think I brought it up the other day—I know when you come to talk about military aid and the economic production for military use to carry out this program you have a transitional stage that has to be worked out. However, I think in view of the understanding of the Congress and of the people of the country, and as I understood it, the author of the Marshall plan's expressed viewpoint when the plan was first inaugurated, I think this Congress should in good faith show that economic aid as such—and I am not talking about aid as related to this military program—is terminated as of June 30, 1952. I believe it should be written in there.

Secretary MARSHALL. I think that is probably the case, sir.

Chairman RICHARDS. Are there any questions on this side?

Mr. JUDD. Yes, Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Thank you, Mr. Chairman.

General Marshall, you say that we "must give economic aid in varying sizes for the individual nations for various purposes." The first one is "to support rearmament programs among nations which might become impoverished if they had to depend solely upon themselves." Do you think there is much danger of the United States becoming impoverished?

Secretary MARSHALL. I think unless we have a very sound basis for our defensive arrangements that we could reach an economic crisis.

Mr. JUDD. You admit, or, do you agree that there is a rather narrow aisle that we have to walk in between what is necessary for us to spend to provide for our defense and the line beyond which we dare not go without becoming impoverished?

Secretary MARSHALL. I think that is the case, but I would like to add to that what I have already said a number of times. The basis on which we lay our military strength is the most important factor in relation to costs. I am hoping now that we are working toward something that will put us in a reasonable position where we can maintain our state and not beggar ourselves economically.

Mr. JUDD. Suppose that the country and the Congress felt that to avoid becoming impoverished this program had to be cut by, say, 15 percent. If that were the case, and that will be governed not by what I believe here or what you believe, but by what the majority believes, would you recommend that that 15 percent be taken totally from this foreign-aid program, or totally from our own defense program, and the equipment and training of our own armed forces, or cut pro rata from both of them?

Secretary MARSHALL. I do not know about the pro rata part, but I think both programs would have to be considered and specific items considered, rather than a flat, across-the-board cut.

As I said the other day, this is part and parcel of our general plan.

Mr. JUDD. Yes. There is no question about that. I want to ask you this question: Do you think that this amount of money, \$6,200,000,000, for example, can be spent during this coming fiscal year wisely? That is, has there been achieved a momentum which will permit us to spend wisely and to good advantage that amount of money in this country?

Secretary MARSHALL. There has not been achieved at this moment the momentum, but I think we are going to secure that momentum in a very short time.

Mr. JUDD. Within this coming fiscal year?

Secretary MARSHALL. Yes. I think so.

Mr. JUDD. You see, the difficulty comes from this: When the bill was before us 2 years ago it was said we had to appropriate almost a billion dollars right away, or everything would go to rack and ruin. Well, we appropriated it and now, 2 years later, only half of it has been delivered. That kind of experience causes many people to wonder whether this is not bigger than we can wisely spend.

What I am trying to get at is: Is this your irreducible minimum, or is this a padded figure, so that if there comes a cut you still will not be hurt?

Secretary MARSHALL. I will say that in no way is it a padded figure. It has been pared down as much as we felt it could be done, and still accomplish our purpose. I would like to make this observation. I got these figures on the rate of expenditures and the rate of commitments to contracts since I became the Secretary of Defense, and I immediately went into an investigation of why it took so long. I found in the first place it is a very complicated set-up by law. It took a great many preliminary arrangements under the terms of the law before you could make the commitments. It took almost 6 months to get at some of the factors concerned in the matter. It is not a simple business at all.

Each country had to be taken by itself, and there had to be arrangements and agreements there, and reports back here, and a great many different things gone into before, under the terms of the law, we could make the contract.

Now, I think we have gotten by that most complicated aspect of the matter, and I feel what we are going into is a practical proposition so far as this next fiscal year, or the present fiscal year is concerned, terminating next July. I feel that the commitments can be made. Of course, the expenditures will not be made in toto because they carry on for quite a considerable period of time, some of them 2 years. So that it is a practical proposition and a very necessary proposition.

The previous delays, I think, were largely due to the extremely complicated requirements of the law, and our dealings with a great many different nations.

Mr. JUDD. And it required a certain amount of months in the beginning to get the basic decisions before anything much could be spent.

Secretary MARSHALL. I am not taking exception to the complications of the law, because they were probably necessary as a beginning, but when the implication is made that we were so slow with that and we would be equally slow with this, I do not think that is the case.

Mr. JUDD. Another question that comes up is this: In all this program of training and building up the armed forces for the defense of Europe, their target of armed forces in being is only about half of what we as one nation are planning to have under arms. That is a little hard to explain. Their target is less than 2 million, and ours is 3½ million.

Secretary MARSHALL. The total, up to 1954, is 5 million on their side. I was trying to find out what the total expectation is up to July 1952. I think it is around 3 million—about 60 percent.

Mr. JUDD. Are you speaking of all countries that are not under the Communists, or of the NATO countries?

Secretary MARSHALL. NATO.

Mr. JUDD. That is very different from the figures that were given us. If there is a difference of opinion on this point, probably it ought to be gone into in executive session, rather than here, because all of us who were in Europe got a different figure from that.

That is one of the things about which we raised questions. We recognized our country's obligations in other areas besides Europe, but why were we called upon to put almost twice as many men under arms as were all these nine Western European countries? Iceland has no army.

I should like to have that checked into carefully, along with the figures that have been given us.

Secretary MARSHALL. Suppose I make a report to the committee?

Mr. JUDD. All right.

I did not intend to say this, but I will. I want to associate myself with much of what Mrs. Bolton said, because it is not accurate for the general impression to go out that Congress was hammering at the administration to demobilize. There were many Members of Congress who were not. I said the week after Hitler died that if we did not get firm commitments and settlements with the Soviet Union, and arrangements for taking care of any violation of those settlements, while we had 4 million men in Europe, I did not think we would ever be able to get them.

I am willing to say right now, when the pressure is on again to cease fire in Korea under almost any terms in order to get American boys home, that my concern is that we get American boys home under circumstances where they can stay home, and not where they come home and have to go right back again because there wasn't a real settlement but only a chance for the enemy to start greater trouble elsewhere. That is what we opposed in 1945 and what we believe we foresee right now is likely to happen again. It is tough to have to say, Do not yield on an inadequate settlement, when it means American boys do not get home and may mean some lose their lives, but I believe we have to do it, when it is in the interest of our country and of their own ultimate security. Many Members of Congress, no matter how unpopular it is, will go down the line on that issue.

Secretary MARSHALL. I agree with you on that, Dr. Judd.

Mr. JUDD. You have said, I understand, in hearings over in the other body, that you felt it was essential to our security in the Pacific that Formosa not be taken over by the Communists.

Secretary MARSHALL. Yes, sir.

Mr. JUDD. Now, suppose we have a cease fire in Korea. It is advantageous to the Communists to get a cease fire because they

know once a cease fire occurs, our morale sags, as you spoke of the other day, and there is the tendency to forget everything except to get the boys home. Now, what if the Communists say in the negotiations, "We have a temporary cease fire, but we cannot enter any agreement or make peace unless you give us Formosa"? Do you think we should then go back to war again rather than let Formosa go?

Secretary MARSHALL. I think you brought up the cardinal point in the first part of your question. Assuming all these men are taken back to the United States and then we reach the decision. They are to be over there while we are trying to reach the decision.

Mr. JUDD. Yes. I know they will be over there, but I remember the Nazi propaganda that was so effective with the French. "Are you Frenchmen going to die for Danzig?" I remember when Japan was going south into Indochina, and some of us were trying to warn about what that meant to our security. There was a town down there called Dong Dang, and all the Communists here said, "Are you going to send American boys over to fight and die for Dong Dang?" Now the line will be, and I think it has already started, "Are you going to have American boys' lives sacrificed for Formosa?"

I tell you, I do not think we ought to underestimate the pressure that will develop. The Communists are gambling that once they can get the fighting stopped, we will surrender almost anything rather than resume it, even though we have our troops there in Korea.

Secretary MARSHALL. Of course, the contrary to that is not to stop the fighting until we have everything settled.

Mr. JUDD. Yes. I recognize that.

Secretary MARSHALL. I agree with you as to the pressure. That will be very great and may be built up to a point that will be exceedingly hard to resist. I have lived through some of that so I bear some scar-flesh as a result of it. It is a very serious matter.

I think the greatest factor toward our success in doing what we have set out to do is a display to the world of a determination to go through with our plans. That is one reason why I would like to see this legislation passed. I would like to see nothing done that would in any way seem to reduce our effort to build up our strength at the present time. I would rather be inclined to think we should make some motion to increase it further, though I dislike thinking of that in terms of budget. However, there should be no doubt whatever in the world's mind that we are determined to be strong enough to stand up in this present crisis in the world's history.

How we would best go about that is a matter of judgment, of course. It is a matter of political reactions, but I think if we settle down to the consideration that we are all Americans and we are determined to see that this thing is done, on a very simple basis such as that we can win through.

Mr. JUDD. I agree with that. The key thing is determination. The Soviets have no illusions as to our strength. What they are gambling on is our softness or what they believe to be our softness. They do not underestimate our capacities. They are confident that they can confuse us with their usual techniques and make us fail to see what are our essential interests, and appeal to our love of comforts and our desire to be at home and at peace, which are all so commendable and understandable.

Another reason why I bring this up today is because you yourself have had more experience with cease fires with Communist forces than perhaps any other Caucasian in the world, because you were in China when the Chinese Government under pressure agreed to cease fire at a time when it had an overwhelmingly advantageous position. The cease fire allowed the Communists to go into Manchuria, when it was in a position to block their going into Manchuria. Who came out on top at the end of the cease fires? Who gained more as a result of the cease fires?

Secretary MARSHALL. Quite evidently the Communists did.

Mr. JUDD. Is it not true that they had about 60 counties at the beginning?

Secretary MARSHALL. About 60 what?

Mr. JUDD. Sixty hsien or counties, and at the end of the fourth cease fire they were in control of a little more than 300 counties. They expanded their area five-fold during these periods of cease fire.

Secretary MARSHALL. I do not know what the exact figures are, but their expansion was a fact.

Mr. JUDD. The fact that you saw the disastrous results of what was done there in good faith should alert you—I am sure it has alerted you—to the possible pitfalls and should be of great assistance to our Government in a moment like this to prevent our falling into the same kind of trap that the Chinese Government fell into.

Secretary MARSHALL. There is more to be said about that.

Mr. JUDD. I realize that.

Secretary MARSHALL. Quite a bit more, Mr. Judd. A lot of that would not have occurred if there had been more effective action by the Government itself.

Mr. JUDD. That is right.

Secretary MARSHALL. I am not talking about the final collapse, but I am talking about at those times.

Mr. JUDD. But you recognize that the Communist objective was to exploit those weaknesses in the Government?

Secretary MARSHALL. There is no question but what they exploit weakness.

Mr. JUDD. Surely the weaknesses were there. It was our job to assist with them, but the Communists were more successful in exploiting them than we in overcoming them and they managed to gain their objective. Now the same maneuver is occurring in Korea. Surely they have not given up their goal of world conquest, and their first objective is getting control of Asia. Therefore, their strategy is to try to exploit weaknesses on our side here at home and in Asia now, just as they successfully exploited weaknesses then in China.

Secretary MARSHALL. I would say to that they had some difficulty in exploiting it because there has been a decided kick-back in this affair. Something was gone into quite obviously by Communist direction, and it did not work out as they intended. Now the question is how to settle that.

Mr. JUDD. They are like a man sailing across a lake. He runs into a head wind. First he tacks this way, and then that way. They tacked this way first—the attack on Korea—and did not get across, but they have not given up. They are now tacking in another direction with another tactic—cease fire—which they hope will be more successful.

Secretary MARSHALL. Another tactic or another tack?

Mr. JUDD. Another tactic.

Secretary MARSHALL. Or did you say another tack? Which was it you said? I did not understand.

Mr. JUDD. It would be a new tack, which is a tactic.

Secretary MARSHALL. "Attack" is the word?

Mr. JUDD. I said another tack—t-a-c-k—which you do when you are going across a lake in a sailboat against the wind. However, it was a tactic designed to achieve the same objective. They are still determined to get across the lake. I suspect there will shortly be another attack by another means than the direct frontal attack by force that did not work out so well. Where they do not succeed by a direct assault, they will give it up if they think they can make more headway by an assault elsewhere or by a flanking movement of subversion or the psychological approach which has been their No. 1 and most successful technique.

Now, my last question: Do you believe that the independence of Asia is essential to the independence and security of Europe?

Secretary MARSHALL. Certainly a Communist Asia with the vast numbers of people which would be involved would not be conducive to the build-up of strength under our conception of what the world should be. I do not think it would be fatal to the defense in Europe. I think it would have an adverse effect in connection with the defense of Europe because it would release that much of Russian attention from the Pacific regions for free movement in the west of Europe.

But your question covers pretty much all of the water front, Mr. Judd, and you could write a lengthy monograph in reply.

Mr. JUDD. I realize that, but it is the key question, because there is no justification in arming ourselves and spending billions for Europe if failure to keep Asia independent will jeopardize it to the point of perhaps causing failure to the whole program.

Secretary MARSHALL. I said the other day I thought we should not become involved in fighting on the mainland of Asia, and that remains my view. I think that is the view of practically everybody, certainly in the Armed Forces, who has studied the question of availability and the spread of effort. So that would stand, in any event, as a point of view.

Mr. JUDD. That is right.

Secretary MARSHALL. Now, you are approaching the thing from this angle. If you accept that as a fact or a reasonable estimate, then the question is how do you manage to prevent the subversion of all Asia in its conversion to communism? That is something else in the way of the Soviet Government's efforts. However, that would mean to me that the defense of Europe is really one question that should not be dimmed by our difficulties in the Pacific.

Mr. JUDD. It should not be dimmed?

Secretary MARSHALL. I mean, that we should not lessen our efforts for the defense of Western Europe because of the Pacific.

Mr. JUDD. No. I agree with that, but I think we should do all the things that are necessary in order to succeed in Europe, and in my judgment finding means of keeping Asia out of the Communist fold is just as essential to Europe as it is to send divisions there.

You say we do not want to get involved in land fighting in Asia, and I think I have urged that probably longer than any minor figure in our

country as far as I know. But if we do not succeed in getting the people of Asia to resist Communist expansion effectively, then we either have to intervene ourselves or let it go. Since we don't want to intervene and cannot afford to let Asia go, there is only one conclusion: We must more resolutely and successfully and resourcefully find means by which we can help these people themselves to resist it. Is that not right?

Secretary MARSHALL. I think that is right. However, I think there, from the military point of view, we have to consider very carefully the whole chain of islands that faces Asia.

Mr. JUDD. That is right.

Secretary MARSHALL. That is a very important factor in the strength of our position in the Pacific, and the final development's one way or the other on the continent of eastern Asia.

Mr. JUDD. But in view of China's size and central location and the whole history of the Far East, do you think it is probable we will be able to keep Asia independent if the Communists succeed in getting their hold in China completely consolidated so that they are free to move in any direction out from China?

Secretary MARSHALL. I think, of course, that would complicate the problem very greatly. It is one of tremendous difficulty in any event, even under the best conditions we can visualize at the present time.

Mr. JUDD. Let me put it the other way. If we do not find means of helping those Chinese who are anti-Communists stop Communist expansion there, where will we be able to stop it in Asia? How will we be able to stop it? At what cost will we be able to stop it? And with what will we be able to stop it? That is the \$64 question I am always troubled with.

Secretary MARSHALL. That is one of the great problems in the free world today, Dr. Judd.

Mr. JUDD. Because I do not want Americans fighting over there, but I am just as sure as anything that if we do not succeed in enabling Chinese to stop communism, then we will have to use Americans later at infinitely greater cost, and wreck our own defense program and the European program too. Therefore, the only alternative is that somehow we must find means of developing the resistance we know is there. The sentiment in China 2 years ago was for the Communists. Now we know it is against the Communists. We must take advantage of that rebound. We have a few months before they get the organized opposition liquidated. That may be a reason they want a cease-fire in Korea. With imagination we have to find a way to prevent that, because if we can loosen the Communist's hold in China, and break the momentum of their drive, and prove to the people of Asia that its victory is not inevitable, and show that it is not invincible, as we have done to a great extent in Korea already, there is a real chance we can break the immediate Communist threat in the whole world. Asia is the place where we can perhaps accomplish most for our whole world program with the least cost and risk to ourselves.

The weakest spot in the Kremlin's set-up today is the mainland of China, I believe. To me, attention to that is even more urgent than Western Europe at this particular moment.

Mr. REECB. Will the gentleman yield?

Mr. JUDD. I am glad to yield.

Mr. REECE. You were on the subject of a cease fire. I know in many of these questions basic policy matters come into consideration, but it would seem that if there was ever a military matter, the question of a cease fire and the conditions under which a cease-fire order may be promulgated is a military matter. First, the safety of our Eighth Army is involved, as well as many other larger questions to which the gentleman has referred. It would be very gratifying to me certainly, and I think to other people, if we had complete confidence that no action on the cease fire would be taken unless it met the judgment of the members of the Joint Chiefs of Staff, as well as General Ridgway and General Van Fleet.

Secretary MARSHALL. I think that is the case, sir.

Mr. REECE. I am not referring now to the final consent of the Joint Chiefs of Staff, but to their judgment.

Secretary MARSHALL. It is being handled as a military problem.

Mr. REECE. Thank you.

Chairman RICHARDS. Does any gentleman on this side have any questions?

Mr. HAYS. Mr. Chairman.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. General Marshall, I bring up a point not to indicate any doubt as to your position, because I think you made it clear in your main statement the other day—and I am quoting your language now—

The United States is taking more positive steps to meet the dangers of our times than have the governments of Europe.

That can be stated as an objective judgment certainly, without creating irritations between us and our allies, but there are certain implications in questions that have been asked today that I think are not supported by the present policies of European governments. I bring it out for that reason.

I would like to have this confirmed. In spite of this generalization that I have just quoted, is it not true that in terms of sacrifice, in restricted food items, and in allocations of other necessities that impinge on living standards, the sacrifices of free Europe are still in excess of America, and would be if the full amount requested were voted?

Secretary MARSHALL. I think that is correct, sir. The standard of living is very much the case.

Mr. HAYS. And that does become a factor in the decisions of other NATO countries as to their contribution because of political and parliamentary situations that develop, and because there is a limit beyond which the most devoted government of Europe cannot go in asking sacrifices in the total defense.

Secretary MARSHALL. That is correct, sir. I am in agreement with you on that.

Mr. HAYS. Mr. Secretary, I have heard you quoted to the effect that on a certain date the Korean War had cost \$34,000,000,000, and that \$7,000,000,000 of that sum was attributable to increased costs since the Korean aggression began.

Secretary MARSHALL. I do not recall the first statement because one of the great difficulties we have had is trying to distinguish with any degree of accuracy for Congress the actual cost of the Korean

War, where we have to separate things that would have been involved anyway from those that took place because of the actual fighting in Korea. However, the \$7,000,000,000 I did state, I recall that quite clearly. It was the amount of dollar value in purchases that we could not make because of the rise in prices after we had made our calculations and secured the approval of Congress for the expenditures.

Mr. HAYS. So that the necessity for firm policies with reference to inflation continues, does it not?

Secretary MARSHALL. Yes, sir. Very much so.

Mr. HAYS. I have one other question, Mr. Chairman.

In spite of the Communist propaganda with reference to the United Nations and the assertions that the North Atlantic Pact is a departure from the United Nations, it is true, is it not, that every step we have taken and every step you urge upon the Congress now is in accordance with the spirit and the letter of the United Nations Charter?

Secretary MARSHALL. I think that is the case, sir.

Mr. HAYS. That is all.

Chairman RICHARDS. Mr. Secretary, before calling on Mr. Herter I want to call the attention of the witness and his assistants, and also the public—of course the committee knows about it—to the fact that this committee has made a special study of the Strategy and Tactics of World Communism. That study was made under the leadership of Mrs. Bolton from Ohio, who was chairman of the subcommittee. I cannot recommend that too highly to people who do not understand the tactics of communism. That is House Document 619, Eightieth Congress.

Mr. Herter.

Mr. HERTER. Mr. Secretary, in connection with the draft of the bill that we have before us, which I understand is in tentative form, there are a number of things that are a little vague which are left in it. For instance, the overhead costs of the operation are not in any way stated. In fact, as the draft appears, the entire amount can be used for overhead. That is, the entire \$8,200,000,000 can be used for overhead if those who are administering the program saw fit to use it all for overhead.

I am wondering if it is possible for you to get figures from the Defense Department on the amount of overhead that you think would be required to service, let us say, the end-item program alone.

Secretary MARSHALL. I think so, sir.

Mr. HERTER. Good. Then the second thing is transportation costs. There is no indication anywhere as to who pays transportation costs in connection with end items. For instance, on what you are sending to Indochina today, does the United States pay all the transportation costs, and the same with regard to Turkey, and the same with regard to other NATO countries?

Secretary MARSHALL. I think that is the case, sir.

Mr. HERTER. Could the transportation costs of all those items be segregated likewise in general terms?

Secretary MARSHALL. Yes, sir.

Mr. HERTER. The third thing is, we have had some testimony overseas in respect to the great value of training a certain number of foreign military personnel in this country. There was, of course, no

reference to that anywhere in the document itself, but you must have made some calculations as to how much money you want to spend on that.

Secretary MARSHALL. Yes, sir. That was done. I will have a report later.

Mr. HERTER. Could you give that to us as a separate item?

Secretary MARSHALL. Yes, sir. I will have that done.

Mr. HERTER. I appreciate that very much.

Chairman RICHARDS. Are there any other questions?

Mr. HERTER. Mr. Chairman, I am wondering if the Secretary, while he is here, would be willing to say something about the value of the training of foreign military personnel in this country. It has not been touched on at all in any of the testimony, and I think it might be desirable for you to give us your views for the record. I feel that is important.

Secretary MARSHALL. It is not only important, but it is essential, and I think about 12,000 have either completed the training or are in the process of being trained at the present time. Is that not correct?

General SCOTT. Yes.

Secretary MARSHALL. And that is a most important factor. It is not only a question of familiarizing them with the management and the functioning and also the upkeep of this material and these weapons, but it also goes into the practices that we think are more efficient in the organizational handling of the men.

Of course, the more we have a common doctrine, the better off we are. The training of these men and bringing them into this country, and all, builds up indirectly that same common thought as to these various matters, and a better understanding of ourselves and of our methods. It is a very important factor and, as I say, it is an essential factor of this program.

Mr. HERTER. Thank you.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Thank you, Mr. Chairman. Mr. Secretary, we have, pending before this committee, a bill that was passed unanimously by a subcommittee of which I happen to be chairman. It is a result of a study we made on east-west trade. Of course, the Congress, and the American people, and the Executive, and all of us, are very anxious to make sure that we do not do anything to build up the Communist war machines that in turn will kill our boys.

General Eisenhower recently told us, on this visit that some of us made to Europe a couple of weeks ago, that we should be very careful in working out this complicated problem as it would not be sensible for us to cut off our nose to spite our face, so to speak, in cutting off all trade, because Western Europe is dependent on certain items, like coal, timber, grain, and so forth, that come from behind the iron curtain at the present time.

You would agree, however, would you not, as I am sure General Eisenhower agrees that there must be some workable system of controls by the United States and by our allies on these strategic shipments behind the iron curtain?

Secretary MARSHALL. Yes, sir. I think that is the case.

Mr. BATTLE. At the present time we are operating under what we call the Kem amendment, which was attached as a rider to the third supplemental appropriation bill. As I understand the Kem amend-

ment, it is effective so far as the United States is concerned only when we are at war under the direction of the Security Council of the United Nations. I think most of us realize, and I believe that the Kremlin realizes, that they made a grave mistake when they boycotted the Security Council at the time the decision was made to go into Korea.

In case war broke out in some area other than Korea, for instance Germany, is it safe or practical to have a policy on east-west trade that is based on the assumption that Russia would walk out of the Security Council again? Is it safe for us to depend on her not using the veto, knowing that the veto would prevent action by the United States under the Security Council of the United Nations.

From my own point of view, and I am sure most of us agree, we cannot predict what Russia is going to do, so it seems like it is not safe to assume that Russia would walk out again and not use their veto. Would you agree with that?

Secretary MARSHALL. That would seem to be the case with me.

Mr. BATTLE. Also the Kean amendment, as I understand it, seeks to cut off economic assistance to any benefactor nation which ships war materials behind the iron curtain.

In the foreign-aid legislation pending before our committee at the present time I believe about 70 percent of the assistance deals with the military. In the future then, do you not think it would be practical and that we should include our military assistance as well as our economic assistance in any system controlling shipments behind the iron curtain?

Secretary MARSHALL. That would seem so to me.

Mr. BATTLE. Relative to the east-west trade problem, I have mentioned the fact that Western Europe is dependent on Poland for coal. I further understand that Poland is beginning to be a little more harsh in the terms of her trade agreements, demanding more in return, especially in the way of strategic materials.

Would you not think it practicable from a military point of view to be thinking in terms of possible alternative sources of supplies, on such important items as coal, for which we are dependent at the present time on countries behind the iron curtain?

Secretary MARSHALL. We are already thinking of that, sir.

Mr. BATTLE. That is all, Mr. Chairman. Thank you very much.

Chairman RICHARDS. If there are no further questions, the Chair wishes to state—

Mr. REECE. May I ask a brief question, Mr. Chairman?

Chairman RICHARDS. Mr. Reece.

Mr. REECE. What progress are you making on the standardization of arms?

Secretary MARSHALL. On the standardization of arms?

Mr. REECE. Yes. The standardization of arms.

Secretary MARSHALL. It is a very slow job. We are making considerable progress. For instance, we are making considerable progress with Canada. As a matter of fact, they have transferred part of their arms of British manufacture and their own local manufacture to one of the Western European countries, and are replacing it with arms that are purchased in this country. That makes quite an advance.

In relation to Latin America, we are making small advances.

This procedure that is going on under this present program we are discussing here is bringing about an approach to that same question. Of course, we are in a predicament where we cannot discard large numbers of weapons, but the replacements and the build-ups are along the lines of standardization.

Mr. REECE. That is all.

Chairman RICHARDS. Mr. Secretary, this will terminate your testimony, as I understand it, in open session. You have been very patient and very frank, and the committee fully understands there were some questions that you felt should be answered, if answered at all, in executive session.

If we should desire later to have you testify before this committee in executive session, we hope that you will be able to come.

Secretary MARSHALL. At your desire, sir.

Chairman RICHARDS. Thank you.

The committee stands adjourned until tomorrow morning at 10 o'clock.

(Whereupon at 11:58 a. m. the committee adjourned until 10 a. m. the following day, Tuesday, July 3, 1951.)

THE MUTUAL SECURITY PROGRAM

TUESDAY, JULY 3, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the Ways and Means Committee room, 1102 House Office Building, at 10 a. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

We will continue hearings this morning on the Mutual Security Program. We are privileged to have with us this morning Mr. Harriman.

Mr. Harriman, do you have a prepared statement?

Mr. HARRIMAN. Yes, sir, Mr. Chairman; I have a brief statement.

Chairman RICHARDS. Will you proceed, please.

STATEMENT OF HON. W. AVERELL HARRIMAN, SPECIAL ASSISTANT TO THE PRESIDENT

Mr. HARRIMAN. Mr. Chairman, ladies and gentlemen of the committee, I appreciate the opportunity to testify again before this committee. I have a brief statement underlining the broader aspects of the Mutual Security Program which in my opinion make it a vital and integral part of our security policies.

I first want to reiterate what I have said to you before: that I still believe it is possible that another world war can be prevented, providing, and perhaps only providing, we give the essential inspiration and leadership to the free world, and that we act with wisdom and vigor, and, above all, consistency of purpose.

As the threat of Communist imperialism has unfolded, our country has supported unprecedented policies and programs which have been successful in thwarting in many areas the Kremlin's aggressive designs. Your committee has played a notable role in developing and carrying through these policies and programs.

I believe we are now in the acute phases of the struggle. The effort that our country will be required to make, including our own rearmament program and the program for mutual security, will be very great, particularly for the next 3 or 4 years.

If we carry out these programs effectively and are successful in preventing a general war, we can look forward to a tapering off of our domestic expenditures and a sharp reduction in our foreign assistance.

The greatest part of our own effort and that of our allies will be to build the necessary military forces in being and trained reserves, and to produce equipment needed for both. When this build-up has been

completed, the annual cost will be very much reduced. Thus, our intensive efforts in the next few years will be in fact a capital investment in security.

The Kremlin respects nothing but strength. I believe firmly that when we and our allies are strong enough we will find an entirely different political situation in the world.

Confidence will replace fear among the free countries. The Kremlin will find that it must adjust its policies, and the processes of disintegration may begin behind the iron curtain.

To arrive at this situation, however, will require our carrying out all of the security programs that we are now planning—the development of our own military strength, aid to help our friends and allies rearm, and an economic program for an expanding economy in the free world.

There would be only disaster if we attempted to “go it alone.” Our associates can develop military forces exceeding our own in manpower, but these forces cannot be effectively equipped without our help.

These nations have not the industrial capacity or the economic resources to produce in time all the weapons necessary for modern warfare.

We must bear in mind that we produce industrially as much as the rest of the world put together, including the Soviet bloc. By a relatively small investment on our part to help a few other free nations, a vast addition to our own and to world security can be attained. To me it is untenable that we should deny our own fighting men the benefit of well-equipped allies, should trouble come.

The Kremlin has at its command in Russia and its satellites only a small fraction of the industrial capacity of North America and Western Europe. It has been estimated that the gross national product of Russia and her European satellites totals less than \$100 billion.

In spite of their pretensions for peace, the Kremlin rulers are forcing their enslaved populations to produce for military purposes at the expense of what we would consider essential civilian needs in a manner utterly unthinkable in free countries.

They are exploiting their European satellites by bringing down the standard of living of these unhappy peoples to that of Russia. They are increasing the military forces of these satellites and diverting output for Soviet use.

If they had succeeded, as I believe they thought they could, in taking over continental Western Europe through subversion during the economic chaos of the early postwar years, they would have more than doubled the industrial resources at their command. By applying the same system of exploitation to these countries, they could have developed military strength of staggering dimensions. We would at best have been forced into the total mobilization of a garrison state and, at worst, faced with an unmanageable situation.

These designs were thwarted by the Marshall plan. And now through the North Atlantic Treaty we have vigorous allies who are working with us to develop and combine our mutual strength in a common effort to make the free world unassailable against external aggression as well as internal subversion.

Had it not been for the new rearmament effort, the Marshall plan would have accomplished its purpose, in all but a few countries with

special difficulties, within the 4 years as planned, and at a cost of several billion dollars less than originally estimated.

Continued economic and technical assistance in Europe is now required on a much reduced basis to make possible the realization of its military potential, and at the same time to sustain a sound economic base from which increased total production can be developed.

Military strength alone cannot win this basically ideological struggle. The only solid foundation on which to build security is economic development—a free-world expanding economy.

Otherwise, we would be building on quicksand. An expanding economy is essential to bear the cost of adequate military forces for defense, and at the same time give hope to freemen for a better life.

The industrial countries can increase their production if adequate raw materials are available. We in this country know that shortages of raw materials now limit our total production. The same is true in Europe. We must work together to increase production of essential raw materials in the underdeveloped countries. This will have the double value of making it possible for the industrial countries to expand their economies, and at the same time improve conditions in the underdeveloped areas.

But it is not enough only to expand raw-materials production in the underdeveloped areas. Their vast populations are engaged largely in agriculture. We must help them to increase their food production.

I know you are familiar with what has already been accomplished with our help in some of these countries. The underdeveloped countries need our technical assistance and capital under the broad concept of point 4.

This country is the principal reservoir of capital in the world. It should be our policy to encourage as far as possible the flow of private capital to contribute to the needed developments.

At the same time, investments must also be made through the World Bank and the Export-Import Bank in those projects which are not appropriate for private financing, such as improved transportation, power, irrigation, drainage, and so forth. I hope that the Congress will approve the recommendation for the addition of \$1 billion to the lending authority of the Export-Import Bank.

The Mutual Security Program includes some grant funds for economic development and technical assistance. The increased earnings of the countries producing raw materials makes it possible for them to finance a considerable part of their development needs.

However, there is real need for the grants that have been requested, to set in motion increased production and to help create conditions favorable to sound future international investment. It is planned that the administration of grants and of loans by the Export-Import Bank will be closely concerted to achieve the over-all objectives.

The reports by Mr. Gordon Gray and by the International Development Advisory Board under the chairmanship of Mr. Nelson Rockefeller have made a valuable contribution to our understanding of the problems of the underdeveloped countries and their interdependence with ourselves and the other industrial countries. These reports bring out clearly the dependence of our economy for its life and expansion on the development of other parts of the world.

We are almost wholly dependent on imports from overseas for such raw materials as manganese, tin, natural rubber, chrome, asbestos,

cobalt, crucible graphite, industrial diamonds, hard fibers, and a number of other metals vital to military production.

We also require very large imports of other basic metals, including copper, lead, zinc, tungsten, and uranium, as well as other products such as vegetable fats and oils, and wool.

A part of this Mutual Security Program is directed toward expanding raw-materials production abroad. The bulk of such expansion is to be privately financed, or promoted through Government loans and purchases for stockpiling or resale for military and other industrial production.

Some of the development projects in this program, moreover, are for transportation and other purposes directly related to strategic-materials development. In the underdeveloped areas generally the program is designed to help create political and economic conditions making possible expanded raw-materials production, and assuring their continuing availability.

We cannot expect political stability under the conditions of misery that are so widespread. The false promises of communism have already made alarming inroads, and it is clearly essential that we help in showing that real improvement in economic conditions can only be obtained in a free society. This requires cooperative policies and actions on the part of all free nations.

A danger which overhangs us all is that of inflation. Like an infectious disease, it spreads from country to country. We must not only combat inflation at home but work with other countries to combat it on an international basis. Inflation has already caused great difficulties in the rearmament effort of Western Europe as well as in our own.

Perhaps the greatest danger of all is the danger of relaxation. Already with the hope of an armistice in Korea there are those, in my earnest judgment, who are asking whether we cannot reduce our efforts.

Relaxation can only lead to disaster. I believe that the United Nations action in Korea has been a crucial step in preventing another world war.

The main purpose of our greatly enlarged rearmament program, however, was not to fight the Korean War but to develop strength rapidly to prevent a world war, and to be prepared should it be forced upon us. If we were to relax now, the sacrifice of our men in Korea might have been made in vain.

I believe that the Kremlin considers the attack on Korea as a major blunder. They expected to attain an easy victory, demoralize the United Nations, and discredit American leadership.

Not only has this plan failed but the aggression in Korea has aroused our country and our allies to undertake greatly accelerated rearmament for defense. The Kremlin would like nothing better than to have us think that we can safely relax now while the Soviets continue to build their military strength.

The Kremlin is convinced that free society cannot organize itself for survival, and that free nations cannot remain united. The Kremlin always seeks to divide the free countries, and we must be ever on our guard.

This is the moment when the United States must take the lead in going forward vigorously with all the security programs on which we have embarked.

I earnestly believe that we are today facing a supreme test—whether we are prepared to make the present-day efforts to assure our security and the continuing growth and vigor of a free society.

Chairman RICHARDS. Thank you, Mr. Harriman.

You stated in your testimony that we could not afford not to make this investment proposed here. We have had an economic-aid program, the Marshall-plan program, that has been going on now for about 3 years. According to the proponents of the measure and also the Congress itself, it is supposed to end officially at the end of June 30, 1952.

We have a military-aid program that should run at least 3 or 4 years.

Do you think at the end of that time the United States can get out of the picture and these people can stand alone?

Mr. HARRIMAN. Well, the termination or the tapering off of the Marshall plan and the beginning of the greatly enlarged NATO military program have greatly overlapped each other. Now, there are certain functions which have been done by the Europeans and by ourselves in working with them, which I think should continue during the period of intense military rearmament, which I understand has been estimated for the next 3 years.

The economic organization of the Europeans, the OEEC, can make a valuable contribution in working together to break the bottlenecks of production in Europe and to help the Europeans help each other in expanding their economies to take care of the added load they must carry in their industry.

By the same token, a good many of the similar types of production negotiations we are engaged in in the conduct of the Marshall plan should continue in order to make it possible for us to work with them on the military program.

In addition, our technical assistance should continue.

We were helpful, as you remember, in stimulating increased productivity in Europe, and both industry and labor now in Europe want our help to show how they can increase their productivity, which would make it possible to carry a heavier rearmament burden. Those functions, many of them, although they are directed in a different way, I believe should continue during the period of the rearmament effort. The form in which you do it is, of course, for others than me to decide.

Chairman RICHARDS. Do you think, sir, that the military-aid part of this program is just as important to the defense of the United States as an authorization for the defense of our own forces here?

Mr. HARRIMAN. That is what I tried to bring out in my testimony, sir, and that is what I earnestly believe.

Chairman RICHARDS. Thank you.

Mr. HARRIMAN. I believe for a relatively small sum, as I said, we can perhaps, if we have the time, double our security by giving aid to our associated countries, both those in Europe and adjacent thereto.

Chairman RICHARDS. You think that taking into consideration the financial and economic condition of the United States and the danger of inflation here, that nevertheless this is a good investment?

Mr. HARRIMAN. I believe so; most earnestly so.

Chairman RICHARDS. Thank you.

Mrs. Bolton.

Mrs. BOLTON. It is delightful to have you before us again, Mr. Harriman. We always enjoy having you here.

Mr. HARRIMAN. Thank you, Mrs. Bolton.

Mrs. BOLTON. You just said that for a relatively small amount—

Mr. HARRIMAN. I meant relative to our own expenditures.

Mrs. BOLTON. Oh, I see.

Mr. HARRIMAN. I meant relative to our own expenditures.

Mrs. BOLTON. Because \$8,000,000,000 looks pretty big, and \$6,000,000,000 looks pretty large.

Mr. HARRIMAN. I meant relative to our own. I am glad to be corrected.

Mrs. BOLTON. You feel that this country can take the \$66,000,000,000 that is going to be required for our military and for foreign military equipment then? After all, your knowledge of the country from a businessman's angle has been considerable.

Mr. HARRIMAN. As you know, all of that \$66,000,000,000 is not spent in 1 year. A good part of it is for authorizations that lap over into other years; but I certainly do. We have, of course, three times the gross national product per capita as Europe. We have industrial capacity that is three times as great, and I believe that we can, and I also believe if we can get the raw materials and basic materials we can expand our economy faster than would be the case without this program, so that in a few years I think we can catch up with it and carry what is needed.

Of course, if we do not get into war, why, this will be a period of intense effort for 2 or 3 years, and then a very sharp tapering off after we get the capital equipment for the forces abroad and at home, and the trained men.

Mrs. BOLTON. Would it seem to you that in order to do it we would have to curtail some of the altruistic programs on which we have been spending a good deal of money for the past 20 years?

Mr. HARRIMAN. If you take altruism, I think, in its literal sense, then I think we must continue the same programs, that is, the programs which contribute to the security of the free world and, therefore, our own security. The programs that are included in the recommendation are to develop political and economic stability in those areas of the world where we have a great strategic interest, not only because of geography, but because of the raw materials on which we are depending.

If we can learn any lesson from Iran it is that we must see that the people of the country where we want to get the benefit of their subsoil wealth for our use—that those people must also get a benefit and get a feeling that they are participating in the advantages that are coming to us.

The sums requested are relatively small for the underdeveloped areas. It would require technical assistance for them, including public administration; but I think you are familiar, so I will not go over it again, with what has already been accomplished. These operations give promise for very real success in showing people how they can improve their production and give them some hope for a better life.

Mrs. BOLTON. I am particularly happy to have you bring up the Iranian matter because we have had some discussion of it, and Mr. Judd made a very fine statement yesterday and previous thereto relative to the fundamental problem that must be faced in Iran,

which you have just mentioned; namely, that the people have the right to more of their subsoil wealth, and that it is just that which they are fussing over.

More than that, it even goes to the recognition of them as free people, as nationals with a right to a voice in the Iranian Oil Co., which they have so far not been able to have, and the recognition by the British and the rest of the world of their importance as individuals and as a general human problem.

Mr. HARRIMAN. I very much agree with you.

Mrs. BOLTON. That would be your very clear understanding of it?

Mr. HARRIMAN. I very much agree with you, Mrs. Bolton.

Mrs. BOLTON. You spoke of the raw materials on page 2 of your written testimony. You said something about the fact that the industrial countries can increase their production if adequate raw materials are available. That is near the bottom of page 2. There has been recent comment that America has been taking all the raw materials, that there should be a pool of raw materials, and that there should be a way of distributing those fairly to produce the best over-all results.

Has anything been done along that line at all?

Mr. HARRIMAN. Yes. There has been established international machinery which is now in operation. It is not quite a pool, but an analysis of the availabilities and the requirements of the different countries. Committees have been set up of producing countries and consuming countries, so that there can be a fair division of the raw materials and, of course, I hope we are arriving at more reasonable prices in some cases. That is in operation now, and others can testify better than I can as to the details of these operations; but I believe that is a very important subject, because we want to see that everyone gets his fair share, if there is a deficit. On the other hand, we must work together, which I believe we are through ECA in Europe, and directly on our part in other countries, to increase the needed raw materials, so that we can expand industrial production here and in Europe.

It is only by an expanding economy that people in a free society will be able to carry this load. I tried to bring out the fact that under the Communist dictatorial state you can deprive people of everything and divert an enormous percentage of their gross national product to defense, which is what they are doing.

When you think that we are fearful of Russia today with a gross national product of only \$70,000,000,000 itself, and less than \$100,000,000,000 with the European satellites—one-fourth of our own—it shows we have a problem in a free society to expand production so that we can have a decent life, and at the same time divert enough of our production for defense.

Mrs. BOLTON. That, of course, is as you suggest dependent largely on the amount of raw materials that can be made available.

Mr. HARRIMAN. The raw material factor is today the limiting bottleneck.

Mrs. BOLTON. We have just received from the printer this morning, Mr. Secretary, a staff memorandum, which we feel is going to be exceedingly valuable, of the potential production of strategic materials by point 4 countries. It is just a little thing, but is full of exceedingly valuable material. I hope you will take one off in your pocket this morning.

Mr. HARRIMAN. I have not had the opportunity to see it yet. I will study it.

Mrs. BOLTON. We have only just received it this morning from the printer. I hope you will take one, as you agree with me that raw materials are one of the very great factors in our entire mutual security program.

Thank you, Mr. Chairman. My time must be up.

Mr. HARRIMAN. May I just say this: Of course, in Europe with lower productivity per workman there is an even greater opportunity to expand percentage-wise productivity there, and that is why there is the great need for the continuation of our technical assistance.

Mrs. BOLTON. Yes.

Mr. HARRIMAN. I found this time, when I was in Paris, even greater interest on the part of the European management and European labor than I did a year ago. It was rather difficult at the beginning to make them both understand the great value of increased productivity, but in the 3 years that we have been working with them as a result of the teams that have come to this country, our industry men who work in the different countries told me there was a real interest and a real desire to absorb this information. They gave me some rather startling figures on what was done in certain individual cases without a very much larger investment, and I was very much impressed.

Mrs. BOLTON. You feel those teams coming over are a very valuable contribution?

Mr. HARRIMAN. Yes, and then a small number of Americans going in on a small basis from industry to industry in the different countries is something that is very important for us to continue.

Mrs. BOLTON. Of course, the labor organizations are making a very fine contribution.

Mr. HARRIMAN. Our labor organizations have been very helpful in terms of education and in terms of helping the labor men that come over here. As you know, it has been historically the idea in Europe that increased productivity was dangerous to employment, and the businessmen liked big profits on a small volume of business; whereas our concept of an expanding economy and expanding productivity is one which I think we have brought to Europe and is one of the values of the Marshall plan. Now we want to help them take advantage of the new opportunity that has been created.

Mrs. BOLTON. Thank you very much, sir.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. Thank you, Mr. Chairman.

Mr. Ambassador, I am certainly glad to see you again.

Mr. HARRIMAN. Thank you, sir.

Mr. GORDON. Of course, I appreciate getting your views on this important Mutual Security Program. I have no questions at this time, Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. I have no questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. I have no questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Harriman, throughout the testimony that has been given here the term "gross national product" has been used quite frequently as one of the yardsticks by which the relative effort of

different nations has been measured. I think everybody gets a little confused in thinking that what gross national product means is gross national income. I wonder for the record if you would be good enough to define what gross national product is.

Mr. HARRIMAN. As I understand it, gross national product is the total output of industry, agriculture, and services. National income is the income received by individuals.

Is that a correct definition? Mr. Gordon, my economist, can perhaps correct me if my definition is not correct.

STATEMENT OF LINCOLN GORDON, ECONOMIC ADVISER TO THE SPECIAL ASSISTANT TO THE PRESIDENT

Mr. GORDON. The gross national product is most simply defined as the total value of "final products" produced in the Nation during a given period. By "final product" it is meant that those things are excluded which, though produced during the period, are used up in the further production of other goods and services. Thus the gross national product includes the total value of finished consumer goods and consumer services, finished machinery and equipment, construction and the goods acquired by and services consumed by the Government. It excludes such things as the steel that is used in producing automobiles, the coal that is consumed in running factories, the grain that is fed to animals, and so forth, the values of these latter commodities being incorporated in the final value of finished goods.

To the above should be added two qualifications. First, if there is a net increase in the value of all inventories and stocks on hand over the course of a period, this increase reflects production not entirely embodied in the value of finished commodities, and the value of that net increase is added into the calculations of gross national product; on the other hand, if there is a net decrease in inventories and stocks on hand, current production during the period is less than that represented by the output of finished goods and services, and the net decline in inventories is deducted in arriving at the gross national product.

The second qualification has to do with durable goods used in production, i. e., plant and equipment. The gross national product estimate makes no allowance for the depreciation of major plant and equipment. By analogy with the treatment of inventories, one would calculate the value of such equipment used up during the period and reduce the total production estimate accordingly. But, inasmuch as there is significantly greater flexibility in the replacement of equipment than in the replacement of inventories, and also because estimates of depreciation are inherently less objective than estimates of stocks of materials since they involve a judgment regarding durability and obsolescence, attention is consequently given usually to the gross figure which makes no allowance for depreciation rather than to the net figure which would allow for the estimated depreciation of durable plant and equipment.

The value of gross national product necessarily depends on the length of the period over which output is measured. The same rate of activity for a year would yield four times the gross national product of a quarter year. By convention the year is the standard accounting period, but we are often interested in the rate of production during

a shorter period than a year, in which case we may calculate the gross national product for a month or a quarter and multiply it by 12 or 4, as the case might be, to express it as an annual rate.

The value of the gross national product is naturally very closely related to the value of incomes earned during the same period within the country, since it is the sale value of the Nation's output from which incomes are derived. Because of this fact it was fairly customary, until recently, to use the terms "national product" and "national income" almost synonymously.

With the great improvements in national accounting and statistical techniques of the last decade there has occurred a refinement of terms so that "gross national product," "national income," and "personal income" are rather precise terms as used in this country and refer to related but different concepts. The national income differs from the gross national product in two important respects:

(1) The national income reflects an allowance for estimated depreciation and depletion of capital equipment (both of private business and of Government assets), the effect of this difference being to make national income less than the gross national product.

(2) Indirect taxes are subtracted from the gross national product in arriving at the gross national income, indirect taxes having been reflected in the values of the goods and services represented by the gross national product. For the United States these two adjustments are currently equal to about \$22,000,000,000 and \$26,000,000,000, respectively, and consequently make the national income about 15 percent less than the gross national product.

"Personal income" represents a still different concept. This concept recognizes that income accruals and income receipts may differ, notably in the case of corporate dividends compared with corporate earnings; the difference being the sum of direct taxes on corporations and net retained earnings. It also recognizes that certain payments by the Government to individuals are in the nature of income payments, although, not arising out of the value of current production, they are "income" in a slightly different sense. Among these are transfer payments, such as pensions and social security benefits, as well as interest paid by the Government. Personal income consequently differs from national income by, principally, the deduction of corporate profits and the addition of corporate dividends, and by the deduction of social security taxes and the addition of Government transfer payments to individuals.

These adjustments may lead to a personal income figure either higher or lower than national income, the general tendency being for a relatively high personal income figure compared with national income when the gross national product is low and unemployment benefits high and corporate earnings low in relation to dividends, and so forth, and vice versa. At the present time, personal income is about 7 or 8 percent less than national income in this country.

The percentage differences among these three statistical measures are not especially uniform among countries, depending as they do on the extent to which governments derive their revenues from direct or indirect taxes, the ratio of depreciation to total production, and, as between national income and personal income, depending on the relation of corporate to personal taxes, the savings practices of corporations, and on whether social insurance benefits are derived from an especially identified system of social insurance taxes, and so forth.

It is generally considered preferable to use gross national product for international comparisons since this figure has a rather clearly defined physical meaning in terms of the total production of the economy and depends relatively less than the others do on institutional arrangements. However, for rough comparisons between, say, the United States and the European countries, the general order of magnitude of the comparison is not greatly affected by using one rather than the other, inasmuch as differences between gross national product and national income may run from 10 to 20 percent, while the differences between the United States and the European countries on either basis are, per capita, from about 100 percent in the case of the United Kingdom and Denmark to roughly 200 percent in the case of France and three or four hundred percent for some of the poorer countries.

Mr. HARRIMAN. Do you wish him to submit a technical report for the record?

Mr. HERTER. We might as well get it clear, because the phrase appeared in your testimony and appears prior to this time, and is used quite frequently as a yardstick. I wondered if you would care to comment on the use of it as a yardstick.

Mr. HARRIMAN. I have used the term "national product" and got in the habit of doing it because I was rather convinced when I was Secretary of Commerce that it was the most reliable figure from a comparable standpoint of total national effort.

Mr. HERTER. If you take the gross national product of the United States and take a percentage of that as being the effort we are making and relate it to a similar situation, let us say, in France, you do not have really an entirely comparable situation, because you start from a considerably lower standard of living in the French case than you do in the case of the United States; do you not?

Mr. HARRIMAN. You mean as far as the military effort is concerned?

Mr. HERTER. Yes. To use that as a single yardstick of relative effort.

Mr. HARRIMAN. It so happens that I think France is running fairly close to our actual expenditures. We must understand one thing, that in our budget as it comes to Congress are not only the expenditures, but the authorizations that are requested; whereas the French budget is an estimate of the actual expenditures. Therefore, in comparing the French budget we must compare it with the actual expenditures during the period under consideration, rather than the budget.

Have I made myself clear?

In France today, as I understand it, they are running along between 8 and 9 percent, or very close to 9 percent of their gross national product in their budgetary expenditures for military, and that is not far off what we are now spending. The French expect to expand their military expenditures, but I believe when we come to a peak it is a fact we will be spending more, or a higher percentage of our gross national product than is contemplated by the French, or that we would suggest the French should spend.

Our gross national product is not the only factor, of course, to consider if we are considering relative effort. One is the fact that France has only about one-third of the gross national product per capita that we have, in addition to which they do not pay their troops anything like the salaries and wages we pay ours. Also, there are other factors that have to be given consideration.

Mr. HERTER. Very recently there has been a tendency to insist on dollars-and-cents appropriations rather than contract authorizations, as was the custom in the past. As a result, the budgetary figures get somewhat distorted from the point of view of expenditures in a given year.

Mr. HARRIMAN. You are right.

Mr. HERTER. On the other hand, you have a great many editorial writers and others who take the expenditure figure and then talk about a pay-as-you-go tax operation based on those expenditure figures. It is a little confusing for Members of Congress to try to explain the thing today, because we are trying to go on a pay-as-you-go basis, but the expenditures are not going to be anything like the appropriations that have been made. I think it is a very confusing picture not only from the point of view of a good many laymen but a great many people who ought to know what the situation is.

I am wondering whether, from the point of view of our procedures, it would not be infinitely better to make estimates of expenditures and contract authorizations, and then try to adjust our tax burden in accordance with the expected expenditure, instead of the appropriations.

Mr. HARRIMAN. This is outside of my immediate responsibilities, but when I was Secretary of Commerce I testified on the tax bill at that time. As I understand it, the Treasury does submit the estimate of expenditures that are going to be made during the current year, and it proposes taxes on the basis of expenditures, to cover that, and not on the basis of appropriations.

However, it is confusing to get across to people generally what the difference is between the budget and the actual expenditures.

Mr. HERTER. One confusing thing about trying to relate this pay-as-you-go procedure is that generally speaking nobody takes into consideration the excess under the social security program—that is, of the intake over the outgo—so that quite frequently you have a considerable margin there of excess taxes that do not appear in the ordinary tax picture at all. That ought to be figured in the over-all inflationary picture.

Mr. HARRIMAN. Three years ago I would have been able to discuss that with you. I have not made a study of the situation at the present time, so I think I cannot help you in that right now.

Mr. HERTER. The only reason I raised the question is that it seems to me if we have to sit here and pass judgment on an over-all economic picture in the making of authorizations, we ought to have a pretty clear picture as to exactly where we are heading in our fiscal situation.

Mr. HARRIMAN. Someone else than myself can give you an estimate of what the actual expenditures will be during the next 12 months if these appropriations are made. I have not got them, but it is obvious a considerable part of the military expenditures are long-lead items that will not be delivered until later fiscal years.

Mr. HERTER. Thank you.

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. Thank you, Mr. Chairman.

Mr. HARRIMAN. How do you do, sir?

Mr. ZABLOCKI. Good morning, Mr. Ambassador. I want to join my colleagues in welcoming you here.

In your statement and in answer to some of the questions you have referred to a fear, saying that we are fearful. I would like to point my questions to that phrase, because I am sure that you do not intend to imply that our Nation and our present policies are laboring under any fear. There are accusations that our present policies are due to fear; that we have either a fear of too much aid to our allies, or insufficient aid, or that the Soviet is too strong for us. I am sure you do not intend to imply we are fearful in that respect.

We are cautious, but we do not fear the Kremlin.

Mr. HARRIMAN. When I was speaking about fear in the free world, I was speaking about those countries which are wide open to Soviet attack at the present time. I was not speaking of our own country, but those countries that are quite close to the forces that are known to exist behind the iron curtain, and who have insufficient defense at the present time against possible aggression.

Mr. ZABLOCKI. Mr. Ambassador, to clarify it further, you do not fear that our allies are weak or unwilling, or not able to cooperate with us in their global struggle; did you?

Mr. HARRIMAN. No. I believe that our allies, or the governments of our allies who represent a majority of the people, are determined to go forward and desirous of going forward, and are determined to go forward with the mutual security programs on which we are embarked at the present time. The will to fight has been shown by the troops that have fought in different parts of the world. There can be, in my judgment, no question about that. The will to fight comes from leadership and comes from ability to fight, which means adequate equipment and adequate forces.

I think so much has been said about France that I might point out that the French have fought gallantly, even though with very small forces, in Korea. They have something like 150,000 French troops in Indochina that have taken substantial losses and have shown no weakness in will to fight, and have been up to the highest tradition of the French military.

Mr. ZABLOCKI. Mr. Ambassador, you state:

The Kremlin will find that it must adjust its policies and the processes of disintegration may begin behind the iron curtain.

On the basis of recent elections in Europe and developments in the Far East, how great or pronounced is the evidence of unrest and disintegration of the Soviet influence today?

Mr. HARRIMAN. The surest evidence is that purges continue. Wherever you find purges they are an expression of the unrest that exists in the countries. We see even in the inadequate information that we get through the press very substantial purges that are going on in the satellite countries.

My statement there, if I may amplify it a bit, relates to my belief that the Kremlin has maintained these very large forces in order to intimidate and to divide the free world, and to support her satellite military operations.

If the free world is strong enough so that aggression cannot be successful, I believe that they will find that it will be necessary for them to reduce those expenditures. Although they can do what they are now doing—that is, force their people to exert most, or a large percentage of their effort to the military—it does cause a lot of unrest within the country.

Now, when these policies prove to be unsuccessful, there will be internal pressures which will, I believe, force some sort of a change.

I did explain that the Soviets were exploiting their Eastern European satellites, and that has helped them maintain their military forces. If they cannot expand there will be no further area they can exploit. This exploiting business can only go on once and it will make it very much more difficult for them to maintain these large forces, and they may well have increasing difficulties behind the iron curtain.

Now, we did see the defection of Tito, which, I believe, came from the improvement of conditions that resulted from interim aid and the prospects of the Marshall plan. That type of movement, although it is not evident anywhere at the present time, can gain impetus if the free world is gaining in strength and determination.

In other words, it is really just a question of whether we believe that free society is the vigorous society, or whether dictatorship has more vitality. I cannot believe that it can hold control of its people indefinitely. The process of disintegration has always in the past begun, and I think that will again begin. After all, they have been in control of Russia for 34 years, and still it is a land of fear. The Kremlin fears the people and the people fear the Kremlin. I do not believe you can go on forever under such a system.

MR. ZABLOCKI. Mr. Ambassador, on the past performance of our allies and with the evidence of unrest, and taking into consideration your last statement, it is most necessary and crucial then that we do not curtail our efforts as embodied in this Mutual Security Program we are now considering. Is that right?

MR. HARRIMAN. I earnestly believe it would be a great mistake, and I believe it would encourage the Kremlin to pursue more aggressive policies if we were to relax, and it would encourage the people among our allies to relax. I know the political situation in other countries is not far different from our own. There are people in other countries who do want to relax, just as there are in this country. I really do believe this. As I said, we are coming to a critical period of the struggle, and if we go forward and show the Kremlin and show our allies that we mean to carry forward with vigor, that today will be the turning point in the whole struggle. But, if we do relax then other people will relax, and it will certainly encourage the Kremlin and it will be an invitation to further aggressive actions on their part.

MR. ZABLOCKI. Thank you, Mr. Chairman.

CHAIRMAN RICHARDS. Mr. Reece.

MR. REECE. Mr. Harriman, do you think bringing Greece, Turkey, and Spain into the North Atlantic Treaty Organization would strengthen the position of the Organization and of the United States?

MR. HARRIMAN. Yes. The bringing of Greece and Turkey into the North Atlantic Organization is under consideration now. The question of Spain is also under consideration, and it will probably take a longer period of time, if it can be done.

MR. REECE. Recently I introduced a resolution, feeling that way myself—

MR. HARRIMAN. What was that?

MR. REECE. Recently I introduced a resolution which indicated it was the sense of Congress that these countries be invited to become parties in the North Atlantic Treaty Organization. I am wondering if the enactment of a resolution of that nature might strengthen the

hand of the administration in encouraging the invitation to be extended by the other member countries?

Mr. HARRIMAN. I think those matters are being discussed with our allies, and I am not sure that it would be helpful at this time. That is a matter, of course, for Congress to decide. I think it ought to be done by negotiation with our allies and in no sense an indication that we are going to try to pressurize them into doing something which they may or may not think is wise.

Mr. REECE. The Congress passed a resolution expressing the attitude of Congress toward not admitting the Red Chinese to the Council seat. We understood the State Department felt the passing of this resolution would strengthen their hand in advancing that cause.

Mr. HARRIMAN. There is a difference, Mr. Reece, between Greece and Turkey, who are already members of the OEEC and a member of the Council of Europe, and Spain, which is not. There have been some very definite differences between European countries and Spain and also in our case. Ambassadors now have been appointed to Spain, and I think in the natural course of events the relations between Spain and other European countries may develop, particularly if the present Spanish Government moved in the direction of liberalizing their policy along democratic lines.

I think one should differentiate between Greece and Turkey, and Spain.

Mr. REECE. In the testimony of General Marshall yesterday it was developed that our armed services budget for this fiscal year amounted to about \$76,000,000,000. That would be about 25 percent of our national product. Is that approximately correct?

Mr. HARRIMAN. I did not read yesterday's testimony of General Marshall. I think the expenditures, as Mr. Herter brought out, are the figures to consider, rather than the appropriations. I cannot give you, and I do not know, the amount requested for authorization that will be spent during the next fiscal year. It would certainly be a lower figure.

Mr. REECE. I did not ask you to confirm the defense budget. I stated that as a fact, that that was developed in the testimony of General Marshall yesterday. My question then was what percent of the national product would \$76,000,000,000 be?

Mr. HARRIMAN. I may be wrong on this, but I understood something like \$50,000,000,000 is going to be spent, rather than the figure you mentioned, which is authorizations.

Mr. REECE. I could not hear you.

Mr. HARRIMAN. I say, this may be wrong, but I understood a figure of approximately \$50,000,000,000 was what was contemplated to be spent during the next fiscal year, as against the figure which I understood you used, which was for authorizations. So that I think one should use a figure of approximately \$50,000,000,000 in considering the expenditures for next year.

Mr. REECE. In determining the relative effort by various countries the same figure should be included. In one case if we included the budget, then in all cases we should include the budget, should we not? That is, if the budget of the European countries ranged from 2 percent to 10 percent of their national product, then it is appropriate to refer to our defense budget, which is around \$76,000,000,000, and which is about 25 percent of our national product.

Mr. HARRIMAN. I want to explain to you, as I did to Mr. Herter, that the Europeans' budget is only for the expenditures and not the authorizations. Under their system the governments go ahead and make the authorizations themselves without the authority of the parliaments; whereas it is our custom to ask the Congress for the money that is going to be spent plus the authorizations. So that in comparing our figures we must use the figure of the expenditure as compared to the budgets of the European countries. Therefore, one should use a figure of roughly \$50,000,000,000 as against what the Europeans would be planning to spend in the same period of time.

As I said, France and Britain today, who are the largest countries—the largest in gross national product—are spending, as I understand it, during the current year, something in the neighborhood of 8 to 9 percent of their gross national product. Europe as a whole is spending something less than 8 percent. They intend to expand their expenditures.

How far they can go has not yet been fully clarified, but there is no doubt that we will go further in the percentage of gross national product than the Europeans will, and in my opinion can, in terms of using this one yardstick of gross national product. In other words, I understand we will go up to 15, or 17, or 18, or maybe as high as 20 percent, whereas the Europeans will not be able to go that high.

Just how high they can go depends a good deal on factors such as the availability of raw materials, and how much assistance we are ready to give them to supply food and raw materials to take the place of their exports which they are now using to buy the needed imports.

There are other factors, Mr. Reece, which one must consider in making the comparison of the gross national product on a per capita basis which, as I said, in Europe is only about one-third of this country.

I am sure you would agree it would not be fair or possible for the people in the State of Tennessee, who have, as I understand it, roughly about half of the income of my State per capita—I think you would consider it impossible and certainly unfair to ask the people of Tennessee to pay the same percentage of their incomes as in my State. I would certainly think it was unfair.

A similar situation exists in our relations with the European countries when we are embarked upon a mutual effort.

Mr. REECE. Well, I appreciate the comparison of the incomes of the people from Tennessee and those of the great Empire State. I am not thoroughly conversant with the amount of income that we contribute to the Federal Government, but we are contributing a very substantial part of it.

Mr. HARRIMAN. I did not mean in any way to speak about it in any sense of superiority on the part of New York State. It just happens to be that the people are engaged in different kinds of occupations that do not bring them in as much money. I hope some day there can be greater equalization of the incomes of the people all over the United States.

I have great respect for the State of Tennessee and the great contribution they are making. I am only indicating that I would not think it would be fair to ask the people of Tennessee, with their present incomes, to pay as large a percentage of that income for defense as are the people of my State.

Part of it is the character of occupation, which in no sense reflects on the effort that the people of each of the two States make.

Mr. REECE. I did not so interpret it, but I was afraid someone else might do so.

Mr. HARRIMAN. All right, sir. I just wanted to make that clear.

Mr. REECE. There is just one other thing. In regard to the budget now, under the system of budgets used in the European countries, do they spend, or does each of those countries spend, their entire budget a year in the year for which the budget is made or estimated?

Mr. HARRIMAN. As to military expenditures in the countries I happen to have been studying, they are more apt to spend more than their budget shows, rather than less. That is in the case of France, which started off with a lower budgetary figure and will end the year by spending substantially more, and will get additional appropriations for that.

Mr. REECE. But under our system here we make a budget for the year. All the money may not be spent, but the major percentage of the budget is obligated so that it is in the process of being spent. Is that not the purpose in setting up the budget, so that the money is available and the expenditures can be planned on the basis of the budget, although it is not expected that all of it will be spent in 1 year?

Mr. HARRIMAN. I think our system is a better system, but it so happens that it has been their custom in the European countries with which I am familiar only to ask their parliaments for the actual money they believe they are going to spend. The governments have taken on their own authority the responsibility for making the forward commitments. That is their system. I do not think it is as good as ours or at least as sound as ours, but that is the way they operate.

Mr. REECE. Then those countries cannot make commitments beyond the year in which the expenditure is completed?

Mr. HARRIMAN. No. They do. The executive branches of the governments, of course, do make those commitments, but they do not ask their parliaments' approval of them until they are ready to spend the money. However, they do go forward just as we do in making the forward commitments.

In the British case, when they asked for this year's military budget they have explained to their Parliament what the next 3 years' budgets are likely to be. So that in a sense they have forewarned them as to what they will be, but they have not asked for a vote of the Parliament approving them. So that it is understood by the British Parliament when they ask for whatever the figure is for this current fiscal year, that the Parliament is on notice that they are making commitments which will run over into other years.

Mr. REECE. If you will pardon me just a minute, I would like to get back to this relative burden that we bear down in Tennessee to that which they bear up in New York, so as to clarify the situation.

A man who is making \$5,000 a year in Tennessee contributes just as much to the support of the Federal Government as a man who is making \$5,000 a year in New York.

Mr. HARRIMAN. That is correct.

Mr. REECE. So that a man in Tennessee, or any other State, contributes the same percentage of his income as does a citizen of New York who makes the same or has the same income.

Mr. HARRIMAN. That is correct.

Mr. REECE. The only difference is that New York has possibly a larger percentage of its people who have an extremely high income.

Mr. HARRIMAN. That is correct.

Mr. REECE. Possibly some members of the firm with which you were formerly associated, who may have salaries ranging into a few hundred thousand dollars—naturally, under our income-tax system they pay a larger percentage of their income than does a man in Tennessee who has an income of \$10,000 or \$15,000 a year. So that after all, the burden falls equally on the citizens, regardless of the State in which they live.

Mr. HARRIMAN. That is correct.

Mr. REECE. That is all.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. Mr. Harriman, since the world has no common currency, we might use man-hours to determine the contribution, might we not?

Mr. HARRIMAN. What is that?

Mr. HAYS. Since the world has no common currency and it is difficult to reduce it to money equations, could we not approach the problem that Mr. Reece has mentioned with the common denominator of one man working 1 hour? Certain criteria could be ultimately worked out to determine whether the contributions are commensurate. Among 1,000 workers, for example, you would have about the same number of men 30 years of age, and the same number of men 50 years of age. A person in France would be contributing in an hour's time about what a person here would contribute, allowing, of course, for differences in technology. That would be one way to get at it.

Mr. HARRIMAN. It would be a fairly complicated one but, of course, that has been done in connection with the number of men that are going into the services, as compared to the population. It gets pretty complicated if you do it on an individual basis, but there are all sorts of considerations that have to be taken into account. I hope that there will be an explanation to you by other witnesses to show the kind of an effort that they are making, and the kind of an effort which it is believed for our part is a reasonable one to expect them to make on a comparable basis.

It is awfully hard, sir, to get a real comparison because there are certain things which enter into it. Our industry being so much greater on a per capita basis than the Europeans', we have industrial capacities which can be converted to certain types of military production which do not exist in Europe and, therefore, the physical capacity to do things which is also involved.

Mr. HAYS. The idea back of it all, of course, is to get each of us to do our dead-level best. If a person's dead-level best in one nation is short of the other nation's dead-level best, at least we can all have the consolation of knowing we are contributing to a common cause. I think that is a fair statement to make.

Mr. HARRIMAN. That is a fair statement, and that is what I believe in time, with all of us working together, we will arrive at in a rough sort of a way.

Mr. HAYS. Mr. Harriman, I want to pursue a little further this problem of inflation growing out of the raw-materials program. I have the figures for the period from May 1950 preceding the Korean aggres-

sion, to January 1951, which is a 7-month period, showing that the price of tin increased 135 percent, antimony 171 percent, lead and zinc 45 percent, and rubber 157 percent. There were some increases too in copper and tungsten and wool, although not as substantial as those other increases.

I wonder what assurance you can give us that the economic and financial controls to arrest that trend are being invoked?

Mr. HARRIMAN. I do not recognize all of your figures, sir. Some of them have gone down, you know, since the figures, I think, that you have indicated.

Mr. HAYS. But in general.

Mr. HARRIMAN. Many of these prices are on the raw-material-producing countries that sell on the open market, and there is open competition for them as there has been in the United States before the controls were set in. Many of the European countries have controls in their own countries, but they do not control the countries that produce the raw-material prices.

There are discussions, as I have said, going on between the producer and consuming countries. What that will lead to I cannot fully tell, but if the consuming countries act together, which I understand they are, in conserving some less essential use for a more essential use and reducing down the requirements, there will be less competition in the open markets and, therefore, a lowering of the prices down to a reasonable basis.

Also, if we can go together to increase our production of these raw materials, why, then, the market itself will naturally come down.

There are certain countries that are cooperating. Certain countries are part of the North Atlantic Treaty, and other countries, of course, are not associated in the same way, and have not got the controls that the North Atlantic Treaty countries have.

Mr. HAYS. It seems to me that we need to emphasize a little more what is happening in these inflationary movements in the world as we discuss our own internal problem of inflation. It is very difficult to meet and unless there is imagination and leadership in it, we cannot whip that problem.

Mr. HARRIMAN. I certainly agree, sir, and I think we should take the lead in it. I hope the Congress will pass the control measures which are requested. We are such an enormous part of the world economy that our own actions can tend to help all around; but, of course, we must ask other countries insofar as we are able to, to follow similar practices.

I think by and large most of the European countries have within their own countries, but in the other countries outside, why, there are not the controls established, and it is not always easy to get them to act. It is not always easy to get action on the part of our own country in controlling certain prices.

Mr. HAYS. It is related to this other problem that has been referred to. It is a condition that the Communists exploit. You get an inflated income in an area that is producing raw materials, but that income is not equitably distributed, and then the extremes of income that the Communists immediately seize on show up.

Mr. HARRIMAN. You are absolutely right, sir. We should use all of our influences and pressures to see that the increased incomes that come about in the individual countries do not trickle down, but go

down in the form of improved conditions among the main body of people in those countries.

Mr. HAYS. It would be true in the rubber-producing areas too, I should think, in southeast Asia.

Mr. HARRIMAN. Yes. In all of those countries.

Mr. HAYS. Mr. Harriman, I was glad to see you refer to Mr. Gordon Gray's report and Mr. Nelson Rockefeller's report. Mr. Rockefeller has been identified with some endeavors of private agencies in reconstruction programs. It is a sort of private point 4.

Are you prepared to appraise the efforts being made in nongovernmental enterprises that are doing exactly this same thing to rehabilitate some of these countries agriculturally?

Mr. HARRIMAN. I have no information on that that can contribute to it. I had heard that Mr. Rockefeller might appear before this committee, and he can give you a good deal more information than I can, I am sure, since these last few years he has been absorbed, I think, in these very admirable and useful undertakings, not only for the countries in which he has operated, but in the fundamental interest of the people of the United States. I am sure he can give you a good deal more information than I can.

The matters I have been connected with have been in Europe, where we have attempted to encourage the European countries to expand the economies of the territories in which they have an influence. There it has been largely governmental in providing the basic services, such as transportation, communications, development of ports, and so forth, which makes possible the cheaper movement of products, both industrial products and food, which will give a higher income to those people. When the cost of transportation is very great, why, of course, the people get a much lower income from their efforts. Both governmental effort and private effort, I think, should be tied in together.

Mr. HAYS. Yes, sir.

Mr. HARRIMAN. That is the objective, and the fundamental objective of the point 4 concept.

Mr. HAYS. I mention it because the tendency will be to overlook and neglect the private agencies that are doing a very significant work. I happen to know about their work in Mexico, for example. Unless we keep some attention focused on it, we may be making a great mistake. If we think altogether in terms of governmental activity, I think we would be making a mistake.

Now, just one other question about the point 4 program. It is proper for us to emphasize the exportation of talent and of manpower, trained young men, that is, to help in this agricultural program of increasing food. It is proper for us, is it not, to emphasize that, as distinguished from the export of goods?

India is a good example. It was ironic that we had to think in terms of sending grain, simply because for the past several years we had neglected to do the other thing. I heard, for example, Mr. Raymond Miller—and I think he is a known expert on agricultural rehabilitation—say that if he were writing the ticket he would send 100 men of the caliber of our county extension agents to India.

I hope that we can interpret this program in those terms, so that the American people can really feel that we are sharing with the

so-called underprivileged people the educational advantages that we have built up in the West.

Mr. HARRIMAN. Mr. Hays, I think you have touched on a very, very fundamental question. We saw a good deal of it in Asia. It is one of the things we attempted to do; that is, to bring in our own agricultural people and to help the European countries set up an extension service based on the benefit of our experience.

Now, some countries have done very well in that respect in Europe, and others not so well. However, the agricultural production has been increased in Europe as a result of the type of effort that you speak of. Of course, European agriculture is very well advanced, but in the underdeveloped countries it is a complete blank, and the efforts that you speak of are absolutely essential to bring to them, if we want to have an increased production in those countries which will give them some hope for a better life, or, in other words, help them help themselves. We have the knowledge and know-how. I am sure they have told you, as they have me, that there are great opportunities for showing the people how to increase agricultural production with better seed; better tools, better fertilizer, better methods of drainage, irrigation, and so forth. I know others can testify better than I can, so I will not expand on that.

Mr. HAYS. Thank you very much, sir.

Mr. HARRIMAN. But it is really the same sort of thing we brought to many of our farmers in this country, which we can do with very little expense. You know how much it has helped the people in your State and other States.

Mr. HAYS. Exactly. The farm security organization, of course, had a very important part in that.

Mr. HARRIMAN. Yes.

Mr. Chairman, I find that I did not fully hear your question at the beginning. Mr. Gordon tells me I failed to answer your first question. I am sorry, but I did not hear it. It was whether we could stop aid after 1954 or 1955. In my statement I said after a few years I would expect to have or expect to see a very sharp reduction, if not an entire stoppage of aid, providing we go ahead with it on a large enough basis. We are building up the capital equipment, sir, to arm the forces that they are now creating, and have enough equipment on hand so that they can call up their reserves quickly.

In modern warfare we need enormously expensive equipment, far more than ever before in terms of cost. After that equipment is once in being and once in the hands of the people, they will be able, in my opinion, to carry on the maintenance that will then be a smaller, and a very much smaller figure than will have to be spent now during the period of the build-up.

It is a very long statement or way of saying that I believe we will be able after 3 or 4 years to reduce sharply, if not entirely abandon, all military assistance. There may be certain countries which we will desire to go forward with which have no industrial production at all, but I look on this as being a great effort for a few years, and then we will have the benefit of it.

Chairman RICHARDS. Mr. Secretary, I asked that question because I knew how familiar you were with the situation of the build-up in these areas, particularly in Europe. I know you cannot say definitely when you expect this thing could be done over there without our aid, but I was just trying to get what you anticipated could be done.

Mr. HARRIMAN. It could not be done in any reasonable period without our aid, but if we give them aid for a period of 3 years to 4 years—others can testify in more detail, and I do not know just how much it is wise to do in open session rather than in executive session—we can expect to have a really sharp break in the size of any foreign aid which we may think it wise to give after that period, always assuming that there is no war.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Harriman, I have read your statement carefully and I want to commend you, as I did the Secretary of State, on what seems to be a lot of progress that has been made in the thinking of the Administration, or at least progress in public revelation of its thinking. For example, it has constantly been said that we must save Europe, regardless of what happens in the rest of the world, because of Europe's industrial capacity and the fact that it is the world's second greatest workshop. But you say on page 2 of your statement:

The industrial countries can increase their production if adequate raw materials are available.

I am glad you have discovered, and I hope others also realize that the workshop in Europe is no good without raw materials, and that adequate raw materials are not to be found in Europe; many must come from Asia.

I am glad that you at last have joined the so-called China lobby along with Secretary Marshall, who almost joined it the other day. He will have to eventually, I am confident, because he is not going to be able to win in Europe unless we pay more attention to stopping the Reds in the Far East, where the raw materials are, and we cannot stop the Communists in the Far East without mobilizing the strength of anti-Communist China.

Now, I want to ask you a question.

Mr. HARRIMAN. Mr. Judd, may I interject this, that what I have said here I have said for a long time. I said it when I was Secretary of Commerce, and it is on the public record in an article I wrote for the Saturday Evening Post, I think in the spring of 1947, which says much the same sort of thing.

It is not only Europe that is depending on these raw materials—

Mr. JUDD. It is ourselves.

Mr. HARRIMAN. It is our own life and our own future.

Mr. JUDD. Precisely.

Mr. HARRIMAN. But I am not joining the China lobby, sir.

Mr. JUDD. I want the Washington Post to notice, please, and report that you are now making precisely the same argument it has anathematized some of us for making all these many years.

Mr. HARRIMAN. I think you and I agree on the great interest we have in the underdeveloped countries.

Mr. JUDD. That is right, and we are interested in China not because it is China, but because we believe there is no other organized body of manpower in Asia that has a chance of stopping further Communist expansion there.

May I ask you this question: If the Chinese, with our proper help—which we have never given them since Wedemeyer was withdrawn in early 1946—are not able to get Communist expansion stopped in Asia, then who will be able to get it stopped, and where, and how, and at what cost?

Mr. HARRIMAN. Well, I am not the expert on the Far East that you are.

Mr. JUDD. But you say we have to have its raw materials and you must do some thinking about it.

Mr. HARRIMAN. I have not been in the Far East for the years you have, although I have been there on several occasions. I am quite convinced unless we go forward with the technical assistance and the economic assistance that is contemplated we will run into difficulties. I would like to see it increased rather than reduced. I would support personally an even greater effort than we are putting forward. However, there are vast parts of the undeveloped world, in Asia, the Middle East, Africa and South America, that we want to give the same attention to and go forward with the programs which we have undertaken.

Now, I think we have to realize that. We have to learn by the experience that we have had and the success of some of the things we have done, as well as the failures that occurred where we did not move fast enough. I think we want to look forward and learn from the good things we have done and from the mistakes that we may have made, but I am very much encouraged from the reports that we have of the success we have had where we have had good people and enough money to operate on.

Mr. JUDD. Yes, but the question is, Will those areas still be free and open to us, so that we can carry on there the programs of which you speak, by the time our Government belatedly gets around to them? That has been my concern. You cannot carry them on in Manchuria today or mainland China, or in Czechoslovakia, or in any area where the Soviets have gained control. The first thing is to stop their expansion.

To give credit where it is due, just as the Chinese held the line against Japan, fighting on our side for 4½ years before we had sense enough to know it was our side—we were helping Japan—so they fought on our side holding the line against Communist expansion in China for 5 years before we had sense enough to know it was our side. We were ordering them to get into bed with our enemy. I only hope that despite our abuse, they can hold for another few years until we can get going in the areas around China that are still free. I believe they may be tough enough to save us, despite all our past folly. This is an old, old story to the members of this committee. They have heard me saying it ever since I have been a member, but I am going to keep on saying it, and maybe we can get some more conversions. It is not because I like to say it, believe me. It does not do anything for myself except create trouble; but I have to do it because I feel so sure our country's whole future is involved. Inasmuch as those are my convictions, I must press them while there may still be time.

The other thing on which I want to comment is on page 4, where you say you believe that the Kremlin considers the attack on Korea as a major error and wants to get out of it.

They expected to attain an easy victory, demoralize the United Nations, and discredit American leadership. Not only has this plan failed, but the aggression in Korea has aroused our country and our allies to undertake greatly accelerated rearmament for defense. The Kremlin would like nothing better than to have us think that we can safely relax, while the Soviets continue to build their military strength.

Mr. HARRIMAN. I did not say it wants to get out of it. It looks as if they want to get out of it, but I would not predict what is going to happen. That is an additional phrase you put in.

Mr. JUDD. Well, I did not mean to read something into your remarks that was not there.

Mr. HARRIMAN. If they mean what they say, it is because they want to get out of it.

Mr. JUDD. I value your comment on that because you were in Moscow during the crucial years near the end of the war, and you ought to understand their purpose, and their tactics and strategy as well as any American. Do you believe that the main purpose of their cease fire is, perhaps, to get us to relax?

Mr. HARRIMAN. I say in the statement that I think they would like nothing better. I cannot tell what their main purpose is. It may be they are unwilling to supply the equipment that is necessary to carry this war on, and want to keep it for themselves. It may be for many other reasons. But I am quite firm in the belief it was a great shock to them that we have engaged upon this large program, and that our allies in Europe and other parts of the world want to increase their military strength for defense. They would certainly like nothing better than to see us all relax again.

I think if we do relax it will be a great encouragement to them to press forward in other directions.

Mr. JUDD. You unquestionably have studied the many documents that have been written by Communist leaders, both Lenin and Stalin in Russia, and Mao Tse-tung in China, on the fundamental Communist doctrine of the strategic retreat. That is, if they cannot gain their objective by one strategy, they must not hesitate to withdraw from it and shift to another one; not as an abandonment of the objective, but as a means of achieving the objective. Do you not think that is what this is?

Mr. HARRIMAN. I think that may well be what they have in mind. I want to see it happen before I say it is, but it is entirely conceivable that they will intensify—if there is an armistice they will intensify their peace drive and try to get the weaker countries to relax even more than is being talked of now in this country. Unless we take the lead it is possible it will spread to other countries. If we relax, it is sure the other countries will do so. Then the vigorous leadership in the other countries that want to go forward regardless of what we do will find it much more difficult to do it. Certainly, it will be an invitation if we do relax to further aggression on the Russians' part, and an encouragement for them to continue.

I want to see them retreat, as you so wisely or knowledgeably put it, for a long period of time, and not just for a few months.

Mr. JUDD. You will agree that while our objective is peace, that is not their objective. Their objective is victory for the Soviet doctrines and system. Is that not right?

Mr. HARRIMAN. That is right. On a step-by-step basis, taking over country after country.

Mr. JUDD. And when they find they cannot get victory by fighting, because that stirs us up, then they seek to get not peace, but victory, by a cease-fire which quiets us down—they hope. Is that not right?

Mr. HARRIMAN. They hope. Just as they have abandoned their tactics in the Berlin airlift. Just as soon as the Berlin airlift was

over there was a tendency on the part of all of us to relax. We must not make the same mistake again, and we must learn.

Mr. JUDD. Is not their present action in Korea precisely what they did in China in 1946? They were not able to get victory by fighting because at that time the Government forces were much stronger than theirs, so they said, "Let us have a cease-fire and peace." They pulled the wool over the eyes of some Americans because they said they wanted peace and the Chinese Government which knew what the Reds were trying to do did not want to yield to their request when it had the upper hand and was defeating them. So it looked to some Americans as if the Chinese Government wanted a civil war and the Communists wanted peace. They succeeded in their maneuver. They could not get victory by fighting, so they got us to insist on a cease-fire. The cease-fires in China in 1946 led to the Communist victory there and that was what made possible the attack on Korea.

The cease-fires confused the Chinese people and armed forces. Four times in 1 year, they got all steamed up to put down the Communist rebellion and then their Government at our insistence agreed to a cease-fire. The morale of Government forces dropped; that of the Reds rose.

The President a week ago criticized the Government of China, saying it fell because it failed to mobilize the people of China. Well, how could it mobilize their will to fight when we urged it not to fight? Whom were the people to believe? You have four cease-fires here, and see if his administration can mobilize our people to fight. You and I are anxious lest even one cease-fire may cause a let-down, an unwillingness to face up to our responsibilities. It is so easy to criticize others' failures until you face a similar situation yourself.

I am saying this merely to point out that one of the things that weakened the Chinese will to resist was those cease fires in 1946. I do not know whether that will happen to our country because I hope we realize the enemy is still there. But I fear he will be stronger after the cease-fire than he is today.

That does not mean, and do not misunderstand me, that I do not want to pursue in every possible way honorable efforts to end the fighting on a basis that will last, but it must be done with terms that do not jeopardize our ultimate victory in this world struggle of which, as General Marshall rightly said, Korea is merely an incident.

Chairman RICHARDS. Has the gentleman any other questions?

Mr. JUDD. Yes, I have. I have asked him several questions.

Mr. HARRIMAN. I would like to disassociate myself from Mr. Judd's remarks about China because I am not familiar with it. I do agree if there is a cease-fire in Korea we should not let it, or should not permit it, to relax our efforts.

Mr. JUDD. You see, Mr. Chairman he answered the question. He agreed with me.

Mr. HARRIMAN. No, sir. No, sir, I did not.

Mr. JUDD. I thought you did.

Mr. HARRIMAN. Not as to the events in China. I do not know about the events in China, and I have no comment on the events in China. I am simply agreeing that we must not let any cease-fire in Korea cause us to relax, and encourage other people to relax.

Mr. JUDD. That is right and all I meant to imply. I am trying to point out, to the best of my ability, what on the basis of previous

experience, it probably is that the Soviets are endeavoring to do in Asia, if we are foolish enough to let them get away with it, as we did once before.

Chairman RICHARDS. Mr. Chipersfield.

Mr. CHIPERFIELD. No questions, Mr. Chairman.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. Thank you, Mr. Ambassador, for your very informative statement.

The committee stands adjourned.

(Whereupon, at 11:59 a. m., the committee adjourned.)

(The following information has been submitted for the record:)

THE SECRETARY OF DEFENSE,
Washington, July 9, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: In reviewing my testimony of July 2, 1951, before the Committee on Foreign Affairs of the House of Representatives, in answer to Mr. Judd's question in regard to forces for Europe, I find that Mr. Judd was speaking in terms of forces in being whereas I was referring to planned mobilizable as well as active forces.

Because of the classified nature of the subject matter, I cannot go into detail in this letter. Subsequent witnesses will be prepared to discuss it further in executive session.

I am enclosing the following:

(a) New obligational authority for national defense functions for fiscal years 1950, 1951, and 1952, requested by Mr. Reece.

(b) A breakdown of budget estimates of the Mutual Security Program for fiscal year 1952, requested by Mr. Herter.

It would be appreciated if this letter were made a part of the official record of the proceedings of July 2, 1951.

Faithfully yours,

GEORGE C. MARSHALL.

THE MUTUAL SECURITY PROGRAM

TUESDAY, JULY 10, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10:15 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we are continuing testimony this morning on the Mutual Security Program. We are pleased to have with us as the witness this morning the Honorable William C. Foster, Administrator, Economic Cooperation Administration.

STATEMENT OF HON. WILLIAM C. FOSTER, ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION

Mr. FOSTER. Mr. Chairman and members of the Foreign Affairs Committee, I am here in support of the Mutual Security Program, which I believe to be an affirmative plan of action for repelling one of the gravest threats yet confronted by our country.

Secretary Acheson, Secretary Marshall, and Mr. Harriman have given a comprehensive outline of the way in which the program is designed to support the security of the United States. I shall try to outline the economic aspects of the program and to set forth why I believe the furnishing of economic aid to other free nations is as essential to our national security as supplying them with weapons and how, in most cases, each is necessary to the other.

First, I would like to discuss the situation in Europe, and later that which confronts us in Asia.

A brief summary of Marshall plan accomplishments will illustrate the progressive and interlocking nature of our new proposals.

The first Marshall plan task—helping western Europe recover from the disruptions of World War II—has been largely accomplished. Last year at this time we reported that industrial production in the Marshall plan countries was running 25 percent above prewar levels.

Agriculture was approaching prewar standards, having made notable gains during the first 2 years of our program. This advance has continued. Today industrial production is about 40 percent above the 1938 mark, while agriculture is 9 percent above prewar levels and steadily improving.

The process of recovery is now such that we could limit dollar assistance to a few special cases were it not for the Soviet design to subvert and subjugate our allies.

The next great objective of the European recovery program was the liberalizing and expanding of European trade—the greater integration of the economies of western Europe.

Real progress has been made in this long-term job of unification. The Organization for European Economic Cooperation which was established in 1948 to coordinate the economic recovery efforts of the west European nations has been moving Europe effectively toward greater economic unity.

In September last year, for example, the European Payments Union was created and we can see tremendous steps forward in the field of trade relations. The fact that the volume of intra-European trade has increased about 60 percent in the past 2 years confirms the worth of EPU and the trade liberalization efforts which preceded it.

The Schuman plan is another heartening move toward unification. In the partnership of the North Atlantic Treaty Organization and under General Eisenhower's dynamic leadership, we see collaboration among the Europeans that inspires our hopes for the future.

Historians will surely point to what has been accomplished in these last 3 years as among the brighter pages in the story of free men's ability to work together in a common cause with intelligence and devotion.

You might reasonably ask: If such substantial progress has been made toward recovery, why do we not wind ECA up as quickly as possible and be done with it?

I agree that would be a welcome, if unique, course for a Government agency. No doubt the Congress will consider that course while also weighing the advantages of having a going concern continue with the economic jobs ahead.

Regardless of your disposition of the agency, however, I sincerely believe that you will find the completion of these new jobs essential to our own security.

For much remains to be done, and I should like to lay before you our assessment of the current problems, and the economic actions we believe are required to build strength in the free world.

Whether we meet them successfully or not will answer the crucial question whether the United States can continue to thrive, or even survive—whether a large part of the world will remain free or fall under the sway of totalitarian dictatorship.

Our response must therefore be sustained and consistently strong. We must cope with the implacable designs of the Kremlin whether they appear as invasion in Korea and Indochina or as subversion in France and Italy.

Most important of all for the long term, we must also cope with international communism, in its more subtle form of feeding upon chaos within its intended victims. We must wage peace through strength on all fronts.

These are the economic tasks of the Mutual Security Program:

1. To complete the building of a western European economy so strong that it is not sensitive to the appeals and manipulations of communism, to consolidate and hold the gains made to date—a positive, committed free Europe, competent to bear arms while simultaneously furnishing its peoples with a way of life worth defending.

2. To generate in the underdeveloped areas a sense of full partnership in the free world and a full awareness of the insidious nature of the Communist threat and the means to eliminate it.

The first part of this job lies in helping the governments, some of them just emerging into the responsibilities of self-government, to meet in more adequate measure the needs of their peoples.

3. To develop and enlarge sources of scarce and strategic materials and to assure their fair distribution within the free world. This is today a matter of major importance in accomplishing the first two tasks.

We believe these tasks possible of achievement. However, we cannot do it all. Obviously, all the United States can do is to help those who want to help themselves, but our experience to date in Europe and in Asia does indicate, I believe, that these tasks can be done.

As to the European situation, I have just returned from a trip to several of our European missions and from a meeting of our ECA mission chiefs in Copenhagen. Once again, I was struck by the progress the Europeans are making—by the fact that the Europeans are worthy allies.

We must never forget that they have spilled more blood in defense of our common spiritual values than we have. As their confidence in mutual security grows, their fears are diminishing and the cycle of strength is gaining momentum.

In addition to the things of the spirit, we know that their basic resources—such things as coal, steel, electric power, or even their total industrial potential—are roughly $1\frac{1}{2}$ times that of Russia and her European Communist satellite states.

We believe those resources combined with Western Europe's diverse skills, transport, communications and other calculable assets, constitute a potent material force in the world today.

If properly mobilized, the balance of power would be clearly on our side. Without it, the balance of power would be against us. It would be in effect against us, too, if Western Europe were to remain weak, unarmed, an easy victim.

As Secretary Acheson and Secretary Marshall have said, we have undertaken a program for helping Western Europe to build its defenses to a level designed to discourage Soviet aggression, and to resist it if it occurs. Our allies in Europe are undertaking a large part of this burden. They are raising forces, feeding and clothing them, and building the barracks, air bases, ports and networks that modern arms require.

Defense production, while still far short of what is necessary, has been doubled during the last year. At the present time, our European allies, except for Italy, have more men in service than they did on the eve of World War II.

And while we know that the bulk of the arms needed for the rapid build-up in Europe which the present situation dictates must come from the United States, we know also that the Europeans must undertake a major military production effort.

Producing their own armaments has many advantages for the Europeans and us. For one thing, arms and spare parts produced in Europe come immediately into position there where they are needed.

A second advantage is one of less cost to the United States. It costs us about \$75 to make a bazooka to send abroad. This is represented entirely by American labor, American materials, American manufacturing facilities.

The same bazooka made in France may require only \$15 in materials and tools from the United States, but all the balance is represented by French labor, French materials, French facilities, thus multiplying our dollars fivefold.

Thirdly, we cannot arm and rearm Europe forever. Progress toward military self-sufficiency in material is essential.

It is, therefore, good partnership business to help the Europeans produce their own arms rather than supply all of them from the United States. Indeed, you might well ask why we do not propose to get even more production in Europe and consequently furnish even less from here.

In much of Europe the standard of living is so low that unless it gets our help, it cannot sustain the burden of armaments without cutting below the danger line where communism begins to grow on want, hunger, and despair.

It is clear that the United States with a present per capita income of about \$1,700 per annum can afford more rearmament than say France, where, despite nearly miraculous improvement in the past 3 years, per capita income is still only about \$525.

Moreover, we must never forget the priceless factor of time. If General Eisenhower's requirements are to be met on time and with maximum efficiency in using scarce tools and materials, we must provide a large proportion of the military equipment, but we believe the Europeans can do their share of meeting all the many needs of mutual defense.

In the short run, the problem is to step up European military expenditures without creating serious inflation for that would improve the opportunities of the Communists for successful internal subversion.

Looking further ahead, the problem is to divert economic resources from civilian to military use without either (a) interfering seriously with the growth of productivity and future economic strength, or (b) so impairing Western Europe's trading position as to make permanent her economic dependence on United States economic aid.

Western Europe must not find itself at the conclusion of the defense effort back in the unhappy situation where the Marshall Plan found it 3 years ago.

There is only one way in which Europe itself can shoulder a larger rearmament effort while at the same time giving its people a way of life more hopeful than that proffered by extremists of the right or left. It is the way of increased production and greater unification.

Given the present situation, the surest and quickest way for Europe to increase its total production is through greater productivity, which is to say, more output per worker per hour.

We believe that Europe offers dramatic possibilities in this regard. Most European workers toil hard enough—sometimes too hard by our standards today—but not always with the most effectiveness.

For example, it is our best estimate that steel production in France could be increased 20 percent with little capital investment. French producers are not getting the most out of their machine tools, many of them new.

French workers are not yet realizing the most out of the fact that they now command almost double the horsepower they did when the Marshall plan began. And, horsepower per worker is a master key to productivity.

Last fall, I outlined to the Organization for European Economic Cooperation a goal which I believe can be attained over a reasonable period and which I believe contains the answer to Western Europe's internal economic problem as well as a large part of the answer to the problem of providing strength for the free world. I refer to the proposal that the countries participating in the Marshall plan increase their annual rate of over-all production by \$100 billion.

Clearly, over the next 2 or 3 years, the major European effort must be to attain adequate military defenses. Production must, to the greatest tolerable extent, be directed to that end.

This, in turn, means continuing the present lean and spare civilian economies. But, when defense goals have been reached, the productive power that has been generated and directed to the military build-up, can be turned to a general improvement of the conditions of living.

We calculate that a \$100 billion increase in production might well provide the base for a 50-percent rise in European living standards. We believe that a continuing movement toward this goal would be the best possible answer the communism. For achievement of this goal would strike not at a military manifestation but at the very core of the Communist appeal, namely, its promise of a better economic life for the free peoples.

From the outset of ECA, of course, we have provided Western European industry and agriculture with many productivity aids. We now are proposing an augmented program to this end.

Our problem is primarily that of changing traditional attitudes and practices; and while this venture is less costly in terms of dollars than is capital investment, it is far more demanding in terms of vision and resourcefulness.

Let me outline briefly the reasoning behind our estimate that economic assistance in the amount of \$1,650,000,000 will be required to build strength for mutual security in Europe during fiscal 1952:

First, the present European effort toward an adequate defense is a very substantial addition to the strength of the free world and produces far greater results at much less cost to us than if we undertook the effort alone.

Second, even so, the present effort is not great enough to meet the requirements of out-producing the slave world as quickly as necessary. Therefore, there must be a substantial step-up in this effort.

Third, without economic aid from us it would be impossible for the European effort to be sustained at the present rate, let alone to be increased and speeded up to meet the requirements posed by the threat of Soviet aggression. The present military effort, unaided by economic support from us, would place an intolerable strain on the economies of our European allies.

Fourth, if this were allowed to occur, we should soon see the return of Western Europe to the inflation, economic dislocation, falling production, decreasing exports and inability to pay for necessary imports—all the social and political instability and weakness which were present at the start of the Marshall plan. This would permit

conquest through internal subversion by the Kremlin and undo the results of our common efforts toward recovery.

Fifth, failure to make available the necessary economic aid for support of the defense build-up of Western Europe would also be likely to foreclose any possibility that our assistance program can be a temporary one.

Unless, of course, we took the unthinkable course of abandoning Western Europe, we should have to anticipate going on and on with our aid just to keep our allies there afloat and in a position to make some defense of the area.

Secretary Acheson and Secretary Marshall have rightly emphasized the possibility that adequate aid for the next few years, plus their own efforts, may be expected to place Europe in a position to carry their load unaided thereafter.

The European recovery program has taught us how important it is to have a terminal date for an aid program, and I believe the same principle is of vital importance in this new Mutual Security Program for Europe.

If we really mean business in this struggle which has been thrust upon us, and if we wish to help build the strength of our allies in Western Europe on a sound and lasting basis so that they may stand solidly on their own feet—and this is possible of achievement, I believe, in a relatively few years—then, the only way is to give steadfast leadership and necessary economic as well as military end-item aid in amounts sufficient to do the job.

The mutual security problem, however, is a world-wide one; its extent and its success depend upon the will and ability of free men everywhere. Thus, the program before you includes funds for economic and technical assistance in south and southeast Asia, in the Middle East, and in Latin America.

The funds for underdeveloped areas are small compared to those needed to bolster rearmament in Europe, but they are equally necessary to the successful efforts of the free world to balk the thrusts of Soviet imperialism in other vital areas of the world.

We have had valuable lessons of experience in China, Korea, and, during the last year, in southeast Asia, and I want to summarize them for you. Much of what I have to say probably applies to a greater or less degree to all the underdeveloped areas of the world, but I want to talk to you particularly about what it takes in economic terms to carry forward a real counter-thrust against expanding communism in southeast Asia.

Following my trip to the Philippines last November, I visited our Asia missions for first-hand consideration of the area's problems. I believe there is little question that unless the United States and the West take effective action to help the countries of southeast Asia along the road to stability and responsible independence, we will see an increase of Communist-stimulated chaos. Thus, they can be organized and exploited for the benefit of the Soviet Union, closed to trade, closed to western ties and culture, and closed to the growth of freedom based on responsibility.

Most of the countries in this area have only recently emerged from colonial status. Most of these countries were severely ravaged by World War II. Some are still beset by internal strife and guerrilla attacks.

Health, education, and transportation are at best rudimentary. There is no adequate reservoir of trained civil servants, no competent government services to handle reconstruction programs.

These countries are, generally speaking, rich in natural resources, but there is no balanced economy and, to all practical purposes, little industry.

It is natural that these new governments, recent successors of colonial administrations and military occupations, look questioningly as well as hopefully at us. It will take time for suspicions of the West to be allayed, and they are not sure in their own minds how completely we uphold their new independence and how seriously we hope to assist them in gaining the degree of economic independence that rightfully should be theirs as free nations.

This calls for our understanding of them. If we recall the early years of our own Republic, our jealous guarding of its new independence, our suspicion of the motives of the great powers of that era, we can better understand why our friends in southeast Asia sometimes express themselves in a challenging way that sounds very much like our assertions of 175 years ago.

The plain fact is, however, that these governments cannot, without our help, provide the advances and services needed by their people—or rather, cannot provide them quickly enough to offset and defeat the inroads of communism.

The security of free Asia depends fundamentally, therefore, on how effectively America and the west can help the governments of free Asia meet the elementary needs of their peoples.

This will require comparatively little capital outlay; rather it will require economic assistance, much of which is technical and advisory in nature. Some 80 percent of southeast Asia's population get their living from the land, but yields are too small. One major task, therefore, is to raise agricultural production by providing better soil care, better seeds, better livestock strains, by replacing the bent sticks now in use, not with costly tractors, but with steel plows and hoes.

Finally, we must take further positive action on our third great problem. It is an acute hindrance to production in the world today. I refer to the shortage of many important raw materials.

The industrial machine of our country and of Europe is today chewing up materials at a rate 50 percent faster than in 1937. Our problem is not one merely of stockpiling against emergency, but of expansion to meet current needs. Acquisition of raw materials has been a big job that must now become a much bigger job.

ECA is involved in several aspects of this problem. We are the agency approached by European and other countries receiving ECA aid when they seek a share of the materials we produce here or otherwise control.

We also have worked with many of the European countries in developing the resources of their dependent territories, especially in Africa. In that continent we have participated in opening new tin, diamond, cobalt, and other valuable deposits.

The new lead and zinc mines at Zillidja in French Morocco, the new bauxite operations in Jamaica, the cobalt and copper resources in North and South Rhodesia are among projects that we have forwarded.

We are also lending a hand to improve transport facilities to deliver larger quantities of materials more quickly to points of consumption. Typical of this kind of activity is our development of a full-size port at Beira in Mozambique.

In our development of raw materials sources and in their production and export, we cannot proceed in a nineteenth century attitude of rapid exploitation for cash.

Asia, Africa, and Latin America need, in exchange for their raw materials, consumer and capital goods. They want agricultural and manufactured goods—trucks, textiles, mining and engineering equipment. We must make this fair return, even out of our own scarce supplies, if we expect a free flow of raw materials—and of friendship and goodwill. More than this, we must furnish an example of our true and idealistic interest in a rational and just development of underdeveloped areas.

I have tried to outline to you some of the facts and principles underlying the program before you. There is one other overriding consideration.

Communism stands ready to move into every vacuum. We must not permit such vacuums to exist by any failure of ours to show the imagination and initiative demanded by world leadership.

We are alert to the dangers that confront us. But, we must be no less alert to the opportunities that are ours. The Mutual Security Program provides us the means of demonstrating our faith and confidence in the free peoples of the world.

It is a sound investment in peace. Without our help, our friends are exposed to the corrosion of communism from without and within. With our help, and with courage and resolution on the part of the free countries, the day will come when all of us can move forward with confidence into a way of life which provides the alternative to Communist slavery and the devastation of war.

Thank you very much, Mr. Chairman.

Chairman RICHARDS. Thank you, Mr. Foster. That was a good statement. I want to say for the record that regardless of what individuals may think of ECA and some of the details of its operation, I think everybody is agreed that both you and Mr. Hoffman have done a wonderful job with the tools you had.

Mr. FOSTER. Thank you, sir.

Chairman RICHARDS. Ladies and gentlemen, we will proceed under the 5-minute rule, first, and then the witness will be available for unlimited questioning.

I want to go back to page 2 of your statement. You have asked a question a lot of us have asked and a lot of us would like to have answered.

We started out with ECA in 1948, and our purpose was to end it by June 30, 1952. That is 4 years. As far as I have been able to find out, to all intents and purposes, this program in Europe has been completed, maybe in February of this year, with the possible exception of some little additional aid required for Italy, Austria, and Greece.

Why not wind this up right now and, if we should wind it up, create a new organization to handle the matter on the basis of economic production for military purposes, and turn over the residue of

your responsibilities and assets to a NATO, as such, in Europe? What do you think about that?

Mr. FOSTER. That is a perfectly fair question, Mr. Chairman. I can assure you that a great many people have given a great deal of thought to that question.

I understand you want to keep within the 5 minutes, so I will try to sum up the highlights of my opinion of that question in that time.

Chairman RICHARDS. I would appreciate it, and then you can develop it later.

Mr. FOSTER. Yes, sir. The job that lies ahead of us today is, in my opinion, a different job in many ways from the job that ECA was set up to do in 1948.

The job that ECA was set up to do in 1948 has, I think, been largely accomplished, as you said, and I think has been accomplished to an extent that few of us who were connected with this in the early days could have hoped for.

Had we been told then that we would have industrial production running at a rate of 40 percent or more above prewar, that we would have had agricultural production already up 10 percent over prewar, we would have felt that was almost impossible of achievement. That has been done.

Therefore, you are faced with the question, and it is a question that has to be decided in the United States Government, in my opinion, very promptly. That is one of the first considerations.

You are faced with the question of whether you should terminate ECA, as was promised in 1948, or whether you should continue it.

Mr. JUDD. Or terminate it a year earlier?

Mr. FOSTER. You can continue for an extended period, you can go to June 30, 1952, or terminate it earlier.

The first consideration which I think we should have is that we have created an asset for the United States in terms of people and procedures which, in my opinion at least, and I think I am objective in this, Mr. Chairman, I am speaking of the overseas missions, I am speaking of the good will which has been created in doing this job, I believe that is an asset that must be preserved in the interests of the United States.

It is perfectly possible to terminate ECA within a reasonable period, 60, 90, 120 days, after your bill is passed, and to make a transition to a new organization.

There have been many recommendations that that be done. As the Administrator, I do want to point out that in doing that you are running certain risks, a loss of people and momentum.

I think you have to weigh that possible loss against the promise which we made not only to the people of the United States, that this would be a 4-year program or less, but also the promise and the statement made to our friends around the world, that they could not depend on this aid for longer than 4 years and, therefore, they had to get their house in order by that time in order to pick up the load themselves.

I think we face a similar question today in advancing not only economic assistance but military assistance. If there is a record of having set up an economic recovery program on a fixed-period basis, and if we have achieved our purpose and terminated it within that time, I think perhaps psychologically we have a better background for

getting the same kind of cooperation in urging them to attain a military position at the end of a measurable period.

I am not taking a strong position on either one. I think that is a decision that the President and the Congress have to make, as to which is the better in the United States interests.

Chairman RICHARDS. You would write into this act that it be terminated on June 30, 1952, if nothing else, would you not?

Mr. FOSTER. I come out with the conclusion that, in view of the new kinds of responsibilities, at least at that time, there should be a new set of arrangements made to carry out this enlarged job. There remains a part of the other job, as you indicated, still to do.

Chairman RICHARDS. All right. That is the second point. Right now we will say there is a part of the other job still to do.

Mr. FOSTER. That is right.

Chairman RICHARDS. And that part is supposed to be dovetailed into the military-aid program, that is, the balance. Why could it not be dovetailed into that and turned over to NATO under a new organization right now?

Mr. FOSTER. I do not know what you mean by NATO in terms of the United States part of this job, Mr. Chairman, though NATO is a very important part of the international mechanism developed to carry out this job. Whatever is done in terms of ECA, as such, as Secretary Acheson said, you would still have to do three things: You would still have to undertake a military procurement and delivery program and development program; you would still have to undertake an economic aid and appraisal program; you would also have to coordinate those two activities with our basic foreign policy.

Those three things have got to continue, as I see it, no matter what you do as to the mechanics of doing it.

Chairman RICHARDS. Just 1 minute. My time is up, but I will want to go into that a little later. I call time on these other folks, so I will call it on myself.

Mr. JUDD. Mr. Chairman, I move your time be extended to let him complete his discussion on this point.

Mr. BATTLE. I will yield my time for that purpose.

Chairman RICHARDS. If anybody wants to continue this line, that will be all right. I am going down the line now.

Mr. BATTLE. I will yield my time to you, Mr. Chairman, in order to continue this discussion.

Mr. JUDD. I will yield my time to you, Mr. Chairman, because I think this ought to be at one place in the record. I can ask my questions the second time around.

Chairman RICHARDS. Doctor, you are going to have something to say. We know that. If your time is not available, you are going to be in a bad fix.

Mr. JUDD. Maybe you will get answers to my questions before you get to me. I hope so.

Mrs. BOLTON. I just want to support Mr. Judd's suggestion that it all be at the same place in the record.

Chairman RICHARDS. All right. That is 10 additional minutes. You may go ahead on that, sir.

Mr. FOSTER. I was saying, Mr. Chairman, you had these three jobs to do in any event, and I started to say, as a part of the mechanism to carry out those three jobs the NATO organization, which is an inter-

national organization, is a necessary part of the whole thing to continue. We are concerned in your question, however, with what should be the United States mechanism to get on best with the United States part of this over-all world job. I think there are perhaps four ways that that could be done, and I will outline four ways, as I see it, although there may be a number of other ways.

One, we could do, as is recommended in the President's message and in the bill, based on existing legislation, with some changes, and go ahead with an economic agency such as ECA--and it is possible to change the name, as was suggested the other day. We would need the military phases of this to be continued by the military. We would need the coordination of both of those by the State Department, and that coordination could be accomplished, as at present, through the International Security Affairs Committee, which was established by the President. That organization is working at getting the job done. It has had a good many weaknesses, which weaknesses, I believe, are being overcome.

You could move to a second alternative of the general nature of that recommended in the Gray report--the establishment of an Overseas Economic Administration which would continue with the kind of things that ECA has done, and you could add to it certain other economic functions, such as claimant agency work for all foreign countries; the development of strategic materials for the free world; a greater responsibility in terms of loans; a greater responsibility in terms of technical assistance; a policy guidance, perhaps, on export controls; the procurement of materials for the United States, which is now done in several places in the United States Government.

Another method which could be used is a combination agency which would have both military and economic functions, as recommended in the Committee on the Present Danger Report.

Or, you could move to what perhaps for long term purposes more nearly conforms to the spirit of our constitutional set-up. You might move toward a Department of Foreign Affairs, which would have an Economic Section, a Military Section, an Information Section, and a Political Section, under an expanded, unified Department of Foreign Affairs. The economic functions which are now carried out by ECA might properly be put in that with somewhat the structure that you now have in the Department of Defense, with coordinated departments under the Secretary of Defense.

The unthinkable thing, from my viewpoint, at least, would be to let ECA terminate on June 30, 1952, or earlier, with no alternative as a means of carrying out what I consider to be, and which I stated in my prepared statement to be, the necessary economic functions to discharge the responsibilities for leadership which we have in the United States, whether we like it or not.

One variation of those four alternatives which would be to take the functions that ECA now has and parcel them out among present agencies of the Government. That would be a dismemberment, and I think it would be a dismemberment which would be fatal to the patient. I mean by that we have these claimant functions. You could give that to the Department of Commerce, who is effectively carrying out part of that for part of the world now.

The dismemberment to which I refer as being fatal would consist of what I believe would be the breaking up of a very effective oper-

ating organization which has, in terms of the interest of the United States, assets which, with the world as it is, I do not think we can afford to lose today.

I think there are many other studies and ideas on this general subject.

You all, of course, read the Gray report and the Rockefeller report and the Committee on the Present Danger report and the Brookings report. Also, the Bureau of the Budget has made a number of studies, as have other private organizations. The NAM has made some recommendations. Also, the Chamber of Commerce, and everybody and his brother, I think, has an idea as to how this should be done. So that I do not want to be too dogmatic in making any specific recommendations, but I would like again to emphasize what I think are three principles—three fundamental principles that, from my experience, I believe, should be kept in mind.

The first is that if you have a clear operating job to do—and I think we have in building economic strength to support military strength in the free world—I think it can be best accomplished by delegating to an independent operating organization of stature, responsible to the President of the United States, that particular job of operations within the framework of foreign policy.

Second, and I am very proud of this asset—I think we do have a current asset in terms of people and methods in ECA which has done a job for 3 years and obtained the confidence of the countries with whom it works around the world, and has obtained at least to some degree the confidence of the Congress and the people of the United States, and which has worked out institutional relationships not only within its own organization, but with the other departments of the United States Government.

All of those things take time and energy, and thought, and should not be lightly discarded.

The third one is this—and it is a corollary of the last one I mentioned—whatever is done, I recommend it be done promptly, so that we do not lose by attrition the benefits of that asset to which I have referred.

I could talk on this almost indefinitely, but I think those are the highlights of the basic principles which I believe should be maintained.

Chairman RICHARDS. What do you mean by "promptly"? Do you mean in this act, that is, in the law we pass this year, if we pass it?

Mr. FOSTER. Yes, sir. I think so. I think in view of the questions that have been raised, and in view of the many suggestions that ECA be terminated, that it is very essential that you in your wisdom, and the Congress, come out with any legislation which is directed to that end, and do it promptly, and do it at this session, if possible. Otherwise, I am sure that as always happens in the case of an agency whose future is uncertain, you inevitably lose a lot of your very best people who, at a time when there are great requirements for brains in private industry and in government, will, of course, move to those jobs where they think they are going to be useful over a longer period.

Chairman RICHARDS. Would you put a terminal date in this act for military aid too?

Mr. FOSTER. I think that has great psychological advantages. I know in Europe in our early attempts to get the cooperation and energetic acceptance of programs by European governments, the fact

that we could say to these people, "Gentlemen, you cannot delay; you must not procrastinate; you must move ahead with these things, because come 1952, or perhaps earlier, you will be faced with the necessity of being on your own feet, and you will not have this aid any longer available"—I think that psychologically was a great help in getting on with the job, Mr. Chairman.

Chairman RICHARDS. Mr. Foster, the additional 10 minutes have expired. Unless some of the other members would like to go along on that, I will start around the table and I will allow the time for that purpose. Mr. Vorys.

Mr. VORYS. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. No questions, Mr. Chairman.

Chairman RICHARDS. Dr. Eaton.

Mr. EATON. No questions at this time.

Chairman RICHARDS. All right. Mr. Mansfield.

Mr. MANSFIELD. Mr. Foster, as always, it is a pleasure to have you before this committee and to partake of the benefits of what you have to say.

Carrying on this subject along a little different line, what countries do you anticipate can be taken out from under the European recovery program before the end of June 1952? I should say, what additional countries?

Mr. FOSTER. Yes. You are familiar with the fact that in Portugal, and Ireland, and Sweden, and in the United Kingdom, we have asked for no funds for economic assistance in our proposed bill.

To answer your further question is rather difficult because it depends to a considerable extent on the load which the countries pick up and the speed with which they undertake an additional arms program.

Chairman RICHARDS. Mr. Mansfield, it is possible that the witness would rather answer that in executive session. I do not know. If you do, say so.

Mr. FOSTER. My difficulty is I really cannot answer it because it depends on the load they undertake. If certain countries do no better than they have done so far, perhaps it would be unnecessary to have that economic assistance. I would prefer to specify which those countries are in executive session. However, our request to you for funds is based on our anticipation of the load which the proposed programs will put on those countries, and on what the countries will do in terms of political and economic decisions to carry it out. The effect of that 6 or 7 months from now is very difficult to anticipate.

I can say this: I think you may have something of this sort in mind. It is my opinion that at least this part—the economic recovery part of the Mutual Security Program—is one in which the amounts we will request next year would be less, rather than more, based on any projections we can make today.

Mr. MANSFIELD. Well, Mr. Foster, I am in full accord that this program, as such, should cease in 1952, and I have stated so on a number of occasions in the past 2 years. I know also you and your chiefs of missions in the various countries have issued statements to the same effect that the ECA end in 1952. I think, therefore, on the basis of the facts as we see them, that the program should continue to June 1952, because there are certain countries that, so far as I can see, you cannot take out from under the program, and that would be true

not alone by that date, but some consideration will have to be given to those particular countries after that date.

I refer specifically to Italy, with its huge population and land problem; to Greece, which is in somewhat the same category; and to Austria, in which we have a peculiar interest as an occupying power in a liberated country.

Those nations are not and will not be able to stand on their own feet, economically speaking, at the end of the ECA program in June 1952. Is that right?

Mr. FOSTER. I doubt that they will, and I would add perhaps Iceland to that as another country. Did you mention Germany?

Mr. MANSFIELD. No.

Mr. FOSTER. Well, Germany is questionable. I do not know. There are probably six countries that might, even with the best of luck, have required continued economic assistance today, even though they had not faced the additional burdens due to this rearmament activity.

Chairman RICHARDS. Your time has expired, Mr. Mansfield.

Mrs. Bolton.

Mrs. BOLTON. Mr. Chairman and Mr. Foster: You have perhaps 540 persons in your organization abroad, or something like that. Is that right?

Mr. FOSTER. No. We have more than that, Mrs. Bolton. We have ceilings roughly in Europe of 1,100 Americans.

Mrs. BOLTON. Well, some of those are staff people, are they not?

Mr. FOSTER. Oh, yes. A good many of them are staff people.

Mrs. BOLTON. That is what I mean. I was speaking particularly of the top groups.

Mr. FOSTER. Officers and technicians.

Mrs. BOLTON. Let us not concern ourselves with the exact numbers particularly, but what I was wondering about was whether the change from or the emphasis on the economic to the emphasis on the military would mean a change of personnel or just of emphasis?

Mr. FOSTER. No. It will mean a change of personnel, which has already begun to take place, because we have been shifting our focus of activity starting last fall.

As I indicated in my statement, we believe that one of the most productive ways in which we can use our resources is to increase productivity. In fact, unless we are able to increase productivity it would seem to us impossible to do this job as we see it, and impossible to get sufficient production, so that we can meet the need of additional military goods as well as maintaining a decent standard of living.

Therefore, we put more emphasis on the productivity aspects of our field activity than in previous times, and that has meant somewhat less emphasis on economic appraisals, and has meant a change in personnel, which has been underway for some months and is being accelerated in the expectation that we will be successful in getting funds to go on with this job as we see it.

The numbers may remain about the same, but the kinds of people are changing, and some of the sizes of the missions are changing, because we may need more people for this sort of thing in France, as an example, than we would in Norway, which has not so many opportunities for increased industrial production!

Mrs. BOLTON. When I was there 2 years ago in Paris I spent quite a good deal of time in the Department in Europe, particularly in the industrial end. I was particularly interested in the type of men you had, and their thorough comprehension of what was going on. I just wanted to know what you are doing in view of changed conditions.

May I ask about the possible pool of strategic materials? We have had occasional word that the countries of Europe have felt that the United States was taking too large an amount of the strategic materials which have been and are in scarcity, if we are expecting them to go into production. Is there any method being developed to divide these strategic materials a little more realistically?

Mr. FOSTER. Yes, Mrs. Bolton. That is a real problem and is a very natural sort of development. We, as the greatest industrial Nation in the world, accepting as we have the responsibility of providing much of the goods to start this program—

Mrs. BOLTON. May I interrupt at this moment, Mr. Foster?

Mr. FOSTER. Surely.

Mrs. BOLTON. I think it was during General Marshall's testimony there was developed the fact that France could make parts of war materials, as was brought out at that time, and it was said the United States wanted to send over a complete product rather than only the parts, that the assembling which could be done in France was not being done because our military are a little insistent on doing it all.

Is that part of your problem in materials and so on?

Mr. FOSTER. I think at the start of the program it was. I think much progress has been made. The method through which we are attempting to get a fair allocation of materials, so that we can have these other countries make their contribution, is through a series of international materials committees. They have been established under the Defense Production Administration. The policy under which those allocations are made, in general terms, has been set forth in a document issued by Mr. Wilson not long ago. That document was actually prepared by a Committee of which I happen to be the head, the Committee on Foreign Supplies and Requirements. It sets forth the basic procedures under which materials should be shared in order to develop best a balanced strength at home and abroad. That is a statement of what you want to aspire to. It will never be achieved in exactly those terms.

Since the United States does have means of getting a good many of these materials there have been in the past some accusations that we are taking too much. I think that is a false accusation. I think we have made very equitable distributions of such things as sulfur and molybdenum, of which we are the largest producers in the world, and because of that we are getting the same kind of cooperation from other nations who supply us with what we need.

Mrs. BOLTON. Thank you.

(The following was submitted for inclusion in the record:)

ECONOMIC COOPERATION ADMINISTRATION,
Washington, D. C., July 11, 1951.

HON. FRANCES P. BOLTON,
House of Representatives, Washington, D. C.

MY DEAR MRS. BOLTON: The following paragraphs contain answers to the questions which you asked me at the committee session on Tuesday, concerning the Financial and Economic Board (FEB) of the North Atlantic Treaty Organization.

Background; why was it created and by whom

Ever since the beginning of the NATO organization there have been a constantly increasing number of financial and economic problems varying in scope from the general problem of financing the rearmament effort to the specialized problems of raw materials, shipping requirements, etc. In the early stages, these problems were entrusted to a number of special working groups under NATO. When it became clear that the financing of rearmament would be a major limiting factor in carrying out NATO military and production plans, the United States proposed in the NATO Council Deputies that all of the financial and economic activities of NATO be handled in one Financial and Economic Board. This proposal was adopted on April 30, 1950. The new Board is thus one of three major segments of the NATO organization, the other two being the Military Committee (and standing group), and the Defense Production Board. These three elements are coordinated by the Council Deputies.

The Financial and Economic Board was set up in Paris in order to take full advantage of the secretariat and national delegations to the Organization for European Economic Cooperation. You will remember that the OEEC represented a very important step in trying to get unified thinking in Europe with respect to the common economic and financial problems; FEB represents another very important step in this direction.

What has it accomplished?

FEB was set up only a few weeks ago. The principal task undertaken by the Board to date is the "burden sharing" study. This involves the submission by each member of NATO of a detailed account of the military effort it is making and of the impact of that effort upon its economy. Member countries are subjected to a detailed cross-examination of their submissions which cover the magnitude of their effort, the measures they are taking to maintain the stability of their economies, and the effects of their military expenditures upon levels of consumption and investment as well as upon their balance of payments. On the basis of these examinations, the FEB is expected to arrive at conclusions and recommendations regarding the relative burden assumed by each country and to make recommendations with respect to aid so as to assure an equitable sharing of burdens. While these recommendations are not binding on any of the member countries, they should promote the assumption by each country of its fair share of the economic burden of maintaining the defenses of Western Europe.

During this period FEB has also initiated studies of the defense shipping requirements and has begun to consider the problems involved in financing the carrying out of DPB's recommendations on production.

Backstop arrangements

Backstopping for Ambassador Wood is provided by the Program Division of his own staff in Paris; the staff of the Assistant Administrator for Program in ECA/Washington; and an Interdepartmental group chaired by ECA (under the International Security Affairs Committee) which brings to bear on the problems dealt with by the FEB the points of view and information available to the Departments of State, Defense, Treasury, ECA, and Mr. Harriman's Office.

Sincerely yours,

WILLIAM C. FOSTER, *Administrator.*

Chairman RICHARDS. Thank you, Mrs. Bolton. Both the reporters and the press have requested that the witness and the questioners speak a little louder so that they can hear the questions and answers.

I believe, Mr. Battle, we skip over you now, do we not?

Mr. BATTLE. Yes, sir.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Foster, in your prepared statement you referred to the standard of living of the people of Europe and said that the average per capita was about \$525.

Mr. FOSTER. That was France, Mr. Smith.

Mr. SMITH. That was France?

Mr. FOSTER. Yes.

Mr. SMITH. What was it in 1948, do you know, Mr. Foster?

Mr. FOSTER. I would have to check this figure. My recollection is it was about \$400. I can get that for you. It was somewhat lower, Mr. Smith. They have made, as I indicated, a very substantial improvement, but 1948, I can assure you, was a very low level indeed.

In 1948, the per capita income in France, in 1948 prices, was estimated at \$380. A better comparison, which permits adjustment for price changes, is the per capita gross product at constant prices, which was \$591 in 1948 and \$667 in 1951.

Mr. SMITH. With productivity up 40 percent or more, should not the standard of living be greatly higher than what you enumerate here?

Mr. FOSTER. The standard of living has improved. The production to which you refer is industrial production, however, and much of that has gone into increased capital facilities in order to build up the plant which would continue this, come the end of the Marshall plan.

In other words, very little of the increased industrial production has as yet in most of these countries become available to the people of these countries in terms of better standards of living. I think as a general statement most of these countries have reattained about the level of their prewar standard of living in terms of availability. In terms of variety, in terms of a wide choice of things to wear, and eat, and enjoy, the levels are not as good as they were before the war.

However, we have deliberately encouraged relatively a much larger investment program in these countries than has been undertaken in the United States, undertaken with the view of their being able at the end of the Marshall plan to support themselves without external assistance.

Mr. SMITH. Is that not the basic thing that we are driving for if we are going to make any successful counterattack against communism? These people are not concerned about whether they live under a republican form of government or whether they live under communism if they can get a decent standard of living. Until they attain a decent standard of living I cannot see how we can make much progress by rearming them.

Now, we admit that this rearmament program is going to have a considerable impact on the standards of living. For myself it seems to me that we have neglected to approach the problem from the economic standpoint. In other words, until we can help to create a more favorable attitude on the part of these people through economic stability we cannot hope to do much to defeat communism; until this is accomplished we cannot hope to reach our objectives. We have not succeeded in moving toward political and economic integration and I doubt that we have spent our money wisely.

If you would care to make an observation on that, I would like to have it.

Mr. FOSTER. I think fundamentally you are quite right. I think men do not always live by what they have. I think what we have been able to do is to give them a hope that they would have something better through this continuing improvement. I think more important, perhaps, in many instances, than actually having it in hand is the hope of something to aspire to. I think that is the great difference between Europe today and Europe in 1947 and 1948, when they had none and when they were living under these desperate conditions.

We have not done enough toward the thing you speak of. We have not been able to see that the benefits of this increased production have gotten down to the people who are producing, and the great mass of people. With the help of many sectors of our own economy we are devoting much of our emphasis to that now.

We have had the strong and very useful support of the American free labor unions in doing that sort of job abroad. We are hopeful that this productivity drive on which we are putting so much emphasis will be accompanied by a fairer division of the additional fruits of that productivity, so that the additional production will be divided not only to the owners of the businesses, but will also get to the consumers, and to the workers, so that you will get a better standard of living among the workers and the mass of people in these countries.

You are quite right. Until we are able either actually to accomplish that, or until we are able to give them a greater hope of that early achievement, we will not get the support of the peoples for the kind of life we are promoting, and for the things we are trying to get done.

Mr. SMITH. I think we are coming out second-best on the propaganda that the Communists are advancing, namely, bread and peace. That is what they are talking about.

Chairman RICHARDS. Your time has expired, Mr. Smith.

Mr. SMITH. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. In assuming or stating that the purposes of the ECA are largely accomplished, are we assuming that the European countries have developed an economy strong enough and productive enough to produce a reasonable standard of living for their people?

Mr. FOSTER. Mr. Carnahan, we had hoped that they would, and had it not been for the new need of taking great quantities of available goods out of their production for purposes of rearmament, we had hoped that they would be in that shape, on a thin basis, but on a bearable basis.

What has happened, as Mr. Smith indicated, was that the diversion of the production to this new build-up of military strength does interfere with the availability for consumption, and it does give us a great problem of balancing the military build-up against the need for maintaining a decent standard of living.

The only way we can get it is by still greater production and productivity plus the fact that for the foreseeable future we will have to continue to give them economic aid, as well as military end-item aid, because without that in handling both those jobs they would not achieve what you have in mind.

Mr. CARNAHAN. Is not this new demand then for military aid a justification for further continuation of the thing we have been doing under ECA?

Mr. FOSTER. In that sense it is, since the economic assistance we give will be partly for the purpose of providing commodities that they will have to have to eat and enjoy. But, the great part of this new aid we are asking for—the \$1,650,000,000 for Europe—is that which is designed to build up the productive facilities so that within a reasonable period they will be able to sustain this military load without the need of necessary end-item assistance from us as well.

In other words, if it were possible to divide the \$1,650,000,000 into two parts—and it is not, because they overlap—the smallest part of that amount would be for the purpose of commodities to sustain the standard of living. The largest part of it is for the purpose of building up productive facilities, purchase of raw material to assume the military production load, which is the other part of the twin job we now have.

Mr. CARNAHAN. Will the assumption of carrying the military load mean a reduced standard of living for the masses?

Mr. FOSTER. It may well lead to that in some countries. The question is always on the part of the governments of these countries, as to whether they can afford to cut back the standard of living in the particular country in order to undertake this additional military load. With the economies so thin in some countries that will be very difficult to do. In fact, it will be difficult in all the countries, but it will be much more difficult in some countries than others.

We have a very difficult job, and a very difficult choice always, as to whether that will defeat the purpose we are trying to achieve or not. If it goes too far, of course, it may, as Mr. Smith said, make a reduction in the standard of living which may put us back to where we were in 1948. That is the dangerous and difficult choice we have ahead of us in all these determinations.

That is why when we say, "Can they not arm faster than they are?" that final verdict is one that we cannot make for them here. That is a verdict that in most cases the governments of those countries have to make. Of course, we want them to go just as far as it is possible to go, but we recognize they must not go so far that they will lose what we have built to date in these last 3 years.

Mr. CARNAHAN. Of course, it is not possible to build a military strength unless you have an economic base to support it.

Mr. FOSTER. It is absolutely impossible, and the military strength, in my opinion, would be of little avail unless you had economic strength behind it.

Mr. CARNAHAN. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. Mr. Foster, you have stated, and I believe correctly so, that there is only one way in which Europe can shoulder a larger rearmament effort, and that is by way of increased production and greater unification. Is not greater unification one of the fundamental prerequisites to increased production on the Continent?

Mr. FOSTER. Yes, sir. It is. Without it you do not have the free flow of materials; you do not have the outlet for the production that you are moving toward. Therefore, a prerequisite of this greater strength is greater unification.

I think General Eisenhower made a very excellent statement of that in his speech before the English-Speaking Union in London a day or so ago, on July 4. It is something we have pushed very hard ever since the spring of 1948, and I think in terms of accomplishments as contrasted with a normal pace in history, we have made a lot of progress, but there is still a great distance to go.

Mr. MERROW. That leads me to ask the second question.

You point out that there have been substantial gains toward greater economic unity, and you cite the European payments program and

the Schuman plan. However, even though there has been that progress, that progress is not as great as you think it should have been?

Mr. FOSTER. No. We would like to have seen even greater strides toward unification. We would like to have seen the complete elimination of quota restrictions—quantitative restrictions on trade between these countries. We would like to see the procurement of goods for this military effort done freely across the international borders. We would like to have seen the Schuman plan come into full being before this time. It is not as yet ratified, as you know, by the governments themselves. It has been initialed by the ministers and we are hopeful it will be accepted, but many of those things we had hoped for long before this time.

However, there is one other organization and one other effort which I would like to refer to briefly, if I may. That is the Organization for European Economic Cooperation. In my opinion that is one of the greatest evidences of at least economic integration that has ever taken place as between sovereign governments, and I think in their 3 years of life their achievements are tremendous, and I think they are continuing. I am hopeful that with their continued efforts and emphasis they will bring about some of these other, faster movements toward complete integration of the economies of Europe, without which we will always be handicapped in achieving this build-up of complete strength.

Mr. MERROW. You are asking for \$1,650,000,000 for economic aid.

Mr. FOSTER. That is for Western Europe.

Mr. MERROW. Yes. What harm would there be in making progress along the lines you have spoken of, by establishing certain conditions that we expect fulfilled for the giving of this aid? In other words, condition the aid by insisting that progress in the field you have mentioned must be made.

Mr. FOSTER. There are certain statements in the present legislation, Mr. Merrow, that set forth the desires of the Congress and the people of the United States to that end. If you are too specific in your conditions as to what should be done within certain times it does seem to me that you may lose the really strong motivating force, which is the willingness and the desire of these people to do this themselves.

Now, this whole effort, I think, has been based on the philosophy of our helping other countries to help themselves. The job has been done by them. It has not been done by us to the greatest extent. We have given the essential marginal assistance in this job, but basically the genius of this plan, in my opinion, was its emphasis on their helping themselves.

If you put such strict requirements as to time and specific acceptance in a bill that it perhaps reduces their freedom of action and their whole-hearted support of an activity, you may lose some of that spirit from within that gets the job done.

I have felt always in the imposing of conditions that we should be very careful, and we should have in mind that this is a partnership as between full partners, and is not an attempt by us to tell these countries exactly how they should meet the conditions which they usually know somewhat better than we.

Mr. MERROW. But if you spend the money without having any conditions the day will come when you have no leverage left, and the goals that you have set for them will not be obtained.

Mr. FOSTER. Well, we have methods of achieving the objectives of the legislation, because we do not have to release the funds. My point is I would prefer it not be too strict a specification as to how, when and why. I think you need flexibility, in other words.

I think the objective should be stated. I am perfectly in accord with you on that, but I think if you state the objectives and say, "You will not get this money unless you achieve this particular objective in this particular time," I think you may lose the motive power of this activity.

Chairman RICHARDS. Your time has expired, Mr. Merrow.

Mr. Zablocki.

Mr. ZABLOCKI. I really do not have any questions, Mr. Chairman, but I do wish to take this opportunity to express my sympathy with the problem you have to face, Mr. Foster. The critics who are charging that there is insufficient military cooperation by our allies, admit that the military effort in Europe is and may further hamper the economic recovery progress. These same critics in past years sought to limit drastically, opposed and criticized our economic aid to those countries. In my humble opinion, our allies on the whole have done remarkably well economically and militarily, considering their circumstances. It appears they criticize and oppose simply for the sake of opposing any efforts.

Mr. FOSTER. Thank you, sir.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. First, I would compliment you, Mr. Foster, and your excellent organization. I think you are doing a very fine job. We in America are very pleased at the acceptance ECA has received everywhere, and at the tact and diplomacy with which it has been carried on.

You have made a suggestion that there be a Department of Foreign Affairs. If that is the case, as a suggestion, what would you then call the State Department?

Mr. FOSTER. Mr. Fulton, I suggested as a possible alternative that that was one way of handling this particular sort of activity. If this were undertaken this would supplant the State Department. In other words, it would be a Secretary of Foreign Affairs who would be the man in the United States Government in charge of our foreign policy, and the top administrator of these coordinated departments, namely, the Foreign Economic Affairs, Foreign Military Affairs, Foreign Information Affairs, perhaps, and Foreign Political Affairs, or whatever you might call that.

Mr. FULTON. So that if that technique were adopted—not saying we were adopting it—it would result in the abolition of the State Department?

Mr. FOSTER. I do not want to be misquoted in any sense of the word, Mr. Fulton.

Mr. FULTON. No. In our present sense of the State Department.

Mr. FOSTER. I think it would supplant the State Department; yes.

Mr. FULTON. And it would really put the economic matters higher than the policy matters in such a department?

Mr. FOSTER. No, I do not think so. The Secretary of State would be charged with the foreign policy of the United States—the Secretary of Foreign Affairs, in my opinion. This is not a thoroughly thought-through suggestion, I might say.

Mr. FULTON. And it is only an alternative?

Mr. FOSTER. It is only an alternative. He, as always—the Secretary of State, or the Secretary of Foreign Affairs, or whatever his title might be—would be, as presently, charged with the foreign policy of the United States under the President, and the foreign economic affairs would be on a par with these other departments, which would report to this super-Secretary. They would be equivalent to the political desk, if you want to call it that, and equivalent to the foreign military activities, and equivalent to perhaps an information, or whatever you want to call that activity, but would not in any sense be superior to—

Mr. FULTON. The policy-forming body?

Mr. FOSTER. That is right.

Mr. FULTON. There is now a group that is just leaving for Europe on a trip from the United States that has been announced as a demonstration of the height of unausterity. They are supposed to be doing the tour in an old-fashioned reckless style. These special tourists will have special trains for them, and special cars. They will be seen in all the European cities with a chauffeur and a footman, and each one of them will have a separate automobile. Now, why do you not ask to have their passports canceled, because while the ECA may be saying to the little people of Europe to pull in their belts, reduce their standard of living and accept a program of austerity, you can never undo what those 17 people will do in 3 weeks in Europe. You will never undo it by a Voice of America program saying that there are two cars in every garage in America, against such a publicized and organized demonstration.

I would like to stop it and block it, because they have blatantly announced this trip as a demonstration of unausterity at its peak.

Our Government officials come up before this committee and say we must reduce the common people of Europe to the point of austerity, and to the point where we almost force them into communism. How can we sell them as a propaganda matter on our type of life when we permit through the State Department such a thing to go on, blatantly challenging everything that we do around this table?

This group has adopted the opposite of what we in the Government have said should be our approach toward our mutual security program, that we want austerity here and controls here. This group openly takes the opposite of what we say, and, as a propaganda move, goes through Europe and destroys everything that we build up, and does it with Government consent.

Mr. SMITH. Will the gentleman yield?

Mr. FULTON. I yield.

Mr. SMITH. For the sake of the record, who are these people?

Mr. FULTON. I guess we had better not identify them by name, Mr. Smith.

Mr. SMITH. Where are they from? Are they from Congress?

Mr. FULTON. Their names are in the papers.

Mr. FOSTER. No; they are private individuals.

Mr. JUDD. They are paying \$14,500 apiece for the privilege of throwing away the money which is burning holes in their pockets.

Mr. BATTLE. They must be Republicans, because no Democrats have that much money.

Mr. JUDD. It's only the Democrats who have been on the payroll these 20 years who have that much money.

Mr. FOSTER. Mr. Fulton, I think it is a very unfortunate example.

Chairman RICHARDS. Your time has almost expired. Do you have a question, Mr. Fulton? You have half a minute left.

Mr. FULTON. There is a serious side to it. When we are trying by words to convey an impression for our mutual security and then by deeds permit passports to be issued for such a thing, then certainly I believe we ought to combine our passport policy, and our economic policy, and our foreign policy, and see that we put our best foot forward. Do you not agree with that?

Mr. FOSTER. I agree this is a very unfortunate example. The only thing I will say is that it does provide some dollars for those countries which are short of dollars. As to whether we should use the visa to restrict the independence of the American citizen who wants to spend his dollars abroad that way, I have no opinion on that.

Mr. FULTON. You certainly do not say it is justified?

Mr. FOSTER. I think it is a very bad example.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Ribicoff.

Mr. RIBICOFF. Mr. Foster, would you estimate that the Soviet is spending in excess of \$1,650,000,000 throughout the world for propaganda, subsidization, and subversion?

Mr. FOSTER. I am sorry; I did not get that question.

Mr. RIBICOFF. Would you estimate the Soviet Union is spending in excess of \$1,650,000,000 a year throughout the rest of the world for propaganda, subsidization, and subversion?

Mr. FOSTER. I have no quantitative estimate on that. They are spending tremendous amounts, which are substantially in excess of any amounts we spend for that purpose. Whether it would come to that total or not, I do not know, and I am not sure that much of what they do costs them very much money. Certainly they have hundreds of people engaged in it; certainly they issue thousands of manifestoes; certainly they control many organs of public opinion.

I have no really good opinion on whether the total would come to that or not.

Mr. RIBICOFF. Mr. Foster, from everything you have said it would appear you cannot separate economics from our foreign policy and our diplomacy. Is that correct?

Mr. FOSTER. That is correct, sir.

Mr. RIBICOFF. Are you not and are we not kidding ourselves when we talk about terminating this program by June 30, 1952, and then giving it another tag?

Mr. FOSTER. If it is simply a question of another tag, I think you are probably right. However, I think that the job from here on is a somewhat different one, especially if new functions were added to the Economic Aid Administration—as might be done under two of the four alternatives I mentioned earlier.

Now, I think that there is a grave question in terminating it, as I pointed out, because I think you do run a risk of losing assets, which in my opinion are very useful assets to the United States.

Mr. RIBICOFF. Then why do we not be realistic and tell the other Members of Congress and the people of the United States, that although we originally thought we could finish in 4 years, we now find we cannot, because of the world situation? Do you not think frank-

ness on your part and frankness on our part is the best way to handle the situation today?

Mr. FOSTER. I am thoroughly in accord with frankness. I think, however, the job is a different job, and I think it is quite appropriate, therefore, to recognize it as a different job. I think that is not in any sense covering up the situation. I think it is a question of balancing the gains and losses in making this transition.

Mr. RIBICOFF. All right. For 4 years you have built up all over Europe—and when we go over there we see it—the symbols ECA, ERP, and the Marshall plan. You have made an impact on the mind of the world and on the mind of Europe with these symbols. Good symbols are hard to build up. Are we going to do comparatively the same type of work in the new program and then change all our symbols? That, I think, is something to consider in scrapping ECA.

Mr. FOSTER. I agree.

Mr. RIBICOFF. And in scrapping ERP.

Mr. FOSTER. I agree. I think you have to weigh that against carrying out the promise that we would be through with the job in 1952.

Mr. RIBICOFF. Another question, following up what Mr. Smith said about our propaganda line. We constantly emphasize the defense and security against war. Now, in ECA we are trying to sell the Congress and the people that economic aid is just an incident to the military. Do you really believe it is just an incident, or do you believe that economic assistance is part and parcel of our foreign policy, and that we should put our economic assistance on the level where it belongs, separate and distinct, or as important a part of our foreign policy as military aid, even though it does not take as much money?

Mr. FOSTER. I think it is just as important as is our military aid in terms of our foreign policy. I think the continuance of it on that basis is vital. I think it should retain the standing within foreign policy that it now has, of an independent agency of stature.

I am a little confused as to how to answer the rest of your question. I believe that this is something without which the foreign policy of the United States could not be effective, and therefore I think it is in the interest of the United States to go on with our economic leadership and help to the rest of the world, as a part of our achieving our broad objectives in the world, and this kind of an agency, with another name, perhaps, and perhaps with a slightly different form, is essential to that end.

Chairman RICHARDS. Your time has expired, Mr. Ribicoff.

Dr. Judd.

Dr. JUDD. My time was yielded, Mr. Chairman.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Foster, we are, of course, very glad to see you here. You and Mr. Hoffman have made favorable records in this country and throughout the world. We have been up against two deadlines here recently, one on appropriations and one on the Defense Production Act. What is our deadline on this act? Will you tell us just what we are supposed to do, and by when we are supposed to do it, Mr. Foster?

Mr. FOSTER. At the moment, Mr. Javits, we are in business on a temporary basis. Each year, as you recall, we come before you for

an authorizing bill, which we do not have at this point, to go on into fiscal 1952. We are operating, therefore, under the continuing resolution, which imposes many handicaps, because it does not recognize the new character of the job we are doing. Therefore, the deadline is yesterday, really, in terms of getting the bill through.

The other deadline is one to which I referred a little earlier, which is that unless we get a prompt decision on what we are doing, we are going to lose, as we already are losing, the people who are part of this asset to which I have referred.

So that I can only plead with you, sir, and your colleagues, that the sooner we can get on with this bill, the better it will be for us and the world, in my opinion.

Mr. JAVITS. Do we have any deadline as far as our relations with other countries are concerned? After all, that is the big thing.

Mr. FOSTER. No, sir; except that operating on this basis we are not as effective as we would be with the definite program ahead. Due to our relationships, which Mr. Ribicoff referred to, I think we can hold the confidence of the people with whom we work; but it is much more difficult, and it would be more effective with a definite program and a definite set of objectives in the law.

Mr. JAVITS. It is a fact that to the extent of \$500,000,000 of requested appropriation for economic aid, the difference between \$1,600,000,000 and \$2,200,000,000 in round figures, you are embarking on almost completely new programs in the Far East, Africa, the Near East, and Asia?

Mr. FOSTER. Almost entirely new programs. We have had since last summer small programs in the Far East in our STEM missions. The \$375,000,000 for the South and Southeast Asia is a substantial increase over last year's activities. The \$125,000,000 in the Middle East is a substantial increase, and the Latin-American is about the same, I believe. So that we could propose to undertake new programs in several countries and did increase the programs in most of the countries where we have just gotten under way.

Mr. JAVITS. You are really going to underdeveloped areas also in order to develop new and much bigger sources of raw materials; are you not?

Mr. FOSTER. That is certainly one of the objectives, although the basic objective, Mr. Javits, is to build up those economies, so that they are stable peoples and have a chance to survive in this world of today. One of the possible benefits that would come to us out of that is an increased availability of strategic materials, but I think that unless we are able to build that stability, that benefit would be of little avail over the long haul.

Mr. JAVITS. Are you asking for enough money to do the job that needs to be done, or are you just asking for what you think you can get from Congress?

Mr. FOSTER. We have always come to you, sir, with what our best judgment is as to what the minimum is to accomplish the objectives we have. We believe with this amount we can do a good job and achieve what we have stated to be our objectives, and what are the interests of the United States.

Mr. JAVITS. Do I have time for one more question, Mr. Chairman?
Chairman RICHARDS. Yes.

Mr. JAVITS. The reason I made that statement was this: On page 8 of your memorandum you make the statement:

This will require—

speaking of this new part of the program in Asia and in Africa—

comparatively little capital outlay; rather it will require economic assistance much of which is technical and advisory in nature.

When you turn over on page 9, you yourself tell us, speaking of these areas:

They want agricultural and manufactured goods—trucks, textiles, mining and engineering equipment. We must make this fair return, even out of our own scarce supplies, if we expect a free flow of raw materials * * *

That strikes me as a much bigger order than just a little technical assistance and advisory assistance such as you referred to on page 8. Can you make any comment on that?

Mr. FOSTER. Yes; I will be happy to. The reason for that is that most of these countries actually do have materials which they can sell to us for dollars in sufficient amount to meet most of their requirements in the way of commodities. The difference in the East, as contrasted with Europe, is the very much lesser commodity program which the Asian countries have to move into, and the greater availability of foreign exchange which they have through selling raw materials to us.

The thing they need is expert people who can work with them and give them better methods to achieve better production, agriculture, and sanitation, and more instruction in how to operate a government and how to train people to furnish the basic governmental institutions, which will strengthen the country.

Those do not take much money, as compared with the requirements of Western European countries in terms of food and raw materials, and in terms of the basic production equipment to turn out manufactured goods within those European countries.

Chairman RICHARDS. Your time has expired, Mr. Javits.

Mr. Roosevelt.

Mr. ROOSEVELT. I would like to pursue the line Mr. Javits started. I am completely in favor of the immediate necessity for a military emphasis in view of the world situation, and the attempt to regain the military balance. I think, however, that implicit in this program is a technical, or economic assistance program for underdeveloped areas, without a clear or very helpful statement of just what our objectives are.

When we started the Marshall plan we spelled out our objectives, and set a 4-year period in which to accomplish them for Western Europe.

I think we are embarking, and I hope we are embarking, on a program for Southern and Southeastern Asia, and parts of Africa and Latin America, and of course the Middle East. However, I get the feeling we are reluctant to come out and say just what our objectives are, and what our long-range program is. I think it would be very helpful, and certainly from a propaganda point of view, or a convincing point of view, it would be very helpful in maintaining the line in Southern and Southeastern Asia, particularly at this moment, if those people had a feeling that we really have their ultimate economic stability as a basic interest.

Do we not have a program? Has the ECA, for example, done any long-range planning on this line? Have you taken into consideration the possibility of working with, or the United States Government working with an international economic development group or program?

Mr. FOSTER. Yes, Mr. Roosevelt. I think that point is very well taken, and I should have separated out a little bit our European program, perhaps, from these other programs.

Certainly the concept of technical assistance to the underdeveloped areas is one that I did not intend to measure in terms of a 2-, or 3-, or 4-year program, because I think that may well continue for a long time. As I indicated in my statement, it is not in terms of dollars of the magnitude we are talking about in Western Europe, but in terms of time it may be very much longer, and I think I said there is a long-term development program in those areas.

In working with those countries we have utilized the United Nations and its subsidiary agencies, that is, the FAO and WHO, and UNICEF, and other of those activities. That is, we have coordinated with them in working in those countries.

We in ECA do not work with the United Nations. That is a State Department relationship and any of our relations would be in the field where we would make sure we would not duplicate what they were doing, and in most of those southeast Asian countries where we operate we have always made sure those programs go side by side, so that we do not spend our people and our funds on the same things.

I think we have made a great deal of progress.

As to your basic question as to whether we have made known to these people that that is our intent, we do do that. That is one of the basic considerations in dealing with these governments that we have emphasized.

Mr. ROOSEVELT. I think one of the problems is this letting it be known as to just what our program is. The point 4 came to the House in last year's bill at \$45,000,000. It was cut down and finally got through at \$35,000,000. Yet, that is not our total program for that area, and propagandawise it is peanuts.

Now, what I am afraid of is that we are not really getting over our total program. Point 4 is a nice term. The Marshall plan is a nice little catchword, but as for your work which we are doing in southeast Asia, I am afraid we have not got the phrase for it. Perhaps that is the way I can best express my worry.

Mr. FOSTER. I think perhaps we have not got the phrase for it, but I do believe we have gained the confidence of those with whom we are working in the southeast Asian countries where we have STEM missions. They are aware that, while ECA as such cannot make a long-term commitment, the United States has undertaken this job of cooperative endeavor with them.

I think even more important than the catch phrase is the fact that we are on the job doing the job, and I think in terms of what these countries have told us that they are aware of that.

Mr. ROOSEVELT. That is all, Mr. Chairman.

Mr. JUDD. For the record, what do you mean by "STEM missions"?

Mr. FOSTER. Special technical and economic missions, to differentiate them from ECA missions in Europe.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. I have great admiration for you as an administrator and operator. When you outlined your four alternative methods by which we might legislate on ECA, I gathered from some of the negative things you said, rather than some of the positive things, that you have a fairly clear idea in your own mind as to what you personally feel would be the best way for us to proceed. I do not want to put words in your mouth, but I gather you feel that the worst thing we could do would be to say that ECA will continue for a 1-year period and then provide for no successor organization, or anything of that kind from there on out.

Mr. FOSTER. I could subscribe to that. I may have to stop a little later.

Mr. HERTER. All right.

Secondly, you said that the assets that have been built up by the ECA from the point of view of personnel and experience are definitely assets and that we ought not to throw them away from the point of view of any successor organization.

Thirdly, you said that in your own mind, at least, it would be best if we created a successor organization immediately and gave it somewhat different functions from the ECA. Am I correct in that?

Mr. FOSTER. It is not quite that clear, Mr. Herter, but I think that purely as an administrator that is about where I would come out. However, we have to recognize there are many other considerations in this sort of an evolutionary build-up.

As you said—and I appreciate your kind words about being an operator—I am primarily an operator. Therefore, I would like to do it in the simplest and most direct way, and perhaps that is it. However, there are many other considerations.

This system of coordinated relationships is one that you do have to work out through experience, and I think the way we are working it out is a good way and an effective way.

Mr. HERTER. May I interrupt there for just a moment, Mr. Foster?

Mr. FOSTER. Yes.

Mr. HERTER. There have been all of these reports you talked about to the public, none of which agree with each other exactly. The bill was very late coming in and I gather again that there was not complete agreement in the administrative branch of the Government as to what kind of organization should succeed ECA, and when. So that in effect this baby has been tossed into the Congress' lap for it to make the determination.

In making that determination I think all of us ought to be entitled to the best information from the executive branch of the Government from the point of view of detailed implementation of what they think is the best line of procedure.

You indicated in your prepared statement here that there are a number of subsidiary problems connected with any organization that may be set up, or even the continuation of the ECA. You have the question of claimant agencies for foreign governments, including South America. You have the question of allocations of raw materials. You have the question of export controls, all of which are now a responsibility resting in different bureaus in the Government.

You have a good deal of policy making by committee rather than fixing the responsibility in the individual, either department heads

or organization heads. I hope very much, without wanting to press you to do anything specific at the moment, that when we come to a further consideration of the matter you would be willing to give us very frankly your own view as to what in your opinion would be the best organizational procedure from an operational point of view, so as to clarify some of the very serious overlaps which I think now exist, and from the point of view of putting in the field one of the most effective operating organizations you can visualize.

Mr. FOSTER. I should be very happy to, Mr. Herter. You are quite right. There are various opinions and I do not presume to think that mine are necessarily the best.

I would say that there are these other functions which ought to be done some day. Constitutionally I am opposed to a committee operating anything and, therefore, I would lean toward certain functions being put in one agency, with full responsibility, and full consultation and information given to the other interested agencies.

Mr. HERTER. With the responsibility centered?

Mr. FOSTER. The responsibility centered and the authority centered.

Mr. HERTER. That is right.

Mr. FOSTER. I think as a businessman that is the way I like to operate my own business, and I think that from an operating viewpoint purely and simply it is the best way to get it done.

However, as I indicated before, there are many other considerations and, therefore, I do not presume that what I might think in my own viewpoint to be the perfect solution is necessarily that.

Chairman RICHARDS. Mr. Herter has a half a minute.

Right there I would like to ask what is the difference between an operator and an administrator? You say you are an operator more than you are an administrator.

Mr. FOSTER. No. I mean an operator as contrasted perhaps with a policy considerator. I like to get things done.

Chairman RICHARDS. That is clear, I hope. Mr. Bureson.

Mr. BURESON. I am sure we all have an appreciation of the efforts that are being made in the unification of the strength of Western Europe. I think also one of the greatest criticism in this country is that it has not been accomplished more rapidly. I know we are an impatient people and we have to realize there are old jealousies and there are great problems in this matter of unification. At the same time it is a very fundamental question which Mr. Merrow touched on, and to which I believe Mr. Mansfield also made reference.

In the small communities and small towns of this country we have a lot of volunteer fire departments, and everybody chips in. Some fellow who is not cooperating may have his house catch on fire and they have to put it out, because it is likely to burn up the whole town. They cannot just say, "You have not cooperated, so to heck with you. We are going to let your house burn."

In Western Europe it seems to me we have just about that same problem. Somebody is dragging his feet all the time. We know that. They want to wait and see what the other man is doing. Is that not one of the greatest problems we have in this whole picture?

Mr. FOSTER. It is a great problem, but it is complicated by the fact that most of these countries have governments which are coalition governments and which depend on being able to hold a center group together. The taking of the most courageous political decisions is

very apt to result in there being no government. The kind of political decisions which are difficult are those we discussed a little earlier where, if you undertake a more ambitious and more urgent military program, you may have to take it out of the standard of living of the people.

Now, how far can you move in taking it out and still remain a government?

I think governments in Europe are very much like our own. The people in government seem to want to stay in government, and these people who are faced with these daily decisions I think are doing—within the objective, as they see it—a courageous and a good job.

It does look to us many times as if it is not enough, and a good deal of the time we are urging them to do more, but, by and large, I think their resistances and reluctances do get back to the fundamental question that they are democratic governments in the sense that they are freely elected by the people, and they have to make decisions which they believe the people will support, and they are going as fast within that framework as they think they can in order to achieve this volunteer fire department which would be effective.

Yes; we criticize them. Yes; we are of the belief that many of them should do more, but I think most of them certainly are men of good will and are attempting to do it within their judgment as fast as they can.

Now, our position from outside is somewhat that of consulting engineers, who can criticize the methods which the executives of that particular country utilize, and in some cases we are able to convince them that their methods are not right and they should undertake more. It has not gone all the way to the extent of our full recommendations in some cases perhaps, but neither does it in business, when your consulting engineer comes in. The heads of the business frequently say, "Well, you do not quite understand the way our business works and, therefore, that recommendation cannot be used in our company, but we will take part of it."

I think our job is to continue to influence, to urge, to push toward what we believe in our best judgment is the extent and speed with which they should do these things. I think we should continue to press in that way, and I think by that pressing we have moved them more rapidly than they would have otherwise done. It is a good volunteer fire department, I think, in spite of the fact that some of them get to the fires a little late.

MR. BURLERSON. Then the matter of pressing them to greater effort, I assume, has been the practice, and I presume the policy in the future will be that the emphasis on greater effort and greater unification, so that each does his part, would come from within those nations, rather than from us?

MR. FOSTER. I think so, sir; yes.

MR. BURLERSON. That is all.

Chairman RICHARDS. Thank you, Mr. BurlerSON.

MR. REECE.

MR. REECE. Mr. Foster, you have made a very fine statement of principles, just as the other gentlemen who appeared here before you have done, but I am wondering if in the course of the presentation there is going to be a breakdown of the proposed expenditures, so that we not only may know what the objectives are going to be, but how

those objectives are to be attained. When we consider an appropriation bill here in the Congress for one of the Government departments, every item has to be justified, whether it is \$5,000, \$5,000,000, or \$5,000,000,000. As a matter of policy no appropriation is made for any purpose unless there is a justification given to the Congress for that particular item. I am wondering to what extent that can be done in a program such as this. It would seem to be even more important than in case of our own Government.

We are asked, or probably will be asked, to appropriate some few billions of dollars to attain an over-all objective, but the details and the purposes for which this money is to be used is left entirely to the discretion of the administrative branch of the Government. I do not know whether that is a kind of pessimistic attitude, but I would like to know whether there will be a breakdown.

Mr. FOSTER. Yes, sir. There will be. We are perfectly prepared not only to get down to the \$5,000, but to some of the \$1,000 items. My attempt, of course, in this presentation was to set forth the general principles and the general objectives and some of the things which in my opinion were essential in accomplishing our broad United States objectives.

Now, we have the figures and the ways to justify each of the amounts which we have asked for for each of the countries, and each of the areas of the world, and we would be very happy in our later presentation to go into any amount of detail that you would like.

As you well stated, sir, the Appropriations Committees, I can assure you, will get into it in that detail following our presentation to this committee.

I must say, Mr. Chairman, I had a very unfortunate operation on my right arm, my right arm being Mr. Richard Bissell, who is normally up here and who can give to this committee, as most of you know, the details down to \$1. Mr. Bissell, who has sat at my right side in most hearings for the last 3 years, unfortunately had his appendix taken out last night at 6:30, so he will be before your committee I hope a little later; but I do hope the committee will be able to wait till he gets well.

Chairman RICHARDS. Will you express to Mr. Bissell, who is a very fine man, the fact that we give him our sympathy. You also have our sympathy because he cannot be here. You handled yourself pretty well without him.

Mr. VOYTS. Will the gentleman yield?

Mr. REECE. I yield.

Mr. VOYTS. I find the unexpended balance June 30, 1951, is \$1,518,000,000 for economic cooperation in Europe. That, with the amount asked in this bill, \$1,675,000,000, will make for the next year \$3,193,000,000, or \$213,000,000 more than we spent this year, in the year in which we have had such success. I hope you or somebody is going to explain why it is we are spending any such amounts, and why it is they have gotten along so well without that unexpended balance.

That is a lot to answer right now, but that is a question I want answered. I do not think, Mr. Foster, this year you are going to do all the justifying before the Appropriations Committee, because there will have to be considerable justification before this committee

before any such colossal amounts are authorized here. I may be in error, but I think a lot of justification is going to be required right here.

Chairman RICHARDS. We will have to get along now.

Mr. FOSTER. I would like to say that all unexpended balances in the pipelines and the funds requested in this bill will not be spent in the ensuing 12 months because there will be a pipeline next year as well. We are talking about obligations and appropriations, and not expenditures.

Mr. VORYS. But whatever results have been accomplished have been done by what is over there now and not what is in the pipeline.

Mr. FOSTER. We have a pipeline that has run from a billion to a billion and a half each year; so, we should not say we would spend \$3,000,000,000, or whatever your total is.

Mr. VORYS. We will certainly want to go into that.

Mr. FOSTER. Yes. We would be glad to justify that, Mr. Vorys.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. I have asked previous witnesses about the inflation abroad, and it raises certain questions, of course, that are difficult for us to answer. In other words, when we have inflation at home we can legislate and apply administrative devices to correct it, but in countries where the price of tin, for example, has been run up because of bidding by other countries, it is a very difficult problem, I assume.

Mr. FOSTER. It is.

Mr. HAYS. You make reference to the opening up of new supplies of tin and other commodities, and of course the committee would be very interested in that. You mentioned zinc, lead, bauxite, and other items. Let me refer to figures on two commodities, tin and rubber. Tin, for example, went up in the 6 months following the Korean aggression 135 percent; and rubber went up 157 percent. What are we doing, aside from increasing the supply, to hold down this inflationary trend?

Mr. FOSTER. We are doing this: In addition to attempting to open up new sources, which is the ultimate way in which to get prices down, we are attempting through those international materials conferences to have international agreement on both allocation of quantities and of prices.

In addition to that, the United States, as you know, has undertaken the procurement of tin through the RFC and the General Services Administration. In so doing, it has attempted to avoid the terrific pressures on supply which free buying by our own people, as well as by other nations, has brought. The price of tin has dropped substantially from the highest figures, which I think your percentages referred to. It has dropped because we withdrew from the market for the time being until it did have a chance to stabilize, and until we did have a chance to have some of these international meetings.

We have not, of course, eliminated inflation from these strategic materials because there will always be pressure to buy on the part of countries which are not part of the conference, and as long as supply is so much less than demand there will be that tendency.

There are no international price-control activities yet effective. I do not know whether there ever will be, but by directing the buying in an orderly way we have taken some of the pressure off, and by these international meetings we have gotten a better appraisal of what the actual requirements are.

When you know what the actual requirements are, and what the supply is, you can adjust the buying of the nations at least within the NATO organization, as an example, and within the OEEC, as an example, to be in proportion to the available supply. That too reduces the pressure and is an artificial way to eliminate some of that excess of demand over supply.

I think progress has been made, but of course the inflation still will remain until we get a greater supply.

Mr. HAYS. You agree that we are entitled to insist that other nations cooperate not only because of the additional cost it involves for us but also the impact on efforts to stabilize political conditions. In other words, inflated incomes are not equitably distributed among the rubber-producing countries. That is true; is it not? The Communists exploit this condition that makes a few people wealthy and leaves others very poor?

Mr. FOSTER. That is one of the great problems. Certainly, in our equitably sharing our own availabilities, we can expect in return there will be an equitable sharing and fair pricing of these materials which other control.

Mr. HAYS. If I have time for one other question, Mr. Foster, I want to say that I like very much what you have to say about the changes in India, for example, or Asia, which we see resulting from helping people to produce more on the farms, and improving by education and technical assistance their productivity individually.

I would like to ask you for some encouragement, I hope, as to whether we can look forward for a little while to support of that program in those countries? In other words, how long will the resistance to that be postponed? You will ultimately, it seems to me, run into a resistance to it in that we are perpetuating an agrarian economy, and industrialization is the ultimate hope. For the time being, it is obvious in many of those countries that the agrarian effort is the only thing that will provide relief, but can we look forward to proper support in those countries for this point of view?

Mr. FOSTER. I think so, Mr. Hays. Certainly most of those countries are so dependent for the major part of their activity on improved agricultural methods that I would say it would be a long time that we would be assisting in improving in that set-up. I am not sure that in most of those countries the effective way is to go into large-scale industrialization. In fact, I would doubt it very much. I think our efforts can be most effective if we continue to devote much of our aid to the improvement of agricultural productivity and methods, and through such things as the extension services, to which I believe you referred in your discussion with Mr. Harriman, and which we have utilized through the specialists we have taken from the United States Department of Agriculture and also from many of the agricultural schools. We have just sent out to the Philippines the head of the Montana State College, who is an agriculturist. We have several of our mission chiefs in southeastern Asia who have that background. We do it because we believe this is the segment of their economy in which we can be most effective.

Mr. HAYS. Thank you.

Chairman RICHARDS. May I say to the members of the committee we have 20 minutes to get down to the floor and complete our period of questioning here. However, tomorrow we will meet at 10 o'clock.

Can you be here tomorrow, Mr. Foster?

Mr. FOSTER. Yes, sir.

Chairman RICHARDS. We will have a morning session tomorrow and an afternoon session.

Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman.

Mr. Roosevelt asked a question in which I was most interested. That was, due to the fact that the war potential of Europe is expected to be one and one-half times greater than the Communist countries, I believe, we should spend more on point 4 in the underdeveloped areas in order to permit Europe to achieve that war potential. Without the raw materials from the underdeveloped areas, Europe could not achieve that industrial output. Is that correct?

Mr. FOSTER. That is correct. Nor could we.

Mrs. KELLY. I would like to say at this time that I feel \$7,000,000 is out of line for the underdeveloped areas under those conditions.

I have one other question. You have a departmental status in ECA. Is that correct?

Mr. FOSTER. The Administrator has the rank of—I have forgotten the exact wording, but he has the same rank as a member of the Cabinet. In other words, he reports directly to the President and has the rank equivalent to that of the head of a permanent executive agency.

Chairman RICHARDS. Something like an admiral, in other words.

Mrs. KELLY. During one of our subcommittee meetings we discussed at length having an oversea chairman of all foreign affairs, or an administrator, in line with the recommendation of the Rockefeller report. Would it be possible, do you believe, to have an administrator for all our oversea assistance possessing the status which you have under the State Department?

Mr. FOSTER. If he were under the State Department, he would not have that status. The relationship with the State Department is very clearly defined in the legislation, and in my opinion has been a very effective relationship through which the ECA was able to keep, as far as I know, within basic foreign policy and yet to operate as an independent agency in getting these specific jobs done. It would be my recommendation that that sort of relationship be continued.

Mrs. KELLY. Thank you.

Chairman RICHARDS. The committee stands adjourned until 10 o'clock tomorrow.

(Whereupon, at 12:25 p. m., the committee adjourned until 10 a. m. the following day, Wednesday, July 11, 1951.)

MUTUAL SECURITY PROGRAM

WEDNESDAY, JULY 11, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue hearings on the Mutual Security Program. Mr. Foster is with us again this morning and will continue his testimony. There is to be unlimited questioning this morning. We plan for Mr. Foster to be here this afternoon in executive session.

Dr. Morgan, have you any questions?

Mr. MORGAN. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. The only detailed information I have about the program is a summary which is marked "secret." I just asked the staff if we had any details on the program. They say they have not come up yet.

Chairman RICHARDS. Whom did you ask?

Mr. VORYS. Our staff. I wanted to know if there was a general breakdown on the economic program. I would like to find out what this money is going to be spent for.

Chairman RICHARDS. We are going into that. It may be that Mr. Foster will answer some of your questions, or you may want to wait until this afternoon.

STATEMENT OF HON. WILLIAM C. FOSTER, ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION—Continued

Mr. FOSTER. Mr. Chairman, Mr. Vorys, what is it you have in mind, the amount per country?

Mr. VORYS. The \$1,650,000,000. What is that to be spent for?

Chairman RICHARDS. Is that all?

Mr. VORYS. Yes. That is what I want to find out. It is not a thing that you can go over orally. I can get it better through my eyes than through my ears.

I would like to get that information so we can interrogate the witnesses about some of the details.

Mr. FOSTER. We had planned as to country breakdowns there would be witnesses on each title, Mr. Vorys, who would have complete figures not only as to countries but commodities.

That discussion was going to be taken up under the titles, and to be after the general witnesses. I shall be happy to give you anything in

general terms. But on that sort of detail I am sure you would get more satisfaction from Mr. Porter in detail than from me. All I would do would be to read it from a piece of paper, too. Anything we have of that nature you are certainly entitled to and we want you to have it. I think perhaps you could get it better in detail in those title presentations.

Mr. VORYS. I suppose I will have to wait for that.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. No questions at the present time, Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Good morning, Mr. Foster.

Mr. FOSTER. Good morning, Mrs. Bolton.

Mrs. BOLTON. It is my understanding that some of the European governments have used certain ECA money to improve their budgetary positions. Am I accurate in my thought of it, or inaccurate? Is it an appropriate use of Marshall plan funds?

Mr. FOSTER. First, I think we must separate dollars from counterpart.

Mrs. BOLTON. Definitely.

Mr. FOSTER. The dollars, of course, contribute very substantially in their indirect effect to the budget situation by creating counterpart.

The counterpart, while it is not used specifically to meet budgetary deficits, is used in all instances either to meet expenditures which would otherwise be a part of the budget and would have to be raised by taxation, or have been used in substantial amount, as you know, through the short-term debt in certain countries where that retirement seemed to be the best way of meeting inflationary situations.

So you are quite correct that Marshall plan aid indirectly has been used to improve the budgetary situation of these countries. It has not, however, been ever released simply to meet a budgetary deficit in that sense; it has been released to meet a part of the total expenditures of those countries and, therefore, it has tended to reduce the budgetary effect, if I make myself clear.

Mrs. BOLTON. You say it has been used indirectly, the counterpart. Is that not a direct use of Marshall plan funds?

Mr. FOSTER. What I meant to say was that the dollars themselves have not been used to go into the budget operations through a conversion into the currency of that particular country.

Mrs. BOLTON. Is that not just a play on words?

Mr. FOSTER. No, I do not think so. I think it is part of the fact that the dollars and local currencies are two different animals, and they are not directly interchangeable in the world today.

Chairman RICHARDS. Will the gentlewoman yield?

Mrs. BOLTON. Yes, indeed.

Chairman RICHARDS. I understand that some of these countries have used as much as two-thirds of the counterpart funds for budget purposes. That is going a long way from the intents and purposes of the original act, is it not?

Mr. FOSTER. They have used, Mr. Chairman, up to 100 percent for purposes of contribution to the basic requirements of the country's development program, which is, of course, a part of the country's budget.

I am not trying to be confusing on this.

Mrs. BOLTON. We are talking about a debt.

Mr. FOSTER. Did you say "debt"?

Chairman RICHARDS. I said "budget," but I meant debt.

Mrs. BOLTON. I meant that, too.

Mr. FOSTER. The United Kingdom has used almost the entire amount to retire short-term debt. In Denmark a great proportion of it was used to retire occupation currency.

In both of those cases it seemed in the joint opinion of ECA and the governments of those countries the best way was to use the available counterpart to reduce the inflationary pressures within that country. And the reduction of inflationary pressures was one of the reasons for the Foreign Assistance Act of 1948, as set up and amended.

Mrs. BOLTON. You are in complete accord with the action that has been taken?

Mr. FOSTER. Yes. I must add this, Mrs. Bolton: We have in some cases had originally other ideas as to what might have been a more appropriate use of those funds, but after a long series of negotiations, and this is an area in which you are entering into the deliberations of that particular government, we have been convinced that was the best use.

Mrs. BOLTON. You think that is the best way to handle it?

Mr. FOSTER. I think the reasons have been sound reasons as finally developed. Our original approach was that there would be other uses of those funds that we would have liked to make. After a long series of negotiations we have approved of that use.

Chairman RICHARDS. Mr. Foster, some of the members down at the other end of the table cannot hear you. Will you speak a little louder?

Mr. FOSTER. Yes, sir, Mr. Chairman.

Mrs. BOLTON. This whole question of foreign aid is a matter of great moment to all our people and goes rather seriously with our increasingly high tax program at home, the unbalance of the tax load in the various countries and the ease with which certain high-bracketed people, corporations and so on just do not pay taxes in these countries is a difficult matter to explain.

Are we doing anything about it, can we do something about it, and should we do something about it?

Mr. FOSTER. I think that is a very fair question. I will be happy to tell you what we have been doing.

We have recognized from the beginning that the impact of taxes was not equitable in many of these countries. We have worked on this and have suggested to the governments our opinion on what would be a better tax system.

Improved taxes, of course, always have to be imposed by the parliaments or assemblies of those countries. The governments in many of the countries having the worst tax system have worked with us and proposed to those parliaments improved tax setups.

In many cases they have been passed and have become effective to a greater or less degree. In addition to our working with the governments through our own tax experts, we have lent in some cases, in some of the countries, tax experts through technical assistance to work in those governments with their own tax-collection systems in order to improve the methods.

So we have very actively operated in that field. I will not say we have been 100 percent successful. I think the correction of tax sys-

tems which have endured many times for centuries is a difficult thing to do.

I can only say we have made a great deal of progress. It is true whether the tax systems are the most equitable or not, the tax load in many of these countries is as great or greater than ours.

Mrs. BOLTON. On the few people that are taxed?

Mr. FOSTER. Of course, you are bound to collect taxes in order to meet whatever proportion of the budget they meet. They are not collected always in the most equitable fashion. Some comes from excise taxes.

Mrs. BOLTON. Is it not true in some of the countries that the load is heaviest upon those who can least pay them?

Mr. FOSTER. That is correct.

Mrs. BOLTON. And that gives reason for unrest?

Mr. FOSTER. That is correct.

Mrs. BOLTON. Those who could pay do not do so in proportion to those less able. That raises a psychological factor. It seems to me it is about time they recognize it.

Mr. FOSTER. I think they do recognize it. It is something that one does not correct overnight. I agree with you that the taxes in some of those countries are very unfair in that the people who can best afford to pay them are best equipped to evade them.

Mrs. BOLTON. That makes it very difficult for us to go back to our constituents with any sort of an adequate foreign-aid program.

They say, "Why should we be taxed for this when the people over there do not pay?" That is our problem, Mr. Foster, as you know, I am sure.

Mr. FOSTER. I recognize that. I would like to emphasize the fact that while the tax load, in our opinion, may not be equitable it is severe. It comes from perhaps the people we think it should not come from.

The point I would like to make perfectly clear is that most of these countries are paying high taxes.

Mrs. BOLTON. I would like to defer the discussion of specific countries for the moment. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions at this time.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Is it not true, Mr. Foster, that by and large the great bulk of the collection of the taxes that are collected are collected from the low-income groups, perhaps not directly but indirectly?

Mr. FOSTER. I think that is true, sir. Of course, I must qualify the statement by saying this varies very considerably as between countries. I am talking in the most general of terms. In some of the countries that is very much so.

The tax systems, in our opinion, are very burdensome on the people who are the least able from our point of view to pay it.

Mr. SMITH. I would like to go back for just a moment and refer to the statement made with reference to use of the counterpart funds to retire debt of these countries.

As I recall the law that would be contrary to any intention on the part of Congress that those counterpart funds be used for that purpose.

I may be wrong about that. That is my impression. If that is going to obtain in one country, or another country, then it will obtain all the way along the line before we get through, as I see it.

Mr. FOSTER. No. 1, I do not think it is contrary to the law or the intention of the law. I think it was one of the ways in which these funds could be used.

I would again like to emphasize, in our opinion, that was not necessarily the first choice of the ways to do it. It has only been used in that way in a very few of the countries. In most of the other countries it has been used in productive works of one sort or another to improve the basic economy of those countries, which also was allowed and specified in the law. I doubt very much that it is contrary to the law.

Mr. VORYS. Will the gentleman yield?

Mr. SMITH. Yes.

Mr. VORYS. In the original Marshall plan, and even prior to that in the post-UNRRA relief act, we got into this balance of payments, dollar-shortage business. We found out that, for instance, in the post-UNRRA bill, one of the items that was to be taken care of was a gold debt, owed by a country on relief to Belgium.

We found out that a country had a certain fiscal and financial structure, and it did not make a great deal of difference, if they were running on an unbalanced budget, whether you took care of their debt service directly or took care of relief or some other expense so that they took care of the debt service.

Is there still an unbalance of payments or dollar shortage so that condition still obtains?

Mr. FOSTER. Yes, sir, there is. The basic method through which we arrive at the amounts of economic assistance which we believe are necessary to do the jobs, the basic method, is figuring the balance of payments deficits.

Of course, we are dealing in all of these activities with a portion of total resources. If you happen to use counterpart for this part of the total expenditure of a country, it is easier to see what you are using it for, but it has no effect, really, on the necessity of meeting the whole range of the expenditures.

In other words, if you say this should be directed toward land reform or low-cost housing, that is a very praiseworthy objective and one we want to see done.

We, through our control of the counterpart, were able to see that it was being used effectively, if it went into that slot.

In addition to those expenses, that government has to meet the whole range of government expenditures. Our meeting only a portion of it does not change the need of the whole amount. In other words, you could take this part of the spectrum or that part.

What it does is close the gap between the total of that counterpart and the total required.

Mr. VORYS. If the gentleman would yield further, is not the same thing true with all expenditures, not only the counterpart? That is, if a country needs some food that has to be obtained in dollar areas, or some steel, or other materials, and it needs them and has to have them, it could borrow the dollars and ultimately repay them through its own currency, or if it got the dollars without payment, that is to that extent relief of that country's budget?

Mr. FOSTER. It is quite true that the aid which we give may also be only a portion of the total dollars needed. For the other portion, which we do not supply, they have a certain amount of dollars avail-

able, either through the ability to borrow to which you referred, or the ability to earn it through their own exports.

They may require, however, more dollars than that in order to get the necessary things either to recover, as in the past in your activities, or maintain economic strength and take on this new military load.

If they are unable either to borrow or earn enough, then it is necessary for us to help them to the extent of that gap, that balance-of-payments gap.

We direct the use of ECA dollars, however, in order to control it better, and to see more easily what is going on, through authorizing use for specific kinds of commodities.

The part I would like to question in your statement, however, is that they could borrow the dollars and then replace them with local currency. That is the part they cannot do today. Therefore, you must measure their ability to borrow by their ability ultimately to earn sufficient dollars in order to repay it. The only place they can earn dollars is through invisibles or through exports to the dollar areas. Therefore, for the last 3 years, as you know, they have been expending a great deal of effort and time in building up their ability to export more goods to the dollar areas, so they could meet those dollar requirements and be free of the necessity of aid from us.

It is that basic difficulty that we see in pressing them to undertake a greater military load. If the load they take is so great that it interferes with their ability to earn dollars, they may well go back to the point where they need more dollars from somebody to meet the normal needs of food, equipment, and raw materials.

Mr. SMITH. This matter of inflation, of course, is a very serious thing in all of Europe, is it not?

Mr. FOSTER. Yes, Mr. Smith.

Mr. SMITH. Have you seen any evidence on the part of those countries where it is bad for them to take any action to control this inflation?

Mr. FOSTER. Yes, indeed.

Mr. SMITH. What are they doing?

Mr. FOSTER. Almost all of the countries are taking action in the way of controls, additional credit controls, controls on the use of materials, controls necessary, of course, in the balancing of their budgetary requirements.

I think every finance minister in Europe is conscious of this grave danger, and is taking what steps he can to get through his legislature some measure to meet this inflationary threat.

In some cases, as I indicated a moment ago, they had felt, in the past, that the way to do that was to retire some of this short-term debt. They are taking many different measures, in other words.

We may not agree they are taking all the measures which they should, but they are taking some measures. Again, it is our job, as we see it, to encourage them to take sufficient measures to meet this new inflationary threat.

Part of the threat comes about through their inability to get the materials, consumer goods, and raw materials, from the world markets to produce enough to have enough goods to sop up some of the inflation.

Mr. SMITH. It appears to me that in view of the rearmament program a nation like France is going to be up against a buzz saw.

I was amazed on our recent trip over there to find that we were getting 349 francs to the dollar. I go back to 1917-18 and remember that we were getting 4½ to the dollar. There is just a terrific spread. Prices are not cheap. Even using our American money we were paying a good stiff price for just an ordinary meal. Neckties that you could buy here for \$2 we were paying \$3.50 and \$4 for.

I am alluding back to what I said yesterday about this matter of inflation, and its effect upon the standard of living and how we are going to beat communism in view of those conditions. It is something that startles me. I know that you perhaps do not have an answer to that.

Mr. FOSTER. I would like to make one comment. I recognize that. But 349 francs means that it is in francs that are stable, and the man who earns his francs today knows that it is a stable currency.

I think perhaps you should not go back to 1918 because the world has changed since then, and perhaps our dollar is not as good as then.

Mr. SMITH. Perhaps.

Mr. FOSTER. I would rather go back to 1948 when we started on this program, when the black market got up to 675 to the dollar, and even then we were not quite sure whether the franc was good, bad or indifferent.

While 349 may be high compared to prewar rates it is a definite improvement over the conditions when the Marshall plan started.

Mr. SMITH. That is all at the present time, Mr. Chairman.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. Is there any future, Mr. Foster, to the guaranty of private investment?

Mr. FOSTER. Yes, Mr. Ribicoff, there is a future.

Mr. RIBICOFF. The reason I say "the future" is that there sure has not been much of a past.

Mr. FOSTER. I know your extreme interest and concern with this subject. The guaranty of convertibility, which was the first of these activities to stimulate private investment, was utilized by ECA to the extent of some thirty-odd million dollars, and did result in encouraging the investment of certain amounts of private capital.

Most of it was early in the period of the Marshall plan, when the convertibility of currencies was not in the state to which I just referred in speaking to Mr. Smith.

The further guaranty, in which you also had a very keen and constructive interest, was the guaranty against expropriation, which has just begun to get into operation.

It was a very complex subject, one that we spent a good deal of time on. We appointed a very distinguished committee of private citizens to advise with us on how it might be applied, what the terms should be.

That committee, in spite of its interest and competency in the field, took several months to make a final recommendation to us on how to operate under the guaranty.

We are operating under it. We have made one such guaranty to date. I think there are eight more applications which we are currently considering. But the basic point is that with opportunities to make substantial profits in the United States, with its stable economy, and with the conditions of some instability in these other countries the inducement is not provided to the satisfaction of private invest-

ment, by insuring convertibility or by avoiding the chance of expropriation.

When private companies make money in these countries it is still subject to the high taxes of the United States, and the additional risk in these less stable communities. I believe that in the opinion of many of these enterprises, the whole problem is not met by these types of guaranties.

I think the basic ways in which we will encourage additional amounts of private investment are through improving the fundamental economic conditions and political conditions in these countries. That is what our whole program is directed to, and in that I think we are making considerable progress. Until you have the condition of being able to make greatly increased profits over what you could make in a more stable economy such as ours, the pressure on private funds to pick up that load is not particularly great.

I doubt that convertibility guaranties or perhaps even expropriation guaranties will accelerate the flow of funds to the degree that you and I would like to see.

Mr. RIBICOFF. In your statement you mentioned the development in Africa of certain basic materials. Is that purely government, or is it government and foreign private companies?

Mr. FOSTER. It is both. We have development contracts with grants to private companies. We have made development grants to governments.

Mr. ROOSEVELT. Is that South Africa?

Mr. FOSTER. In the Dependent Overseas Territories of the Metropolitan European Countries, and also in Southeast Asia.

Mr. RIBICOFF. Has there been any tie-up between private American companies with foreign private companies who might be willing under the guaranty provisions to come in under some copartnership arrangement as a substitute for Government dollars? Have you come across that at all in your efforts?

Mr. FOSTER. Many of the companies, of course, that we give these development contracts to are either American companies or subsidiaries of American companies. There have been few instances that I know of where we would act as a sort of sponsor of a private company for private company development. I think that is what you meant by that question.

In those cases, generally speaking, they would prefer to keep the United States out of it, if they are able to raise the financing themselves.

Mr. RIBICOFF. I think it has been the desire and thought of many of us around the table that this was a way to encourage private funds to take the burden off the taxpayer.

The past performance has certainly been discouraging. Do you think it is worth while to go into this further or do you think it is something that is going to die a-borning?

Mr. FOSTER. I can tell you this, Mr. Ribicoff. We were all very enthusiastic about the possibilities of this in the early days of the Marshall plan, particularly the lack of private investment due to the difficulties of convertibility.

We spent a great deal of thought, time, and energy attempting to develop these guaranties for the purpose of encouragement in the flow of private investment.

I must say in all frankness that out of that expenditure of time, thought, and energy we did not produce very much. My analysis of it is about what I said earlier, that you must first get the improved basic conditions. That of itself would lower the barriers to private capital through the need for higher profits commensurate with the greater risk. The risk is not primarily today, at least in Europe, that of convertibility.

Mr. VORYS. Will the gentleman yield?

Mr. RIBICOFF. Gladly.

Mr. VORYS. There is so much secrecy around here, but is there anything secret about the pilot operation? I think it was in Germany.

Mr. FOSTER. You mean, the expropriation? No, that is guaranteed to the Otis Elevator Co. in Berlin. I think the very condition of Berlin is a good example of why that expropriation guaranty would be an encouragement to private industry.

Berlin being isolated and subject to being cut off, the Otis Elevator Co. felt that was a good business risk today to take, if they could be guaranteed against the take-over of the plant at a cost of 1 percent a year.

Mr. VORYS. I wanted to bring that out. That is obviously what you had in mind.

Mr. RIBICOFF. Is it safe to say that the private American entrepreneur is no longer interested in investments and developments in far distant lands, that the guaranty program does give him safety and security, yet there is the unwillingness to go out in unknown territories. If point 4 is ever going to work, as originally conceived, it would be the guaranty that would spark this type of investment or development.

Mr. FOSTER. I agree thoroughly, that this is a part of the background which when more stable conditions have been developed will create the thing that we had hoped for in point 4, namely, the great increase in the investment of private capital to carry on the development of those countries in a long-term, public-spirited, method.

Today, unfortunately, in many of the countries in which that would be useful, other conditions than expropriation and convertibility are the things they are fearful of.

They are fearful of the rather unstable governments that change overnight; they are fearful of the tax laws that perhaps in a foreign country would bear unduly in addition to our own taxes, because there is no exemption except a nominal one for the foreign taxes paid.

I think, in other words, the thing that we are trying to do fundamentally in the world is the thing that will over a period, and I hope the period is not too long, create conditions in these underdeveloped countries, particularly, that will attract American private enterprise and will allow us to reduce the Government load in building up the countries. But I am afraid that convertibility and expropriation guaranties are not sufficient in themselves so to do.

Mr. ROOSEVELT. You talk about the lack of stability. I gather you refer primarily to the lack of economic stability and political stability—

Mr. FOSTER. And military stability.

Mr. ROOSEVELT. Is not there basically a third risk? I have talked to a lot of private capital that normally used to go abroad prior to World War I and World War II. It boils down to one thing—the

question of war risk. They do not want to be bothered with something that is going to be blown up tomorrow if we get into another one.

Mr. FOSTER. I think that is a good deal of it.

Mr. ROOSEVELT. That hinges on the military-aid program, to restore sufficient military equilibrium, which, in turn, we hope will bring about a modus vivendi between the two ideologies.

Mr. FOSTER. I could not agree with you more. That is the necessity of building the military strength around the world, so we do not have to fear an attack overnight, which does discourage private enterprise.

Mr. ROOSEVELT. This is a little bit outside the ECA field. I asked about South Africa. As I remember it, the World Bank made a loan to the South African Government for railroad and communication, gold mine and diamond-mine developments, to the tune of about \$500 million, I believe, in which six private American banks participated; is that not roughly correct?

Mr. FOSTER. Mr. Roosevelt, I think you have fallen into the trap that Government officials fall into. I think you misplaced the decimal point. I do not think it was \$500 million. I have forgotten the amount.

There was a loan used for those basic facilities, which is necessary in order to make any development effective. In other words, we have done some of the same sort of development expenditure.

We have financed port improvements at Beira in Mozambique. We have financed some railroads through Rhodesia, so if you develop the mines there you will have a way of getting the ore out in order that it may be shipped to the point of use.

Mr. ROOSEVELT. The important thing was that some private American banking companies did go in with the World Bank on an "even-Steven" basis there.

Mr. FOSTER. That is correct.

Mr. ROOSEVELT. I think that is the most significant trend, as far as American capital going abroad. But there in South Africa you have the relatively stable conditions which you were referring to earlier.

Mr. FOSTER. That is correct, sir.

Mr. RIBICOFF. If you are going to develop the economies in these backward nations—if private industry is unwilling to go in for the mutual development of the backward countries then must it not have to be on a government-to-government basis?

Mr. FOSTER. There are agricultural resources which, of course, are susceptible of development by private companies. Sugar and pineapple are certainly susceptible of development by private companies.

You have your whole range of mineral activities. You have some manufacturing activities which in these countries are useful. There are one or two very small ones in the handicraft field in some of the Southeast Asia places where private industry and private American brains have gone in without the benefit of any government support.

Of course, the petroleum industry is very active around the world. They have been since the war, as you know, the largest single source of private investment in the underdeveloped countries.

Mr. RIBICOFF. I just want to make a comment. In my opinion, the ECA personnel is an outstanding group of men. The country will suffer a great loss if this organization and its personnel were allowed

to disintegrate. I am hoping out of these hearings will come some type of economic organization that will preserve your organization intact, sir.

Mr. FOSTER. I certainly want to thank you on behalf of the organization. I share your views as to the rest of the organization.

Chairman RICHARDS. Will the gentleman yield right there?

Mr. RUBINOFF. Yes, sir.

Chairman RICHARDS. Mr. Foster, I wanted to make this observation in regard to guaranties. This whole program avowedly builds up competition for American industry; there is no question about that, is there, in the long run?

We figure it is better for us and them to have that?

Mr. FOSTER. I think that is right.

Chairman RICHARDS. If they can compete with American industry, why should there not be some guaranty to build up American industry so that it will be in a better position to compete over there? That is one phase of the guaranty proposal, I think.

After this thing is over we are going right back to the historic competition, and there will be the restrictive tariffs. I think the American business interests should get something out of this thing in the long run, as well as the Europeans.

Mr. FOSTER. I could not agree with you more. I think American business is getting a good deal out of this. They are getting a good deal in terms of better markets, in terms of the opportunity of expanding, it seems to me. I think the needs of these countries as we develop them are so great that the markets we will have will be greater than anything we have had in the past.

Our whole philosophy in the United States is that of an expanding economy and not a static economy to produce more, and not divide up what you have.

Chairman RICHARDS. I am talking about the day when these nations, or individual nations, can stand alone economically and say, "We do not need any more of your help. We are going to protect our industry over here. We can get along."

We will be confronted with that situation. We are paying for this program. Dividends will come back to us and to them in the long run. A great many businessmen in free enterprise have been the strongest proponents of this program, because they feel it is stabilizing the world, and in the long run we will be stabilizing our own economy. That is the theory, is it not?

Mr. FOSTER. That is right. I think you have put your finger on one thing that should be taken into consideration in the United States on behalf of its industries, that there should not be discrimination against our industry as these countries become strong.

We believe, I think as a competitive economy, that in that sort of set-up, without discrimination, we could hold our own.

Chairman RICHARDS. You have a whip, and that whip is American dollars. You can get people to do a lot of things when you deal in our dollars because they need dollars. We are trying to get them to the point where they will not need dollars, where there will be a trade balance, I am talking about the future. It is visionary.

Mr. FOSTER. No; it is not visionary. We must not, in building up the things we are trying to build, destroy the opportunities for our own country and its people.

In my opinion, I do not think we are. I think we have to be alert to the fact that we must have the freest possible multi-lateral trade. In that context I believe we can hold our own.

Mrs. BOLTON. May I interrupt?

Chairman RICHARDS. Go ahead, Mrs. Bolton.

Mrs. BOLTON. You feel it has been a temporary situation that has really cramped some of our industries considerably in the matter of prices, and so forth and so on; also, the matter of markets abroad?

Mr. FOSTER. Certainly there has had to be a temporary restriction on imports of dollar goods, for the reason that these countries did not earn through their own efforts sufficient dollars to let their own people buy all they wanted.

That is a condition that has been reduced to some extent, and the restrictions against dollar goods have been cut down. When the time comes that they have rebuilt their economies, then I would hope those restrictions would be completely eliminated. And our efforts all the way through, and the continuing efforts of the State Department, of course, are to work toward the straightening out of those restrictions.

Mrs. BOLTON. It has been exceedingly hard on some of our industries.

Mr. JAVITS. Will you yield on that point?

Mr. RUBINOFF. I will be glad to.

Mr. JAVITS. In the muddled state of our leadership we are in the great way of abolishing the very opportunities that you speak of that are being gained with the American dollars.

The State Department has dropped, as I understand it, the International Trade Organization Treaty. There has been considerable impairment on the reciprocal trade agreements program. In these receptacles we were going to fit these agreements not to discriminate against American industry and to open world trade. If we are going to vote money on the one side to earn these agreements with dollars and then kick out the very programs within which these agreements can be made, then where are we?

Mr. FOSTER. Mr. Javits, I said in response to Mrs. Bolton's question that I thought temporarily many of these restrictions had to be imposed.

I spoke in terms of the future for a long-term objective. I think the practical limitations on available dollars are such today that it is necessary to yield temporarily on some of those discriminations.

Certainly I am sure the State Department has not put aside the long-term policy and philosophy. They can speak more eloquently on that than I can. But under the conditions and the necessity of conserving dollars for these more urgent purposes, it is essential that many of these countries, for the time being, impose conditions which we consider restrictive and not in our long-term interest, or theirs.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. Mr. Foster, you stated yesterday that steel production in France could be increased about 20 percent with a little capital investment. Why is there not an effort made to develop that increase? What can we do to bring about such an increase?

Mr. FOSTER. To answer the second part of your question first, I think things can be done to bring about the increase.

It is proposed under our new activities that we do. We have been instrumental in modernizing the French steel industry through the acquisition of modern American equipment.

The point that I was making in using that 20-percent figure is that we do not yet feel that the French managers and technicians have so far learned well enough how to utilize that modern equipment. We are working to so improve their operations, and are sending American technicians to France for that purpose, and have brought some of the French technicians to our country to watch our own steel mills operate with the same type of equipment.

I think that is not only true of the French steel mills, which I used as an example, but I am sure it is true of much of the production in Western Europe. Some of it has been because they did not have sufficient horsepower behind each worker to handle the materials.

One of the great skills that the United States has in handling materials within a production plant is to make sure that it does not require too much human energy, and can be handled insofar as possible mechanically.

We are attempting to make that type of skill available to these people. This is an activity in which we have spent some thought and effort, but we do not feel enough.

My point was that we plan to spend a good deal more on that sort of thing to get that additional production.

Mr. MERROW. Would you venture a prediction as to how much longer after 1952 we will have to continue economic aid?

Mr. FOSTER. That would be a very difficult guess to make. I do not think it would have very much validity. The countries we spoke of yesterday which even without the Korean additional load would have required economic assistance, in our opinion, are made up of such countries as Greece and Austria. They are two very good examples. Austria is faced with the possibility of getting an arrangement under which it can get a unified economy and proceed to develop itself to be self-supporting.

At the moment, as you know, much of the resources of Austria are funneled out at the eastern end of Austria due to the fact that the Soviet Union occupies a zone in which great petroleum availabilities occur.

I do not know how long Austria will require us to feed in at the west end sufficient to make them viable. It might be 1 year if we got a treaty. It might be 10 years.

Greece is another example of a country which due to the fact that it has either been at war or occupied over the course of the last 10 or 12 years is very poverty stricken and has little opportunity in the way of natural resources to make itself self-supporting. I would think we might face in Greece the necessity of economic assistance for a long period.

Iceland is a single-industry country which also has some difficulties. They have lost some of their markets of their greatest single product, fish.

Apparently there are not enough people who like to eat the kind of fish that Iceland has to make it self-supporting, so the necessity of building up other industries to pick up that load may be a long one.

Those are in terms of purely economic recovery-continued assistance.

In terms of the need of economic assistance brought on by the additional military load, I do not know. The whole plan of this present program which has been presented to you is that the United States Government in the first few years would give massive amounts

of end-item aid, and some economic assistance, the purpose of the economic assistance being to build up facilities which can provide sufficient available sources so that they can maintain those end items after a period of 2 or 3 years.

If we can do that in a way that does not destroy their ability to earn money through export of goods which they are now shipping to the Western Hemisphere, they should be able to pay for the maintenance of that equipment and to pay for the replacement of it within, I do not know, three to five years. I think that is a difficult projection. I am sorry I cannot be more specific in my response, but it is a very complex problem.

Mr. MERROW. Would it be fair to say that the amount of aid and the time for which it must be continued will depend to a great extent on the degree of economic integration on the Continent, and by economic integration I mean also the integration of Western Germany with the rest of the Continent?

Mr. FOSTER. I think that is a fair statement. I think that is one of the fundamental facts of the whole Western European set-up. Europe has been made up of a series of small economic and political entities. We have in the course of the last 3 years, as I said yesterday, been able to break down many of the barriers to the free movement of goods, services, and people, but not enough of them.

I think that one of our basic objectives all the way through has been the greatest possible extent of such integration in order to develop a single market which would lead to the production on a more efficient basis of the goods which are produced over there and which would thereby lower the costs and make available at a cheaper price goods produced within Europe.

I think certainly the market is there in the form of 275,000,000 free peoples who want all the things that we want. The amount of economic integration can well be the deciding factor in whether they do move to this condition of self-support and freedom from the need of extraordinary outside aid from us.

Mr. MERROW. I thought from what you said yesterday that you favored the spelling out of the various steps by which this economic integration is going to take place and you would perhaps put them into the legislation as things to be desired, but would not attach them as conditions to the continuation of the aid. Is that correct?

Mr. FOSTER. Yes, sir.

Mr. MERROW. You would be very careful to spell out the manner in which we feel these countries should operate to bring this about?

Mr. FOSTER. I would like to make one qualification. I said I thought it very desirable to establish objectives. I do not think I would quite go as far as you did in saying I would specify it in detail, if I understood what you said, because when we become too precise in the exact objectives we may be laying down objectives that due to conditions there are impossible of achievement.

I do think the broad objective such as the accelerated trend toward integration is a very good one to have, and that could well be incorporated in the legislation. How that should be done in detail and what we mean exactly by that in detail, I would be a little hesitant to approach. I am not sure we are smart enough to lay out exactly the methods through which it would be achieved in Europe.

Mr. MERROW. It seems to me considerable thinking should be done along those lines, because after the money is spent there will not be means of pressure. Is that correct?

Mr. FOSTER. There may not be the same pressure. Of course, we believe this is in their interest and there should be a pressure from within to get it done. Unless it is something that is in their interest, it won't be done anyway.

Mr. MERROW. Some seem to think—even the Europeans—that perhaps we have not been positive enough and perhaps not insistent enough in making certain demands.

Mr. FOSTER. I think that is probably true, too, and you do again, as between countries, have differing philosophies toward this. I spoke yesterday of General Eisenhower's speech on July 4, which I think was a magnificent expression of the need of unity within Europe. I think that "Ike" in his person and through his having taken on this activity is a great spur toward integration—one of the greatest contributions we have been able to make in the United States toward that end. But even in "Ike's" speech I think you will find it is in terms of the general objectives.

The countries individually, some of them, want to move toward it very rapidly, and some of them have reservations as do the British, for good and sufficient reasons, perhaps, from their viewpoint.

Mr. MERROW. Would you care to comment on what progress has been made by way of coordinating the defense production programs up to date in Western Europe, or the NATO countries?

Mr. FOSTER. I can talk in general terms from the viewpoint of production as such. From the viewpoint of the military aspects of it, General Bradley or General Scott can give you very much better information than I. Fundamentally we have approached the problem on the basis of it being a variation of the problem we had been faced within ECA for 3 years. Our objective for 3 years has been to build up the whole range of production in Western Europe.

Now, in this new context we are faced with the urgent necessity of increasing particularly the heavy-goods industries and the more directly military-contributing industries. To do that, of course, we have continued through ECA to work through our industry divisions with the governments and with the industries of those countries where we have missions.

In addition to the United States as a single focal point devoting itself to this, there was established under the NATO organization a Defense Production Board, which is an international body made up of usually the Minister of Supply of each of these countries, and sitting as a board of 12 men representing the 12 NATO countries.

We have on that the United States representative, who is William Batt, who also happens to be the chief of our mission to the United Kingdom. The coordinator of that group is also an American, Mr. Rod Herod, who is an international executive who attempts to bring the consideration of these production problems together and accelerates the movement toward a strong production activity.

Of course, they work within the plans established by the military groups. Through that mechanism they are identifying production problems; they are bringing to bear technical assistance to resolve some of them; they are bringing together in one point the possibility of assigning or subcontracting certain types of production to the

countries best fitted to do it; and, by and large, the movement, while it has not yet moved anywhere near as fast as we had hoped for, is making substantial progress.

I talked to some of the members of that Board when I was in France and London just 2 weeks ago, as I think some of the members of this committee did. I am not sure whether you did or not.

Mr. MERROW. Yes; we did.

Mr. FOSTER. But I think out of that is coming an integrated look at this production problem, and with that integrated look a genuine, over-all movement toward the more adequate production in time for what we need.

Mr. MERROW. Progress does not seem to be as great in many of these fields as we hoped. Are we hoping for too much?

Mr. FOSTER. I think we are a very hopeful Nation, Mr. Merrow, and I think our targets and sights are perhaps a little high. We, as a production nation, are able, as you know, to turn things on so well that we have set our sights perhaps higher than some of these other countries, which have been more limited in mass production, can yet achieve. However, I think they are making good progress toward it.

Mr. REECE. Mr. Merrow, would you mind yielding?

Mr. MERROW. I yield.

Mr. REECE. I wonder if you would mind giving us a little of Mr. Herod's background. He seems to be a rather important young man there. I am not familiar with it.

Mr. FOSTER. Mr. Herod, Mr. Reece, was president of the International General Electric Co., and he had spent over the last many years a great deal of time in Europe, working with not only the foreign affiliates of the General Electric Co.—with their own companies abroad and, of course, with their suppliers abroad—so he had a very detailed knowledge of Western European production possibilities. I believe the United States was very fortunate when this international body did choose a coordinator that we had as qualified an American to work with them as Mr. Herod is.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. Thank you, Mr. Chairman.

Mr. Foster, I have always thought of ECA as being a temporary organization, and much is being said about the termination of its activities, or of this program, at some time or other, although no one can determine just when. However, on pages 7 and 8 of your prepared statement—and I use this as an example—you make reference to southeast Asia to continue the objectives there with funds to be made available under this bill, which suggests to me a permanency of activity in that area.

As I understand it, the objectives there are to improve essential services—that is, health, transportation, communication, technical training, and so forth—as well as to promote economic rehabilitation and the development of agricultural industry and production, fisheries, and so forth. Under Public Laws 535 and 472, the ECA law of 1950, known as the China-Aid Act of 1950, the ECA was authorized to use funds from the China-Aid Act of 1948 for those areas determined by the President—that is, areas in China determined by the President—to be not under Communist domination, or some such language. That has been construed to mean Thailand, Burma, Indochina, Indonesia, and the Philippines—practically all of southeast Asia.

Now, as I understand it, you intend to continue the ECA program in that area, and yet we have something called point 4, which is a very ambitious program. I do not know what the breakdown of funds may be for point 4 in this bill, but do we intend to have two agencies operating in southeast Asia, indefinitely with the same objectives? As I understand it, point 4 is a permanent program. Now, would you comment on that, please, sir?

Mr. FOSTER. I will be happy to, and that is a very important question to bring up, because there is a good deal of confusion on the subject.

Point 4, as you indicated, is considered to be a permanent and long-term and lasting activity, which I believe is a very useful thing for the United States to pursue.

Last year it was determined that with the funds from the China-Aid Act, to which you referred, it would be useful, due to the experience ECA had not only in Europe but which up to that point we had had in China and Formosa—it would be useful perhaps to extend that type of operation to the other countries which you mentioned. In order to make clear that this was not ECA in that sense, those missions were called STEM missions, but were operated by the ECA, and the chiefs of those missions are responsible to the ECA Administrator.

It was thought then that perhaps these could be somewhat more temporary activities.

Another place, of course, where we had the operation was in Korea. It was thought that these could be somewhat more temporary in the terms of the ECA administration of them, but at least it seemed in the interests of the United States Government to take advantage of the then ECA organization to run these new programs.

There was confusion as to where point 4 began and where STEM ended. There have been a series of pieces of paper between the agencies and discussions as to how to avoid duplication. In the hearings before this committee last year, I think, we read an agreement as between the point 4 organization and our own organization, which indicated our intent to avoid duplication. The arrangement is that where we have an ECA mission, either in southeast Asia, or, for instance, in the oversea territories, and there are point 4 types of activities to be undertaken, that ECA will operate those particular functions so that there will not be two United States Government agencies in the same country.

We may be carrying out the technical-assistance type of activities which point 4 does in the countries where we have no missions, but there is no duplication in those countries because we carry out the technical-assistance functions in terms of agricultural-extension work, in terms of agricultural-improvement work, in terms of health and sanitation activities. The basic way that we now eliminate duplication is that there is one agency in a country, and if we are in it or if we are in that country with an ECA operation then the point 4 agency does not operate there. Of course, we would consult and advise with them, but they would not operate there.

Mr. BURLESON. Then that would mean ECA may be in Burma and point 4 in Thailand?

Mr. FOSTER. No. We are in Burma and in Thailand.

Mr. BURLESON. I am supposing that.

Mr. FOSTER. Oh, it could be.

Mr. BURLESON. They could be side by side?

Mr. FOSTER. That is correct.

Mr. BURLESON. The advantages then toward accomplishments from the competitive angle—and we have all seen competition between Government departments—would be the one who had the most money to spend?

Mr. FOSTER. I am not sure I would like to put it in those terms. I think a certain amount of competition is healthy. There should not be competition for personnel in the sense of our drawing on the same pools, and there is not. There is close coordination between ECA and TCA, and I do not think there is competition in the sense that you fear. We undertake in general broader programs than the TCA programs in that we would enter into the general economic programs of the countries, but the related activities of the technical assistance which I have just referred to fit in without competition in my opinion.

Mr. BURLESON. But the objectives of the ECA program in these countries, on which has been spent \$157,000,000 of the \$164,687,000 available for these areas, are not temporary are they?

Mr. FOSTER. No; they are not. We would probably put more emphasis on some of the short-term objectives than could TCA through its program. I am not quite clear as to that breakdown you have. That indicates what area? Is that southeast Asia and south Asia?

Mr. BURLESON. It comes from those funds made available to the President to use in these areas. As I understand it, you have used the 1948 ECA funds by the action of the 1950 law.

Mr. FOSTER. Oh, you are referring to the past funds. We had left over from the China-aid funds for use in that way. As I recall the figures, last year it was about \$89,000,000.

Mr. BURLESON. \$89,000,000 was that which was carried over?

Mr. FOSTER. Mr. Cooley reminds me we did come in in December and ask for the right to transfer 3 percent from the European funds, which brings it up to the total you talk about.

Mr. BURLESON. That amounted to approximately \$75,000,000.

Mr. FOSTER. That is right—a total of \$164,000,000.

Mr. BURLESON. The thing I am getting at is, if ECA is a temporary program how can these most ambitious objectives likewise be considered of a temporary nature? As I said, I do not know what the breakdown is in the bill, or what is to be used in that area. Neither do I know how much the point 4 program calls for, but I know at present it has little money. I just mentioned this figure here as a comparative figure to the sum appropriated for the point 4 program.

Now, without any reflection of an unfavorable nature on ECA, how can an organization, operating on a supposedly temporary basis, deal with these long-range purposes? Could not a permanent organization do a better job? The emphasis of ECA as I have always viewed it, was in Western Europe. However, now here is ECA going around the world in a great program, and yet the organization, as I think of it, is a temporary one.

Mr. VORYS. Will the gentleman yield?

Mr. BURLESON. Yes.

Mr. VORYS. As to what ECA thinks of itself, you can find it on the shield they are using now. They changed it at the beginning of this year. I first noticed it up at their birthday party. It was a great, big,

United States shield which said on it, "Strength for the Free World from the United States of America." In a short form, that is what their formal purpose is, as put on their shield and on their letterheads. Is that not correct, Mr. Foster?

Mr. FOSTER. That is correct, sir.

Mr. RIBICOFF. Will the gentleman yield?

Mr. BURLESON. I yield.

Mr. RIBICOFF. That is a pretty good slogan.

Mr. VORYS. Well, as to how much territory they are taking in, it is the whole world, according to their own insignia.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. BURLESON. I yield.

Mr. ROOSEVELT. Is not the area they are taking in all in accordance with the acts of Congress? It is not as though they had suddenly plunged their hands into Uncle Sam's hip pocket and said, "We are going to move into another part." We authorized them to do it, and directed them to do it. Let us get the blame in the right place.

Mr. VORYS. I am not talking about blame, but I do not think there is any authority in law for that.

Chairman RICHARDS. Gentlemen, will you speak one at a time, please?

Mr. JAVITS. Will the gentleman yield for an observation?

It seems to me the area ECA is covering is coterminous with the size of the Communist threat—the whole free world.

Mr. BURLESON. That is not the point I wish to make but it is a point. I am trying to get in focus what I think is a practical question as to the accomplishment of the objectives of the program.

Here are two agencies that have the same objectives, one supposed to be temporary and one set up on a permanent basis. They are operating in the same area with the same funds, and it is a long-range program, and a very ambitious one. They are certainly continuing.

Now, you do not improve agriculture, and you do not improve essential services, like health, transportation, communication, and all of that sort of thing this year, and then do nothing about it next year. It is a continuing thing. Anyway, in some of these areas we know very well, as observed during the war, if we put every facility which we enjoy in the United States, in some of these places and walked off and left it, you know how long it would be there.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. BURLESON. I yield.

Mr. ROOSEVELT. I think you have hit upon a very important problem in the minds of many of us as to just what the point 4 responsibility is for non-Western Europe; that is, the metropolitan colonies in Africa and so on, and what the ECA responsibility is. I think this all heads up again into the problem we were discussing yesterday, which is just what are we going to do, if we do anything in this bill, about the continuation of ECA or the transfer of ECA into a new or existing department. Is that not really the problem?

Mr. BURLESON. We are not approaching it from that standpoint because here is ECA—

Mr. ROOSEVELT. When we decide what we are going to do with ECA we will have solved this problem about ECA and point 4 responsibility.

Mr. BURLISON. We can hardly approach it in that respect. As I understand it, here is a program for southeast Asia. At another point in the bill we will have the point 4 people come up and support their proposition within the same measure as applied to the same area. Is that correct?

Mr. FOSTER. That is correct. I would only like to make one point, Mr. Burlison.

Mr. BURLISON. Yes.

Mr. FOSTER. You say in the same area. I think the differences between countries, even though they are contiguous, are quite substantial. I think it is perfectly possible to separate out the problem in two neighboring countries in that area. I can assure you the governments in those areas have considerable differences, and you might have an entirely different operation.

As to your point as to the long-term nature of it, I certainly agree, and we are doing this on the basis of both interests—both establishing the long-term nature of this in those activities which are of a long-term character, and establishing the impact characteristics in those things where you can immediately get some results which show these people that we are interested in their welfare. I think it is a workable system. I think that we have gotten along with it without duplication and waste.

I am sure you will want to talk to Dr. Bennett when he comes up here on this problem from his viewpoint, but one point I would like to make clear is that we could not elect ourselves to do this job. It was felt in the executive branch that we had some assets which could be useful in carrying out the long-term and short-term foreign policy of the United States, and we said while we had plenty to do in Europe we would take it on in that national interest.

Mr. BURLISON. Let me repeat, Mr. Foster, I was not directing these remarks as a criticism. Rather the criticism, I think, rests squarely on the Congress to pin-point responsibility and to approach the question from a practical viewpoint.

Mr. Chairman, I may be crossing bridges before we come to them, but I think that is a fundamental issue which is going to have to be decided along with these many others.

Mrs. KELLY. Will the gentleman yield?

Mr. BURLISON. I yield.

Mrs. KELLY. As I understand it, the ECA is Federal assistance to the nations of the world, particularly Europe, to promote economic recovery whereas point 4 is an endeavor on our part to encourage private enterprise to invest for economic development so that there is a transition period at this time due to changed world conditions.

Mr. BURLISON. That it encourages private enterprise is one part of it—a theoretical part, I might add.

Mrs. KELLY. But due to world conditions at this time point 4 could not go into its full operation.

My question, Mr. Foster, is this—

Mr. BURLISON. Let me observe this: The money comes out of the same pocket. You cannot get away from that.

Mr. VORIS. If the gentlewoman will yield, the ECA law requires, and Mr. Foster administers that law, that it should stimulate private enterprise and work through it in every possible instance.

Mrs. KELLY. That is the channel. However, at this time would it be better for the United States to assist sectional plans such as the Colombo plan in place of initiating new developments or industries?

Mr. FOSTER. I think the Colombo plan is a very promising plan. I think we should work as closely as we possibly can with it. It is based, as you know, on the contribution of the members of the commonwealth and the neighboring states there, and I think that it is a very fine thing. I am afraid of itself it is not sufficient. Perhaps it is my personal inclination that I think many times directly as a United States agency we can be more effective than we can in working through a whole series of international groups in which it is more difficult to get decisions and more difficult, perhaps, to move forward as forthrightly.

Mr. HERTER. Will the gentleman yield at that point for one question?

Mr. BURLESON. I yield.

Mr. HERTER. You have raised a very interesting question there which should be reserved until later, but it fits in here at this point in the record. I wish you would comment on this.

In the draft of the bill we have before us I think there is \$112,000,000 for aid to Korea and rehabilitation in Korea. You operated in Korea prior to the outbreak of hostilities, and some people believe it was the success in some measure of your reviving the economy of South Korea that led to the invasion, among other things. However, that \$112,000,000, as I understand it, is not to be spent by you, but is to be turned over to an international organization to be spent.

We have had some rather unfortunate experiences with UNRRA in days gone by, and I am wondering if you would want to comment on that, because this, as I visualize it, is a turning over of \$112,000,000 in accordance with the United Nations resolution, and the administration would be entirely out of our hands, and it would be carried on entirely by a committee form of administration again.

I wonder whether you would care to comment on that?

Mr. FOSTER. Yes. I will be happy to comment on that. Mr. Herter.

No; I do not think that is a committee form. It is done under the auspices of a group of nations in the United Nations. The United States program will be carried on to some extent, that is, there will be an American director of the relief agency, that is, of the United Nations Korean Relief Administration or Agency—I have forgotten what the "A" stands for—and it will use many of the patterns and practices, I think, that ECA had when it operated in Korea. I think, in fact, it will use a good many of our mission people out there.

Mr. HERTER. To whom would it be responsible?

Mr. FOSTER. It would be responsible to the United Nations.

Mr. HERTER. To the United Nations directly?

Mr. FOSTER. Yes. As to my comments on the Colombo plan, I think I said it was a very promising plan which we wanted to work with. However, I believe I said that I did not believe it supplanted the ability of the United States through its own agency, possibly working alongside of that, to achieve certain things.

I was not in any sense minimizing the ability of those United Nations groups because yesterday, you recall, I referred to our working with them too in these Southeast Asia undertakings which we

have. The statement was that we should not, in my opinion, become completely submerged in that kind of multilateral activity. I think we can continue to contribute by, in addition to our contribution to it over-all, maintaining a single agency on the side to accomplish those things which perhaps can be best accomplished bilaterally. By "on the side" I mean nothing with any evil significance.

Mr. HERTER. I am not critical of the United Nations or the United Nations resolutions.

Mr. FOSTER. I understand that.

Mr. HERTER. But I think there is such a thing as seeing money well spent, and sometimes each nation feels it has an obligation to put its own personnel in the field. Then you get a very bad division of responsibility and authority from the point of view of getting a very difficult job done quickly and efficiently.

Mr. FOSTER. There was a great deal of thought given to the establishment of this particular United Nations group to try to minimize that multi-nation difficulty, and the restrictive influences of too many votes on it. I think what came out of it within that broad framework is a pretty good set-up. I have forgotten the number of nations represented on it. It is either five or seven. Do any of my cohorts know? It is either five or seven, and they are free to act within pretty broad limits by decision of that group, and they have a focal point of direction in terms of Mr. Kingsley, who is the American director of the agency.

Mr. ROOSEVELT. Will the gentleman yield at that point?

Mr. HERTER. I yield.

Mr. ROOSEVELT. I think this problem Mr. Herter brings up is a very interesting and important one. We are all anxious to see money well spent, but I think on the other hand we have got to be aware of the fact that the fellow who is the "money bags" has the danger of becoming known as Uncle Shylock. I think one of the ways we can take the curse off the good we are trying to do, which is so often misinterpreted by the recipients, is to work as much as possible through the United Nations in a lot of these programs—not just Korean relief, but some of the others.

That is why I mentioned yesterday whether ECA or some of the other agencies were doing any long-range economic development or planning with a view to working it out under a United Nations program. I think if we can achieve that and still avoid the difficulties that Mr. Herter referred to, we will encourage the international aspect of it and discourage the Shylock aspect of it.

Mr. JUDD. Will the gentleman yield there?

Mr. ROOSEVELT. I yield.

Mr. JUDD. As I recall it, Shylock was taking money from others and not giving it to them.

Mr. ROOSEVELT. I know, but we are accused of being Shylocks and are accused of giving this away in order to be the economic controller.

Mr. JUDD. They can give their money away, too, if they want to give it away.

Chairman RICHARDS. Wait a minute, Dr. Judd. I am going to recognize you right now.

Mr. JUDD. I am waiting my turn.

Chairman RICHARDS. Dr. Judd, this is your time.

Mr. JUDD. Mr. Chairman, I was going to leave Asia to the end of my time, as I usually do, but inasmuch as others have brought it into

the discussion I want to ask a few questions on that subject first, with your permission.

You recall, Mr. Foster, that when this program was started for Europe it was in essence presented in exactly the terms you use for Asia, which I find on page 8 of your prepared statement, where you say:

The security of free Asia depends fundamentally, therefore, on how effectively America and the West can help the governments of free Asia meet the elementary needs of their peoples.

ECA was set up to help meet the elementary needs of the people of free Europe. It was not enough. We had to move on to a second step or stage, military assistance, so that they could defend themselves against external aggression as well as internal unrest.

Then it was discovered a third stage was necessary. Europe did not have enough raw materials, and if step by step Asia and these other underdeveloped areas were taken over by Communists, Europe's recovery would go by the board. So we went to the third stage, as you said here, of seeking to meet the elementary needs of the peoples of free Asia, partly because that is in their interest, partly because it is in our interest, but primarily because it is necessary in order to pull through in Europe.

Do you not believe we must add as a fourth stage these four words to that sentence:

"The security of free Asia depends fundamentally, therefore, on how effectively America and the West can help the governments of free Asia meet the elementary needs of their peoples—and build their defenses"?

Mr. FOSTER. I think so.

Mr. JUDD. Do you see any way in which you are going to be able to carry on your STEM programs or point 4 programs in southeast Asia if the countries are overrun?

Mr. FOSTER. No; I do not. I would agree with that.

Mr. JUDD. You have more experience out there than anyone else because you have your ECA people there. What is your estimate of prospects of those countries by themselves building their defenses so that they can resist the pressures which you know exist from the north?

Mr. FOSTER. One, I would like to disclaim that. I am not in your league as an expert on the Far East.

Mr. JUDD. But you have real experts out there reporting to you every week.

Mr. FOSTER. I am a 3-day expert on all of those countries. I have missions reporting there. I think again it varies as between the countries, Dr. Judd. I think a number of those countries have the possibility of building their own defenses, but only if we assist them to do so. I think there are some of the other countries which as yet are so thin in their cover and have so little on which to build that it would be very difficult to get any sort of defense until we can first strengthen the governments themselves, or until they can strengthen the governments themselves.

I think the basic necessity in that is to get the support of their peoples, and they will only get the support of their peoples through the achievement of some of these other objectives to which we have referred. It is to that that we therefore directed our first energies.

But, again I must say, each of those countries is an individual case, and the conditions as between them, as you know much better than I, are quite different, and they must each be considered on that basis.

Mr. JUDD. All I am trying to say is, should we not state frankly to ourselves, and to the Congress, and the people, that we have to have a military-aid program in those areas just as well as an economic-aid program, and we have to do both in Asia or neither will succeed, just as in Europe?

Mr. FOSTER. I think in many of those countries we have to do both. In some of them, as you know, they feel they do not want that kind of connection with us. They feel they can do it on their own.

Mr. JUDD. I was shocked to find evidence of that in Europe. You say in your statement dealing with Europe that we must undertake a program for helping western Europe to build its defenses. One of our ambassadors over there told us, "You have no idea how hard a job we have had persuading this country to build its defenses." They did not want to be associated with that kind of effort in parts of Europe either.

However, a great deal of progress has been made there, and you believe we must direct sensible and reasonable efforts, not in the form of compulsion but of persuasion, in that direction in Asia, too?

Mr. FOSTER. I certainly do. As you know, in many of the countries we are actually moving forward to that sort of military strengthening as well as an economic strengthening.

Mr. JUDD. Is the biggest bottleneck in your programs in those countries money, or is it the right kind of persons? I am talking about Americans now. Is it American money or American persons?

Mr. FOSTER. I would say American persons.

Mr. JUDD. Do you not think the major reason why you have been so successful in Burma, for example—which was on the ropes only 2 years ago, and your mission more than anything else has shored it up—and in Formosa and other countries, is that you had fellows like Moyer and Winfield, who understood those countries and their problems and who began from the bottom instead of starting from the top under a master plan, devised in Washington, with a subdivision for each country, and trying to make all these countries into a sort of little America?

Mr. FOSTER. I think we cannot ever give enough credit to the people who have gone out to those countries, such as Dr. Moyer, and many others of our mission chiefs who are out there and who have been able to understand the nature of the people and get their confidence and to work with them in achieving this improvement. I think the results in Formosa are really amazing, and I must admit that when I went out there I had not expected to find anything like that. I state that almost as an example of how with a little money and the right people you can completely transform an economy.

Mr. JUDD. I was pleased to hear the Rockefeller Foundation medical expert, Dr. Grant, say recently that the medical program there has developed so well that in the Rockefeller Foundation they are now advising people from India and other Asian countries to go to Formosa to see how getting medical aid and health education to the country people can be done.

Coming back to Europe, you say on the first page of your prepared testimony that we have increased their agricultural production about

9 percent above prewar levels. Do you have, or does one of your associates have, the figures for the population increase in those countries during the same period of time? Is it not about that amount?

Mr. FOSTER. I think it is about 10 percent.

Mr. JUDD. So that approximately they are not much better off per capita?

Mr. FOSTER. Just about what they were as far as availability goes.

Mr. JUDD. The question of unification has been brought up by several Members. The committee has heard me argue this here and in the House for many years. I felt, as you said, that while we were passing out the dollars, we ought, in a noncompulsory way, to make certain they feel encouraged to achieve certain goals. I wonder if you think it is too specific to say in the ECA law where it now reads:

It is declared to be the policy of the people of the United States to encourage the further unification of Europe * * *

the first year it was the "unification," and the second year it was the "further unification"—would it be all right to put there, "the economic unification and political federation of Europe"?

Mr. FOSTER. I will have to pass to the State Department the political federation part of that. The first part of it I would accept; the first part of that phrase, that is.

Mr. JUDD. The first part, "economic unification," is the more urgent.

You say Greece is not going to be able to make it without outside help. There are certain States in the United States that could not make it if each were a completely separate economic unit. Having the 48 States in one economic unit is what gives the whole economy, and therefore each State in it, strength.

Mr. FOSTER. I think you can state those objectives and that particular objective appropriately because that is what we have pressed for with all of our vigor for these 3 years.

Mr. MERROW. Will the gentleman yield at that point?

Mr. JUDD. Yes. I yield.

Mr. MERROW. In that connection, would you make reference to quotas and the desirability of removing tariff barriers, and dual pricing, and so on?

Mr. FOSTER. Some of those I think are already in. I think we talked about tariff barriers in the existing act. As to quantitative restrictions, certainly they can be mentioned. We have mentioned very forcefully dual pricing. Again, it is in context. It is how much detail you want to go into. Economic unification, in the terms that Dr. Judd speaks of, would cover all of these. If you want to specify within the broad phrase the detailed considerations that go to make up the broad phrase, the trouble is you may be more restrictive than if you leave the broad phrase. But, you gentlemen are legislators and can make the phrases better. I would be a little afraid we might be more restrictive rather than more encouraging if we specify it too much in detail.

Mr. JUDD. The major new step we debated when extending this law last year was the Payments Union. Do you feel it has worked as well as you contemplated, or expected, or hoped for it?

Mr. FOSTER. I think it has been one of the great achievements of this whole activity, and I think it has the promise of being an enduring, permanent institution, which can lead to even broader integration.

Mr. JUDD. It is largely out of OEEC and the Payments Union that the movement for a united Europe has developed. Is that not right?

Mr. FOSTER. Yes, sir.

Mr. JUDD. What hope do you see of achieving in the military production field the same kind of thing as, or something like, the Payments Union, where each country will produce all that it can of a commodity or weapon that is needed for the whole area, even though that is far beyond the needs of the particular country? I say that because only if you mobilize the full productive capacity of all those countries can they stand and can we lessen the burden on ourselves.

Mr. FOSTER. That is a more difficult thing to achieve. I think the Schuman plan is the first constructive and positive step toward it. It has had a very difficult role getting as far as it has, due to the natural reluctance of both private industry and government to throw their production into the one pool; but we believe it will go through, and we believe that it will be a pattern for other similar kinds of economic pools, and it will lead to what you have in mind in due course. I doubt that that is an approach you can achieve in one fell swoop.

Mr. JUDD. Yes; but you believe there is hope of working out a formula such as the Payments Union was for the paying up of inter-country debts at the end of stated periods, and that something similar can be worked out in this field?

Mr. FOSTER. I am not sure you can do it by a formula, Dr. Judd. I think rather this will be achieved through a series of steps related to each other and built on the Payments Union, which is one of the things which will make it possible.

Without the Payments Union there would have been no hope of ever achieving this, in my opinion, because you would not have had the ability to settle balances at the end of a period, which you would require in order to make this kind of a products pool to which you refer.

Mr. JUDD. Do you foresee a time in the reasonably near future when the Payments Union can stand on its own without contributions every year from the United States?

Mr. FOSTER. Yes. I am not sure what we mean by the reasonably near future, but I see a time, and we are certainly moving toward that. I think that had been our concept from the beginning—that we had to finance the initial stages of this in a substantial measure, but certainly, as it got under way, it should be able to do that financing itself.

Mr. JUDD. Is that not one of the major reasons why we must continue an economic-aid program, whether it is called ECA or something else?

Mr. FOSTER. Yes, sir.

Mr. JUDD. You brought up the Schuman plan, and I would like to ask you a question about that. You say it is another heartening move toward unification. Is it so heartening? Do you wholly approve of the Schuman plan, or are you afraid of its becoming an international cartel, as is so frequently said?

Mr. FOSTER. I am not afraid of its becoming it. Had it not been subjected to the kinds of provisions it has in it, that form is one that might lead to a cartel. In other words, when you put together basic industries of that sort and when you put the principal enterprises within the control of a small group, you have, of course, the possibility of a cartel type of control.

The specific provisions in the Schuman plan, the method of government, the method of appeals, and the basic philosophy which lies behind its objectives, are such that I do not think it will be used for that purpose. But, the form is such that without all of those restrictions it could well be.

Again I think it is a question of the spirit in which it is carried out, and I think that spirit is the right spirit, and I think in view of that the possibilities are good—

Mr. Judd. In your opinion, is it true, what we heard in various places, that the greatest need in some of these European countries is not that they get more of our goods, but that they take over more of our methods, that is, the technical, organizational, managerial know-how, of which you are an example par excellence, and, even more, a change in their economic philosophy?

I met an Englishman who said, "I have been in America, and the trouble is that England's economy has been built, for years on how much money we can make out of producing as few things as we can at as high a price as possible. Yours is the opposite. Your economy is based on how much money you can make out of producing as many things as you can for as low a price as possible."

He said that habit of thinking in his own country had not changed, and there was a greater lag in getting that change of philosophy than there was in any other field. Do you agree with that?

Mr. FOSTER. I do. I think the toughest job we have, as you indicated, is to change the state of mind. That is tough not only in the European countries, but in our country, to change the state of mind. I think there is great hope, though, in some of the younger managers and some of the younger owners of these businesses and, I think, in some of the rising trade union leaders. I think that is one of the things to which we are devoting a great deal of our time and effort. I think there is hope that we can change that state of mind, but before we can achieve any of these other things, we have to do that, and that is the tough job.

Mr. Judd. One more item and then I will pass and let others have time. I will be back later, I hope.

I judge from your statement yesterday that you feel an organization like ECA, whether it is called ECA or not, must be continued, and that you prefer to have it continued on an equal status with the regular Government Departments, coordinated with them but not under them, either Defense or State. Is that correct?

Mr. FOSTER. That is correct.

Mr. Judd. Do you feel that the Military Assistance Program should be an independent operating agency separate from Defense or State?

Mr. FOSTER. I am not sure as to the distinction which you make.

Mr. Judd. I am speaking of the Military Assistance Program. Yours is the economic assistance program.

Mr. FOSTER. You mean the end-item program in which we supply the manufactured equipment to the Europeans?

Mr. Judd. Yes. We have an economic and a military-assistance program. The economic program should be separate, we believe. You do and we do. Do you think the military program should be separate also?

Mr. FOSTER. Whatever or however the military program is handled, certainly the procurement and the development and the decision as

to equipment and forces is a military problem and should be done by our military. As to whether the actual delivery of that end item and the scheduling of it could be done under a separate organization, I am not so clear on.

I have in mind, of course, the recommendations that were made by the Committee on the Present Danger, which came out with a recommendation that a new economic agency be set up which would administer both forms of aid since basically they were both economic aid. I think that is a suggestion that is certainly worth considering.

The ability to separate the pure administration of that program from the procurement and other parts of it may not be as easy as that committee indicated; and if it is not, then it would be better to leave that administration in the military, as it is now.

Mr. JUDD. But, in principle, do you agree it would be desirable to have each of them separate from the regular policy-forming agencies? Or, do you believe they should be combined into one, the military and economic in a separate agency, correlated with but not under the old-line agencies?

Mr. FOSTER. I will not come to that. I cannot answer that question specifically.

Mr. JUDD. I am not trying to commit you, but just to get your judgment.

Mr. FOSTER. I think if you are able to separate the delivery—to use an oversimplified term—of the end items from the procurement, scheduling and policy part of it, it would be perfectly possible mechanically to put the administration and the delivery of that into the same agency that administers the economic assistance; but I have to base it on the question of whether you can so separate it. Of that I am not quite so sure, and I think you might do better, and I think the military perhaps could answer that one better than I.

As far as scheduling the goods goes, of course we can do it. We have done that on all kinds of commodities all the time we have been in business, but whether they can be separated out as an operating function of that character, I do not know. I am not so clear on that.

Mr. JUDD. One of the reasons why I asked this question is because the chairman was present with me and some others in a meeting the other day, where one of those present said, "After all, if you pour water into the bowl, it does not make any difference whether you pour it in on this side or on that side. If we give them military assistance, it leaves them more of their own money for economic purposes, and if we give them economic assistance, it leaves them more money for their military. So, it does not make any difference."

If that is true, or to the extent that it is true, the two should be coordinated so that even if the total of economic and military does not change, the balance between them—which is the better way to apportion them with the least drain on ourselves—could be better regulated through one agency. Is that right?

Mr. FOSTER. Certainly you need the coordination. I agree with that. The coordination now is done as between operating agencies by the ISAC under the chairmanship of the representative of the Secretary of State. Whether that again would be improved, you still need the coordination of the procurement and development.

Mr. JUDD. That is right.

Mr. FOSTER. So that whether it is a part of the military job that could be separated out of the procurement and development and

moved sidewise into the administering agency, I am not so clear on that.

Mr. JUDD: But if it could be done, there would be certain advantages from the standpoint of both the economic and military-assistance programs.

Mr. FOSTER. If it could be done, I should think it would.

Mr. JUDD. Thank you.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. Thank you, Mr. Chairman.

Mr. Foster, how great do you think the difficulties are of sustaining these economic programs for southeast Asia in the light of new demands from the rearming areas of the world?

Mr. FOSTER. Mr. Hays, you mean in terms of the available materials or in terms of the available dollars? I am not quite clear.

Mr. HAYS. It is a sort of cover-all question. The rearming movements in Europe have had an impact on your goals and on your program for southeast Asia. Are we going to be able to sustain with any degree of hopefulness these rehabilitation programs for southeastern Asia and carry the rearming aids at the same time?

Mr. FOSTER. I think we can, Mr. Hays, and I hope we can, because I believe the carrying of that part of our program is also vitally important to strength for the free world, as Mr. Vorys said earlier. I think we cannot afford to focus entirely on Europe to the exclusion of those programs which have great significance to those peoples, and great significance in terms of what they can contribute to the free world.

Certainly our most important set of relationships are those with Western Europe, but they are not so important, in my opinion at least, that they should be focused on completely to the exclusion and to the elimination of these responsibilities, which I think are great, in southeast Asia and the Far East.

Mr. HAYS. You would agree, in other words, that it is very wholesome to find this new interest in the welfare of southeast Asia?

Mr. FOSTER. I certainly would.

Mr. HAYS. Of course, in some respects a rearming program with the accentuated demand for certain things that they can supply advantageously; but there is a delusion about that that we must be on guard against. Is that a fair statement?

Mr. FOSTER. Yes, sir.

Mr. HAYS. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. Senator Taft has recommended, I believe, that this be a 2-year program instead of a 1-year program. In other words, the amount to be allocated on the recommendation of the administration for this year should be spread over 2 years. Would you please comment as to what effect that would have on the program which you are justifying?

Mr. FOSTER. Mr. Fulton, if the effect of that were to be in essence a 50-percent cut in the available funds, then I would say the effect on our program would be very, very grave indeed. If one of the reasons given for the suggestion of that program by someone—I am not sure whether it was Senator Taft or someone else—was that they had doubts that we could obtain the materials to utilize the funds within 1 year, if the program was set up so that it lay within the dis-

cretion of the Administrator as to the rate at which the funds could be expended, up to 2 years, then, of course, it would have little effect because if there does exist a limit on the availabilities, then we could not spend it any sooner. However, I do feel that any such cut as 50 percent in the sums which are being asked for for this program would not only have a very substantial effect, but would interfere very seriously with the build-up of military strength in the countries to which this aid goes.

Mr. FULTON. As a matter of disagreement, would you then strongly disagree with such a change in this program which may affect, for example, the security of the United Nations and the United States and the free nations that are allied with us?

Mr. FOSTER. I would disagree just as strongly as I am able to put it down, because I think that that sort of a reduction in the ability to do this job would be a disastrous thing from the viewpoint of our national interest.

Mr. FULTON. Do you think it would have a psychological effect that would be adverse abroad among these nations that are now associated with us?

Mr. FOSTER. Extremely bad, because what is happening today, in my opinion, is a growth of confidence that we are building strength and that we are building strength sufficient to lead from strength in our arguments with the Soviet. If this reduction were to destroy that growing confidence we would have lost something that it has taken us a long time to build, and I think is one of the great assets we now have in the free world.

Mr. FULTON. Would you go so far as to say that a relaxation of our efforts, both militarily and economically, would be increasing the danger that we are opposing?

Mr. FOSTER. I cannot think of anything that would be more acceptable to the Soviet than a relaxation at this time.

Mr. FULTON. Britain, as you recall, had been almost opposed to the Schuman plan and, let us say, had not given it a warm reception at birth. Has there been any change in the British official position towards the Schuman plan that might look toward cooperation in the advancement of this plan?

Mr. FOSTER. I think there has been no change in the official position. They were not opposed to it in that sense, as you surmised. They simply did not want to enter into it as far as Great Britain went. Officially they are still of that viewpoint.

Mr. FULTON. Does the British position on colonial preference or empire preference cut across the ability of your agency to do a good job on the building up of these countries for defense?

Mr. FOSTER. There was a very good exposition of the British position in the New York Times written by Mrs. McCormick.

Mr. FULTON. When was that?

Mr. FOSTER. This morning. I think certainly the rather divided interests of the British Empire make it difficult to integrate completely the efforts of the United Kingdom with the continent of Europe. I do not think, however, that that can be said to interfere seriously with the objectives we have in the sense of imposing undue obstacles. Of course, we have wanted to have a greater joining in of the United Kingdom in the efforts toward integration of the Continent.

I think that the Schuman plan is an example of one of the things that we in the United States Government felt it would be better if they were in, and we hoped that they could be. They could not be, and they decided against it. I think that is typical of the type of reservation sometimes which they feel in their interest they must make. It does at times, in our opinion, slow down at least the movement toward a complete integration. They have very good reasons, in their opinion, for it, and they have these other interests of their commonwealth and of the sterling area, and I think they are genuine reasons, and I think we must accept them as genuine.

It does not help us in getting on with the job, and it does not prevent our doing the job.

Mr. FULTON. The point I was leading up to, of course, was something that was suggested by your statement that we were assuring the flow of strategic materials and resources fairly throughout the free world. Now, taking that as a fundamental postulate, then are we not building up, through advancing the money for colonial development in the British Empire, a system where we have a second-class card because of empire preference and colonial preference with regard to those strategic materials? Are we not then in the minor leagues compared to any British dominion and any British colony, so that when the distribution is made we come in second?

Mr. FOSTER. There might be that possibility. It has not developed in that way, Mr. Fulton. We do have complete—we have fair and equitable access to those raw materials through the other arrangements that are worked out. I do not think the colonial preference in that sense has prevented our having the right to get those materials which are useful in our own production.

Mr. FULTON. The colonial and empire preference has been used rather in exchanging trade transactions than at the production and strategic materials level so far?

Mr. FOSTER. That is right, sir.

Mr. FULTON. Should we in this act make any reservation to prevent such a thing occurring when that does become the prime factor?

Mr. FOSTER. I think our fundamental protection is the fact that the British are full partners of ours in this activity, and I would personally, just expressing a personal opinion, feel that it was rather unwise to attempt to protect that partnership in that way.

Mr. FULTON. Is any other member burning with questions?

Mr. ROOSEVELT. I have just a technical question to ask of the Chair.

Chairman RICHARDS. You know about the bells.

Mr. ROOSEVELT. The second bell has rung.

Chairman RICHARDS. We still have some time. I want to say to the committee we will go into executive session this afternoon at 2:30. Mr. Dulles will be here from 4 to 5 in executive session to tell us something of the Japanese Treaty.

Mr. ROOSEVELT. I have a procedural question to ask. If we adjourn now, Mr. Chairman, my line of questions really belongs in the executive session. Where will the questioning start this afternoon when we resume at 2:30?

Chairman RICHARDS. It will start with Mr. Fulton, if he has not finished, and then you.

Mr. ROOSEVELT. That is fine, then.

Mr. FULTON. I thought somebody might be burning up with questions he wanted to ask before we adjourn.

Mr. JAVITS. I have one question before we leave the public session.

Mr. FULTON. I will be glad to have you; go ahead.

Mr. JAVITS. You talked about the Colombo plan, and you talked about the United Nations, but you have not told us whether you are planning for an Organization for Middle East Economic Cooperation and an Organization for Far East Economic Cooperation, combining those nations for self-help just like we have done in Europe with the Organization for European Economic Cooperation. Are you planning that in these new areas?

Mr. FOSTER. Mr. Javits, I think that those have got to come from the nations themselves, just as did the OEEC, and just as did the Colombo plan. I do not think any plan we attempt to impose on them in that sense could probably be a success.

Mr. JAVITS. In Europe, of course, they responded to our statement that we were going to inaugurate a Marshall plan. In the Middle East and Far East, too, it would be just an invitation. We would say to them, "We are going to inaugurate a plan in your area. Will you do what the nations of Europe did, that is, get together and form your own organization to tie in with that plan?"

I do not see why we cannot do that. I might say this to you: I think we have been accused of uncertain leadership. It seems to me our failure to give such an invitation just underlines that criticism. It is the right thing to issue such an invitation as the program is one of self-help and mutual cooperation and we ought to do it. There is no reason why we ought to be diffident about it, and I do not think it will be taken amiss by the nations concerned because it is right.

Mr. ROOSEVELT. Perhaps those nations already informed us they would not like that invitation at this time.

Mr. JAVITS. Then we ought to know that either in open or executive session.

Chairman RICHARDS. The committee stands adjourned until 2:30 this afternoon, when we will be in executive session.

(Whereupon, at 12:20 p. m. the committee recessed until 2:30 p. m., when the committee would meet in executive session.)

(The committee reconvened in executive session at 2:40 p. m. and remained in executive session until 3:20 p. m., at which time, by committee decision, the following discussion was had in open session:)

Chairman RICHARDS. We will now go into open session. Mr. Javits.

Mr. JAVITS. You told us, Mr. Foster, that what these underdeveloped countries want is not primarily money, but goods. Is that not in effect what you told us?

Mr. FOSTER. Yes, sir.

Mr. JAVITS. They can get the dollar bills they need from the raw materials they are selling, but they cannot get manufactured goods and machine tools and other equipment necessary to improve their economy, their health, and their living standards—now extremely low. Is that correct?

Mr. FOSTER. They might have great difficulty doing it due to priorities or lack of availability.

Mr. JAVITS. Would you recommend that we legislate on that subject and establish a form of priority which would give them some

proportion of consumer goods, or machine tools, in order to bring out from them the maximum amount of raw materials?

Here you are going to underdeveloped countries and want them to produce more of the things that are fundamentally needed by us and our allies in Europe to create military strength. Yet they want things we cannot give them. Should we legislate to say that we give some proportion of our consumer goods, machinery to them, because they are producing the fundamental raw materials that are the basis of the whole job?

Mr. ROOSEVELT. Will the gentleman yield?

Mr. JAVITS. Yes.

Mr. ROOSEVELT. For clarification of your question.

Mr. JAVITS. Certainly.

Mr. ROOSEVELT. Are you talking about goods that they need purely to augment their production of the raw materials that Western Europe and the United States need for military production, or are you talking about (b) the civilian consumer goods, that they need to raise their standard of living, but which they cannot get because of the tremendous demand here in the United States?

Mr. JAVITS. I am talking about both (a) and (b) which they need to increase their raw material production, and which we in turn need for military purposes.

Mr. ROOSEVELT. But the (b) they might not need for increasing their production.

Mr. JAVITS. They do need some consumer goods or you cannot get the maximum production of raw materials out of them. That is axiomatic in the underdeveloped areas.

Mr. FOSTER. My response to that question, Mr. Javits, is that I would be very fearful of covering this with legislation. I think it is perfectly possible to achieve what you have suggested there by a wise executive policy. I referred yesterday, I believe, to a foreign allocations policy statement which has now been accepted by the President and by the Director of Mobilization, and is the policy of the United States Government.

I would like, if I might, Mr. Chairman, to submit that statement for the record.

Mr. JAVITS. All right.

Chairman RICHARDS. Without objection that will be done. We are glad to have it.

Mr. FOSTER. It covers what you have in mind. I would say as far as legislation goes I do not think we need it. I think it would be very fine, however, to have the support of the committee that this is wise policy for the United States Government. I do not expect you to accept it as policy until you have read it, but in effect what it does is to say that we will equitably share these goods which we have in order to achieve both things.

First, of course, essential military requirements and essential civilian requirements. After that, even on the use for less essential civilian requirements, we would put them in a comparable position at the moment.

Mr. JAVITS. Could you implement that further in order to give percentages in this field?

Mr. FOSTER. No, sir. I could not; and I would be very fearful of the rigidities of specific percentages, because I think—I do not want

to belabor this point, but conditions are so different between different economies that if you become too specific in percentages you defeat the need for judgment in getting this thing done.

Mr. JAVITS. Now, Mr. Chairman, I ask unanimous consent that that be made part of the answer to my question, that is, the statement of policy of the witness.

Chairman RICHARDS. Without objection that will be done. It is so ordered.

(The document referred to, entitled "Foreign Allocations Policy," reads as follows:)

ODM Doc. 6
May 25, 1951

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION

SECRETARIAT

Subject: Foreign allocations policy.

Contents: Statement by the Director of Defense Mobilization.

Comments: Originally prepared and submitted to the Director of Defense Mobilization through the ODM Foreign Supplies and Requirements Committee under date of March 5, 1951.

Action: Considered by the Defense Mobilization Board (Item II, DMB-M-9 and item XI, DMB-M-10). Revised May 25, 1951, following the discussion by the Board. Issued by the Director of Defense Mobilization as policy guidance to agencies operating under the defense mobilization program.

ODM. 770

STATEMENT BY THE DIRECTOR OF DEFENSE MOBILIZATION ON FOREIGN
ALLOCATIONS POLICY

The President, in his message to Congress, on May 24, 1951, outlined our basic policy to strengthen the free nations of the world.

In carrying out that policy, the following specific guides to the allocation of resources which are to be devoted by the United States to foreign needs should be followed:

(1) When there are competing requirements of similar high essentiality in terms of the over-all objective, allocations policy should attempt to satisfy such requirements according to the degree to which they will contribute to the following results:

(a) Military production of the free world, and direct support for the expansion or improvement thereof;

(b) Promotion of increased supplies of all materials essential to strengthening the free world, and in particular the production and acquisition of those materials required for the current mobilization effort of the United States (including military reserves and immediately necessary additions to stockpiles) and for similar mobilization efforts of nations actively associated with the United States in the defense of the free world;

(c) Maintenance and necessary expansion of essential services and production facilities, and maintenance of minimum essential civilian consumption requirements, in the free nations and in areas which they control;

(d) Direct progress toward reduced future dependence upon military and economic assistance from the United States;

(e) Lessened dependence of the free nations upon supplies from areas or countries within the Soviet bloc; and

(f) Prevention of political deterioration in nations or areas essential to the combined strength of the free world.

(2) Allocations by the United States form part of a wider give-and-take among the free nations. Among the countries sharing in such allocations the principles of self-help, mutual aid, and similarly effective application of internal policies governing the allocation and use of scarce materials should prevail.

After requirements of high essentiality have been met, the intercountry allocation of remaining supplies by the United States (including allocation to American domestic consumers) should take into account the effects upon the respective civilian economies of the broad contribution of each area or country toward common defense, in direct military production or in increased political and economic strength, including the common aim of controlling inflation of world

prices. Individual countries differ widely in their ability to make such contributions; the objective should be to bring about an equitable distribution of the resulting burdens and sacrifices. This objective clearly excludes any mechanical formula, or any mere leveling down to a uniform standard of lowered consumption.

The foregoing principle is admittedly difficult to apply, since standards of consumption in different areas of the world are determined by a complexity of factors, such as normal levels of real incomes, customs, cultures, and climate. But its application is of high importance for the attainment of the over-all objective of economic strength and morale in the free countries.

(3) The establishment of adequate export quotas from the United States for materials and commodities under export control will not meet the criteria outlined above, if foreign purchasers cannot place orders or secure delivery because United States suppliers prefer to satisfy their domestic customers. Commercial channels of trade should normally be used, but exports should be assured by priorities and/or directives to producers whenever necessary. When such assistance to exports is thus given, care should be exercised that corresponding assistance for domestic orders of similar essentiality is extended, if necessary.

(4) Corresponding allocation objectives and policies on the part of other free countries should be promoted by the United States by all practicable means agreement on and implementation of such policies on the part of other countries is especially important to the development of adequate supplies of the materials, facilities or services of which they control substantial portions of the total available world supply.

(5) Allocations of available supplies for abroad shall be administered in conformity with statutory and executive policy designed to prevent shipment or trans-shipment to the Soviet bloc of war-potential materials and products.")

Mr. VORYS. Will the gentleman yield?

Mr. JAVITS. Of course.

Mr. VORYS. On one part of your question as to furnishing so-called incentive goods in the so-called backward areas, as I understand it, there is no program of that character involved, is there?

Mr. FOSTER. No, sir. The only commodities which we propose to finance under our actual aid provisions would be essential commodities to promote specific projects within the economic development program.

There is, however, a matter of our acting in the United States Government—and ECA does this for the countries where we have missions—as claimants for those goods to countries which are within our program. In other words, there might be some other goods which were in short supply here which, in order to get them out to southeast Asia, would need somebody to be their advocate before the allocating agencies of the United States Government. We stand in that position for these countries.

Mr. JAVITS. In other words, you are not dealing with the dollar problem, which I think was the point of Mr. Vorys' observation, but you are dealing with the problem of actually getting the goods if there is any difficulty in getting them?

Mr. FOSTER. That is correct.

Mr. JAVITS. The countries themselves have the dollars for these particular goods and ECA is not supplying them, but ECA will propose to act in the capacity of seeing that this country gets goods in the United States for its dollars, and not ECA dollars?

Mr. FOSTER. That is correct, and we really act in that position before NPA and DPA.

Mr. JUDD. I want to say again at this point that I think there are real advantages as I brought up this morning, in having the two programs coordinated or even united in one operating agency, that is, the economic and military assistance programs.

Mr. VORYS. If I may come back to this incentive goods business, in 1947 and 1948, and even back under lend-lease there were incentive goods programs, that is, tobacco, and some clothing, and that sort of thing. We were told it was necessary to provide those goods under the program so that people would work in those countries. But, as I understand it—and I want to get this clear—there is nothing in the whole \$2,200,000,000 for the purchase of that sort of goods this year. Am I right or wrong about that?

Mr. FOSTER. No. If I gave you the impression that was so, I was wrong. There are provisions in that total for some incentive goods still. In southeast Asia, for instance, we may need to generate some counterpart. These countries are short of local currency in some instances, and we may send in goods which can be sold on the civilian market to generate counterpart, and out of that counterpart we can undertake these broad programs which they might otherwise not have been able to produce.

Also, in Europe we are still procuring goods such as tobacco. That can be considered, according to the way in which it is put on the programs of these countries, as not only an incentive goods, but a necessity. We have financed a substantial amount of tobacco, because many of the governments have included tobacco as part of what they consider an essential program of aid.

Chairman RICHARDS. Will the gentleman yield there?

Mr. VORYS. Yes.

Chairman RICHARDS. You talk about generating counterpart funds. What do you mean by that? Do you mean starting the circulation of counterpart funds?

Mr. FOSTER. No. If we have a grant program—and let us take Indochina, because that is one of the states where we have to generate this counterpart in order to go on with our local programs—in Indochina the government there has such great difficulty with its tax collections that it is unable to appropriate local currency which can be used to set up the health clinics or some of the agricultural improvement stations. Therefore we in our grant program approve of the importation into Indochina of—well, I do not think there is any tobacco in it, but certainly there are some textiles which come into that country. Those textiles are sold on the local market for whatever the currency is—piasters. In Indochina the piasters are put into the Central Bank and used under joint approval by the Vietnamese government and our own government to finance this health station which I referred to.

The commodities are in effect given to the government of the associated states and the money received through the sale of those commodities is deposited to the credit of the government. It cannot be spent by the government, however, except with the approval of the United States.

Chairman RICHARDS. That is right. That is the whole counterpart plan, but I got mixed up where you used the word "generate." I thought you were talking about local currencies.

Mr. FOSTER. It is a little different than it is in Europe because we do it deliberately for the purpose of generating counterpart to carry on these other programs; whereas in Europe the generation of counterpart is to some extent a byproduct of the major commodity programs.

Mr. JUDD. In Europe sometimes you use the counterpart really to retire currency or to pay off the national debt.

Mr. FOSTER. That is correct.

Mr. JUDD. Because the problem is to get less currency in circulation and less inflationary pressure in the country, whereas in Asia there is just not enough currency to carry on an expanded economy.

Mr. FOSTER. That is correct, Dr. Judd.

Mr. JUDD. That is one of the biggest problems in Formosa.

Mrs. KELLY. Will the gentleman yield?

Mr. JUDD. I yield.

Mrs. KELLY. Mr. Foster, at this point I want to ask you a question on the Vietnamese problem. In dealing with that, do you have to get the consent of France, or do you deal directly with those dominions? I am speaking particularly of the three northern provinces, where they are now seeking a dominion status.

Mr. JAVITS. May I advise the witness we are on the open record here?

Mrs. KELLY. Not at this point.

Chairman RICHARDS. Yes, we are.

Mrs. KELLY. I request we go back in executive session.

Chairman RICHARDS. We will go back in executive session then. Have you another question first, Mr. Javits?

Mr. JAVITS. I have a question or two, but I will wait on Mrs. Kelly.

Chairman RICHARDS. I believe we had better complete the questioning in the open session first, then, and keep it together.

Mr. JAVITS. Mr. Foster, do you think it would be useful to us if you segregate out of what is being requested in money that part of it which you say is incentive goods and present us a memorandum to show what that is?

Mr. FOSTER. We will be happy to present an illustrative set of figures on that point.

(The information requested is as follows:)

RE "INCENTIVE GOODS" IN SOUTHEAST ASIA PROGRAMS FOR FISCAL YEAR 1952

Economic Cooperation Administration's southeast Asia programs are not directed toward supplying "incentive goods" in the sense of supplying goods that induce otherwise idle persons to work by providing something for them to spend their earnings on or by making payments to them in kind which enable them to subsist while they are working on a project. However, the majority of these programs do contain a substantial element of commodities which it is proposed to import into the southeast Asia countries in order to maintain supplies which are in fact deemed vital to the functioning of their economies as well as necessary to help finance local currency costs of the ECA country programs. These proposed commodity imports are shown in aggregate amount in country tables opposite the category heading "Maintenance of essential supply." This category includes both requisites for production and other essential civilian supplies. "Requisites for production" include fertilizer, various industrial raw materials, equipment items for sale to industry, and other miscellaneous salable items designed to facilitate the operation of the production system. "Other essential civilian supplies" consist of and large of consumer goods such as food, textiles, POL, and drugs and medicines. There follows an illustrative listing, by country, of the proposed amounts in these categories for fiscal year 1952.

*Fiscal year 1952 illustrative totals**(In thousands of dollars)*

Country	Requisites for production	Other essential civilian supplies	Total, main- tenance of essential supply
Formosa.....	37,718	16,750	167,190
Philippines.....	13,390	4,810	18,200
Indochina.....	12,438	2,472	14,910
Burma.....	1,000	200	1,800
Indonesia.....	None	None	None
Thailand.....	None	None	None
All southeast Asia countries.....	65,143	24,232	102,100

¹ Includes \$12,725,000 of common-use items in addition to "Requisites for production" and "Other essential civilian supplies."

Mr. JAVITS. I have not heard you talk very much about the International Bank. It is a fact—is it not?—that the International Bank represents a very material source for investment funds of the kind which will produce the results that you discussed in connection with this program?

Mr. FOSTER. Yes, sir, and if I did not talk about it it is simply because it has not happened to come up before, because the International Bank should be considered the primary source of investment capital for long-term projects to the extent that they are able to find appropriate projects, and we do use it in that sense.

Also, the Export-Import Bank is a source of development capital as well as commodity financing in addition to our grant programs, and we do not propose in our program for fiscal 1952 to enter into any loan activities directly in ECA, except perhaps some counterpart funds for the development of strategic materials; but all of these programs will be worked out in coordination with each other, so that if a country can get a loan from the International Bank in the first instance we would propose that they do so.

Mr. JAVITS. The International Bank, as distinguished from the Export-Import Bank or your own operations, represents no additional money from the United States. Is that not true?

Mr. FOSTER. That is true. We have not yet advanced our promised capital to the International Bank. They have been able to finance in the open market their requirements so far, and I would presume they could continue to do so.

Mr. JAVITS. It is not our promised capital, I believe. We have advanced our capital, if you will permit me to explain, but we have not subscribed any part of our guaranty of its obligations. We do not have to do that until there is a loan default. Is that not so?

Mr. FOSTER. That is correct.

Mr. JAVITS. So, the bank could make all the loans which it is possible and it would not cost the American taxpayer a dollar?

Mr. FOSTER. That is correct.

Mr. JAVITS. Would it not be to our interest to build up the lending power of the bank materially beyond where it is today, right in connection with this bill?

Mr. FOSTER. I am not certain that would be so because I think one of the problems of the bank is to find bankable projects. I think they have the capital available to meet the bankable projects so far;

the bankable projects again being limited by the availability of goods and equipment.

Mr. JAVITS. As I recall the report of the International Bank—and you will correct me if I am wrong—they say that if the ECA operation should stop, or when the ECA operation should stop, they feel there will be a much greater demand for loans from them.

Mr. FOSTER. I think that is a possibility in that there may be a tendency, when there is grant money available, to walk away from having to borrow it. I think that is perfectly possible. I do not think anyone can predict or state positively, however, whether that amount is substantial or not. There are many advantages in this sort of grant program through which we can obtain action on the part of these governments which is in line with our conception of an economic development program for the long-term improvement.

Mr. JAVITS. Is it fair to say, therefore, that the grant money is largely what is called seed money; that is, it forms the basis on which loans may later be made, provided there is adequate technical competence in the country to prepare loan projects?

Mr. FOSTER. I think that is a fair statement.

Mr. JAVITS. So that, as we go along, the demands on us to do the job needed to be done in the free world can be materially reduced, especially in these underdeveloped areas, provided that the International Bank is ready more and more to step in and meet the demands which are created by our present basic activity?

Mr. FOSTER. That is a fair statement.

Mr. JAVITS. Do you not think under those circumstances we ought to do everything possible to build up the capital of the bank, if it would not mean building it up with our own money?

Mr. FOSTER. I think that would be a desirable thing certainly to do, because as these conditions improve then you will have greater calls for these bankable projects on the International Bank.

Mr. JAVITS. Has the ECA made any study of merging the bank and the fund? We have some billions of dollars tied up in the fund which has appeared to me for a long time to be close to sterile.

Has the ECA thought through, as part of its long-range responsibility, the consequences to this whole program of merging the fund and the bank, and increasing the resources of the bank by something in the area of 2 to 4 billions of dollars without costing the United States taxpayer any money?

Mr. FOSTER. No, sir; we have not.

Mr. JAVITS. Will you give us your comments on that?

Mr. FOSTER. Yes, sir.

Mr. JAVITS. The bank has expressed itself, as has the fund and the Secretary of the Treasury. This is my first opportunity to bring the question up with ECA. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Javits, do you have any further questions? Does anybody else want to ask anything while we are in open session, for the record?

Mr. JAVITS. I had one other question. I did not want to take the committee's time.

Chairman RICHARDS. Go ahead.

Mr. JAVITS. We have all seen the International Development Advisory Board [Rockefeller] report, which makes a great many detailed recommendations as to this whole program that ECA is

proposing. Yet, it is very hard to trace in what is being requested for the coming fiscal year the impact it will have upon the ECA program.

Would it be useful to us, Mr. Foster, either in writing or at this time, if you would show us what effect, if any, this report has had on what you are now proposing; and, if it had no effect, why not?

Mr. FOSTER. Well, Mr. Javits, I can state that we were very closely in touch with that report while it was being written. We think that many of the suggestions have great usefulness.

If you would like us to submit some written comments as to how it would affect us if it were put into operation in that form, I should be very happy to submit them.

Mr. JAVITS. More than that, I would like you to submit any point where you have utilized the recommendations of the report, in what ECA is proposing to us this year, or, if you have rejected them and, if so, why?

Mr. FOSTER. I will be happy to submit that.

(The following information has been submitted for the record:)

PROBLEM OF CONSOLIDATION OF INTERNATIONAL BANK AND FUND

The International Bank for Reconstruction and Development and the International Monetary Fund were set up for two distinct purposes. The International Bank was established to make long-term loans for reconstruction and development. It has been carrying out this objective and should be encouraged to play a major role in international investment in the future. The Monetary Fund was established to deal with matters of foreign exchange policy and to aid in stabilizing exchange rates. As a matter of policy the United States Government has opposed substantial use of the fund's resources in recent years of serious structural imbalances in the payments positions of its members. The fund has, however, played an important role with respect to exchange rate policy and action and with respect to other related financial responsibilities.

A merger of the two institutions would not, in the opinion of ECA, be advantageous and might lead to changes sponsored by other members which would be detrimental to our interests. As far as the staffs of the two organizations are concerned, their separate identity is useful in carrying out operating responsibilities. As far as financial resources are concerned, there would be no obvious advantage to a merger and certain adverse developments might follow from such a merger.

Approximately \$2 billion of our subscription to the fund remains unutilized, partly as a result of the policy decisions of the United States Government. It is true that this money has been appropriated by the Congress and, if it were transferred for use by the International Bank, would represent an increase in dollar loan funds without additional appropriations by the Congress. The use of these dollar resources either through the fund or bank would represent an additional cash claim on the United States Treasury. The measure of the ultimate cost to the United States taxpayer is the net utilization of these resources without repayment.

The International Bank should be able to carry out an expanded program without difficulty. The bank now has loans outstanding of approximately \$1 billion in United States dollars. Dollar funds have been made available to the bank for lending purposes through the United States payment of 20 percent against its total subscription of \$3,175 million and through the sale by the bank of approximately \$300 million of bonds to private investors. The bank has had no trouble finding a market for these bonds and could presumably sell substantially more. It is of the utmost importance that the bank have funds available to carry out its responsibilities, but no problem of dollar availabilities appears to exist at the present time.

CONFORMITY OF MUTUAL SECURITY PROGRAM WITH THE REPORT OF THE INTERNATIONAL DEVELOPMENT ADVISORY BOARD (ROCKEFELLER REPORT)

The report of the International Development Advisory Board has been an important constructive influence in the formulation of the Mutual Security Program now before the committee, and this influence is reflected throughout the program submitted. Moreover, this influence will continue to be felt in the actual carrying out of the program during the course of the coming fiscal year.

The conclusions of the Board were at three major levels: (1) broad comments on the approach, objectives, and philosophy of United States Government programs in the underdeveloped areas of the world; (2) general recommendations on the financing, over-all organization, and content of United States programs in these areas; and (3) specific observations on matters of internal organization of aid agencies and procedures for implementing the program.

ECA's general approach to the problem is similar in many respects to the recommendations of the Board. For example, the Board reported its feeling that "strengthening the economies of the underdeveloped regions and an improvement of their living levels must be considered a vital part of our defense mobilization." This is exactly the approach reflected in the proposed Mutual Security Program for the areas involved.

The second type of recommendation was summarized by the Board in nine points. The specific status of each of these in relation to the present program is as follows:

1. *Appropriation of \$500 million in economic assistance to underdeveloped areas.*—Since the Mutual Security Program estimates include substantial sums for direct emergency relief purposes not contemplated by the Board, and do not provide for additional funds for public-works loans as recommended by the Board, the coverage of the two figures is not identical. However, the program submitted is on a somewhat smaller scale than the Board recommended.

2. *Creation of an over-all agency for foreign economic operations.*—This recommendation is under active consideration in the executive branch and is, of course, subject to determination by the Congress. ECA's views on this subject have been covered in earlier testimony.

3. *A realistic program for strengthening the economies of the underdeveloped areas and improving living standards.*—This is contemplated in the program submitted.

4. *An all-out food-production drive.*—Increase in food production is one of the major aspects of the program in the underdeveloped areas. The targets set by the Board are, of course, for longer-range development.

5. *A development program for strategic materials.*—Such a program is contemplated in the act under consideration and in the pending extension of the Defense Production Act. The executive branch is actively considering possible means of centralizing responsibility for this program within the Government and further intensification of the program.

6. *A policy for assuring the underdeveloped areas essential imports.*—A policy statement on this subject was issued by the Director of Defense Mobilization on May 25. This policy statement has been supplied to the committee in the course of testimony given by Mr. Foster.

7. *Creation of a new International Development Authority to help finance public works.*—In ECA's view the advantages of this proposal under present conditions are not sufficient to offset the difficulties and disadvantages of establishing a new international fund.

8. *Adoption of a general principle that assistance programs should provide for cooperative local services and financing.*—This approach is contemplated as a general principle in all of the recommended aid programs. In practice, United States funds will, in almost all cases, represent only a relatively small proportion of the total funds going into any particular type of activity. It must be recognized, however, that some of the governments of underdeveloped areas are in such a weak financial condition that their contributions cannot be on a very large scale.

9. *A program to increase United States private investments in foreign countries.*—It is contemplated that present guaranty and related programs will be continued and that every effort will be made to encourage and stimulate private investments and private enterprise. Because of the present state of military insecurity in

many of the underdeveloped areas, it is, of course, very difficult to attract private capital.

The third group of the recommendations of the Board on specific points of organization or procedures are under consideration in the executive branch in connection with pending organizational decisions.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. JAVITS. I will yield.

Chairman RICHARDS. This is open session.

Mr. ROOSEVELT. If I get the tenor of your request, it is to ask a Government agency whether this Presidential commission has foisted its program upon an existing Government agency.

I think it is the other way around. I think the Rockefeller report probably gained a great deal from the work and the experience of the existing Government agency.

Mr. JAVITS. May I answer that? The International Development Advisory Board was appointed pursuant to an act which we passed for technical cooperation, and Mr. Foster has been speaking constantly of technical cooperation and the development of raw materials with both of which the report deals.

This Board was created and made a report. Are we not entitled to know whether the findings of this high-level Board have had any effect whatever upon what the ECA is proposing to us this year, either pro or con?

That is all I am asking.

Mr. ROOSEVELT. I think you might reword it a little bit, whether the program that is being recommended this year in the estimation of the ECA jibes with the Rockefeller report.

Mr. JAVITS. That is fine.

Mr. ROOSEVELT. I do not want the ECA to tell Mr. Javits that at the request of Mr. Rockefeller's committee we have taken on this and this and this. I think probably the Rockefeller report had genesis in the ECA.

Mr. JAVITS. You have phrased it before exactly as I had it in mind.

Mr. ROOSEVELT. Perhaps it is a matter of fact.

Chairman RICHARDS. Mr. Foster, before the public phase of this hearing is closed, I want to ask you if you will do this: Put a statement in the record of the different steps that the European nations have taken in the field of economic unification and cooperation.

There has been a lot of talk about improved European cooperation. I would like to have in the record for the benefit of Congress itself a list of the things they have done that you think have been helpful.

Mr. FOSTER. We will be happy to do that.

(The following information has been submitted for the record:)

EUROPEAN ECONOMIC COOPERATION AND UNIFICATION

The countries of western Europe have in the last few years taken a number of highly significant steps in the direction of cooperation and unification in the economic field. Some of the principal steps are:

1. *European Payments Union.*—The European Payments Union is a substantial step toward unification in the field of international payments. The European Payments Union makes European currencies transferable so that the funds which a country earns by exporting to one of its neighbors can be used to purchase imports in any of the other member countries. The European Payments Union also provides for substantial amounts of mutual aid since creditor countries automatically extend credits to the European Payments Union while debtor countries borrow from it. The managing board of the European Payments

Union has played an increasingly active role in reviewing the payments positions of the member countries. It has made recommendations to member governments in some cases of a far-reaching character, and these recommendations have had great weight with the governments of the member countries concerned.

2. *Trade liberalization.*—The members of OEEC have undertaken as an eventual goal to remove quota restrictions which at the outset of the European recovery program applied to almost all of their imports from each other. About three-quarters of the trade within western Europe is now free of such restrictions.

3. *The Schuman plan.*—Six western European countries have signed the Schuman plan which calls for a pooling of their coal and steel resources, the establishment of a single market free of tariff or other trade restrictions on coal and steel products within the six countries, and the establishment of a supranational high authority to maintain and regulate the single market. The Schuman Plan Treaty was signed in Paris on April 18, 1951. It has not yet been ratified.

4. *Other OEEC activities.*—Eighteen western European countries have signed the Convention for European Economic Cooperation which pledged them to cooperate in a common recovery program and establish the Organization for European Economic Cooperation. In the OEEC, in addition to the European Payments Union and the trade-liberalization program, they have engaged in a variety of cooperative activities among which the following are particularly significant:

(a) OEEC conducts a searching annual review of the internal financial situation in each member country. Thus through the Organization, member countries can make common cause in resisting inflationary and deflationary tendencies. This "harmonization" of their policies furnishes the fundamental basis which makes possible balanced progress toward progressive relaxation of exchange and other commercial restrictions within Europe.

(b) Through OEEC action the discriminatory practice of dual pricing on commodities in intra-European trade has been very much reduced.

(c) OEEC has prevented any reintroduction of demands by European sellers for dollar payment on goods supplied to European purchasers despite the renewed scarcity of many of the many classes of export goods.

(d) OEEC has undertaken to prevent the export restrictions which sprang up in Europe after the Korean crisis from being applied in such a way as to interfere with the continued meeting of essential requirements in other countries for the commodities subject to restriction.

(e) The OEEC has collected full information, in the case of commodities which have become scarce since Korea, on the problems and the measures of control in each of the member countries. On this basis the OEEC, through its representatives to the International Materials Conference, is able to give a coordinated account of the actual situation in Europe, and the views of the Organization on the possibilities of useful joint action. It has also been recommending to the European governments the periodic allocations of coal which would best meet, so far as available supplies permit, the most urgent needs in Europe.

Mr. JUDD. I have one short question for the record. On page 3 of your statement you say that the productive capacity of Western Europe, including their basic resources, is roughly $1\frac{1}{2}$ times that of Russia and her European Communist satellite states.

Can you give us an estimate of how much of the productive capacity in each case is devoted to defense measures?

Mr. FOSTER. I think we can, sir. I will have to submit that for the record.

(The information referred to appears in the appendix.)

Mr. JUDD. Western Europe may have $1\frac{1}{2}$ times; but, if it is putting in only half as much of its production for defense, we are not ahead; we are behind.

Mr. FOSTER. I think I have talked here in the terms of potential. Of course, the Russian statistics are not very good. They devoted a substantially higher percentage of their resources to defense than did either Western Europe or ourselves.

Chairman RICHARDS. This will end the public session. Most of the members know that Mr. Dulles will be here at 4 o'clock. He has to leave at 5. We have only 20 minutes for executive hearings.

Mr. VORYS. Are we off the record?

Chairman RICHARDS. We are in executive session.

(Whereupon, at 3:40 p. m., the committee went into executive session.)

(The following was submitted for the record:)

THE SECRETARY OF DEFENSE,
Washington, July 12, 1951.

HON. JAMES P. RICHARDS,
*Chairman, Committee on Foreign Affairs,
House of Representatives.*

DEAR MR. RICHARDS: As you will recall, when I was testifying on July 2, 1951, before the Committee on Foreign Affairs, Mr. Reece, at your suggestion, furnished me with a list of questions which he had prepared for answers in executive session. I direct your attention to page 262 of the stenographic transcript of the hearings.

Information in response to Mr. Reece's first question with respect to the proposed armed-service budget has already been furnished to you. In response to Mr. Reece's question concerning the portion of the economy of our allies which is going for defense purposes, I am enclosing a copy of a chart previously furnished to the committee staff which gives such information for each NATO country.

The Joint Chiefs of Staff have examined the questions that are within their purview, and it appears that the most effective means of answering these questions would be for the Chairman of the Joint Chiefs of Staff to cover such matters in executive session. General Bradley is prepared to furnish the committee, in an off-the-record executive session, a comprehensive résumé of our long-range plans which should fully answer those of Mr. Reece's questions which are military in nature.

As several of the questions are within the purview of the Department of State, Assistant Secretary of State George W. Perkins advises me that he will cover such matters when he appears before the committee to testify on behalf of title I of the bill.

If I can be of any further service to you or your committee, please do not hesitate to call on me.

Faithfully yours,

G. C. MARSHALL.

THE MUTUAL SECURITY PROGRAM

THURSDAY, JULY 12, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we have as our next witness in these hearings Mr. Thomas D. Cabot, Director of International Security Affairs, Department of State.

Mr. Cabot, do you have a prepared statement?

STATEMENT OF THOMAS D. CABOT, DIRECTOR, INTERNATIONAL SECURITY AFFAIRS, DEPARTMENT OF STATE

Mr. CABOT. Yes, Mr. Chairman; I have a statement here which is rather long. I think all members of the committee have copies of it.

I would like to suggest that the first part of it, inasmuch as it deals with rather technical matters, we could skip and read the second part.

If anybody wants to hear all of it, I will be glad to read that.

Chairman RICHARDS. Let us get the opinion of the committee on that. We have time. Mr. Cabot said his statement was necessarily long on account of the discussion of the organization. It may be better to have the whole statement read. It will be placed in the record, anyway.

What does the committee say?

Mrs. BOLTON. Where does the second part begin, on page 14?

Mr. CABOT. Yes. The first part deals with the changes from the present legislation that are in the new Mutual Security Program, the changes in the law. The second part deals with organization and administration.

Chairman RICHARDS. Mr. Cabot, how long will it take to read that statement?

Mr. CABOT. It would take, the whole of it, I would estimate about 25 minutes.

Chairman RICHARDS. I think we had better have the whole statement. What does the committee say?

Mr. MANSFIELD. I think so, Mr. Chairman.

Mr. SMITH. We go in at 11 o'clock.

Chairman RICHARDS. We meet at 11. Mr. Cabot will probably have to come back, anyway. We have permission to sit until we are called down there. Let us go as far as we can go with the whole statement.

Mr. Cabot, before we go into that, will you tell the committee, please, what your job and your functions are?

Mr. EATON. If any.

Mr. CABOT. I am Director of International Security Affairs. I have been here only a short time, 6 months. I am a businessman, really, or was. I resigned from my business connections when I was confirmed by the Senate.

Mr. BATTLE. Is your old job still open?

Mr. CABOT. I think I might return to my previous occupation, yes, sir.

Mr. HERTER. I think Mr. Cabot ought to tell us what his business connections are. He is a constituent of mine.

Chairman RICHARDS. Can you say a good word for him in any other respect?

Mr. HERTER. I certainly can, and I would be glad to.

Chairman RICHARDS. Mr. Cabot, we are talking on light lines, but we do like to know the background of a man who has come into the Government.

We know that you did not need a job, did not seek this job, but we would like to have you tell us your business and administrative background.

Mr. CABOT. My whole business life has been as a manufacturer of carbon black, with plants mostly in the southwestern part of the United States—Texas, Oklahoma, New Mexico, and Louisiana.

I also have served as a director of the United Fruit Co. and 1 year as president of the United Fruit Co. Thus I have been familiar with big business as well as moderately small business.

I have been in Government now only 6 months. I came here because some of the organizational experts had suggested that the complexities of coordinating our Mutual Security Program, our oversea-aid program, required the skills of a businessman.

That is due perhaps to the fact that it is an interdepartmental operation. It has three parts—the political, the military, and the economic. You have a three-legged stool, you might say, and I am located as the seat.

I am the coordinator of the three parts of the program—the economic, the military, and the political. My statement deals with the need for coordination. I do not think I need to summarize that now.

Mr. EATON. Do you think you have passed the need and accomplished any coordination?

Mr. CABOT. Yes, sir. I think I can point with some pride to what we have been able to do in terms of coordination.

We have a committee, the International Security Affairs Committee, which deals with these problems of military and economic aid and the coordination between them.

That committee has so far been able to resolve practically all of the problems that have been presented to it. None of the problems have had to be referred to the President. One or two have been handled outside of the committee at Cabinet level.

Chairman RICHARDS. Thank you. Will you proceed with your statement, sir.

Mr. CABOT. Shall I read the whole of it, Mr. Chairman?

Chairman RICHARDS. I believe we would like to have you read the whole statement.

Mr. CABOT. Previous witnesses have described the role which the Mutual Security Program is intended to play in furthering foreign policy objectives. Subsequent witnesses will discuss the problems of the four major geographic areas of the world and will demonstrate the specific ways in which the assistance proposed for each is adapted to make use of available resources in meeting these problems.

I shall attempt to summarize and explain the full scope of our legislative proposals; and to describe the organizational and administrative techniques through which we propose to carry out the entire undertaking.

I should like first to present a summary of our legislative proposals.

We recommend that, in authorizing the program, you make the maximum possible use of the authority which is contained in those existing foreign-aid laws that have already stood the practical tests of experience.

Therefore, in lieu of drafting an entirely new statute, we suggest that it would be wise to continue to employ the Mutual Defense Assistance Act, the Economic Cooperation Act, the Act for International Development, and other pertinent laws, amending them to the extent necessary in order to adapt them to changed circumstances and to weld them firmly together into a single legislative framework.

We propose that Congress, by amending prior legislation and writing appropriate new provisions, deal with a series of substantive problems for which existing authority provides no adequate solution.

The entire program has the primary purpose of providing resources which other free nations do not have and which they require in order to resist Soviet imperialism. The kinds and amounts of resources required differ markedly from region to region, and from country to country. Such differences merely reflect variations in the form of the threat and in the capabilities of different peoples, with different resources and skills, to meet the threat which imperils them.

In some nations the fundamental need is immediate military strength; in others, the kind of social, political, and economic stability that will make their societies less open to Communist subversion; and, in the majority, some combination of all of these.

The situation in a particular country may therefore require one or more of the following: finished military equipment which can be immediately used by its forces; commodities which are necessary to sustain its underlying economy; raw materials or machinery which are essential to maximize local military production; technical assistance to increase industrial productivity, or, as in the underdeveloped areas, to open horizons for new and improved social, health, and economic conditions; relief supplies to meet immediate and crucial emergency conditions such as those which have existed among the Palestinian refugees and which are to be expected in Korea; training in modern military techniques and weapons; or food, clothing, and fuel to support military forces which are necessarily larger than those which the local economy can possibly maintain without outside help.

It is obvious that, in any country where two or more different forms of resources are required, it would be folly to make judgments with respect to one form of aid without reference to the others and without seeking that combination of all forms of aid which will best support our objectives in that country.

For another thing, it must also be clear, given a country's requirements and its maximum capabilities in terms of materials, facilities, and manpower, that failure to provide resources in one form frequently merely increases, sometimes very disproportionately, the amount of resources that must be provided in another form.

For example, a reduction in the economic aid proposed for Europe would necessitate over the long term a substantial increase in the military-equipment program, an increase which might greatly exceed the amount of the reduction.

Conversely, a significant cut-back in the military-equipment program would require a step-up in the economic program. The real task, therefore, is to strike a proper balance between the two so that for a specific amount of total assistance, we achieve the largest increment in total European strength.

This cannot be done if we separate each form of aid into separate isolated compartments. Our objective everywhere should be to capitalize, by a careful selection of types of aid and techniques, on the particular capabilities of a country with the minimum net demand on our own wealth.

It is essential, in selecting the forms of aid to be provided, and in the allocation of different types of resources between United States requirements and competing foreign claimants, that we undertake these tasks against the background of world-wide plans and through machinery which assures that the available quantities of each type of resource will be employed so as to produce the largest possible increment in the security of the free world.

These things will be difficult to do under any circumstances, and they will patently be impossible of accomplishment if we treat this program as a series of unrelated and separately administered undertakings, each devoted to providing one particular type of resource for only one segment of our total objective.

Our efforts to create military strength in critical foreign areas, and particularly in the North Atlantic Treaty area, are part and parcel of our own national security program.

This relationship is also close in the case of other forms of aid because we are dealing with personnel, materials, and equipment for which combined foreign and domestic demands exceed availabilities.

Consequently, sound judgments as to those domestic and foreign programs which should be emphasized presuppose a broad examination of our total security requirements rather than the kind of disjointed and parochial approach which is inevitable if each foreign-aid project is considered in isolation.

A final advantage of the single program is the opportunity which it affords to the executive branch, to the Congress, and to the American public to gain a clear appreciation of the full scope of our foreign-aid activities.

A major question concerns the extent to which we should rely upon existing legislative authority. The preparation of wholly new legislation is a long and complicated affair in which it is difficult, in spite of the most able and meticulous draftsmanship, to deal with all the problems which require treatment, or to do so in a way that will obviate the subsequent development of major issues of interpretation.

Consequently, if we can, by simple amendments, use existing laws for the Mutual Security Program, such a course would have many advantages. Their scope and meaning are clear and understood by all concerned; they have, in general, met the test of experience; and a large number of people in this country and abroad are familiar with the procedures which have been developed for their administration.

Moreover, perhaps 50 rather elaborate international agreements have been negotiated under the authority of these laws and have proved to be satisfactory instruments for our dealings with other countries.

I believe that a partial inventory at this point of the legislative amendments which we propose will provide a useful background during the remainder of these hearings. They fall into three principal classes:

(1) those which give concrete recognition to the fact that the Mutual Security Program is a single program with several interdependent and mutually supporting elements; (2) those which increase the geographic coverage of the Mutual Defense Assistance Act, the Economic Cooperation Act, or the Act for International Development; and (3) those which amend provisions in the foregoing laws which are not entirely adequate to meet a number of current problems.

We have prepared a new statement of purposes which embraces the total objectives of the Mutual Security Program and which modifies, to the extent that they are inconsistent with the objectives of the MSP, the purposes originally set forth in the Mutual Defense Assistance Act, the Economic Cooperation Act and the Act for International Development.

The new statement emphasizes the primary need for strengthening the collective defenses of the free world and the importance of developing the resources of the free countries both as a foundation for military strength and in order to increase their ability to resist internal aggression. It recognizes that, in Europe, economic recovery need no longer be given a priority over efforts to increase military strength.

The new legislation should also recognize that no one can foretell the exact course of events during the next 12 months and that the pattern of assistance which we are presently proposing may therefore need to be somewhat modified if it is to be responsive to changing requirements.

Consequently, there should be authority to utilize a small portion of the funds which may be authorized for a particular type of assistance in one geographic area for the purpose of increasing the amount of the same form of assistance in some other part of the world.

In the fluid state of current affairs, new emergencies may develop, and we must be in a position to respond to them quickly and forcefully.

Experience with the Mutual Defense Assistance Act has already demonstrated the importance of this type of flexibility. Specifically, we suggest that not to exceed 10 percent of the amount made available by Congress for a specific form of assistance in any one region should be available to provide the same form of assistance in other regions.

In Europe, where the interrelationship of military and economic aid is close, we recommend that a limited portion of the amount appropriated for economic assistance should be available to augment the amount appropriated for military assistance, and vice versa.

We should be in a position, if the opportunity presents itself, to capitalize to the maximum on European capabilities for raising forces and producing munitions, even though this requires the utilization of some of the funds which are presently intended for military end items. If an additional dollar of United States economic assistance will result in European military production of a value several times such amount, its use in this fashion certainly represents a better investment than its use for the procurement of military equipment in this country.

Several other changes are also needed in order fully to integrate existing laws into the concept of a single program. Some of these have to do with the use which may be made of local currencies received as an incident to the operation of any present foreign aid legislation.

We propose, for example, that any local currencies, regardless of the particular act under which they are generated, may be utilized to further the program as a whole. We also believe that Congress should explicitly authorize the use of counterpart to support the European rearmament effort.

Finally, in recognition of the fact that we are here dealing with a single, unified program, we recommend that the separate reporting requirements in each of the present foreign-aid laws be replaced by authority to file periodically under one cover reports concerning all of these operations.

The second class of problems to which legislative attention should be given derive from the need to extend certain types of aid to new areas or countries. Since these needs have been adverted to by previous witnesses and will be described in detail by those who will follow, I will simply list the more important of them.

They are: (1) Authority, upon a finding by the President that certain conditions affecting our security exist, to extend assistance to free countries of Europe even though they are not members of the North Atlantic Treaty or of the Organization for European Economic Cooperation;

This would, among other things, permit the provision of economic assistance to Yugoslavia. It would also, should this become important to the defense of the North Atlantic area, permit us to furnish military aid to a number of non-NATO countries with somewhat greater facility than is possible at present;

(2) Authority, again after a determination by the President that such action is important to the security of the United States, to employ 10 percent of the amount made available for military assistance to Greece, Turkey, and Iran, for the provision of this form of assistance to other nations in the near East;

We must have the ability to move rapidly in this crucial area if a situation arises in which military aid will further the cause of the free world;

(3) Authority to furnish a limited quantity of military assistance to other American Republics when assistance of this character will further the performance by them of specific missions which are important to the defense of the Western Hemisphere;

(4) Authority to make contributions to the United Nations Korean Reconstruction Agency, the organization through which the difficult task of rebuilding the economy of that war-ravaged country will be undertaken; and

(5) Continued authority to contribute a limited portion of the amount made available for economic assistance for the support of technical assistance programs to be carried out through the United Nations and the Organization of American States.

The third class of problems requiring some form of legislative action arises from the inadequacy of certain provisions in existing foreign-aid statutes.

In the first place, we have reached the point where we should raise the present limitation, contained in the amended Mutual Defense Assistance Act, on the value of excess materials which may be transferred as grant assistance without charge to military assistance appropriations. The present limitation, based, as it was, on the availability of excess equipment in relation to requirements as of some 12 months ago, is no longer realistic.

A somewhat comparable problem has arisen in the administration of the reimbursable aid provisions of the Mutual Defense Assistance Act. The present law permits the United States Government to place military procurement contracts on behalf of other governments, but limits the unliquidated value of such contracts which may be outstanding at any one time to \$100,000,000. Inasmuch as the Canadian Government, which is paying cash for all the equipment which it must obtain in the United States, while at the same time making substantial grants of military equipment to other NATO forces, has requirements which are three or four times in excess of this sum, this limit should be raised. We propose that it be fixed at \$500,000,000.

The present reimbursable aid provisions have also confronted us with another problem which was not foreseen when they were rewritten in the summer of 1950. At that time, the original law was amended so as to permit reimbursable assistance to any nation which is not eligible to join established collective defense arrangements but whose ability to defend itself, or to participate in the defense of the area of which it is a part, is important to the security of the United States.

In the case of any such nation, the transfer of equipment must be preceded by adequate assurances that the equipment is required for, and will be used solely to maintain, its internal security or legitimate self-defense, or in order to permit its participation in area defense. These safeguards were, and remain, important. However, they overlooked the possibility that certain nations would need to purchase United States equipment in order to participate in collective United Nations actions. They have thus sometimes prevented the use of this form of reimbursable aid to furnish supplies required by foreign units under the United Nations command in Korea. We believe the reimbursable aid provisions should be amended so that we can meet this type of situation in the future.

Another important problem which should be dealt with in the new legislation is that of acquiring local currency which is necessary to carry out foreign-assistance programs in the Middle East, south Asia, and the Far East, or which is needed to provide the local currency expenses of increasing the foreign production and availability of materials in which the United States is deficient. This complicated problem will be fully covered by subsequent ECA witnesses.

There are also a number of problems of a primarily technical nature which deserve congressional attention. One results from the

fact that the North Atlantic Treaty Organization has certain expenses toward which each of the participating governments must contribute. These include the expenses of SHAPE, the Council of Deputies, the Defense Production Board, and other agencies of the treaty. While the present Mutual Defense Assistance Act unquestionably provides the authority for United States contributions for this purpose, it seems desirable to make this authority more explicit.

Another problem relates to the transfer of patents and know-how which are frequently essential to the initiation of military production abroad. Still other problems concern the hiring, security clearance, and compensation of personnel who are needed to administer the program.

The requests, as submitted to you, represent the culmination of nearly a year's concerted work in the executive branch. This work has included: Determinations as to requirements; the screening of requirements against availabilities; a series of judgments concerning the relative importance of various regions and countries; and the development of illustrative programs of assistance. The product reflects the best judgment of all agencies concerned with respect to the amounts and types of aid which should be furnished. I should stress, however, that the aid proposed will not fill requirements because these requirements exceed the resources which we can presently make available to meet them. Consequently, we have done all the pruning that seemed possible without destroying essential activities.

I want to reemphasize that those of us who have developed this program do not claim omniscience. We are certain that our experience in tackling specific problems and the occurrence of events which we cannot now foresee will necessitate some variations in our present, illustrative programs. It is this factor of future uncertainty which underlines the need for some flexibility in transferring funds among areas and, in certain instances, between economic and military assistance.

It should be noted that the expenses of administering the entire program, including expenses incident to United States participation in international security organizations and expenses of domestic programs under the act for international development, would, under our proposals, be taken out of the sums which we have proposed for the European area.

All funds for economic assistance in the European area, including assistance to further European military production, is included in the \$1,675,000,000 which we propose should be administered under the provisions of the Economic Cooperation Act. I point this out because, in the past, funds for increasing munitions production abroad were authorized and administered under the Mutual Defense Assistance Act. Subsequent witnesses will explain the reasons for, and the consequences of, this change in approach.

Finally, I want to stress that it is absolutely vital that unexpended balances of prior appropriations should continue to be available. These balances have already been fully programed, and are in varying stages of use. The programs which we are now proposing fit onto, and assume the completion of, the projects and activities for which these balances have long since been earmarked. Failure to provide this carry-over would simply necessitate an increase in our present request by the estimated amount of these unexpended sums.

II. ORGANIZATION OF THE PROGRAM

I turn now to the general question of organization, and I wish I could offer you an easy, uncomplicated answer. On the contrary, I am forced to admit that in my many years of business experience I have never encountered an inherently more difficult problem. There is no simple answer because the conduct of foreign aid, no matter how you view it, is intrinsically complex.

The problem is how to use the administrative resources of the United States Government to achieve at minimum cost the security which is the over-all objective of our whole foreign policy. To get a maximum increase in our own security from the money spent under this program will require many skills and much wisdom.

This is a matter which has aroused wide public interest. A number of important studies have been made and thoughtful proposals advanced. I shall try to make clear what we propose and why we think the plan we are recommending is better than the alternative proposals. No doubt some of the alternatives would be workable, but our proposal has the advantages that it is proven by experience and that it is based on a logical analysis of the factors involved.

Briefly, the plan of organization proposed to administer this program is as follows:

First. The administration of each form of aid will be the responsibility of an operating agency especially equipped for and experienced in that particular activity. For military aid, this will be the Department of Defense. For economic aid to support a defense effort, it will be the Economic Cooperation Administration. For aid in underdeveloped areas, to countries where the economic program consists primarily of technical cooperation and where the capital for essential economic development can be supplied without substantial United States grants it will be the Technical Cooperation Administration in the Department of State. For those underdeveloped areas where the United States program is primarily grant aid to finance needed capital development, ECA will administer the program.

Second. The Secretary of State will be responsible for providing leadership and coordination to the program to make sure that its different forms are mutually supporting and are coordinated with other foreign policies and programs.

Third. An Interagency committee, the International Security Affairs Committee, of which I am presently chairman, will serve as a forum in which a balanced governmental judgment will be arrived at to guide the activities of the operating agencies.

Fourth. Each operating agency will operate in the field with its own personnel or missions, who will work in close unity under the general guidance of the Ambassador in each country to assure that we speak with a single voice abroad.

Fifth. Certain programs will be administered by special international agencies of the United Nations and other international organizations rather than by agencies of this Government.

The basic premise in developing our organization, as you can see, is that we should use existing facilities and experience. The plan follows that now in effect which dates from December 19, 1950, when a memorandum approved by the President established my office.

Past experience has certainly demonstrated that the actual operation of either military or economic aid—the mechanics of laying out a detailed program, of procurement or the financing of procurement, and the follow-up on the use made of the aid—is a specialized job that requires a specially equipped operating agency which can give full attention to it.

Determination of arms needs is a military determination and must be done by military men. Arms procurement and military training are also jobs for military men and should be the primary responsibility of the Department of Defense, as they have been under previous military aid programs.

Similarly, the ECA has done a very commendable job in carrying out the Marshall plan. It has an effective team trained in economic and production problems and has a great fund of information on European production and capacities. To lose or impair the usefulness of this team would set back the effectiveness of the economic aid portion of the mutual security program by many months.

The basic problem of organization is how to tie together military aid and economic aid so that they will complement each other in operation and give most effective support to our total foreign policy. The primary objective of military aid is to arm and train the forces of friendly nations. Military aid has been the responsibility of the Departments of Defense and State. The primary objective of economic aid has been to promote economic recovery and economic development. The greatest part of our economic assistance has been administered by ECA. Now most economic aid for Europe will be directed toward the objective of increased military production, and to help sustain economies strained by stepped-up defense effort.

Increased European military production is of great importance to the American taxpayer. This increase is unlikely if we do not enforce the policy of eliminating from arms aid those items which can, within a reasonable time and at reasonable cost, be produced in the recipient country. No country is likely to go to the trouble and expense of producing what it can get from us free of charge. Therefore, when the arms requirements of a country have been determined, they are screened so we will not furnish items which should be produced either in the recipient country or a neighboring country. When necessary, economic aid is adjusted to help the recipient carry the added burden of producing, or buying from its neighbor, items screened from the military aid program.

It is evident that we cannot carry out this policy and get countries to build up their own production unless the arms and economic aid programs are coordinated. The logical place for coordination responsibility is in the Department of State, where the two programs meet and where each must of necessity be coordinated with the over-all foreign policy of the Government.

The position of our ambassadors and their relations with the Secretary of State require that we have a coordinating responsibility for aid if the Ambassador is in fact to have a primary role in the relations with the country to which he is accredited.

The need for either military aid or economic aid depends on the part a country is expected to play in the mutual security plans, the size of the forces it should maintain, the mission of these forces and the political and economic factors which condition its efforts. Judgment

cannot be made solely on military or on economic or on political grounds. It must embrace all of these. It must be a composite judgment to which the Defense Department, the State Department and the ECA all contribute.

Foreign aid must also be judged in relation to other instruments of our foreign policy. All aid can be useful in determining the courses recipient governments will take toward mutual security, including larger defense budgets, forces and production. The United States does take into account the willingness of other governments to make their own contributions to mutual defense.

These contributions take many forms in the economic, political and military field—not all directly related to the mutual aid program. We must use our total effort, including our aid programs, effectively and avoid exhausting it on objectives of low priority. To do this, our negotiations must be coordinated so that all aspects of our relations with the recipient country harmonize with and contribute to our general foreign policy objectives, particularly in the international security field. Often our aid programs are in large part designed to supply the United States contribution to the collective security effort, the nature of which is determined through multilateral negotiations in NATO or some other international body.

Although the total of aid is used for the total of our objectives, one cannot first determine the total and then divide it between military and economic aid, for economic and military aid needs are determined by entirely different processes and have different significance. Primarily, the process of determining military aid is to determine what arms are needed for the forces committed to our mutual security and when these arms will be needed. The timing of appropriation and obligation of funds for arms is different from the timing of deliveries of arms. This is due to variable time between placing the order and getting delivery of items of varying complexity. It is thus not feasible to allocate arms aid at the time of obligation in the same manner as with economic aid.

Military aid and economic aid have a quite different significance per dollar. In fact, we have not told recipients the dollar value of military aid. Some items from surplus are valued at a small fraction of the cost of similar items from new procurement. To bargain with military aid on a dollar basis would jeopardize our whole security program. We cannot afford to deny weapons to forces which desperately need those weapons. To do so would sacrifice our own security.

Military aid and economic aid must be considered separately but related each to the other. A composite judgment is necessary to get maximum effectiveness in support of national policy. Although the Department of State will be charged with the responsibility for coordination of aid under the proposed Mutual Security Program, this does not imply direct control. It is expected that aid will be coordinated through the International Security Affairs Committee, on which the three agencies—Defense, State, and ECA—will be represented (also, Treasury and Mr. Harriman's office).

Agreement in this committee must be unanimous. Failing agreement, matters can be referred to the Cabinet level, or to the President. Actually, experience of the last 4 months has shown a remarkable degree of unanimity in the committee. The committee has, in

fact, been able to resolve its problems without reference to the President.

A relatively small but quite important element of the Mutual Security Program is economic and technical aid to the underdeveloped areas. The purpose of this part of the program is to build strength in those areas by helping the peoples to make progress toward a more stable and productive society. This is as truly a phase of mutual security as military aid or economic aid to support a defense effort.

This activity requires an organization which can furnish technical advice and assistance in dealing with the problems of farm and village life predominant in those areas. We have such an organization created especially for this purpose in the Technical Cooperation Administration which has been set up to administer the point 4 program. ECA missions in the Far East are carrying on programs with essentially the same purpose. The distinguishing feature between these two phases arises from the varying ability of the countries concerned to supply capital for economic development.

In some areas development capital is available from local sources, from outside private investment, or from public lending institutions, such as the Export-Import Bank and the International Bank. In those countries the form of organization required is one which can lay out jointly with the country authorities an effective economic development program and can then supply the essential ingredient of technical know-how. In other countries an organization is required which is able to administer supply and construction activities on a considerable scale in addition to the foregoing. As a general rule, TCA will administer the underdeveloped areas program in the former countries and the ECA in all other countries.

It has been suggested by some who have studied foreign aid that our program should be administered by a single agency. This sounds attractive. We all know that a single authority is usually the best way to get things done. However, we must bear in mind that a major part of this program involves three elements, three skills and three responsibilities—military, economic and political—which are presently in three different departments of the Government. If authority were vested in a single agency, it would still be necessary to coordinate the three elements. It is hardly conceivable that the program could be run without coordinating it with the work of the Departments of Defense and of State and with the ECA; and the Treasury Department must concern itself with the effect of the program on finances. However we organize, it would be necessary to coordinate the work with several agencies besides that responsible for operations. A coordinating committee would exist, in fact, whether formalized or not.

At the start of the Mutual Defense Assistance Program in 1949, it was recognized that military and economic aid were a means toward our foreign policy objectives, and Congress established the central responsibility in the President, who designated the Secretary of State to coordinate and give central leadership. The close relationship of our aid to our participation with other nations in the North Atlantic Treaty Organization and in other collective security arrangements was obvious. Now that NATO has become established with its Council of Deputies in permanent session under the chairmanship of Ambassador Spofford and with permanent boards concerned with economic, military, and production problems, it has become necessary to coordinate

our participation in these activities which are the concern of several departments of our Government. These activities are, of course, closely related to our aid programs. In Europe, the United States representatives have also needed coordination and the European Coordinating Committee (ECC) has been established.

In order to show you the relationship of these various United States committees and of the NATO bodies with which they deal, we have prepared some charts, and with your indulgence, I beg leave to show them to you.

I am sorry, Mr. Chairman. They are behind your head. May I refer to these charts now, and you will have to turn around, I am afraid.

Chairman RICHARDS. Yes, sir.

Mr. CABOT. The first chart shows the present organization of the NATO. I do not want to imply that this is necessarily the final organization. There have been several recent changes since I came to Washington, but I might go through this with you.

At the top we have the Council itself, which sits either as the Foreign Ministers or Defense Ministers, or other ministers, as appropriate. That Council, as you know, is not in permanent session. It has ordinarily met several times a year, but has not yet met in this calendar year. We have hopes that we can have a meeting in the next few months.

In permanent session under the Council is the Council of Deputies, and it is under the Council of Deputies that most of the problems on which we need international agreement are now handled. Ambassador Spofford is the American representative on the Council of Deputies and its chairman.

Under the Council of Deputies we have a number of permanent committees. I will take them in this order:

First, the Defense Production Board, of which Mr. Batt is the American member. Under this Defense Production Board there is a staff of people who serve in an international rather than a United States capacity. The head of that staff is Mr. Herod, former president of the International General Electric Co., a businessman with great skill in the field of production. The staff is recruited from the member nations.

The Military Committee, which is, of course, of great importance, consists of the 12 Chiefs of Staff of the 12 members of NATO. It obviously can only meet very infrequently. In permanent session, however, here in Washington in the Pentagon, is a standing group which is a sort of Executive Committee of the Military Committee. That standing group represents the United States, the United Kingdom, and France. The nominal members are the Chiefs of Staff of those three countries. Actually, it meets, however, as the Deputy Chiefs of Staff, namely, Vice Admiral Wright, of the United States; Air Chief Marshal Elliott, of the United Kingdom; and Lieutenant General Ely, of France.

I might in passing point out that this is the top military body in permanent session and is the source from which General Eisenhower and SHAPE in Europe get direction. It gives military advice to the Council of Deputies, which is also in permanent session, and gets in turn political advice from the Council of Deputies.

There is also here in Washington the Military Representatives Committee, through which eight of the other nine governments in NATO take part in this military planning.

In Paris NATO has a Financial and Economic Board, which has recently been set up. It is only now getting organized under a French chairman, and Ambassador Wood is United States representative.

Mr. VORYS. Would you stop there and tell us what that Financial and Economic Board does compared with OEEC, and so forth?

Mr. CABOT. Certainly, Mr. Vorys.

Presently the Financial and Economic Board is making studies of the economic impact on the members of NATO of the defense effort--of getting into proper military posture. This task is what we call the burden-sharing exercise. We expect it will make recommendations to the Council of Deputies and give facts to the Council of Deputies which will enable the Council of Deputies to discuss burden sharing.

The FEB is in a sense an inner circle within OEEC, which in the past considered how the countries of Europe could best use United States economic aid and in general coordinated European economic recovery. The two have no direct relationship to one another, however, and OEEC covers 16 countries, of which only nine are members of NATO.

Mrs. BOLTON. Mr. Chairman, will the gentleman yield?

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. I asked certain questions of Mr. Foster which he was kind enough to submit answers to in letter form. Those have been put into the record, Mr. Vorys, with the history of this particular Financial and Economic Board. It is in the record, Mr. Chairman. (See pp. 167-168.)

Chairman RICHARDS. You mean the questions you asked yesterday?

Mrs. BOLTON. Yes. They referred entirely to this, and the answers take a little different slant from what the gentleman said.

Chairman RICHARDS. We would like to hear Mr. Cabot on that.

Mrs. BOLTON. Of course, but I am just advising you that it is in the record.

Chairman RICHARDS. I am glad you told me about that, Mrs. Bolton, because we were interested in that particular point yesterday.

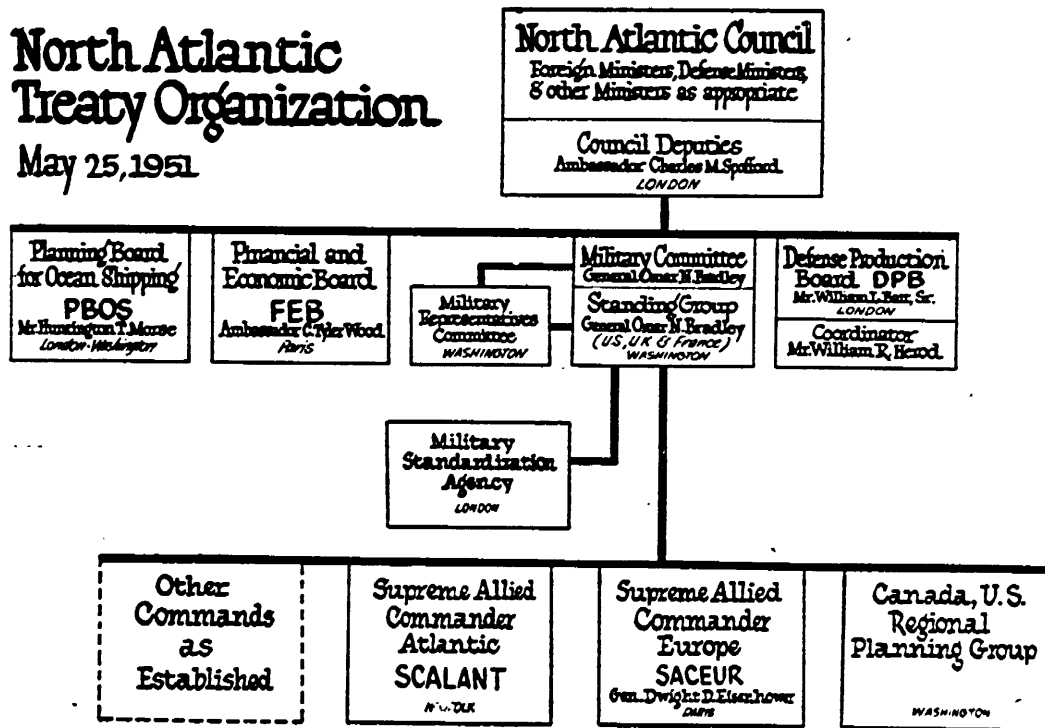

Mr. CABOT. Mr. Foster could no doubt tell you in greater detail of the work of the FEB, because that is really a primary responsibility of the ECA, that being the agency of our Government charged with administering United States economic aid to Europe and Ambassador Wood is, in fact, an ECA man.

Then we also have the Planning Board for Ocean Shipping, which I think describes itself. It plans the problems of shipping, which will be so important in case of war. The Military Standardization Agency I do not think I need to dwell on since its title describes its function. Most important, of course, of the organizations which we are reviewing is General Eisenhower's command in Europe, but we must not forget there are other important organizations used in the NATO defense effort.

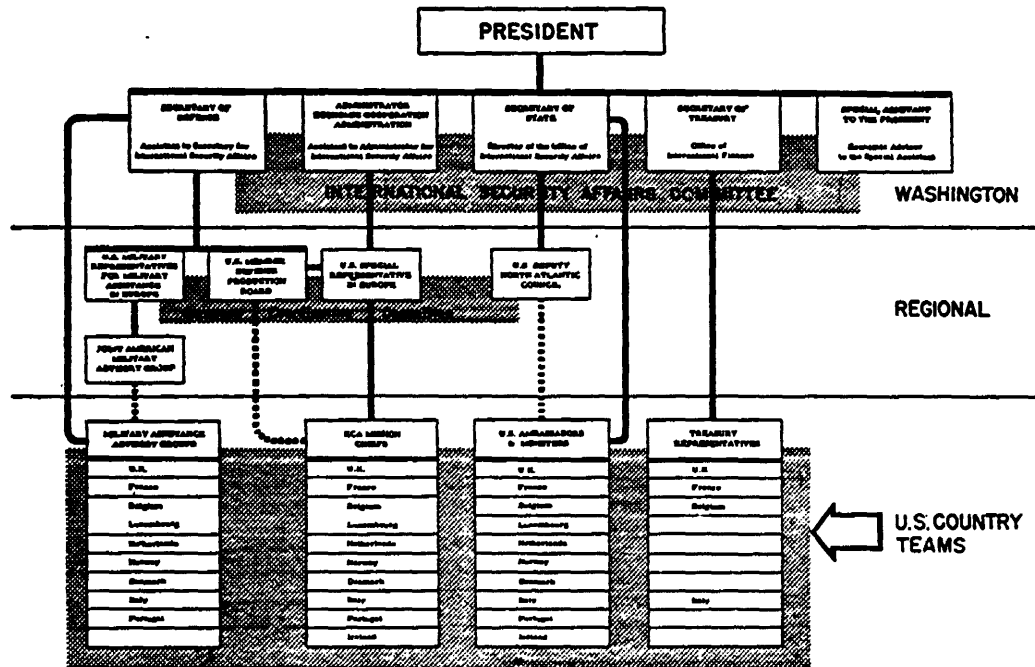

I think that next one is wrong on the chart. It should be SACLAN'T, which will be headed by Admiral Fechteler if his appointment is confirmed.

THE MUTUAL SECURITY PROGRAM

There is the Regional Planning Board for the North American Continent. Later we may have further commands under NATO. Would you like me to pause for questioning on this chart before I proceed to the next one?

Chairman RICHARDS. Are there any questions about that chart?

Mr. SMITH. Is there any sound reason why these agencies should be located in one central place, rather than have them scattered all over the world?

Mr. CABOT. There are plenty of reasons why they should, and there are also reasons that make it difficult to accomplish that. I think there are a good many advantages to having them somewhat scattered.

Mr. JUDD. I am a little puzzled by your description of burden sharing. You said the FEB's business is to deal with burden sharing, which of necessity consists largely of how to divide up American aid.

Mr. CABOT. Correct.

Mr. JUDD. That is, they decide how to divide up what they get as the result of our carrying the burden? I do not quite figure out how that is sharing the burden? That is sharing the loot. It seems to me somewhat of a misnomer to call it burden sharing. Only one is carrying the burden. Why do you not say "aid sharing" or something like that instead of burden sharing?

Mr. CABOT. It is certainly not expected that the United States will be the only nation which will give aid. The standard of living, as you know, is far lower in Europe than it is in the United States, and therefore it is to be expected for some time the United States will be the major Nation in providing aid to the other members of NATO; that is, to its other partners.

Mr. JUDD. Well, is its ultimate function to try to do what the name says, that is, share the burden, or is it just to divide up the aid? The two things are quite different. You use one name for another process.

Mr. CABOT. I do not think there is an exact difference, is there, Mr. Judd, between dividing up the aid of giving countries and the sharing of the burden among the whole 12 partners? It seems to me they are part of the same general concept.

Mr. JUDD. It seems to me burden sharing would be how to divide up the carrying of the burden, and not how to divide up the results of the burden that is being carried by one nation.

Mr. CABOT. I think it is how to divide the carrying of the burden. Yes; how carrying the burden will be an aid to the other countries.

Chairman RICHARDS. Mr. Cabot, did you finish your prepared statement?

Mr. CABOT. Yes; I did.

Chairman RICHARDS. I was following your statement orally, but I was not following you on your paper. You have finished your prepared statement?

Mr. CABOT. Yes, sir.

Chairman RICHARDS. If you will, will you go ahead and proceed with this other chart, because we will have to go down on the floor soon. We will question you a little later on that.

Mr. SMITH. I have something on administration, Mr. Chairman.

Chairman RICHARDS. Do you want to question him on this chart?

Mr. SMITH. Yes.

On the question of overseas administration of the security program, Mr. Batt—and we saw him when we were on our trip—I understand, is chief of our ECA mission in the United Kingdom, and he is also our United States representative on the Defense Production Board of NATO. That is correct, is it not?

Mr. CABOT. That is correct.

Mr. SMITH. As I understand it, Mr. Batt has two separate offices, one in London and one in Paris.

Mr. CABOT. No, sir. I do not believe he has any office in Paris. If so, I have not heard of it.

Mr. JUDD. It is two offices in London.

Mr. SMITH. He has two offices in London?

Mr. CABOT. That is correct.

Mr. SMITH. What can be the purpose of that?

Mr. CABOT. Because he has two duties. One is as ECA Administrator for England and the other is as United States representative under the Defense Production Board. The international agency has an office in London, as does ECA.

Mr. JUDD. There was an announcement, I think last November, that ECA aid to England had ended.

Mr. CABOT. The ECA mission to England has not ended because it has many duties. First of all, it has the distribution of the aid still in the pipeline, and also ECA is still the claimant agency on supplies, and has various other economic functions in England.

Chairman RICHARDS. We will go to the next chart if you have finished with that one.

Mr. CABOT. Yes.

Chairman RICHARDS. I would suggest to the members of the committee that I do not think we ought to suspend hearings this early this morning. We could drop down and answer the roll call, since it is a quorum call.

Mr. JUDD. Why do they not tell us when they are in the well, and in 5 minutes we can all go down and come right back.

Chairman RICHARDS. Suppose we do that. Mr. Crawford, will you let us know, and then we will come back if it is not too late.

Mr. CRAWFORD. Yes, sir.

Mr. CABOT. This chart, Mr. Chairman, shows the United States organization. The previous chart showed the international organization, and this shows the United States organization by which we handle the Mutual Security Program and also handle our relations with NATO, and the other countries with which we are cooperating to increase our mutual security.

I would start, if I may, at the country level. We have in each of these countries a United States team. It naturally divides itself into several parts. The head or the leader of the United States team is our ambassador in each of these countries. We might, for instance, take France. Ambassador Bruce, of course, is our Ambassador to France. We also have an ECA mission chief in each of these countries. In France it is presently Mr. Parkman.

We also have military teams. We call them the MAAGS—military missions or military assistance advisory groups—the head of the MAAG in France is now General Richards. In France, but not in all of the countries, we also have Treasury representatives.

I wish to point out that these officials have different functions: the ECA chief being charged with the economic aid; the military assistance advisory groups being charged with development of the military programs which, of course, they do in consultation with military people of the country to which they are accredited; and the ambassador being charged with our over-all foreign-policy relationships with these countries.

Mr. VORYS. What are the Treasury representatives doing?

Mr. CABOT. They deal with the financial relationships between certain of these countries and the United States.

Mr. VORYS. What financial relationships? What function do they have separate from ECA?

Mr. CABOT. The Treasury carries on continuous observation of the finances of these countries and is, of course, also interested in the effect of their financial position on the over-all finances of the United States. The Treasury has representatives in a number of countries, including four of the NATO countries.

Chairman RICHARDS. Does the Treasury have anything to do with the use of counterpart funds in ECA, whether it is to retire the public debt of those recipient countries, or anything like that?

Mr. CABOT. No, sir. I do not believe that the Treasury does, except insofar as they might give advice to the ECA, which they might well do through the International Security Affairs Committee or through the National Advisory Council.

Chairman RICHARDS. But primarily then the Treasury is an adviser on the financial status of the recipient country as related to the United States position?

Mr. CABOT. That is correct.

Mr. HERTER. Is it not true in Paris that Dr. Tomlinson advised in financial matters the Embassy, the Paris ECA, and the regional office of ECA; that is, all three?

Mr. CABOT. That is correct. He is in an advisory capacity.

Mr. HERTER. All of the American agencies in Paris, and he happens to be a very valuable and skilled man there; but there are a limited number of Treasury men abroad.

Mr. CABOT. That is correct.

Mr. MANSFIELD. If the gentleman will yield, I would like to say too that the Treasury man in Brussels impressed us very much with his wide grasp of the situation.

Mr. HERTER. A very able man.

Mr. VORYS. Is he on the payroll of the United States Treasury? I thought all those things are things ECA was supposed to be doing.

Mr. CABOT. I believe he is on the payroll of the United States Treasury, Mr. Vorys.

Mr. RIBICOFF. This problem of the Treasury is a lot bigger than just the question of the ECA mission or military assistance. In other words, the Treasury representatives were in these countries before ECA was started. Is that not correct? This is a continuing part of the way we carry out foreign relations. You certainly cannot carry it out unless you have the Treasury coming into it with international trade, the loans involved, and so forth. That is my understanding of what the Treasury does.

Mr. CABOT. I believe that is correct.

Mr. VORYS. I thought, for instance, we used to have Department of Commerce representatives all over the world. We quit that because we were just going to have one mission in each place. Now, I frankly did not know that we still had Department of Treasury representatives scattered over the world. Are they under our ambassadors?

Mr. CABOT. They are advisory to our ambassadors. The exact relationship that they have to the Treasury in Washington I cannot tell you. I do not know.

Mr. MANSFIELD. Mr. Cabot, you could get that information for us, though, and give us a detailed analysis of the positions of the Treasury representatives in these four European countries?

Mr. CABOT. I would be glad to, Mr. Mansfield.

(The information referred to appears in the appendix.)

Mr. SMITH. How many men are employed in this program, Mr. Cabot, at home and abroad?

Chairman RICHARDS. What program is the gentleman talking about?

Mr. SMITH. This mutual assistance program in these various agencies or departments?

Mr. CABOT. That would be a hard question to answer, because you would have to define whether you mean full-time on the Mutual Security Program, or whether they deal with it in connection with other duties. The total staff abroad I could not tell you.

Mr. SMITH. How many do you have here at home?

Mr. CABOT. There again you have the same problem, because many of us deal with many problems other than the Mutual Security Program.

Mr. SMITH. There is an overlap then of responsibility and duties?

Mr. CABOT. That is correct.

Mr. VORYS. You said "many of us." Do you have duties other than being Chairman of the Coordinating Committee of ISAC?

Mr. CABOT. No, sir. That is my duty. My job really divides itself into two parts, however. I am the backstop for Ambassador Spofford in London, so that the United States Government will speak as one voice to him so far as it can, it being an interdepartmental operation; and I have responsibilities with respect to the aid programs to see that they are properly coordinated.

Chairman RICHARDS. In line with what Mr. Ribicoff said, you or your organization avail yourselves of the normal facilities of the United States Government, let us say, the Treasury, Agriculture, and any other departments that have representatives abroad. That is correct, is it not?

Mr. CABOT. That is right.

Chairman RICHARDS. Go ahead, sir.

Mr. CABOT. Now I will deal with the regional level.

These agencies at the country level have their counterpart at the regional level. I might explain that for military and economic programs it is necessary that they be related, one country to an adjoining country. For instance, it would not be good policy for the United States Government to give end-item aid to a country where those end items could be purchased in an adjoining country either quickly, cheaply, or effectively.

Inasmuch as the country mission would not probably have knowledge of the adjoining country, our programs are screened at the regional level.

At the regional level the leader of the team is Ambassador Spofford. He is also Chairman of the European Coordinating Committee, which I referred to in my prepared statement.

The top economic man is Ambassador Katz in Paris, and, as you know, his resignation is now pending.

On the production front Mr. Batt is the American representative, and the military representative is General Handy, now in Heidelberg.

Under General Handy is General Kibler in London, who screens these programs at the regional level. The programs then are referred to Washington. In Washington the military programs are handled by the Defense Department and the economic problems by the ECA; and they are coordinated through our Committee.

Of course, the President has the final say on all of these matters.

The representatives on our Committee of these various departments are General Burns for Defense, Mr. Halaby for ECA, Mr. Hebbard for Treasury, Mr. Gordon for Mr. Harriman's office, and I chair the Committee for the Secretary of State.

If there are no more questions on this chart, sir, I will turn to the last chart, which is a simple one and simply shows how our committee is organized.

Mr. JAVITS. Could I ask one question on this chart?

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. What is the top authority in the United States on the Mutual Defense Assistance Program comparable to the Administrator of ECA in the economic program?

Mr. CABOT. I do not think I could say that there is a top other than the President, who has authority in the Mutual Security Program.

Mr. JAVITS. I said the Mutual Defense Assistance Program.

Mr. CABOT. Oh, you mean the military part?

Mr. JAVITS. Correct.

Mr. CABOT. The top authority there would be the Secretary of Defense, of course. Under the Secretary of Defense there is an office under General Burns which concerns itself with all military foreign aid. The actual programing is under General Scott.

Mr. JAVITS. But there is no person comparable to the Administrator of ECA who is the Administrator of the Mutual Defense Assistance Program?

Mr. CABOT. Not exactly comparable, Mr. Javits.

Mr. JAVITS. Thank you very much. That is what I wanted to know.

Mr. JUDD. If I may interrupt there for just a moment, on page 17 you say there are these three jobs, the military aid, the economic aid, and the technical assistance. One is in Defense, one is in ECA and one is in the State Department. They are all part of one program.

I am still not sold on the argument that it is not advisable to have one operation with three parts, correlated with Defense and State and the rest of the Government. You have three parts of one program. That is where the fundamental integration ought to be, in one agency, it seems to me.

Mr. CABOT. That could, of course, be done, Dr. Judd. I am not for an instant suggesting it could not. I am only pointing out if that is done you would also have to coordinate.

Mr. JUDD. Certainly. You would have one top man who would be head of the Mutual Security Program. It would have three parts, the military, the economic, and the technical assistance.

Mr. CABOT. He, however, could not issue orders to a member of the Department of Defense, except if the President designated him to do so.

Mr. JUDD. No. That is right. He cannot issue orders to the technical assistance business now.

Mr. JAVITS. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. JAVITS. Neither can ECA issue orders to the Department of Commerce or anybody else, but they still have a top man running the show. That is what I think Dr. Judd and I are after.

Mr. JUDD. That is right.

Mr. MANSFIELD. Mr. Chairman, I think the answer in part to Mr. Javits' question lies in the fact that under ordinary circumstances the ECA, a foreign aid program, would have gone through the Department of State, making the Secretary the head of it; but it was created as an independent agency, giving the Administrator a great deal of power. If you want to make a comparison I would have to agree with Mr. Cabot that Secretary Marshall would be a similar head to Mr. Foster in the ECA, on the military aid program.

Mr. CABOT. Thank you, Mr. Mansfield.

Mr. VORYS. Mr. Foster has just a claimant agency. Is that not right? He does not buy anything? He does not order anybody in this country to do anything. He does not procure.

Mr. MANSFIELD. No, but does he not make use of the Government agencies in existence for procurement purposes?

Mr. VORYS. Yes. Of existing agencies.

Mr. MANSFIELD. So that you have that same situation coming up again of this correlation or coordination, or lack of oneness you have been trying to bring out in your testimony.

Mr. JAVITS. Might I say that might be good? All I think we ought to do is pinpoint the situation, so that we know what we are dealing with.

Chairman RICHARDS. Let us go into that a little later. Mr. Cabot will sit down directly and we will all ask him questions about that.

Mr. FULTON. Could I have one question?

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. There is a liaison with Greece and Turkey. As you said, obviously they are outside the NATO countries. Where does that liaison fit in on your chart?

Mr. CABOT. Do you refer to liaison with the governments of Greece and Turkey?

Mr. FULTON. Yes.

Mr. CABOT. Or with the American teams in Greece and Turkey?

Mr. FULTON. Whatever the liaison is with those two countries. Just where does it fit in on your chart there?

Mr. CABOT. In Greece and Turkey, as in other countries, we have an Ambassador, a military mission and an economic mission. The liaison with the Governments of Greece and Turkey is through the heads of those missions.

Mr. FULTON. It does not come into your chart through you, under the Secretary of State?

Mr. CABOT. The Ambassador is, of course, the representative of the President, but receives his instructions ordinarily from the Secretary of State.

Mr. FULTON. So that in those countries you are actually operating just under the present diplomatic set-up without any change through this International Security Affairs Committee on this particular problem?

Mr. CABOT. The International Security Affairs Committee is a Washington coordinating agency. There is coordination in the country under the Ambassador, who is the leader of the team in each country.

Mr. FULTON. But on the Mutual Security Program you have no coordinating in Washington through the International Security Affairs Committee. It is done directly through diplomatic channels as to Greece and Turkey?

Mr. CABOT. Orders to the ECA mission chiefs are through an ECA channel; to the military mission through a military channel; to the Ambassador through a diplomatic channel. The coordination takes place both in Washington and in the country—in Greece or in Turkey—and also in the region through the European Coordinating Committee.

Mr. FULTON. With whom would they check in on your committee?

Mr. CABOT. Each checks in with his counterpart in Washington, because they have three channels of communication.

Mr. MANSFIELD. Could we have the other chart now?

Mr. CABOT. In further answer to the last question I would like to point out that Greece and Turkey are no different from other countries organizationally, except that we have no regional coordination for Greece and Turkey except through OSR.

This last chart shows how we organize here in Washington. We have a top coordinating committee. I have already given you the members of this committee, and under it we have five subcommittees: The Defense Production Group, dealing with production matters; the Foreign Aid Committee, dealing with the relation between economic and military aid; the Public Information Committee, dealing with information programs; the Financial and Economic Group, dealing with the economic problem; and, the Political and Military Group, dealing with the relationship between foreign policy and military policy.

Chairman RICHARDS. Mr. Cabot, I hope you can remain here a little while. We will have to suspend for a few moments to go down to the floor.

(Whereupon, at 11:40 a. m. the committee recessed until 11:50 a. m.)

Chairman RICHARDS. The committee will come to order, please.

Mr. Cabot, will you please continue your testimony?

Mr. CABOT. If I may, Mr. Richards, I would like to revert to the subject of burden-sharing which Dr. Judd raised. We were talking at that time of the FEB and, therefore, I adverted only to the economic aspects of burden-sharing but, of course, burden-sharing is a much larger subject, really. The Europeans are putting up a major measure of troops, and they are also providing the maintenance of those troops, and the individual equipment of those troops, and much of the hardware of those troops.

Then there is the subject of infrastructure which enters into the burden. Infrastructure is what the military people refer to when they are talking about the docks, and the communications, and the air fields, and so on, which are for the common use of forces of the cooperating countries.

This burden-sharing exercise will be finally studied in the Council of Deputies. One of the elements which goes into it will be the results of study by the FEB.

Mr. JUDD. Burden-sharing is the new word for what we used to call division of effort. Is that right?

Mr. CABOT. Yes, sir.

Chairman RICHARDS. Suppose we go around the table, Doctor. Are you through with that question?

Mr. JUDD. Yes.

Chairman RICHARDS. We will go around under the 5-minute rule. Mr. Gordon.

Mr. GORDON. No questions, Mr. Chairman.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. You have given us a lot of food for thought and explained the whole thing in one piece more than any witness yet.

Coming back to this baffling organizational set-up, you are called the Director of International Security Affairs; are you not?

Mr. CABOT. That is right.

Mr. VORYS. Do you direct anybody except your immediate office staff?

Mr. CABOT. Yes, sir. I have a considerable office staff which deals with the final screening of these various programs and the coordination of these programs. Actually, my staff divides itself into certain departments, which I might describe to you.

My deputy, Mr. Coolidge, you all know, and there are four assistant directors—Mr. Ohly, whom many of you will remember because he has been up before you on the two previous military aid programs. He is the Assistant Director of the Program and Policy Department. He is the head of the planning element of my staff.

Mr. Bell has charge of the program management and control. He is an assistant director.

Mr. Bingham is in charge of the non-European affairs; and Mr. Pittman is in charge of the European and NATO affairs on my staff.

We have to follow the activities in the various parts of the world in order to coordinate the aid programs with the over-all foreign policy of the United States, and thus I need somewhat of a staff.

I said earlier that I had no responsibilities other than in foreign aid programs. I do have one small additional responsibility, and that is in the Munitions Division in the Office of Security and Consular Affairs of the State Department, which receives policy direction and guidance from my office. Mr. Elliott runs that Division. It concerns itself with the licensing of the export of munitions and allied things, such as patents on munitions, and blue prints, and plans.

Mr. VORYS. Are you familiar with a bill that our colleague, Mr. Battle, has introduced, which would wish on to you individually the entire control of east-west trade through the iron curtain?

Mr. CABOT. I have read the bill. Yes, sir, Mr. Vorys.

Mr. VORYS. That bill was the product of some groping by our subcommittee in this maze of agencies. We found that there was nobody, that is no one person, responsible for what was going behind the

iron curtain from this country or other countries, and we wanted to pick out one person some place and give him that responsibility.

Under that bill, as you know, you would direct, and you would have statutory powers, that is, you yourself, and nobody but the President could do much about those powers.

What do you think about that?

Mr. CABOT. I think the bill is a very good bill. As to whether I should be the one to administer, I will have to leave that to someone else. I can hardly view that objectively. I will be glad to try, if that, in your wisdom, is the best place to put administration of the bill.

Mr. VORYS. Here is why we picked you——

Mr. BATTLE. We thought you did not have enough to do.

Mr. VORYS. Here is why we picked you, or your job. We have great confidence in you personally, but here is why we picked your job. We figured that in persuading other nations to go as far as they should in this, that the fellow who had something to do with whether they got any economic or military aid would be a very effective persuader. Now, I wish that you would, with as much detachment as you can, comment on that. I appreciate it involves you personally, but I want to find out whether you think that is an effective way to go about it.

Mr. CABOT. Aid is certainly an important element of the foreign policy of the United States and is used in implementing the policies. There can be no doubt that there is a relationship between aid and the ability to get cooperation from our partners in withholding helpful supplies from our enemies.

Chairman RICHARDS. Your 5 minutes are up, Mr. Vorys.

Mr. Battle.

Mr. BATTLE. Mr. Chairman, I will continue with Mr. Vorys' line of questions since it is on the Vorys-Kelly-Burleson-Chipfield-Battle bill here.

I would like to say before I start that everybody on the subcommittee contributed considerably to the construction of this legislation. Mr. Vorys had a brain storm out on the porch one day when we were meeting, and Mrs. Kelly had a basic idea that was adopted unanimously. Mr. Burleson, Mr. Chipfield and I also worked hard to set a workable, sound and permanent policy to control trade with those threatening our security.

I was wondering, Mr. Cabot, in your capacity as Chairman of ISAC, if it was ever appropriate, or if you have called on the OIT in reference to some of these shipments behind the iron curtain? Does OIT fit into the picture at all insofar as your work is concerned?

When we were studying the various agencies that make up ISAC it seemed that since OIT has the major responsibility of controlling shipments from the United States, possibly they should or would be invited in for consultation on occasion.

Mr. CABOT. Presently, no. We have no direct relationship with the Department of Commerce in my committee but, of course, the State Department has a coordination responsibility with the Department of Commerce and the OIT.

Mr. BATTLE. Is it your interpretation of the Kem amendment that in case there is a settlement in Korea it will not be operative unless the Security Council of the United Nations sanctions the participation of the United Nations forces in a new conflict somewhere?

Mr. CABOT. My understanding of the Kem amendment is that it becomes inoperative as and when hostilities cease.

Mr. BATTLE. And that to become operative again it would have to be under a new decision of the Security Council of the United Nations?

Mr. CABOT. The Kem amendment—I do not see how it can become operative under the Security Council of the United Nations. It is a United States law; is it not? Perhaps I do not understand you, Mr. Battle.

Mr. BATTLE. If I am correct I think that the Kem amendment operates only when the American forces are engaged in actual hostilities under the direction of the Security Council of the United Nations.

Mr. CABOT. I understand.

Mr. BATTLE. And if the Korean situation is settled and then there is an outbreak, say, in Iran, or Germany, or somewhere else, then the Kem amendment will not operate in any shape, form, or fashion, unless the Security Council of the United Nations sanctions hostilities for the United Nations forces again in this new spot.

So what I am saying is, that if hostilities cease and we get a cease fire or get an agreement in Korea, then the Kem amendment will not be effective or will not operate because the Russian delegates will not walk out of the Security Council again. In other words, they will stay in the Security Council and will veto any effective action which that unit might want to take.

So I am just saying in effect, or asking, if it would not be a good idea to get on with our bill at the first opportunity so we can have a legislative act with a definite policy for the United States so far as our shipments are concerned, and so far as the control of shipments is concerned, relative to the recipient countries of our aid.

Really what I am asking you is if you agree with the principles of our bill on east-west trade?

Mr. CABOT. I do.

Mr. BATTLE. Mr. Vorys, did you get through with the questions that you wanted to ask?

Chairman RICHARDS. He has no more time.

Mr. BATTLE. Is my time up? I would like to yield to Mr. Vorys.

Chairman RICHARDS. You have 1 minute left, Mr. Battle.

Mr. VORYS. I wanted to get back to your present organization. With your vast experience in business, and I know you were picked because of your organizational experience, have you ever seen in business the counterpart of the sort of organization you are "director" of now?

Mr. CABOT. No, sir. I have never seen anything like it, and I do not believe that there ever was a business anywhere near as complex as the United States Government; but I have given a great deal of thought to this since I have been down here, and I do not see how it can be simplified.

Surely, you can put everything under one agency, but you still are going to have an interdepartmental operation and must coordinate with the departments which have the operating responsibility. It is like a three-legged stool. You can make any one of the legs the responsible agency, but you have to have the other two legs in order to get the job done.

Mr. JUDD. How about the seat being the responsible agency that holds them together?

Mr. CAHOR. The seat really is the President of the United States.

Mr. JUDD. Yes; and he can delegate it to one man with three subordinates as well as to three men.

Mr. VORYS. The Hoover reports generally urge that we use the military or business type of departmental organization, with the authority at the top, a streamlined authority. Of course, this organization violates that. I am groping as to where it can be improved or changed, but I value highly your views on it.

Chairman RICHARDS. In your private business you did not have to fool with the Constitution or anything like that, did you? You had certain rules, and you had a board of directors who made those rules, but that was about all; was it not?

Mr. CAHOR. That is right. We had bylaws, but they could be changed.

Chairman RICHARDS. That is right.

Mrs. Bolton.

Mrs. BOLTON. No questions, Mr. Chairman. I am very happy to yield to Mr. Vorys, if that is the way you want to do it.

Mr. VORYS. I have had enough.

Chairman RICHARDS. Mr. CARNAHAN.

Mr. CARNAHAN. What is the relationship between this International Security Affairs Committee and the State Department?

Mr. CAHOR. The committee is an interdepartmental committee. My office is a part of the State Department. I act for the Secretary of State in this area of his responsibilities.

Mr. CARNAHAN. Even though the function is interdepartmental, it would certainly be well to have somebody who is responsible to get together the departments; would it not?

Mr. CAHOR. I have that responsibility—the responsibility of getting the departments together and attempting to find a governmental position on the various matters which involve these departments—and so far have been quite successful, I feel, in getting a Government position in a number of notable instances.

I might mention, perhaps, the Canadian proposal in which the United States Government had no position for a good many months. That finally was taken up in our committee and a Government position was found.

Now, we have a revision of the top committee structure of NATO closely following the proposal of the Canadians made some time last summer.

Mr. CARNAHAN. I have nothing further, Mr. Chairman.

Mr. HERTER. Will the gentleman yield there?

Chairman RICHARDS. Will the gentleman yield to Mr. Herter?

Mr. CARNAHAN. Yes.

Mr. HERTER. I was wondering if the gentleman would like to elaborate on that a little bit. I do not think most members of the committee know what the Canadian proposal was, and what it relates to, and what happened in connection with it. It has some connection with this whole structural feature.

Mr. CAHOR. The NATO is a partnership of 12 sovereign nations, and this partnership is a three-function partnership. It is political, military, and economic.

In every one of these 12 governments those functions are functions of different departments of each government. Therefore, the various Ministers all felt it was their responsibility to carry on this NATO, and we started, by article IX of the treaty, with a Council which consisted of the 12 Foreign Ministers, and a Defense Committee consisting of the 12 Defense Ministers.

We soon had a Defense Finance and Economic Committee consisting of the 12 finance members, and a Military Committee consisting of the 12 Chiefs of Staff.

So, you had what is essentially 3 cabinet-level and 1 top-military-level committees, all 12-man committees of 12 sovereign governments, and with no straight coordination between them except through the 12 governments.

The Canadians last summer proposed that they do away with the Defense Finance and Economic Committee, and with the Defense Committee, and merge them into the Council, making the Council a Council of Governments. Within a few weeks of this proposal being made in the Council of Deputies, 11 of the governments came to an agreement as to substantially what they wanted in the way of a simplification of this top structure, but for many, many weeks thereafter the American representative, Ambassador Spofford, whenever this matter came to the front on the agenda, had to say, "I am uninstructed."

The United States Government, which is attempting to show some leadership in world affairs, could not make up its own mind.

It was perhaps that and a number of other similar problems that led to the study of how we could get better interdepartmental organization here in Washington which led to the formation of my office and of the International Security Affairs Committee.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Cabot, do you have your statement before you? I would like to ask specific questions about three or four things in it.

Beginning on page 9 you give a list of five amendments or changes which you believe ought to be made in our present legislation. I grant you the advantages of retaining as much as possible of the legislation which has already been interpreted and proved. We know what it means and how it works.

But you now want authority given to the President, for example, to permit him to provide economic assistance to Yugoslavia. Then you say it should also permit him to furnish military aid to a number of non-NATO countries.

What countries do you have in mind? Do you care to say? Would you say Austria, for example?

Mr. CABOT. There are several possibilities.

Mr. JUDD. You mentioned Yugoslavia by name, but you did not mention any others. I did not know what you meant by "other non-NATO countries."

Mr. CABOT. I would not want to discuss the exact status of our thinking on aid to any non-NATO countries except perhaps in executive session.

Mr. JUDD. Are you thinking of Europe there?

Mr. CABOT. Yes. Specifically in Europe. There are other countries, which, as you know, might be used to help us in this concept of balanced collective forces.

Mr. JUDD. Of course, you recognize it is going to be very difficult to get such a blanket grant of authority. The Korea affair, where the President initiated a police action on his own, turned out to be the third or fourth largest war in our history. As a result of that experience and the impression left in everybody's mind, it is going to be very difficult for the Congress, I think, or the people, to support such an extraordinary blanket grant of authority.

I would predict the Congress would tighten up on previous grants of authority rather than making new ones, as you ask us to do in these five items.

For instance, in No. 3 you say:

Authority to furnish a limited quantity of military assistance to other American Republics when assistance of this character will further the performance by them of specific missions which are important to the defense of the Western Hemisphere—

What do you mean by that? Are we furnishing it now to some?

Mr. CANOR. We give reimbursable aid only on military items to other American Republics. We are asking for authority to give up to \$10,000,000 of grant aid—military aid to other American Republics.

Mr. JUDD. That is to be determined completely by the executive agency without any reference to Congress?

Mr. CANOR. That is right.

Mr. JUDD. Then, in No. 4, you say:

Authority to make contributions to the United Nations Korean Reconstruction Agency—

What do you mean there? Do you want Congress to give a blanket authorization, or do you want this committee to recommend a blanket authorization for the President to transfer to that Agency whatever amount of funds he wants to out of this \$8,500,000,000? Or is it your idea that we give a general authorization and then you come up and justify specific amounts before the Appropriations Committee? Or do you want the President to be able to transfer any amounts out of the appropriations, no matter for what purpose it has been granted, to meet the objective you mentioned here?

Mr. CANOR. We are presently programming \$112,500,000 for reconstruction in Korea. We, of course, do not know whether or not it would be useful to spend that sum. We cannot predict what would be the future events in Korea. Therefore, we feel it must be left to the administrative branch of the Government whether or not we give that money for that purpose.

Mr. JUDD. That is right. If Congress in this bill granted \$112,500,000, the President could certainly cut it down. However, as I get it, you are asking us to give him authority to make it \$500,000,000 if he wants to.

Mr. CANOR. No, Dr. Judd; I do not believe that is correct. If I correctly interpret the bill, we are limited to \$112,500,000 for this purpose.

Mr. JUDD. But this language says you would like to have us give you—

Mr. HERTER. A new form of authority.

Mr. JUDD. Yes. A new grant of authority in addition to the \$112,500,000, unless you have misstated your own position, because the way this reads you want us to give him authority to make contributions with no limitations.

Mr. CABOT. In previous bills we had no right to give for this purpose. We are now asking for the right to give for this purpose up to \$112,500,000.

Mr. JUDD. Only up to that point?

Mr. CABOT. I believe the bill speaks for itself on that point, Dr. Judd.

Chairman RICHARDS. Dr. Judd, your time has expired.

Mr. JUDD. All right.

(Statement submitted by Department of State in further clarification of the provisions of the bill in regard to United States contributions to the United Nations Korean Reconstruction Agency:)

As indicated in the section-by-section analysis under section 303, the total United States contribution in the United States fiscal year 1952 to the program of the United Nations Korean Reconstruction Agency is \$162,500,000. There are approximately \$50,000,000 of funds appropriated for the ECA for Korea for the fiscal year 1951, however, which are unobligated and authority is requested to make this amount available for contribution by the President to the Reconstruction Agency. Accordingly, only \$112,500,000 would need to be authorized to be appropriated by the proposed legislation. It is proposed to credit to the United States contribution of \$162,500,000 United States-financed supplies which are in the pipeline at the time the UN Korean Reconstruction Agency assumes responsibility for the Korean relief and rehabilitation program. The amount of such pipeline stocks cannot now be known.

Dr. Judd raised the question whether section 303 contains any limit on the amount of the contributions. Under the bill as presently drafted, the total contribution could conceivably exceed \$162,500,000 by the amount of the pipeline supplies, which are transferred to the Reconstruction Agency. This was not the intent. We are entirely agreeable to appropriate changes in the language to make clear that the total contribution will not exceed \$162,500,000.

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. I have no questions at this time, Mr. Chairman. I yield my time to Dr. Judd.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. ROOSEVELT. Mr. Cabot, do you not really intend to say, "Authority to make \$112,500,000 contributions to Korea"?

Mr. CABOT. Yes.

Mr. JUDD. If that is what you mean, then there is no conflict.

Mr. ROOSEVELT. You mean to say "Authority to make \$112,500,000 contributions to Korea."

Mr. CABOT. That is correct.

Mr. JUDD. Then there is no conflict. As I read it, you were asking for blanket authority, and I wanted to be sure of that.

Now, as to the fourth paragraph on page 10, you speak of excess materials which may be transferred as grant assistance without charge to military-assistance appropriations. Maybe this is not the place to ask, but I want to know if there are excess materials. They told us 2 years ago there was only a limited amount, and that excess materials had been pretty well used up.

Now, can the Army declare practically any amount of even new material to be excess, and thereby increase the amount available for grants, without the knowledge and consent of Congress?

Should that question go to General Scott?

Mr. CABOT. That would be more fully discussed by him, but I can answer it generally. We are asking for additional authority because the amount we have had heretofore is used up. The amount of excess material was limited. It is always limited, but it is not static. That

is to say, new material becomes excess because we find new models which we want for our troops or we have some surplus for some reason or other, and we wish authority where material has been declared excess by the Army, or the Navy, or the Air Force, to include this in our military assistance up to a certain amount.

We are asking for an additional \$450,000,000. We have had a total of \$700,000,000 heretofore. The \$700,000,000 is practically all exhausted, and of the \$450,000,000 we are presently programming \$229,000,000 as grant aid of excess material.

You understand that this is the original value of this excess material.

Mr. JUDD. Yes.

Mr. CABOT. \$229,000,000 will be programmed for grant military aid. The additional \$221,000,000 we wish because of the reimbursable-aid feature of the bill. We may wish to sell some portion of this excess material on a reimbursable-aid basis.

Mr. JUDD. Of course, you see what we are up against. It is always possible for the Department of Defense to take stuff that is 20 days old and declare it excess and dispose of it at 10 cents on the dollar. Something like that has been done repeatedly. It means that when Congress appropriates \$100,000,000, actually \$1,000,000,000 worth of materials can be passed out. I do not know the exact figures, but that has been done repeatedly where they really wanted to carry out a program. In other cases where Defense or State did not favor a program which Congress wanted, they charged the replacement cost and not 10 cents on the dollar, thereby cutting the program down.

Mr. CABOT. Dr. Judd, we are limiting this to \$450,000,000. That is the procurement cost of the material and not the price at which we will "cost" it for the Mutual Security Program purposes.

Mr. JUDD. I want these things spelled out in the record.

One more question at this time. At the beginning of your statement, you speak of this as being a single program. You say it is a single program. Well, I am compelled to comment that it ought to be a single program, but it is not. By your own statement it is a series of programs that you are merely coordinating. Therefore, this is my question: Is the reason that you cannot get better organization—you say you have thought about it and struggled with it, and you are an expert in that field—is the reason the inherent difficulty and complexity of the problem itself, or is it because of resistance you have met from various agencies who do not want to come into a single program?

I do not want to embarrass you, but I would like your honest opinion.

Mr. CABOT. I would be very happy to answer that, Dr. Judd. I have not met resistance from the various agencies. I have a very high regard for the people I have met in these agencies, although I knew few of them when I came here. It is because of the inherent difficulties in this international field. You cannot effectively implement this program without using the varying skills that there are in various departments of our Government. Those departments having no common meeting place short of the White House, you must coordinate it through a coordinating committee. The President cannot, nor can the Cabinet, find the time to do the coordination at a higher level.

Chairman RICHARDS. Doctor, your time has expired again.

Mr. Javits.

Mr. JAVITS. I will just take a minute, Mr. Chairman.

Mr. Cabot, we are trying diplomatically and wisely through economic and military aid to lead the world to peace and higher standards of living and more freedom. We have talked here about the unification of Europe and the various elements of that. We have talked here about land reform—not spurious as in the Communist revolutions, but productive and just—in southeast Asia. We have talked here about the antidotes to cartel thinking in Europe, and similar problems throughout the world.

Do you believe, as the head of a coordinating committee of the State Department, which is what you are—and yours is the one agency that heads all these programs up—do you believe in that way you can have the greatest impact in our relations with all of these nations we are going to deal with in the Mutual Security Program for the purpose of moving them toward these other objectives, or do you believe you could have much greater impact if you were the administrator of the Mutual Security Program?

Mr. CABOT. I do not believe there would be any substantial difference that I could have under the two different titles. In either case one would have to have the consent of the operating agencies in order to get anything done.

Mr. JAVITS. You would have to have the consent of the operating agencies to ship something, or to supply something, or to procure it, or to specify it, but you would not have to have the consent of the operating agencies to go and see the Prime Minister of France and tell him what the United States really wants to accomplish through this program, which you would be the head of in all three parts—economic, technical, and military. Today it would take you, and Mr. Foster, and Dr. Bennett, at least, if not a lot of other people also, to see the Prime Minister of France.

The other way—that is, the way I described it—it would just take you. Now, which would be better?

Mr. CABOT. I would think Ambassador Bruce should have the primary responsibility for seeing the French Government, and that I would have the right to see the Prime Minister of France under my present title and set-up.

Mr. JAVITS. Now, Ambassador Bruce has been seeing him for some time, and I have great confidence in him and high regard for him. But we are not very satisfied with the progress that is being made solely on the diplomatic level in the respects that we feel this program is designed to serve. We ask you what are we to do about it? Should we just let it run along as at present, supplying even more money than now?

Mr. CABOT. I believe the program has gone well, and that we are very well represented in France. Of course, General Eisenhower also has the right, and often goes to see high Cabinet level officials of the French Government.

Mr. JUDD. You are not speaking of France except as an illustration; are you?

Mr. JAVITS. I have the deepest faith in General Eisenhower and his mission but he does not control this program as you bring it to us. I am just taking France as an illustration. You can apply it to any country in the world. We have heard, and people throughout the

country have been saying, that we are trying to get certain ideas across, and trying to get them effected. Here is an enormous piece of equipment, the whole Mutual Security Program, composed of the military, economic, and technical aid, which we want to use as the vehicle for leading the free world to better things.

I am asking you how can we best do it, and so far the best answer you have given me is the fact that we can best do it by a coordinating committee in the Department of State.

I must say that it just does not jibe with my own experience, and I doubt that it jibes with your business experience. That does not seem to me—and I can only speak for myself—the way to have the impact, and we are all agreed we want the impact.

Chairman RICHARDS. Mr. Cabot said it did not jibe with his business experience. He said that in answer to the questioning awhile ago, and he told you why.

Mr. JAVITS. I am only pointing out, Mr. Chairman, that we are not only interested in the fact that your committee agrees today, and that you get the stuff out and you get it delivered—we are willing to agree with you on that—but what we are after is are we putting ourselves in a position really to serve the purposes for which we set all this machinery up, and not just to keep the machinery operating. You are not just a machine operator, but you are supposed to be a leader and an effective force to put the program over. That is what I am asking. Can you be such a force in your present position?

Mr. CABOT. Mr. Javits, I do not believe there is any doubt that the man who is closest to the President can speak most forcefully for the administration. I do not claim to be very close to Mr. Truman. I serve under Mr. Acheson, and I consult with him quite frequently and, in fact, meet with him daily.

Mr. VORYS. Would the gentleman yield?

Mr. JAVITS. Certainly.

Mr. VORYS. We sat around this table in 1948 and we created this independent status for ECA and the director, and we created a lot of people who were called ambassadors. The purpose of it was kudos. It was so that when the ECA people went to talk with foreigners they would be ambassadors and "big shots."

At that time the Brookings Institution made the study on which that was based, and everybody seemed to agree that that was enormously important. It is pretty difficult for us, having been indoctrinated that way, to find that you simply have an office in the State Department, but are the director of all of those ambassadors, and are the director of a man who has Cabinet status, Bill Foster.

Mr. JUDD. Nobody has ever heard of your office outside of a few hundred people.

Mr. CABOT. You have a misconception, I fear, Mr. Vorys, of my position. If anybody has suggested to you that I am the director of Mr. Foster, that is incorrect. I have no directive authority over Mr. Foster.

Mr. JAVITS. Is it correct to say then, Mr. Cabot, that it is Secretary Acheson who is really doing this whole job, and you are just his agent? Is that not what we come down to; that we have a choice as between an independent agency and the Secretary of State?

Mr. CABOT. The Secretary of State has no directive authority over Mr. Foster either.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Ribicoff.

Mr. RIBICOFF. I am just going into this in a little different phase. Concerning the type of organization that you would eventually evolve, would it not depend on how long the program is going to last?

Mr. CABOT. Yes; I think it would. On the question of how long the program is going to last, I view it as a temporary program in any important scale.

Mr. RIBICOFF. Now I think we have gotten down to the heart of this whole problem. If this is going to be a 1- or 2-year problem, you are not going to set up the complicated agency involved, and that is what your thinking has been, as you have talked about your organization here, beginning on page 14. You seem to view it as a temporary proposition.

Mr. CABOT. We view it as a temporary proposition of more than 1 or 2 years. We, in fact, believe that beyond fiscal 1952 there will be two more years of large-scale aid, and thereafter it will taper quite rapidly.

Mr. RIBICOFF. And ECA is supposed to terminate on June 30, 1952, that is, in another year?

Mr. CABOT. That is correct under existing legislation.

Mr. RIBICOFF. Your thinking then becomes dependent on what policy Congress adopts as to the future of this program.

Mr. CABOT. That is correct.

Mr. RIBICOFF. Suppose the policy is that this program in one form or another is here to stay with the United States for many years. Would that change your thinking as to the type of organization that ought to be set up?

Mr. CABOT. I do not believe it would substantially. You could, however, operate this by making a new Foreign Affairs Department and putting economic, political, public information matters, and so forth as divisions under that department.

I have no strong opinion one way or another as to whether the ECA as such should be continued. I have a very strong opinion that that team, which has done such a superb job in implementing the Marshall plan, should be kept in being to carry on an even more important job which faces us today, namely, increasing the military production of Europe; for, unless we can increase the production of munitions in Europe, this program will not taper off as we now envisage, but will be on the shoulders of the American people for a long time.

Mr. RIBICOFF. When you consider the short time that we have to get out a bill, so to speak, do you think it would be possible within the next month or so to sit down and do an effective job in reorganizing this whole program? Do you think it could be done properly?

Mr. CABOT. I have had very little experience in legislative drafting, sir. I would think you would have difficulty within a month.

Mr. RIBICOFF. Would you not say it is difficult? Suppose you had to amalgamate three huge corporations in America that had a budget of approximately \$8,500,000,000 a year. Do you think as a businessman or an attorney you could coordinate those things in 2 months?

Mr. CABOT. No, sir. I do not.

Mr. RIBICOFF. That is all.

Mr. FULTON. Could I ask, on the one point you are speaking of, where does this suggestion originate of the so-called proposed Department of Foreign Affairs?

Mr. CABOT. I could not answer that. I do not know where it originates. I have heard it from a good many different people, the thought that economic, political and psychological, or information affairs are but divisions of foreign affairs as a whole.

Mr. FULTON. Yes; but is it not material the State Department has traditionally dealt with and now deals with, including this, which is that simple, complicated statement—foreign affairs? I do not see what the difference is. By changing the name do you arrive at some new approach? Because, it has always been foreign policy, economic policy, psychological approach, treaties, agreements, executive agreements. It has been implementing foreign policy with force and trying to get the two coextensive. So, what is there different in this then that leads you to suggest a department which would be possibly called a Department of Foreign Affairs, as distinguished from just the old State Department?

Mr. CABOT. I really did not mean to suggest that there would be any benefit from such a plan. I was asked what plan might implement this, and I simply put that out as one possibility.

I believe that the Brookings Institution has made studies of this question of the relationships of aid to foreign policy. I think it would be well worth the time of the committee to study the latest report of the Brookings Institution.

Chairman RICHARDS. Mr. Ribicoff, did you yield to Mr. Fulton?

Mr. RIBICOFF. No; I did not, but that is all right.

Chairman RICHARDS. We will come back to you. Your time has expired.

Mr. RIBICOFF. That is all right.

Chairman RICHARDS. Mr. Fulton, go ahead on your time then.

Mr. FULTON. I will be pleased to have you go ahead, Mr. Ribicoff.

Mr. RIBICOFF. No. That is all right.

Chairman RICHARDS. You were not here when I got down to Mr. Javits, Mr. Fulton.

Mr. FULTON. Did we finish that particular point? If there should be a Department of Foreign Affairs, what then would be the duties of the State Department, as we know it now?

Mr. CABOT. I would presume they would be merged into the Department of Foreign Affairs.

Mr. JUDD. Diplomatic relations.

Mr. CABOT. I am not prepared to discuss how we should implement the foreign policy of the United States. I am prepared to discuss how we should carry out the aid programs, which are a part of foreign policy. The whole of foreign policy is a much broader subject than that which we are discussing.

Mr. VORYS. Will the gentleman yield?

Mr. FULTON. I would be very glad to.

Mr. VORYS. There are bills introduced, one by our former colleague, now Senator Case, on this subject. It is pointed out that the State Department was originally called the Department of Foreign Affairs. Therefore changing the name is not doing away with the traditional State Department, but going back to the old label, although the label in itself has no particular significance.

But if the gentleman will yield further, Mr. Cabot, your duties, according to the Executive order, are "in performing this function on behalf of the Secretary of State, and as the Director of the International Security Affairs Committee" you "will be exercising responsibility for the Government as a whole."

So that, according to the President, you are at the top of all these charts.

Mrs. KELLY. At that point, will the gentleman yield?

Mr. FULTON. I would be glad to yield.

Mrs. KELLY. I return to the Battle Committee report at this point.

As I understand it, your organization, or you, as director, was or were primarily secret at first, and I think due to that, or maybe that was one reason why our committee went into the duties of it and endeavored to give you the whole responsibility in some way. So I believe for that reason so much discussion has come up as far as replacing the State Department with a Foreign Affairs Department, and so forth.

In the Battle Subcommittee we found out that while you are the Director of International Security, you have both national and international scope.

In dealing with the problem with Mr. Sawyer, or discussing it with him, he told us when he was ambassador he tried to coordinate the work of ECA and Commerce. Is that correct, Mr. Battle?

Mr. BATTLE. Yes.

Mrs. KELLY. I know I feel, there should be somewhere in the Executive Department a person who is Director of Overseas Assistance—foreign aid—both national or international supervision, to whom we can turn and to whom we can give responsibility if something goes wrong with any economic assistance or if something goes wrong with our military assistance.

Since the problem involves political or foreign policy I do not want that director to assume the work of the Secretary of State in foreign affairs. So it is not a policy person we want. We want to pin responsibility for carrying out the foreign aid on one person.

Mr. JUDD. That is right. An operating agency, just like ECA is the operating agency for the economic phase of it.

Mrs. KELLY. You do not have departmental status, Mr. Cabot, and ECA has a departmental status, and you direct ECA.

Mr. FULTON. Could I give back the remainder of my time?

Chairman RICHARDS. Could I say this: I thought Mr. Cabot's position was that you could appoint an Administrator if you wanted to, but that Administrator could have all the authority you wanted to write into law and all the king's horses behind him, but he would not be able to carry out foreign-policy matters. The President and the Secretary of State would have to be consulted on that, and there was nothing we could do about it. The aid program was a part of the foreign policy of the United States. I thought that was the line of your argument. Is that correct, Mr. Cabot?

Mr. CABOT. That is correct, Mr. Richards.

Chairman RICHARDS. Now, if we appointed an Administrator—and I have been worried about this thing just like other members of this committee have—as a business proposition I cannot help but see that would be the most effective way to operate. I think everybody around this table has been worried about that.

When you move into the foreign-policy field you cannot get away from the fact that whoever might be named, could not proceed in certain fields until the State Department was consulted.

Mr. JUDD. Even Paul Hoffman could not, without consultation, but he still operated independently. On policy matters the Secretary of State could go to him and make representations, and then he could go to the President if he wanted to, but Mr. Hoffman still operated independently.

Chairman RICHARDS. And you feel that if he could do it, a man appointed over all could do it?

Mr. JUDD. Yes.

Chairman RICHARDS. Let me say there is a motion to recommit up on the floor. I imagine members of the committee would want to find out about the form of that motion.

Could we come back after that? We have four members here who have not availed themselves of the 5 minutes, and I do not want to cut them off at all. What do you want to do about that?

Mr. HAYS. I have no questions.

Chairman RICHARDS. Mr. Herter, could you be back here at 2:30?

Mr. HERTER. Yes. I would be glad to.

Chairman RICHARDS. What about you, Mr. Roosevelt?

Mr. ROOSEVELT. I have some questions, and 2:30 would be all right.

Chairman RICHARDS. Can you be back at 2:30, Mr. Cabot?

Mr. CABOT. Yes, sir.

Chairman RICHARDS. Fine. The committee will adjourn until 2:30. (Whereupon, at 12:40 p. m. the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

The committee reconvened at 2:30 p. m., the Honorable James P. Richards (chairman), presiding.

Chairman RICHARDS. The committee will come to order, please.

Mr. Cabot will continue his testimony.

Did you have an opportunity to question Mr. Cabot, Mr. Burleson?

Mr. BURLESON. I do not have any questions.

Chairman RICHARDS. Mr. Roosevelt.

Mr. ROOSEVELT. Mr. Cabot, there are two points I would like to take up in my 5 minutes. First, if we can get back on this organizational problem, when we had the problem of defense mobilization come up after the Korean war started a year ago, we had two courses open to us.

One was to follow the course the President followed and the Congress followed in appointing a defense mobilizer, Mr. Wilson, directly at the top of the mobilization structure. The other, of course, is that he could have appointed Mr. Wilson and put him over in the Department of Commerce under the Secretary of Commerce to coordinate the efforts of a lot of different existing agencies in the mobilization work.

It seems to me that is a parallel to what we are facing now in this whole foreign aid, economic, military, and technical. Whether it is for greater efficiency or whether it is for perhaps greater kudos in the international effect of the program, it seems inescapable but that it would be advantageous to have today a counterpart to the defense mobilizer on the foreign military, economic and technical program.

You seem to be now more or less the director general of the program, but I think the general feeling of the committee is that you ought to be given more kudos, more international stature.

We have asked a number of other witnesses about this organization problem. I think Mr. Foster and Mr. Acheson have expressed themselves fairly clearly although not expressing preference for any particular alternative. Nobody really seems to have done a complete study of it in the executive branch of government.

Rather than ask you to go into it now, I think it would be very helpful if perhaps at a later hearing you would go into the relative merits of two or three ideas that have been suggested by Mr. Acheson and Mr. Foster, and some of the members of the committee, because I think you are the key fellow who could give us the best advice on the problem.

The other problem is the one you referred to on page 3 of your testimony, that if we carry out economic aid, or if we cut down on the economic aid at this point, we may find we are expending a great deal more money 2 or 3 years from now on military aid because we will be paying for more end items.

Have you any concrete examples in a factual sense of what it might cost us if we cut down on any one phase of the program in later years?

(For supplementary statement by Mr. Cabot on the organization of M. S. P., see appendix.)

Mr. CABOT. It would be hard to give specific examples which would mean much. We could give examples which would show a very great leverage from economic aid.

We have a technique, as you know, called the AMP—additional military production—under which in order to stimulate the production of military end items in Europe we financed the dollar import costs of those items to foreign governments, and told them to go ahead with a specific program of making some specific item of munitions.

We found that relatively ineffective, because the hard currency fraction is usually a very small part of the total cost. If you give only a part of the cost and the foreign government has to find the rest from its budget, then it really becomes just a budgetary problem for them to go ahead with the production. Yet I could use that as an example.

There were many of those projects, of course. I used them as examples where economic aid directly supports military efforts.

I think as a general rule we can say economic aid is multiplied in its effects on military efforts.

Mr. ROOSEVELT. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Chairman, I wanted to follow two lines of thought, if I may. Perhaps I can ask unanimous consent for a minute or two more.

Chairman RICHARDS. You will not have to do that now. You are the last member we are calling on. Then we will have unlimited discussion.

Go ahead, and then we will move up the table.

Mr. HERTER. The first question follows somewhat Mr. Roosevelt's last question. Let us assume that you have countries each of which has a different type of problem from the other. Take, for example, the British problem, the French problem, and the Greek problem.

You are asking for economic aid as well as the military aid. In the case of the British, it is not anticipated any economic aid will be required, but their position on balance of payments is such that at the moment they do not require further economic aid but some end items of military aid, is that correct?

Mr. CABOT. Yes.

Mr. HERTER. In France the balance of payments is such that if it was not for the fact that you were pushing them into a military line of production, which in turn takes away from the earning capacity in dollars, to buy raw materials and produce consumer goods to maintain their standard of living, they would not require economic aid, is that not so?

Mr. CABOT. That is correct.

Mr. HERTER. So whatever the figure is, 300 millions roughly, of economic aid that you are asking for for France is essentially economic aid to stimulate their military production and equalize from the point of view of their standard of living the sacrifices they have to make to turn their productive capacity to military purposes?

Mr. CABOT. Yes; also the fact that they are taking a good deal of manpower into their army and the military budget costs rise sharply by reason of their other military activity, principally the war they are fighting in Indochina, which has a very great impact on their general budget.

Mr. HERTER. Correct. But it is military reasons that have made the impact on their budget; otherwise, you would have considered from the ECA point of view that further aid was over and done with. So the economic aid now is for military purposes, generally. I think that is a fair statement, generally.

When you get to Greece, you have a situation where the economy is essentially so thin that if the country is maintained at all as a going concern, you have to continue with economic aid regardless of any military consideration, is that not correct?

Mr. CABOT. Yes. There are three countries of Europe, I believe, possibly more—Greece, Trieste, and Austria—where the economy would not be able to support itself even without substantial military build-up.

Mr. HERTER. Coming back to France for a moment, in the French picture, if you are going to put in the equivalent of some 300 millions in economic aid into France, that is not really the whole picture.

That is, we have not before us, for instance, the aid that might be required from the United States for the infrastructure operation. That has not come before us in this picture and is not in the bill.

Mr. CABOT. It has not yet been decided how the infrastructure is going to be handled. It refers to those military needs which are common to a number of armies of different sovereign powers.

The problem of who pays the cost is an extremely complicated one. It has not yet been decided what budget of the United States, if any, will stand what part of the cost of the infrastructure.

Mr. HERTER. That has not come before any committee of the Congress?

Mr. CABOT. I would have to check on that.

Mr. HERTER. There is now a bill before the Armed Services Committee dealing with the problem of bases. I did not know if that tied

in with Iceland, Greenland, and so on. Do you know if the infrastructure included that?

Mr. CABOT. I would prefer to have one of the military men testify on that. I can say we have a great many bases that are used wholly or almost wholly by the United States Air Force which will not be financed multilaterally by the various countries of NATO.

Mr. HERTER. Has an agreement been reached as far as the British picture is concerned? Perhaps we should consider that in executive session. I wonder what funds there are to be for the British picture.

Mr. CABOT. It does not come from MDAP funds.

Mr. HERTER. It does not?

Mr. CABOT. No.

Mr. HERTER. So it is not going to come before this committee?

Mr. CABOT. No, I presume not. It does not come before this committee.

Mr. HERTER. We are getting into a curious zone where a part of the program is going to other committees and a part of it is coming here.

I wanted to get straightened away on the military aid and economic aid.

Mr. CABOT. May I revert to that last answer. You are speaking only of England. My answer is correct; economic aid is not specifically provided in our present Mutual Security Program to contribute toward the building of bases in Britain used wholly by the United States.

If you were dealing with France, the economic aid might help the French contribute their share of the cost of some of these bases, which they would help pay for.

Mr. HERTER. That is what I was by indirection getting at. The economic aid to be given to France is essentially to improve her dollar position, which she is sacrificing as a result of her military effort; is that not true?

Mr. CABOT. That is right.

Mr. HERTER. Is it not possible that if the military in its procurement problem had the authority to spend a part of its money off-shore, and contributed, let us say, in this over-all picture in Europe from the point of view of stimulating military production by putting X number of dollars in there, it might in part take care of the economic picture that you are worrying about?

Mr. CABOT. That is certainly true. That is taken into account in the predilections on which we predicate the economic aid. The money that is spent directly by our Defense Establishment in Europe, and the indirect money which will be spent by our soldiers who are in Europe, is taken into account in figuring the balance-of-payments deficit, which is one of the principal factors in determining economic aid.

Mr. HERTER. Then, in determining that, this \$300 million to France might possibly go into a pool or something of that kind, which would allow you, for instance, to finance a Belgium gun operation, so that a number of countries could share in that through the use of a certain number of dollars in a pool, in order to make it possible for one country, like Belgium, say, to produce for a number of countries in Europe.

Is it possible that the dollars might be used that way?

Mr. CABOT. It is possible. That leeway is given in our bill. That has had a great deal of study in the executive branch of the Govern-

ment, to see how would be the best way to stimulate the production in one country for use in another country of military end items.

Mr. HERTER. Taking this rough figure of \$300 million for France, how much of that would you say would go directly into military production? Assume that the best thing that you could do would be to spend the whole amount of it in order to get that \$300 million in dollar exchange in France, that all of it were to be used on either equipping through machine tools or in purchasing end items in France itself, would you feel that you had the situation in hand?

Mr. CABOT. I do not think you can tell what part of the \$300 million goes into military production, because the economic aid is used for a number of purposes. It cannot, of course, be used more than once.

It is used to help the French maintain a high military budget. And their military budget is necessary in order to maintain the divisions, and in order to pay for the individual equipment which they produce entirely themselves, or procure from other European countries, and in order to provide facilities for the production of hardware. It is the same kind of hardware in many cases that we are including in our military end-item programs.

But we do make a part of our policy that we will not give military end items which can within a reasonable time and reasonable cost be produced in the recipient country.

Mr. HERTER. Presumably out of the military budget of the French expenditures, if it is brought to the point where it should be, it will contain a considerable sum of money for replacement parts or end items that are approved by the military, whether it be jeeps, half-tracks, guns or what-not, it will come directly out of the French budget.

What I am driving at is this: If you use a considerable part of that \$300 million through placing contracts it will relieve the French budget of a part of that picture and put that dollar equivalent into the French economy.

Would you not accomplish your purpose as effectively as in little bits spotted all over, trying to bolster the French economy?

Mr. CABOT. Your suggestion may be summed up, that our Military Establishment procure in France with the \$300 million, instead of giving grants of economic aid.

I think then you would not have \$300 million added to the French budget which could be used for other purposes. You would not have the counterpart of it.

Mr. HERTER. You would have the equivalent in the French budget still and available in France. It would be the French Government spending it rather than you yourself checking it in counterpart funds. Is not the economic effect almost identically the same?

Mr. CABOT. I think it is substantially the same. You cannot use the same money twice.

Mr. HERTER. What I am trying to get at in all of this is that if your economic effect is the same in keeping France in balance from the point of view of our dollar economy, and at the same time keeping the standard of living at a reasonable level, so that you are not forced to turn too much of the production away from military production, do you not arrive at almost the same formula, doing it this way, instead of really going at it by indirection in helping little segments of the economy and getting the dollars that way?

Mr. CABOT. Well, we have various criteria by which the economic aid is judged. Mr. Bissell will later testify on that subject.

I think if you limited economic aid to the procurement of military equipment, that then you could not use it for many other purposes, which would be very desirable from the United States standpoint.

Mr. HERTER. Yes; you can only use it once. If you are getting the same end results and you are getting them by different means, you are still making effective use of those dollars, and possibly you get your entire military productive capacity of France built up faster by that method than going at the thing by indirection, which is bolstering little segments of the economy all over the land and having the French take out of their military production budget so much more.

Mr. CABOT. When you give money for off-shore procurement, as we call it, there is no counterpart created. When you give money for the purchase of commodities which can be sold to the people of France you get a counterpart, and that counterpart can be used for various purposes, such as helping the French budget, which is used to produce military equipment.

Mr. HERTER. If your off-shore procurement is turned over to the French Army, you are relieving the French military budget, and you are in effect doing exactly the same thing, except you are letting the French Government spend the counterpart money rather than by agreement between yourselves and the French Government?

Mr. CABOT. That is right. Therefore, it may not be used to build up productivity, but just for existing facilities, which in the long run do not do as much good from the United States standpoint as the direction of the use of this counterpart funds toward things which are more productive.

Mr. HERTER. Again, the reason I raised the point is that it is inevitable, no matter who are the ECA operators, if the French have \$300 million to spend on the French economy, every sector will want bolstering from that \$300 million, and that primary objective of increased military production, from the point of Europe being eventually able to defend itself is concerned, might lose a part of the effectiveness of the aid which is given.

I am trying to find out whether or not we might be more effective with the same number of dollars by doing a straight off-shore procurement job rather than doing it by the old ECA method, which has proved very effective.

Mr. CABOT. That has had a great deal of consideration. We are doing some off-shore procurement. We have a feeling, at least the members of my committee, that there are dangers in a large amount of off-shore procurement, because of the disincentives involved.

Mr. HERTER. Obviously if you did it you would have to insist that the French Government do its share in any case, and not lay the whole baby in your lap.

Another thing: Can you point out to us the passage in the MDAP where there is provision for the off-shore procurement? We understood it was in there, but we cannot find it in the document.

Mr. CABOT. I think there is no limitation as to where the purchase is made by the armed services under the Mutual Security Program. That is my understanding.

Therefore, the armed services who do the procurement for the Mutual Security Program could buy in Europe as well as in the United States.

Mr. HERTER. Does that apply to ordinary military appropriations everywhere; if there is nothing said about that, can you buy off-shore?

Mr. CABOT. I will refer that question to General Scott.

**STATEMENT OF MAJ. GEN. S. L. SCOTT, UNITED STATES ARMY,
DIRECTOR, OFFICE OF MILITARY ASSISTANCE**

General SCOTT. As I remember it, this subject of off-shore procurement was discussed last year before this committee. It was indicated at that time that some money may be used for that particular purpose. Legally, I believe it can be done.

Mr. HERTER. I assumed it was legal. I was told definitely you had permission for off-shore establishment, but I could not find it.

General SCOTT. There is a procurement organization now operating in Europe under General Handy's command. This organization has been buying in Europe for several years.

Mr. HERTER. That is in part for your own production here in the United States?

General SCOTT. I do not quite understand the question.

Mr. HERTER. In part, are you buying small items that piece in with your own production here?

General SCOTT. That is right.

Mr. HERTER. That does not mean that the end item goes to Europe and may be used over there?

General SCOTT. What they are buying in Europe now, they are using in Europe.

Mr. HERTER. What procurement?

General SCOTT. I am speaking of off-shore procurement.

Mr. HERTER. It is the MDAP and not the regular military procurement?

General SCOTT. There are two types of procurement—according to authorization—procurement for the services and procurement for MDAP.

Mr. HERTER. When you procure for the services, you procure from regular appropriations?

General SCOTT. That is correct.

Mr. HERTER. It has always been explicit in those appropriations that you could do off-shore procurement?

General SCOTT. In the service regulations?

Mr. HERTER. Yes.

General SCOTT. I think there are certain restrictions or limitations. Food, I believe, is involved in the law that permits such procurement.

Mr. HERTER. I could not find that.

General SCOTT. It is my understanding that there are certain legal limitations. But I believe that they are buying ordnance items, replacement items, spare parts, fresh vegetables, probably cloth of various types in Europe.

If you want details of that, I can give it to you.

Mr. HERTER. Is that for servicing of our own troops?

General SCOTT. I believe that is right.

Mr. HERTER. None comes back to the United States?

General SCOTT. That is my understanding.

Mr. HERTER. I merely raise that point because I think you have an in-balance there. In a type of country where you do not have

the balance-of-payment problem, like France or England, that is one thing, but you have a different situation where you are not going to use the money again.

Take Belgium, for instance. You are asking for a certain amount of money for Belgium. The balance of payments recently have been extremely good. There again the end-item orders in Belgium would be the most effective, it seems to me.

Mr. CABOT. All of our programs are based on a military budget, which we think is the highest which it is politically and economically feasible for the recipient countries.

If the budget is not as high as we have predicted, then presumably the aid will not be as high as we are predicting.

Mr. VORYS. Will the gentleman yield?

Mr. HERTER. Yes; if I may be allowed one more question.

Mr. VORYS. Go ahead.

Mr. HERTER. Go ahead, Mr. Vorys.

Mr. VORYS. Right at that point, is there anything in the law or in the proposed draft of the law that would require what you say?

You say they are to use 10 percent of their national income for military, and you say to country X, "If you will come up to the 10 percent, we realize that will affect you by so many million dollars, but insofar as you come up we will aid you. But we are not going to give you the aid and have you fall short in doing your part."

The only provision that I can think of in the ECA law that expresses that thought is "continuity of assistance depends on continuity of cooperation."

Chairman RICHARDS. Will the gentleman yield there? I thought this law provided for a transfer of funds. There is no provision that the countries do those things.

Mr. CABOT. I think I can explain that. There is nothing in the act which states the criteria which we shall use in determining the amount of economic aid.

I do not think you could state it in law, nor could you predict in advance just what criteria are going to be given what weight. It is too complex. It is not only the criteria of the balance of payments, the amount of military aid, the amount of gross product that goes into the military budget, but there are criteria as to the number of divisions that are committed to NATO, there are criteria such as the amount of fighting that is being done in other areas of the world, such as Korea and Indochina. There are other criteria that at the moment I cannot think of.

Mr. VORYS. Of course, in both laws the President has the right to withhold or cut down on such aid for any failure of the other country, but he never does it. But, although we hear that both in NATO and in ECA we are disappointed, Eisenhower and Foster are disappointed, with the response of these countries in doing things that are so obviously in their own interests as well as ours, in no case that I know of except for a short time with Holland has aid ever been suspended.

Am I correct in that?

Mr. CABOT. No, Mr. Vorys. I am afraid I cannot agree with you on that. I think we could find a great many instances in which the aid has been curtailed or set at a level lower than had been anticipated by reason of our disappointments in performance or feeling that a

country was not assuming as large a burden as we had anticipated at the time when we made up illustrative programs of aid.

Mr. VORYS. Belgium, for one.

Mr. CAHOT. In fact, I might say in my office we are almost constantly concerned with memorandums concerning the level of effort of the various countries with which we are dealing, and the bilateral negotiations with those countries to stimulate them to greater effort.

Chairman RICHARDS. Mr. Herter, you had one more question, you said.

Mr. HERTER. General Scott was speaking in terms of contracts for end-item replacement parts, and so on. Does the military sign those contracts?

General SCOTT. The military enters into such contracts.

Mr. HERTER. The military does negotiate the contracts?

General SCOTT. That is correct.

Mr. HERTER. So that you have been doing it yourself for the services?

General SCOTT. We have been doing it both for the services and for MDAP.

Chairman RICHARDS. May I interject there, General, are you talking about end items or end items and other things?

General SCOTT. Well, both.

Chairman RICHARDS. Both?

General SCOTT. Yes.

Mr. VORYS. Vegetables are end items, are they not?

General SCOTT. Vegetables are end items in that they are complete without further processing.

Mr. JUDD. Spare parts and asparagus.

Chairman RICHARDS. A part is not an end item, is it?

General SCOTT. We do not consider it as such.

Chairman RICHARDS. What vegetables are you talking about?

Mr. VORYS. He talked about buying vegetables over there in Europe.

Mr. HERTER. May I ask a second question, sir? There is another question that is bothering me a great deal in connection with the organizational structure we have been talking about. This is mostly overseas. The most disturbing problem I think any of us have to face now is the question of trying to get some order of production within the 12 countries that begins to be of a size that you think is adequate to do the job; and, secondly, that dovetails into an over-all pattern so that each country is not duplicating what the others are doing, and so that each is doing what it is best qualified to do for the benefit of all the NATO countries.

The production experts we have overseas are split right in two between the London organization and the regional office of the ECA that sits in Paris under Milton Katz with a number of production experts. You have an international organization that Herod is in charge of, and that Bill Batt is the American representative of. That entire production organization from every ar of any kind whatever. It can do nothing but recommendationally, it is split, and our experts are divided betw

When you get all through with it, the only leve getting anything done is ECA funds. Is that not

Mr. CABOT. Yes; substantially correct. I do not consider that military end items are really a lever. Is that the word you used?

Mr. HERTER. Yes. If you just deal with military end items and you hold back on them, then you are cutting off your nose to spite your face. The problem is to get military end items in the hands of as many people as possible in as short a period of time as possible, so when you withhold on those in order to punish somebody it hurts both sides. The rest of the world must think that this is very funny with these disputes going on and nothing being done to accelerate the whole program.

However, on this organizational thing it would seem to me it is awfully bad organization to have Bill Batt trying to build up an American corps of production people in London, with Milton Katz having a corps of production people in Paris, and essentially operating under two separate organizations. You have to take Bill Batt's ECA hat off the production man in London and put him under SUSREP, an entirely different entity.

Is there not any way of putting our effort in the international production field on a better footing with a little better grant of authority, in order to get things done?

Mr. CABOT. May I consider your questions in various parts?

At first you referred to the production level in Europe. I think we can point to a good deal of progress. In production for use within the country where it is produced we have made a great deal of progress. Perhaps not satisfactory progress, but we have about doubled the production within the past year. I am not now as well satisfied with the production in one European country for use in another country of military end items. That is a much more difficult problem and one to which we have given a great deal of thought.

As to the organizational problem, Batt is the United States representative on the Defense Production Board, which is a 12-man board, and in which the 12 NATO countries are represented. Under that board there is an international staff headed by Mr. W. R. Herod, and it is he who is building up a team of production experts.

Mr. HERTER. But the international staff, as you know, consists very largely of Mr. Herod and a few people borrowed from Mr. Batt, and that is the entire international staff at the moment.

Mr. CABOT. He is setting up an international staff. It is not very large as yet, but he has not been there very long.

Mr. HERTER. Yes.

Mr. CABOT. I can agree with Mr. Herter that the difficulties of doing this production job multilaterally are very great indeed, and we have met with a certain amount of frustration in trying to do this job multilaterally by reason of the fact that the DPB and the Coordinator of the DPB, Mr. Herod, are merely advisory. They have no money with which to carry on their plans. They must carry them out through the 12 governments.

Ambassador Katz in Paris has economic aid, or he can at least get economic aid, being one of the most important members of the ECA, and can, therefore, do more to stimulate production than can be done multilaterally at the present time.

However, I feel that there is very good coordination between Mr. Batt and Mr. Katz through the Economic Coordinating Committee.

It has been suggested that there should be a command relationship rather than a mere coordinating relationship in Europe, just as you gentlemen have suggested that there should be a command relationship in Washington between the various parts of this team.

I personally feel that you run into just about as many difficulties in a command relationship as you do in a coordinating relationship, but I do not say it cannot work in a command relationship. I only say we are getting along fairly well in most areas in the present coordinating relationship, and particularly here in Washington.

Mr. HERTER. I think the impression of most of us who went over was that the quality of the individual dealing with these problems was extraordinarily high, but the organizational set-up, particularly the split between London and Paris, was very unfortunate.

Again, this command relationship we are speaking about, and having the use of the effective weapons, which in many cases has developed as something to stimulate things with, has not been coordinated satisfactorily in developing these multilateral relationships.

Mr. CABOT. May I speak of the locality problem for a moment? The reason Ambassador Katz is in Paris was that historically Paris was the point at which we carried out the European end of the Marshall plan. There was set up in Paris the OEEC—the Organization for European Economic Cooperation—which has been extraordinarily effective in integrating the economies of these European countries.

We felt that to move Ambassador Katz—the OSR, as it is called—from Paris to London, would seriously interfere with his relationships with the OEEC, and that is why Katz has stayed in Paris. The other is in London because the DPB was set up there, that being the headquarters of NATO.

There are many advantages to DPB and Mr. Batt staying in London, both because it makes it easier for him to work with the head of the team, Ambassador Spofford, and because the head of the military regional group, General Kibler, is located in London.

Mr. HERTER. For what it is worth, I think we had a feeling very strongly that if both Spofford and the production team came to Paris it would make a much better integrated set-up. After all, the JAMAG in London is operating largely as a clearing house of information on military end items, and I do not think that was necessarily as important in Paris.

Certainly from the point of view of shipping they could well remain in London, because that is the obvious place for shipping information. I think if you could bring together all the members of this team at one spot, even though they have been coordinating extremely well with each other, in my mind it is not a good organizational set-up at all, and you can make very real improvements in it.

I realize all the difficulties you have had in having them separate and some of the objections to bringing the whole NATO group to Paris, but I still think they ought to be all together and all in one place, if just from the viewpoint of not having people traveling back and forth day after day after day in trying to maintain a coordinated operation.

Chairman RICHARDS. Do you want to say anything about that?

Mr. CABOT. I think Mr. Herter made a very careful study of this problem, and he certainly sees the aspect of the problem. There is

not any easy solution, however, You cannot move everything to London, or everything to Paris. So long as you are going to have the split there is no easy place at which you can split the different parts of the team. We think we picked the best place to split it.

Mr. HERTER. I felt particularly strongly about the production thing which is the thing that really needs more of a spark plug than any other part of the operation, and the thing that really needs some gimp in it. If you bring that all together I think it would be very important.

Chairman RICHARDS. Did either one of you gentlemen, Mr. Hays or Mr. Holifield, have any questions right now?

Mr. HOLIFIELD. No. The only reason we are leaving is because they are voting on that amendment now. I wonder if we could have a temporary recess on that and then come back.

Chairman RICHARDS. We can do that. When was it set for? Was it 3:30?

Mr. HOLIFIELD. Yes.

Chairman RICHARDS. We can recess for 15 minutes.

Mr. VORYS. Are there any further questions? I wonder if we should hold Mr. Cabot longer.

Chairman RICHARDS. Is there any necessity to hold Mr. Cabot here any longer this afternoon? If anyone has a particular question he or she wishes to ask they could do that now and we could complete it at this time and not come back.

Mr. JUDD. I have one short question, Mr. Chairman.

Chairman RICHARDS. All right, sir.

Mr. JUDD. Would it not be possible for Mr. Batt to have his two activities in London in one office if he is going to be kept in London? I realize he has two hats. Why cannot one staff do both jobs instead of two separate empires?

Mr. CABOT. He has only one staff, I believe, Mr. Judd. His staff in the ECA is a fairly important staff. In the DPB he is the American representative on an international board. He has it all from one office.

Mr. HERTER. He has 37 men in his office in his position as production representative.

Mr. JUDD. That is what I thought. I understood he had two separate offices and staffs.

Mr. HERTER. They are in entirely separate buildings and there are very considerable staffs for each.

Mr. JUDD. Every Congressman has two or three jobs. We have to attend to legislation, we have to attend to constituents and we have to attend to dealing with agencies, and we do not have three offices for them.

Chairman RICHARDS. Let me say this, Mr. Cabot. Mr. Herter, Mr. Battle, and a couple of other members went over on this special study. They stayed in Paris and in London a week making an exhaustive study of these points. In this report we brought back some of the recommendations on how to do away with certain overlapping and, you might say, dual agencies. That is the reason why I imagine he is raising that point.

Mr. ROOSEVELT. Why replace Mr. Katz? Why not put Batt in there and join them?

Mr. JUDD. Why put a new man in Mr. Katz' office? Why not move Batt up to that office and combine it and let him handle the whole thing.

Mr. CABOT. I would prefer that question be answered by ECA as I have no administrative control over the appointment of successors to Mr. Katz.

Mr. JUDD. We are not talking about individuals. We are asking: Why not eliminate one job there? There are two jobs, or at least two aspects of the same job, and one is more inclusive than the other.

Mr. HERTER. But Mr. Batt is directly under you when he wears the hat of a production expert.

Mr. CABOT. No, sir.

Mr. HERTER. In the NATO organization he is your particular baby.

Mr. ROOSEVELT. He is under Spofford who, in turn, is under the Secretary of State.

Mr. VORYS. I think you need another coordinator to coordinate Mr. Katz' two functions. That is what we need.

Mr. ROOSEVELT. I think we need an ISAC or coordinating committee for the committees of Congress too.

Mr. JUDD. The point is this: Any opponent of this whole program can go down and by merely showing all these charts on the floor of Congress can lose 50 votes for the bill. I think I could do it with the general public. People would look at that set-up and say, "That is what I am paying for? Maybe it makes sense but I can't see it." Even though the functions remain, you can simplify it—

Mr. ROOSEVELT. But you are not a demagogue. You would not do a thing like that.

Mr. JUDD. No, I would not but somebody could and I am afraid somebody might.

Mr. CABOT. Might I correct a misapprehension as to Mr. Batt's position which seems to be prevalent here? Mr. Batt is not under Ambassador Spofford except to the extent that Ambassador Spofford is the leader of the regional team. Mr. Batt took his appointment as head of the Defense Production Board from the Department of Defense.

Mr. HERTER. From the Munitions Board.

Mr. CABOT. And his backstop is the Munitions Board. Mr. Katz is from ECA so that the relationship between those two gentlemen is one that heads up in the President of the United States.

Chairman RICHARDS. Dr. Eaton would like to ask a question.

Mr. EATON. Like all the committee we are greatly impressed with your grasp of the problem. You use the phrase, "foreign policy objectives." Could you give us in a word or two what those objectives are?

Mr. CABOT. Yes, sir. I can in a word or two. The security of the United States.

Mr. EATON. That is the whole show?

Mr. CABOT. I think that is the only real foreign policy objective we have.

Mr. EATON. That is our activating motive?

Mr. CABOT. Yes, sir.

Chairman RICHARDS. Thank you very much, Mr. Cabot. You have been a mighty informative witness and we appreciate your coming up here. If we should need you at a later time we will try to give you notice.

The committee stands adjourned until 10 o'clock tomorrow morning. (Whereupon, at 3:35 p. m., the committee adjourned until 10 a. m. the following day, Friday, July 13, 1951.)

THE MUTUAL SECURITY PROGRAM

FRIDAY, JULY 13, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 2:30 p. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

We will now have as our witness General of the Army Omar N. Bradley. We are very glad, General, to have you with us this afternoon. Will you proceed, sir.

General BRADLEY. Mr. Chairman, if it is all right with you, I will read this statement and get it into the record.

Chairman RICHARDS. Yes, sir.

STATEMENT OF GENERAL OMAR N. BRADLEY, CHAIRMAN, JOINT CHIEFS OF STAFF

General BRADLEY. Mr. Chairman and members of the committee, you have heard testimony on the world situation; the economic, technical, and military needs of the free world; and the United States relationships to them. I would like to add a brief statement on what the Mutual Security Program means to this country from the military viewpoint.

Two years ago the Department of Defense urged this country to join the North Atlantic Treaty, and to establish a corollary program of military aid in order to give real military muscles to our defense plans.

Fundamentally, we joined the pact as a deterrent to war, and as a protection to the free world if war were thrust upon us.

As military men we looked at the treaty and the military aid program from the viewpoint of its military necessity, and its contribution to our own security.

We needed allies, and at the same time we wanted to deny those free nations to any aggressor who would try to include them among his satellites. Through the treaty, we combined the military efforts of more than 300 million people in a collective security pact.

We also counted on the industrial potential of our 11 friends which, when added to ours, was a critical factor in our hopes for the future security of the Western World.

We stressed the point that the frontiers of our collective defense were in the heart of Europe, and that, consequently, the geographical position of these allies contributed to our security.

We still hope to deter aggression, and these same factors are valid today.

We still must have friends. Our security demands that the Soviet-satellite combination be prevented from picking off any more nations. The free world still needs the industrial potential—the resources and skilled labor—of all of our combined nations. The United States defensive frontiers to the east remain in the heart of Europe.

In planning the military aid program with the other member nations of the treaty, we have considered their most important requirements along with the weapons and matériel requirements of our own forces. Both the treaty and the aid program are integrated, collective security efforts.

You are now considering further expenditures to continue the economic and military aid for friendly, needy nations throughout the world. It is again time for a critical examination of the program so that it will do the United States and the free world the most good.

When we gage the progress being made, we have to examine the treaty and the Mutual Defense Assistance Program together in order to get a true picture. Looking over the accomplishments of the first 2 years, I am encouraged to recommend that we continue, and possibly enlarge our participation.

The tension in this world has not decreased, and the North Atlantic Treaty Organization is even more important today than it was 2 years ago. As far as the North Atlantic area is concerned, there is no direction to go but forward.

In this day and age, collective security requires a collective effort on many fronts. It requires economic cooperation, industrial cooperation, international political trust and confidence, as well as collective military planning. We have made strong beginnings in all of these fields.

Except under the pressure of war, or under a dictatorship, no group of nations has ever before collectively planned their defense, integrated their weapons programs, and allotted forces to an international commander. This feat stands as a marvel of accomplishment.

Without American leadership this would not have been possible. It is also to our credit that this 12-nation defense system has evolved without duress or pressure from the leader nation.

Now, the North Atlantic Treaty Organization must develop, equip, and effectively train, the forces that our collective defense plans require.

The creation of effective forces is the major military problem facing us today. Some of your committee members have just returned from a trip to Europe. Undoubtedly they have talked over some of the specific problems involved, and have undoubtedly seen the gains we have made, as well as the gaps that still exist. In my recent talks with General Eisenhower and his staff, the French Chiefs of Staff and the British Chiefs of Staff, we discussed these problems.

On the military front, it is apparent that the North Atlantic Treaty forces can only be equipped quickly by further assistance from the United States industrial capacity.

The items represented in title I of this bill total more than \$5 billion required for this task. Title II, totaling approximately \$415 million, is for Greece and Turkey whom we have already aided for 4 years, and whom we hope some day can be included in the North Atlantic Treaty Organization.

Title II also includes essential military aid for Iran. The program for Iran has been a part of our assistance to the Near East and Africa, since the military aid funds were first appropriated.

We are also asking for authority to grant aid to the other free countries of the Near East and Africa if it becomes necessary to our security to do so.

There is a gap between the forces we have now and the forces General Eisenhower needs for an adequate defense of Western Europe. First priority must be given by all nations to the task of making the forces we have now really effective and ready for combat. In the case of European nations, this task could not be accomplished quickly enough without a sound military aid program from the United States.

In addition to making truly effective the forces we have now, the rest of the forces we shall need have to be mobilized, equipped and trained. There is no hope of accomplishing the remainder of the job in the next few years without continued military aid from us.

As you already know, the military aid part of this Mutual Security Program takes two forms: direct provision of end items of military equipment, and also assistance in the form of machine tools, production tools, and other essential items to help them rebuild their armament industries.

I would like to expand on the last sentence a little bit to make sure it is understood. In other words, the aid which supports European military efforts is not only in the form of end items produced in the United States, but also in the form of economic aid provided for in the ECA part of this bill.

In other words, the ECA part is to establish some war industries as well as helping along other lines to assist the European governments to build roads, ports and airfields, while feeding and housing their forces. That is the reason for that sentence, if it needs any further explanation.

As we consider the collective security effort we are making with our allies, there are two questions uppermost in American minds. Will there be time for us to make the defense of Western Europe effective? And are the other members of the pact contributing a fair share?

To answer the first question of time, I must honestly state that no one knows.

Two ideas come to mind, however, when I hear this question asked. First, we set out upon this program to improve the defenses of the North Atlantic area as a hope that it would act as a deterrent to war.

Despite the Communist propaganda at the time of the signing that the Organization of the North Atlantic Treaty would be considered an aggressive act, so far the Soviet-satellite combination has not moved in Western Europe.

As long as we have time to do so, we must continue to apply every effort to making the collective defense a continuing and stronger deterrent to aggression.

The second thought this question brings to mind is this: If we continue to make an effort to strengthen the North Atlantic Treaty Organization and prepare our collective defense, we will be better prepared if war is thrust upon us.

The other alternative—not continuing to give every aid we can to the collective-security effort—can only lead to a defenseless and supine military position.

The second question: Are the other members of the pact contributing a fair share?—is an equally difficult one.

From my conversations in Europe, I am convinced that the military men of these nations are working steadfastly to contribute everything that they can. The great increase in their military budgets this year over last year would also indicate to me that they have every intention of continuing to improve the state of their own defenses, and continuing to make a maximum contribution to the collective defense security effort.

As many of you heard during your recent visit to Europe, France is perhaps the key nation in the North Atlantic Treaty Organization. My discussions with the French Defense Minister, the French Chiefs of Staff gave me every indication that France has increased her defense effort and expects to increase it still more.

In the defense of Europe, France is a key nation. Her needs and her problems are typical. For France, and for the other nations, our military aid program should soon enable our European friends to manufacture their own spare parts and maintenance items.

To defend Europe tomorrow, they all need end items of ready equipment. But to defend Europe 5 years—and I use 5 years not as an exact figure, but figuratively—from now, and to give them the security of their own making, they need armaments industries.

This long-range investment which is an integral part of this program, will ultimately decrease their dependence on the United States.

It is obvious that the bulk of the weapons for the defense of Europe currently must be provided by the United States; but this can only be accepted as a temporary condition.

In due time the security forces of European nations will have to be maintained by the Europeans. If we help them plan their rearmament wisely, the future requirements for spare parts and maintenance of these forces should largely be met by the European nations themselves.

Just as much as we would dislike having them permanently dependent on our production, they would dislike the long-range possibility of continually leaning on us.

So for this year, we must do both: Give them the end items, and encourage the development of their own armament industries toward a self-sustaining basis.

Because ECA has done such a marvelous job, both as to morale and the improved economy of the recipient nations, there might be some tendency to slack off now, especially when we are faced with the larger military aid program.

I believe it is wise to point out that many of these economic programs contribute materially to the potential industrial development that will enable these nations to assume more of the rearmament load for the longer-range weapons production program.

There is one more encouraging sign in the progress being made by our allies. Many of these nations that started with little or no foundation have made signal improvements in their own armed forces—organizationwise and trainingwise.

Officer and noncommissioned officer schools and training have been organized and improved throughout NATO. New technical developments have been adopted wherever possible. And national military budgets have been increased. All these indicate to me that they are

in this thing to stay, and with every intention of contributing as much as possible to the collective defense.

One of my main purposes in making the recent trip to Europe was to make my own estimate of the progress being made in Europe under General Eisenhower.

As you know, when the appointment of a Supreme Commander was considered, we were doubtful about appointing an American commander for forces that did not exist and could not exist for many months.

On the other hand, it was hoped that General Eisenhower's presence in Europe, and the creation of his command, would be a "shot in the arm" to European morale and European defense efforts. In my opinion, it has worked out this way.

I have been most favorably impressed by the splendid job of organization and planning done by General Eisenhower and the members of his SHAPE staff representing the North Atlantic Treaty Organization nations.

His presence there, and the strong leadership he has exerted, has brought renewed confidence and renewed vigor to our allies in Europe. He deserves every support that we can give him in his difficult task of closing the gap between the forces at hand and the forces we need.

Our effort alone cannot accomplish this, but in combination with the other nations, we should be able to provide a strong and adequate defense of Europe.

I have given most of my attention in this statement to title I—the European section—of this program. However, when we study carefully the information our intelligence provides concerning the Soviet satellite disposition of forces, we immediately recognize that the other areas in this program—the Near East and northern Africa, Asia and Latin America—are also vital to the improved security of the United States, as well as the continuing chance for peace in the world.

The Near East and northern Africa are contiguous to the North Atlantic Treaty area. Our responsibilities of leadership in Asia and Latin America have never been so great before.

Most of them hold membership in the United Nations, and all of these nations represent groups of free men and women who want peace and security, and a chance to improve their ways of life.

This combined program of foreign aid—military, economic, and technical—is a program entirely worthy of a great and generous nation. If it pays off in peaceful years, it will be the greatest investment that any nation has ever made.

Chairman RICHARDS. Thank you, General. I think that was a strong statement of your case.

We will proceed under the 5-minute rule. I have one or two questions I would like to ask.

Our own defense budget outlay this year is more than \$60 billion. In this bill there is more than \$6 billion. Would you care to state to the committee your opinion as to the relative importance of these two items in the defense set-up for security?

General BRADLEY. Mr. Chairman, I think they are so integrated that each one is essential. It is hard to say you can do one and not the other one and still expect to accomplish our purpose.

In other words, the purpose of both of these bills, that is, the defense budget for the Armed Forces and the help to Europe, are all designed to increase our collective security forces to a point where they will act as a deterrent to war.

It is very hard to say that one is more important than the other one.

You might say that if war should happen before this thing becomes effective, then maybe what we spend here at home will be of more ultimate use than what we spend abroad.

But a third world war, with all of its destructiveness, is so great, and the final results would be so catastrophic, that it seems to us that you ought to lump the two and think of all of them as a deterrent which would avoid such a world war.

Chairman RICHARDS. Would you say, taking into consideration the entire world picture, politically and otherwise, that it seems to us that one is as important as the other?

General BRADLEY. Yes, I think they are, sir.

Chairman RICHARDS. General, practically all of this military production, except some items for maintenance and other things, will come out of American industry. That being the case, do you think it would be wiser to do it as it is suggested in this bill, or would it be wiser to allocate a certain percentage of our production in the United States for the military program in Europe, and turn that over to General Eisenhower to allocate to the individual NATO members, and thus possibly get better cooperation by doing that?

What is your idea on that?

General BRADLEY. In my opinion it is much preferable to do it this way: This is a very carefully worked out program, based upon recommendations of the people who do the planning in Europe, then screened by the Joint Chiefs of Staff here, with a special staff set up to study it for them.

And it is also entwined so much in our Government policy that I do not see how you can delegate that to somebody abroad.

Another big point is that General Eisenhower is really an international commander. He is not a United States commander.

To turn over to an international commander a thing which is primarily a United States business, I think is setting a dangerous precedent. Furthermore, he does not have the staff to do it. Of course, you could build that staff up.

Suppose General Eisenhower's successor is a Frenchman or an Englishman. I do not think you would want to do this. I think you must think of General Eisenhower as almost wholly an international commander. And I do not think this is something that you want to turn over to an international commander.

It is so wrapped up in our governmental policy that I think you should keep it here in Washington.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. General Bradley, as to General Eisenhower's status, is he like MacArthur, serving under our Commander in Chief, or is he actually selected by the 12 nations and, therefore, he himself is an international commander?

General BRADLEY. He was specifically asked for by all 12 nations of the North Atlantic Treaty Organization. And he receives his orders not from the President but from the standing group of the North Atlantic Treaty Organization. So, to that extent, to answer your question, he is not in the same status as General MacArthur.

Mr. VORYS. He was not appointed by our Commander in Chief and would not be subject to removal from his present office by our Commander in Chief?

General BRADLEY. I would not go that far, because after all he is an American officer.

Mr. VORYS. He could be retired?

General BRADLEY. They could recall him if they wanted to, if there was reason for it.

In the case of General MacArthur, he was acting as the United Nations commander, under a situation where the United States Government had been designated the executive agent for the operations by the United Nations. That has not occurred in this case. In other words, the United States has not been appointed executive agent for NATO as far as the Supreme Commander of Europe is concerned.

Mr. VORYS. That is what I understood, that there was a distinction. On page 9 of your statement you said:

We must do both: Give them the end items, and encourage the development of their own armament industries toward a self-sustaining basis.

There is a third thing that we must apparently do that we did not know we were going to have to do when this was presented 2 years ago, that is, furnish our own ground forces. You have gone over that in great length before another body recently. I wish you would tell us why it is that we now find it necessary not only to furnish end items, not only help to develop their own, not only as we were informed when the plans started in 1949 to furnish a strategic air force and navy, but furnish ground forces.

General BRADLEY. Well, when this question of additional troops to Europe came up—and I assume you are talking about additional ones because we have always been committed by occupation forces—two questions arose in my mind. In the first place should we, as you say, send troops to Europe? Could they furnish the ground troops and let us help by our mobile forces, air and naval forces?

Mr. VORYS. Plus these gigantic supplies of end items and this enormous economic aid.

General BRADLEY. That is right. I think we would all wish we did not have to furnish it, but I think you have two or three stages to consider. If by sending a certain number of divisions to Europe you made this security force such that it would deter aggression, I think we would all be willing to send whatever that force was, if it was anything within reason.

I think that is one thing we are faced with here that for some time to come we are going to have to furnish a certain number of ground forces in order to make that force a deterrent. Then the question came up and we argued this at great length—and I certainly did with myself—should we send them before this X number of divisions would make it effective. There are a lot of arguments for not sending them until such time as the six divisions, or whatever it is, would make that force effective.

On the other hand, it is just like sending General Eisenhower over, as I stated. It acts as an incentive to these people to exert greater efforts. It shows them we are in this thing really to make it effective, and we are willing to give our own forces to make it effective. We are willing to lend them a commander to make it effective.

So what the answer to your question will be 5 or 10 years from now I do not know. I would hope the answer will be, "Yes", they are now strong enough so that they can hold it until we send them over there after it starts, and we do not have to keep them over there on the ground.

That condition does not exist at the present time, and I do not think anybody can say just how soon it will. I think we hope that condition would exist at some time in the future.

Chairman RICHARDS. Your time has expired, Mr. Vorys.

Mr. Ribicoff.

Mr. RIBICOFF. No questions at this time.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. General, you have a most interesting statement, from which I would deduce that your sense of this whole thing is that we are entered upon a period when the free nations must build themselves a strength sufficient to withstand the onslaughts of those in opposition to freedom, regardless of the cost to all of us together?

General BRADLEY. Yes, I do, because the alternative looks rather black.

Mrs. BOLTON. It certainly is. No matter what the outcome is in Korea there must be no letting down of our efforts to strengthen ourselves.

General BRADLEY. Well, to me Korea indicated that the Russians were now ready and felt themselves in a position to start more aggressive acts—I might say begin aggressive acts of a bigger size, if you want to put it that way, than they had before, with the attendant risk that it might start a world war.

Just because we stopped them in Korea and kept them from accomplishing their purpose, I do not believe we can take that as an indication that they are not going to continue their policy. They have had this policy for years and years. It was taken over from the czarist government by the present Communist government. It is the nature of the people and the nation, and I do not think just because we have stopped them once that they are going to change their whole world-wide policy.

Mrs. BOLTON. As you understand that, it means that their goal is complete domination of the world?

General BRADLEY. That is their intention and, in fact, I believe they have announced that. They have announced that communism and our form of free enterprise and government just cannot live in the world together. As long as they have that, I think we must expect that they are going to continue to try to accomplish their end in some way. If they cannot do it in Korea they will try it somewhere else, and I do not think this is any indication at all that they have changed their minds.

Mrs. BOLTON. Thank you.

On page 11 you speak of northern Africa—the Near East and northern Africa. Are there not other potential strengths and weaknesses in other areas of Africa? It is not just the northern part of Africa that is important to the free world, is it?

General BRADLEY. No. It is the part of Africa which is most immediately under the guns and probably concerned. Of course, south Africa is pretty much in a position to take care of itself. It is, I am sure, one of those countries that we could expect to join us, although

they are not in any treaty organization with us. I believe we all feel south Africa would come in, in any war England comes in.

Mrs. BOLTON. Sometime when I have you alone I would like to discuss a little bit the intelligence aspects of the situation.

Chairman RICHARDS. Is that all right with you, General?

General BRADLEY. Yes, sir.

Mrs. BOLTON. But I would just like to refer for a moment to title II, which takes in the Near East and Africa—north Africa. It is very general and very short. I wondered if you had in your own mind plans that were more detailed in the way of granting aid to the free countries there.

General BRADLEY. We do, and General Bolte, I believe—no, it is another officer, and I have forgotten which one it is now who is going to testify specifically on that and who has gone into all these details. I went into all of these breakdowns last fall, when the Joint Chiefs approved this program, but in trying to read back into it I have not gone into that much detail.

Mrs. BOLTON. But you will cover that?

General BRADLEY. We will have an officer up here who will testify in detail on all of the things involved in the Middle East and north Africa.

Mrs. BOLTON. Thank you very much, General.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. General, on page 10 of your statement you say it was hoped that General Eisenhower's presence in Europe and the creation of his command would be a "shot in the arm" to European morale, and European defense efforts. Why do you think it was necessary that Europe get a shot in the arm?

General BRADLEY. Well, sir, in my opinion, as I indicated in another way maybe here, France is more or less the key to this thing, and the key to French security forces, in my opinion, is spirit. I think most of us would say—I do not know whether we are right or not—that the French spirit to resist has not been as high in the last few years after having been overrun partly in 1918, and then overrun again in this last war, and they possibly need more of a stimulant or a shot in the arm, or encouragement, or whatever you want to call it, than maybe we would, or some of the people who had not been occupied.

That is what I mean by a "shot in the arm." I have no doubt that France's desire to resist and build up these security forces would greatly increase—and that would come back to the point where they have great national pride in their security forces—if left alone; but we would like to speed that up. I think the presence of General Eisenhower, with his reputation and his prestige—and they know what he stands for—I believe his presence in France will speed up the building up of the security forces and their interest in national security.

Mr. SMITH. I think if any man could do it, he could. It was my privilege to be over there with our group a few weeks ago, and somehow or other I came away with the feeling that General "Ike," as we call him, was acting as a sort of cheer leader for Western Europe.

Now, I would like to suggest why I think they lack this spirit you are talking about, which is absolutely essential if we are going to have

a real defense in Western Europe. In 1948 the standard of living of the French people, that is, the working people, was \$518 per year. After we have poured in the Marshall plan billions we find it is today \$525 per year. So long as we have that kind of a standard of living, can we expect to arouse a people to a fighting pitch? It seems to me that the whole military effort rests on the spirit of the people, and as of this date I do not believe it is there because of this low economic state that the great bulk of those people are in.

General BRADLEY. To me that is one of the questions that arises when you start studying French defense. I do not know of any subject that is more complicated than just that, and that is one of the big elements in it. I went over and got a lot of figures, and I have a lot of figures at home, and I find it very hard to analyze. There are a lot more elements that enter into it, if I might mention some of them.

They have, with the aid we have given them, been able to come back industrially, and they are now producing about 135 percent of what they were able to produce before the war. Well, you immediately ask the question, if they come back that much why can they not convert more of it to building these spare parts and their own matériel and equipment, and so on. Then you begin to look around for that.

I think there are several elements that enter into it. One of them you have mentioned—the low standard of living. Involved in that is the wide difference between the cost of things and their wages. Some people I talked to brought up this question: If you make them, by insisting in some way, by holding conditions over them, convert more of this industrial capacity to war equipment now, and thereby possibly reduce the supplies of civilian goods, may you not still further aggravate the problem by raising the price of the commodities they have to buy out of that \$525?

I do not believe all of that high price is due to the scarcity of materials and the fact that they have not caught up. There are other elements that enter into it.

Far be it from me to get into the political side of this, but I think it is a question as to whether or not something should not be done maybe to lower the profit element percentage. I do not know enough about it to know how much that affects it, but I suspect a lot of people are getting richer; whereas, if they could level the thing off a little more, you would remove part of that.

Another thing that enters into it, of course, is the finance. How much can the Government finance without undoing some of the good?

Another thing is the question of raw materials, which we are all competing for, including yourselves.

However, we get down to the question of, well, if you push them too fast, or if they push themselves too fast and cause this \$525 a year man to have to pay more for his fuel and food, and so forth, may you not force him into communism? Then, instead of having 26 percent Communists, or whatever it is, you may raise it to the point where you lose the battle internally.

So it is a very complex problem, and frankly I do not know what the answer is. I think that is one of the reasons why we are going to have to depend very largely on people on the ground, like General Eisenhower and his staff, and the ECA people, and Mr. Herod and his staff, all working together to try to find out just what is the answer to this problem.

I do not know, certainly, in a short period, with what time I have had to put in on it.

Mr. SMITH. Of course, I think this: Until we begin to devote some time and study to that problem, much of the money we spend for the military will be going down the drain, because we are not going to solve the basic problem involved. I think this is one of the answers to communism, or at least one part of it.

General BRADLEY. I do not think it is going down the drain necessarily. The things that are in this bill are end items for units which are actually being formed, and they will not be turned over to them until they are formed and ready to receive them and the economic aid, all of which goes to making war materials. Certainly that must be coordinated by Mr. Herod and the rest of them that are over there. I do not think this is going down the drain, but I think it is going to be less effective unless pretty soon they convert more of their effort to it.

Mr. SMITH. But these people are the ones who are going to use this end-item material, and until we get the right spirit in them it is questionable.

General BRADLEY. Could I add a little answer to that, Mr. Chairman?

Chairman RICHARDS. Yes, sir. You are talking about the will to fight, are you not?

Mr. SMITH. Yes, sir. I am indeed.

General BRADLEY. It is one of these circular things again as to which comes first, the hen or the egg, because in my opinion this equipment, or getting these units well-equipped and well-trained, and having them well-supplied, and getting the war industries started, raises the spirit, because when these men go home on furlough and start bragging about what a grand outfit they have with these new trucks and tanks, whether the French built them or whether we have built them, that raises the spirit of their immediate neighbors, and that is part of the job. In lifting the spirit of France it goes all together, in my mind.

Mr. SMITH. Thank you.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I only want to inquire, Mr. Chairman, if it is anticipated that we will all have an opportunity to be alone with Mrs. Bolton and General Bradley before these hearings are concluded?

Mrs. BOLTON. I am sure we would be delighted to have you.

Chairman RICHARDS. I am sorry to inform you, under the rules of the committee there will not be an opportunity for anybody to be with him.

Mr. BURLESON. Will General Bradley be back with us in an executive session?

Chairman RICHARDS. No. Not very soon. We will have an opportunity after the 5-minute rule, though, for questions from anyone who wants to question him further.

Dr. Judd.

Mr. JUDD. General Bradley, continuing the same line as the gentleman from Wisconsin pursued, is it your feeling that the main problem is not so much to create a desire on the part of the French people to stay free as it is to give them a reasonable hope that they can and to overcome the defeatism that any people would have if faced with such overwhelming power across the border, when they are without

the strength to meet that power without such assistance as we and others can give?

General BRADLEY. I think that very definitely is part of the will to resist. Yes. To use an illustration on that, I expect we would take a lot of insults from Joe Louis before we would fight, knowing that we had no chance to win. But, when he gets to be about 80 or 90 years old, if we were much younger and we had a chance to win, then I think we might be willing to accept the challenge and fight. I think the French are very much that way now. As long as they feel they have no chance to win they might not fight, just like I said we would not fight in physical battle with somebody we knew would lick us. But in my opinion, when they see a chance to win, and when they get to that point, then I think they will fight.

Mr. JUDD. I want to say for myself that as compared to previous visits to Europe, that process of improving morale is already a good deal further along than we had a right to expect. General Eisenhower and his staff, his personality, his organizational ability, the arrival of some American equipment and the providing of something concrete to rally around have more than justified the faith that you and we have had. I am greatly encouraged at what has been accomplished.

That brings me to this question, based on what you say on page 7. You say:

As long as we have time to do so, we must continue to apply every effort to making the collective defense a continuing and stronger deterrent to aggression.

Do you think we have gained more in these 2 years than the Soviet has?

General BRADLEY. Yes, sir; I do. I think time is running in our favor if we take advantage of it.

Mr. JUDD. Well, they obviously think it is running in their favor. They always stall everywhere and do everything possible to buy time. They would not be doing that unless they thought somehow it was operating in their favor. This perplexes me. I hope you are right and that it is in our favor.

General BRADLEY. I think you have to consider that from two angles. I say I think time is running in our favor because if given sufficient time—and we have to try to make it sufficient—we will have our security forces built up so that they will act as a deterrent to war.

From their point of view I can see where they might say, "Well, we are making pretty good progress without going to war on the fringes, propagandawise, politicalwise, so time is running in our favor. We have taken over China and have China now as Communist, and we have taken over Tibet and Czechoslovakia, and so forth."

So that they might think as far as getting these results without resorting to war is concerned, that they want all the time they can to do it. So I do not think they are too inconsistent and, of course, one of us may be wrong, or we may both be wrong.

Mr. JUDD. Our problem is to build up military strength so that they cannot win by force, and then handle our political and economic affairs so well that we will not become a victim internally to their historic method of conquest, namely, subversion.

General BRADLEY. I think the second will follow very largely the first.

Mr. JUDD. You say on page 9:

In due time the security forces of European nations will have to be maintained by the Europeans.

Can you tell us how much time you have in mind there, and how long it will be before the presence of American troops will have served as a catalytic agent or a "shot in the arm," and so forth, to the point where they can defend their own countries?

General BRADLEY. I think there are two points to this. One is the point when they can take it along without material assistance and money assistance or financial assistance. The other one is the question of when troops can be withdrawn. I would say the first one would probably arrive first, and after that, and following that, probably they can stand on their own feet as far as certain security forces are concerned.

It is pretty hard to estimate that. We would hope in, say, 3 years, if this program is continued on approximately this scale, that we would have reached that point where they can produce their own equipment and matériel. But, if France, as we were talking about it a minute ago, can convert that industrial capacity to war-making equipment faster than we might think she can, it might shorten it. If she cannot do it as fast as we think she should, it might lengthen it a little bit.

About the only thing you can say, in my opinion, is that you can guess in about 3 years of this assistance she should then be able to produce this stuff herself.

Mr. JUDD. I want to get this straight. You think that within 3 years she will be able to be essentially self-sustaining economically, but we will have to have our forces there longer than 3 years. Is that correct?

General BRADLEY. I should think it might follow—that second one might follow, because it takes a long time, as you know, to get these assembly lines running. It takes longer over there than it does here. So, when they start producing their own equipment and running it off and putting it in the hands of their troops, and their troops start training with it, that extra step will take some time. Maybe I have got them reversed, but in my own opinion I think reaching the state of producing their own equipment will come before you can withdraw all your ground forces there.

Mr. JUDD. Then the next paragraph on page 9 does not tie in with that. You say:

"So for this year, we must do both."

As a matter of fact, we will have to do both for more than this year.

General BRADLEY. Yes, sir. I hope I did not put too much emphasis on "this year." We are talking about this particular year.

Chairman RICHARDS. This year's bill.

Mr. JUDD. I see, but I did not want the wrong impression to go out that we must do both for just this year. We have got to do both for at least 3 years, and maybe one still longer. Is that correct?

General BRADLEY. Depending on so many intangibles that we cannot guess now.

Chairman RICHARDS. The gentleman's time is up.

Mr. Holifield.

Mr. HOLIFIELD. Thank you, Mr. Chairman.

General Bradley, you placed an approximate time plan of 5 years before us to mobilize, equip and train these forces, and to give the necessary economic and military aid to our allies to insure that we will have at least a chance to maintain a free world. You point out very clearly on page 6 that it is a question of time as to when a strike might occur against us. I find the feeling abroad in the land—and it is particularly augmented by this truce situation in Korea—that the emergency is almost over and that there is no need for mobilizing on this side of the water to achieve this program.

I wonder if you do not feel that there should be no let-up on our mobilization of the resources of America to produce this aid that is necessary, you say, for them to get on their feet.

General BRADLEY. I feel very definitely that this should not influence our own efforts to increase our own security or to increase the security forces of our friends. Just because the Communists have failed to attain what they had started out to attain in Korea is no proof at all that they have changed their over-all opinion of some day dominating the world. I think they have just been stymied in one place and are willing to pull out of that, but I do not think any of us would be surprised to see them start in somewhere else.

Mr. HOLIFIELD. It is very important then that we proceed as though there is an emergency?

General BRADLEY. Yes, sir. As I tried to outline here this morning in talking about the various trouble spots around this world, that is just one of them.

Mr. HOLIFIELD. That is all.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. General Bradley, may I revert to the question the chairman asked you and put it in a little different way from the way he put it.

When we were in Europe we spent considerable time in studying the mechanics of getting together the various figures being presented to us. In connection with military end items it was perfectly clear that the procedure followed was that the initial studies were made by the country missions in which the military were represented. Then the military in each country sent their findings of estimated needs to you and sent a copy to a coordinating committee in London. But the final determination, even though made within the limit of appropriations set, was made here by the group under your command. That was a decision with respect to these military end items, and these military end items, which are all material of war, were exactly similar to that which we were procuring for our own Armed Forces. In other words, that there was no special equipment being made for the European countries and, generally speaking, that there was standardization of equipment.

So in effect you were making the decision here as to how much of what was coming off our production lines ought to be sent to Europe, which I think is an entirely proper way for it to be done.

However, that in effect means, General, that you as a military man are determining, from what you know as to what the productivity of this country can be through Mr. Wilson's organization or otherwise, what is coming off our production lines and what in the interests of the security of this country as well as the free world you think should be allocated to the European theater of war, and the NATO countries.

Is that a correct statement?

General BRADLEY. That is what you finally end up with, but before you arrive at that decision you take into consideration all the evidence you can get, and you get this information very largely from the members of the various regional planning groups.

Someone asked me a question the other day as to why that should not come from General Eisenhower and his staff. As a matter of fact, a lot of it will next year, but when this particular list was made up, General Eisenhower's headquarters was not in existence. Now, since his headquarters and his subordinate commands really replaced three of the regional planning groups under the North Atlantic Treaty, then the information from those regional planning groups will now come through his headquarters.

Mr. HERTER. As a matter of fact, the method of getting the information was excellent in that you did it with a political, economic, and military group sitting together in each country, and the information that went to you on these military items was a result of their studies. As to the question the chairman asked you in regard to General Eisenhower with regard to the distribution of this equipment, I think I would like to pose that in a different way. Even though he has been an international commander, nevertheless he is the individual directly charged with the responsibility for security in Europe, and he has under his command a certain number of troops which he is free to utilize as he sees best. Is that not true?

General BRADLEY. Yes.

Mr. HERTER. He can move them wherever he wishes to move them.

General BRADLEY. With the limitation of consulting the national governments who give them to him.

Mr. HERTER. But after that he has a certain responsibility of command.

Now, the place where he does not come in at the present time at all is that after you in this country have made the determination as to the sum total of what can be sent to all of the NATO countries together, then he has nothing to say in the field of command at all as to whether he thinks it would be wiser to have more tanks go to Italy and more guns to Italy. Then it is principally a problem of handing them that which you have allocated on this side. Do you not think he should have at least a consulting voice as to the distribution of that material?

General BRADLEY. I think he will in Europe always, because if we start shipping this material over, you do not ship it all at once, as you know, of course. If General Eisenhower and members of his staff afterward decide that is not being made proper use of, that report would come back here and you could ship that equipment right from here, and he would not have to do that from over there.

He could very easily influence the flow of that equipment. You do not have to go from the list we made up now. That is not an infallible list. If it turns out they cannot use it the way we planned it, we could very easily shift it under the North Atlantic Treaty.

Mr. HERTER. You cannot shift it once it has been turned over to a government. Neither can he.

General BRADLEY. No, sir.

Mr. HERTER. It has to be done right the first time.

General BRADLEY. That is right; and, of course, your point is he should be able to turn it over—

Mr. HERTER. In the chain of command it ought to be made very clear he has something to say about the allocation of it as between the different countries. Not the total. The total you have to determine here at this end.

General BRADLEY. I think you will find in practice he has that, unless you go so far as to say that we maintain title and have the right to take it back. Then you get into a different problem.

Mr. HERTER. Yes. That is a different problem entirely.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Roosevelt.

Mr. ROOSEVELT. Thank you, Mr. Chairman.

General Bradley, there are two brief points I would like to ask you questions on. The first is, how does the actual military production in these NATO countries today compare with 1939? Is it way down?

General BRADLEY. Oh, there is really no comparison, because, you see, their war-making industries were all destroyed by the occupying powers. Let us take France and Belgium, for example, where a lot of it was. That was all destroyed and the machine tools were destroyed and all carried back to Germany, and that part that was in Eastern Germany was probably carried somewhere else. So that their war production capacity was really destroyed in either that way or by the results of the action. England, of course, was about what it was during the war.

Mr. ROOSEVELT. There is some conversion necessary in England and modernization of plants?

General BRADLEY. Yes, modernization and replacement of worn-out equipment.

Mr. ROOSEVELT. I wanted that for the record.

The second question, I think, is tied up with this possible terminal date when we will hope to bring our own troops back. I remember back in 1940, when the Germans were overrunning France, that there was considerable talk at that time that the French General Staff were about 20 years behind the time in their military tactical thinking and that General DeGaulle was at that time only a colonel, and he had been the great advocate of tank warfare within the French Army, but he had always been suppressed by the Maginot line people.

Now, maybe this should be answered in executive session, but I do not think we are going to be able to pull out our ground troops if we are not satisfied that the top military leaders of France and the other NATO nations are qualified from a modern military point of view to carry on the defense of Europe with the forces which we have helped to create. You may find the French General Staff at that point, having most of the troops, will insist on having the successor to General Eisenhower, and you may not have the confidence that that fellow has the military ability to defend Europe unless we still have our forces there.

General BRADLEY. In the first place, in answer to your question I would hope none of us would put too much emphasis on the fact that in 3 years, or 5 years, or 6 years, or any particular number of years, we can bring our troops home, because I do not think anyone knows. The conditions may be such that a certain number of them will be required over there even a longer period of time in order to furnish

some of the leadership and the example and impetus necessary to this thing.

I hope no one thinks I am saying or making any promise that I would recommend at any particular time, at this stage and with what we know now, we would bring them home. I would visualize we can at some time, and I think we can, but that should not be taken as any promise. As far as the leaders are concerned, that is a very difficult one to foresee. There has been a study under way which would provide for setting up a NATO war college for training of staff officers of all the nations that belong to the organization. That might partially meet your objection there if we could get a strategical and tactical thinking among the countries, so that we would insure their being up-to-date and, in other words, not have obsolete methods.

Mr. ROOSEVELT. It is not an objection, but it is a worry.

General BRADLEY. Yes, sir.

Mr. ROOSEVELT. Thank you, General. That is all I have.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. In your statement, General, you expressed the hope that Turkey and Greece might be admitted to the NATO organization. I am in agreement. What are your views about the advisability of Spain also being admitted to the NATO organization?

General BRADLEY. My own opinion from the military point of view is that I would like to see her in NATO, but we have run into a lot of political reasons which get beyond my qualifying phrase of "from a military point of view."

Mr. REECE. What is the purpose of NATO? Is it a political organization or is its primary objective a military objective?

General BRADLEY. I think it would be rather hard to separate them. Certainly, as a result of the union (even if you say it is a political organization) we hope to get military forces and a military situation which will act as a deterrent to war or win if war comes. So, I think you could say the end result is military security.

Mr. REECE. It would certainly seem so, and it would seem to me that the military considerations should prevail over some individual or national prejudice that might obtain.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. REECE. Surely.

Mr. ROOSEVELT. General, is it not true, however, that the military security is aimed primarily at accomplishing a political end result, which is to prevent communism in this Western European area from taking over either by external force or internal subversion. So really the end result, as you put it, military security, is only a means to a political end.

General BRADLEY. That is the reason I say they are so closely associated that it is hard to separate them.

Mr. ROOSEVELT. But the thing is that Mr. Reece leads us into a position where we will say this is only a military thing and only military consideration should prevail, and I do not think we ought to get into that position.

General BRADLEY. May I answer that question a little more fully, and I think it will cover the point? I answered it from my point of view. You cannot get a Frenchman or an English military man to say what I said, that from a military point of view they ought to come in. Essentially for the same reason Norway and Denmark

will say from a military point of view Greece and Turkey ought not to come in, because it spreads your line.

Mr. REECE. But probably more than is true with any other European nation the Spanish people have two things that are important. One is the will to fight; and, secondly, they have a hatred of communism. When we get those two things in combination, together with a strategic location, and admittedly Spain is a strategic location, it would seem to me as though we ought to take the leadership in trying to develop a situation that would enable that country to be brought into the orbit.

I am wondering if we had brought as much pressure on England for Spain to be brought into this orbit as England has brought on us to admit Red China into the orbit, if we would not have made more progress on it than we have made.

General BRADLEY. The question as to the relative amount of pressure that has been put both ways is a political one and a diplomatic one which, I am sorry, I cannot answer, sir.

Mr. REECE. I realize that, and probably I should not raise that question here, but we just raise the questions as we think of them here.

General BRADLEY. Thank you, sir.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman.

Continuing with Mr. Reece's and Mr. Roosevelt's remarks, is it not a fact that we supported Yugoslavia and gave aid to Tito just for military reasons?

General BRADLEY. I think there are both military and political reasons why we gave him assistance there.

Mrs. KELLY. Hoping that they would resist Russia?

General BRADLEY. Hoping that they would resist; and, further than that, you could not afford to let somebody fall by the wayside for lack of a helping hand when he had broken away from the Soviets. Had we done so, it would have been very hard for anyone in the future to break away. So there were both political and military reasons why we would hate very much to see Tito fall by the wayside for lack of a little help.

Mrs. KELLY. I agree with you in that, and I think Spain should be brought into the NATO nations.

I am perturbed about the lack of will to fight. Do you know if there is that lack of will in Italy?

General BRADLEY. I have not been to Italy for about 3 years, and I will have to give you only hearsay. However, General Eisenhower's staff, and particularly Field Marshal Montgomery, who have recently been there, came back with very glowing reports of the rise in spirit of the security forces of Italy and their attitude.

I think that is significant because I think before that trip, Marshal Montgomery would probably be influenced by the general thinking that Italy would not fight. But here you find an Englishman coming back very enthusiastic about the increased spirit and revived spirit of Italy. I think coming from him it is significant.

While I say that is only hearsay and I have not been there for some time, I think we could say that their will to fight is certainly better than it was a year or two ago.

Mrs. KELLY. Thank you, General.

Would you care to comment at this time on the situation in the Balkans?

General BRADLEY. I do not know just what you mean. I covered a lot of that this morning off the record. I do not know what I could add to that, unless you give me a line on what phase you want me to discuss.

Mrs. KELLY. What is the situation at this time in Albania?

General BRADLEY. I am sorry. I did not bring that up this morning. I think I could have told you two or three things about Albania that I would hesitate to say in open session.

Mrs. KELLY. That is all at this time. Thank you, General.

Mr. JUDD. Will the gentle lady yield if she has half a minute left?

Chairman RICHARDS. I have two members who did not get in yet under the 5-minute rule. First I will call on Mr. Carnahan and then I will call on Mr. Fulton.

Mr. CARNAHAN. Thank you, Mr. Chairman.

Do all of the member NATO nations have some form of universal military training or selective service?

General BRADLEY. I think all except Iceland. Iceland has no military force, you see, but all the rest of them do have some form of compulsory service.

Mr. CARNAHAN. Within the last year, has there been a tendency to increase the periods of training?

General BRADLEY. Yes, sir. I believe most of them have increased their period of service. I think someone who is going to follow me can give you those exact figures, if you want them, or I could get them and furnish them to you. I do not happen to have them in front of me at the present time.

Mr. CARNAHAN. And all of the countries perhaps have increased their military budgets too?

General BRADLEY. Their military budgets have been increased. Yes, sir.

Mr. CARNAHAN. Is that not a pretty strong indication that they really mean to make the organization effective?

General BRADLEY. I think it is. When you talk about France, for example, France has increased her budget about 50 percent over what it was the year before, and has indicated she expects to increase it still more. I am not at liberty to say how much she hopes to do, because what I would say probably would not be binding on the new government anyway; but it is an indication of what the people were thinking along military lines, and I expect will be backed by the new government.

Mr. CARNAHAN. Is there a general feeling throughout the European countries that their economy is developing to a point where they can support their military programs?

General BRADLEY. Yes, sir; and I think they all feel that they can convert more of it to war production. You take the steel production figures, for example. All of them have increased that over what it was a year or two ago. If I remember the figures correctly, France is up to something like 12,000,000 tons, and England is up to something like 17,500,000 tons. Belgium and Luxembourg together are between seven and eight. Of course, that is one of the troubles you run into in a country like Italy. Her production, if I remember correctly, is about 2½ million tons, which does not furnish enough raw materials to do some of the things she would like to do along the lines of building equipment.

Mr. CARNAHAN. That is all, Mr. Chairman. Thank you.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. The name of the program, General, has been the Mutual Defense Assistance Program to date. From my point of view I believe that that is a good statement of what we intend to do by the program. There is now some question of changing the name to the Mutual Security Program.

Could I ask you if there is any real reason why we have to change from the name Mutual Defense Assistance Program, because I think it is of great propaganda value to show that our forces are for the purpose of defense and not for such things as security police, or maintaining a status quo within recipient countries, and are not occupation forces.

General BRADLEY. I am sorry, Mr. Fulton. I have never given any thought to change of name. I do not know where that came from, and maybe I should know about somebody's proposal to change it, but I have not given it any thought.

Mr. FULTON. But you have had no trouble in the military sense with the name of the program so far, that is, the Mutual Defense Assistance Program, have you?

General BRADLEY. Not that I know of.

Mr. FULTON. I conclude therefore it has caused no difficulties.

In addition, there is the problem with each country of the correlation of arms or standardization. Have you been making satisfactory progress in general terms in that field?

General BRADLEY. I might answer that yes and no, because in some ways it has been going along satisfactorily, and in some ways it has not. We have run into a few items on which we have delayed getting an answer. I think they are in a fair way of being answered now.

I might cite as an example the fact that the British want a .28-caliber rifle. We have no objection to their having a .28-caliber rifle as long as they do not try to force it on us and change our M-1 to a .28. In my opinion there is no necessity for us having just one rifle and just one type of ammunition. We have about three sizes of ammunition within our own equipment, because you have your M-1 ammunition, and .30-caliber ammunition for your .30-caliber carbine, and a .45 pistol. So I do not know why we should gag at adding one more for 12 nations.

That is one of the things that has held up things for a while. I do not think it is acknowledged yet, but the French want to make a 73-millimeter bazooka, and we are very well pleased with our 3.5. There is no reason why we should not have two types of bazookas if we coordinate the manufacture and the ammunition problem. I think it can be solved without arguing forever as to which is the better of the two in either case.

Mr. FULTON. That was my next question. There is criticism of the program that I have heard in respect to the Department of Defense. I believe you are doing a fine job, I might add. The criticism has been that disputes go on endlessly as to what materials and implements should be used, and nobody is making any decisions. Therefore it is delaying the program.

Is that really delaying the program, or are we moving ahead? Are we saying, "All right. You make your kind of bazooka and you make your kind of rifle, and we will make ours, and we will see that there is

enough standardization to make it work"? Or, are we bogging down in these endless disputes as to technicalities that in the long run are not very important?

General BRADLEY. I would hate to give the impression that we do not think there has been some delay, but I think it is being solved at the present time. Some of these things are not quite as simple as they appear. But, that is one of them, weighing the standardization of two types of rifles on which somebody should make a decision.

Mr. FULTON. Who should that be? Who should make that decision?

General BRADLEY. Well, it is supposed to be made by the governments after getting a recommendation from the Standardization Board. A proposal was made that we appoint a board of senior officers, let us say, from the three principal nations on the standing group—and Canada, which does produce a lot, and give them the final power of decision. However, we do not think you can delegate that much authority to four men because it is a Government position and you have to think of how much money we have tied up in .30-caliber rifles. I do not think any one man should be required to make a decision on that. Therefore, I think we will get it eventually straightened out here in the standing group and Standardization Board.

Mr. FULTON. Who in this country then should we go to in order to get those decisions made very promptly? When you feel it is delaying the program somewhat, who is responsible for it?

General BRADLEY. I think it would be a departmental one and not any individual's decision.

Mr. FULTON. You have spoken of the Middle East and the fact that we are going to assist Greece and Turkey, and you mentioned Iran. Then you were also asked if there is authority to grant aid to other nations in the Near East and Africa if it becomes necessary to our security to do so. There might seem to be an assumption in your statement that at the present, as to the other nations including Israel it would not be a present requisite for our security to do so. I do not think you mean that inference when Israel has a fine army group of 100,000 men who are an active force, and 100,000 in reserve, and there are other mediterranean countries that I feel are presently a real factor in our security and it should be our immediate intention to help.

General BRADLEY. Admiral Sherman is going to appear before your committee with the specific job of testifying on the Middle East. I would suggest, if you would, to ask that question of him. I could answer it in a general way, but he spent his time on that, while I have tried to cover the whole area and the world situation. He can answer that better than I can, I am sure.

Mr. FULTON. I have one final question. That was on the problem of joint defense. Have we been able to convince these countries of Europe that they should give up individual defense in order best to join in a joint defense? I say that because they all cannot have a whole army, navy, and air force that would be best suited to defend each individual country, but must cooperate with this group of NATO nations to do the part that they can best do, joining is in an over-all defense. Have we made any progress on that?

General BRADLEY. I think we have made tremendous progress in it, and I think we will make still more now with General Eisenhower and his staff right on the ground doing the planning.

I think, as I mentioned before, you cannot do it overnight because you have to change the thinking of the whole national populace of some of these countries.

For example, the Netherlands are seafaring people, and it takes a little time to convince them that they should not spend more on their navy than they should on their army and tactical air force which supports it. I think when they analyze it they will admit their principal threat is overland, and they will have to depend in large part for the defeating of any hostile navy on other nations, with a collective defense idea. However, it does take a little time, but I do think we have made tremendous progress.

Mr. FULTON. Thank you. I want to say as one citizen that we American people are very proud and lucky to have you on the job on the Joint Chiefs.

General BRADLEY. Thank you.

Chairman RICHARDS. General, I would like to ask you one question for the record and make a few remarks. We have this program in three steps. First we have the economic aid. That has come to the point where we want to get out of it entirely at the end of this year, that is, fiscal 1952.

Then there is this program for several years, that is, 3 or 4 years. Then they say when you get that off their backs, when do we get our troops out of there?

As a matter of fact, so far as the taxpayers are concerned, if we are going to keep up a Defense Establishment of $3\frac{1}{2}$ million or 4 million men, it does not make much difference to the taxpayer whether they are training them in France or here in the United States. That would come under our own defense budget if they are American troops, would it not, if we leave some divisions over there?

General BRADLEY. Yes, sir. As far as the cost is concerned, there would not be too much difference, because the big item is the cost of equipment and the pay. There is some additional expense in keeping them in Europe because of your long pipeline of replacements and the expense of shipping supplies, particularly consumable supplies. So that I think we would have to admit it would cost something extra to keep them over there, but it is not a great, big item.

In other words, the big item is the equipment and the pay, and the uniforming, and so forth.

So, as you say, it does not cost too much more, but I think the point is not a cost one so much as it is the fact that you have so much of your manpower abroad.

Chairman RICHARDS. You would give them to the Atlantic Pact countries to fight, if they are invaded.

General BRADLEY. Yes, sir.

Chairman RICHARDS. If they are here you would have to send them over there. If they are there the cost would be some more then.

Mr. VORYS. Could we have a 5-minute recess? That is a teller vote.

Chairman RICHARDS. I think we can. We will suspend for 5 or 10 minutes.

(Whereupon, at 3:45 p. m. the committee recessed until 4 p. m. of the same day.)

Chairman RICHARDS. General Bradley will resume his testimony.

General, do you want to say anything more about this troop business?

General BRADLEY. I think there might be added in addition to what I have already said, that certainly in any war plan in which we are going to participate, if the war takes place in Europe we will undoubtedly send troops. We did in the First World War, and we did in the Second World War, and we will undoubtedly do so in another war. So you have to weigh the question when you are talking about bringing them all home, of whether or not that is what you want to do, because you have to take into consideration the shipping required to get them all home in a short time. If other conditions arise you might not want to leave them over there, but you would not have the troops there then you had hoped to contribute for, say, the first 2 or 3 months of a war.

That is what I wanted to add to the statement I have already made.

Mr. VORYS. Is it time to start around again, Mr. Chairman?

Chairman RICHARDS. Yes. We will go around informally now. However, I have a question about the shipping, General.

As a matter of fact, when you talk about distances in this country, sending troops from the east coast to the west coast, and sending tanks and other material by freight, the rates are considerably higher than they would be sending that across the ocean. Even from the standpoint of transportation, adding it all up, I cannot see where there would be very much additional cost.

General BRADLEY. I do not think you can base too much of your decision on cost. As I say, the final cost is affected to a small percentage, I would say, by whether or not they are here or over there, as far as the actual cost is concerned.

Chairman RICHARDS. Are there any questions by members of the committee?

Mr. VORYS.

Mr. VORYS. Yes, sir.

General Bradley, there is now pending in our committee Senate Concurrent Resolution 18, which is the so-called troops-to-Europe resolution. I wanted to ask you about sections 4, 5, and 6. Section 4, to refresh your recollection, states:

It is the sense of the Congress that before sending units of ground troops to Europe under article 3 of the North Atlantic Treaty, the Joint Chiefs of Staff shall certify to the Secretary of Defense that in their opinion the parties to the North Atlantic Treaty are giving, and have agreed to give, full, realistic force and effect to the requirement of article 3 of said treaty. * * *

Section 5 provides that:

* * * units of the United States ground forces as may be assigned to the above command shall be so assigned only after the Joint Chiefs of Staff certify to the Secretary of Defense that in their opinion such assignment is a necessary step in strengthening the security of the United States; and the certified opinions referred to in paragraphs 4 and 5 shall be transmitted by the Secretary of Defense to the President of the United States, and to the Senate Committees on Foreign Relations and Armed Services, and to the House Committees on Foreign Affairs and Armed Services as soon as they are received;

Paragraph 6 states:

* * * it is the sense of the Congress that no ground troops in addition to such four divisions should be sent to western Europe in implementation of article III of the North Atlantic Treaty without further congressional approval;

What would be your view as to putting those provisions into the Mutual Defense Assistance Act?

General BRADLEY. Mr. Vorys, it seems to me like you are asking me to answer a question which goes down to the question of the authority of Congress, as compared to that of the executive branch of the Government, which I do not think I am qualified to comment on, because that is really what it does come down to.

I think from a military point of view we become worried when anything happens which would so restrict the free movement of military forces in time of emergency as to affect our ability to carry out war plans. But other than that, it seems to me like it is a question of who decides whether or not troops go to Europe—the executive branch of the Government or the congressional branch, or the two of them together.

I say, I do not feel I am qualified to discuss it.

Mr. VORYS. There are really three different propositions here.

General BRADLEY. Yes, sir. I understand that.

Mr. VORYS. The first two provide a sort of machinery for requiring the Joint Chiefs to make a finding as to what Europe is doing, and as to our own security, and then certify that to the President and the appropriate committees of Congress. It would seem to me that the only objection to that would be that the Joint Chiefs might want, or somebody might want to have troops go to Europe when it was not in support of our own security under section 5, or that the European nations were not doing their part under section 4 and therefore that certifying would certainly be a proper requirement and one that could certainly not hamstring anybody.

General BRADLEY. I think the thing may come up from the suspicion that these people are sent overseas without the recommendation of the Joint Chiefs of Staff. That has not happened yet. The Joint Chiefs of Staff recommended that these people go, and I think it would be rather unusual for the Government to send any additional forces to Europe except as a recommendation of the Joint Chiefs of Staff.

Now, certain conditions you put in there would require us to go into some of these things in greater detail than we are able to now. For example, we have to certify to you they are doing everything they can for themselves. That is quite a problem, because ECA machinery and General Eisenhower's headquarters, and everybody else, has a hard time deciding that.

As I said here this afternoon, I do not know what the answer is on France. There are so many conflicting things that certainly we cannot make a decision here that France is doing everything she can do for this collective effort. We can say she is doing a lot and improving it and increasing her effort, but it would be pretty hard for anyone to say she is doing everything she could.

Mr. VORYS. I know this language has had a great deal of study and debate. It says in section 4 that the NATO countries—

* * * have agreed to give, full, realistic force and effect to the requirement of article 3 of said treaty that "by means of continuous and effective self-help and mutual aid" they will "maintain and develop their individual and collective capacity to resist armed attack," specifically insofar as the creation of combat units is concerned.

General BRADLEY. Yes, sir.

Mr. VORYS. Now, the only people that we could ask, or the President could ask about that, would be the Joint Chiefs and, of course, you testified on that today.

General BRADLEY. I can say as long as you leave out the words "full capacity" I think we could probably have certified to that, that in our opinion they are doing this. When you get down to article 6 it would seem to indicate that this resolution is primarily intended to cover the permission or the authority to send troops beyond the four divisions that are now to go. This is the same as Senate Resolution 99.

Mr. VORYS. That is right. This is the same text.

General BRADLEY. And they indicate, I would say, in section 6 there that they are talking about the full approval of these four to go, but if more than that go then articles 4 and 5 come into being and we would have to certify these things.

Mr. VORYS. Section 6 does not require any certificate; 4 and 5 do. Section 6 says:

* * * It is the sense of the Congress that no ground troops in addition to such four divisions should be sent to Western Europe in implementation of article III of the North Atlantic Treaty without further congressional approval.

One way Congress might express its sense would be to put a prohibition against additional troops in the law, and if that prohibition were in the law signed by the President, that would be it.

General BRADLEY. Yes, sir. As I say, it is a question whether or not that does not apply to things beyond the four that are already scheduled to go.

Mr. VORYS. Yes. It is obviously intended to apply to prohibit more than the four without further act of Congress.

General BRADLEY. More than the four.

Mr. VORYS. To prohibit the four plus two.

General BRADLEY. Yes, sir.

Mr. VORYS. I left out the approval of the additional four, which is stated in 6.

General BRADLEY. Yes. That is stated in there that they approve the four. Not being a lawyer, I do not know what it means, but it is a question as to whether or not it does not mean we would have to certify this and get the approval of Congress to send more than the four. I am merely bringing that out in case a study indicates there ought to be some change in the wording to make it plain. That is all.

Mr. VORYS. I am quite confident as this bill goes through the Congress there will be efforts made in view of the developments of the past 2 years, and what some of us feel is a change from the original NATO plan, to attempt to put some sort of legislative limitation on troops in the law. There are two questions. One would be a constitutional question, which you might or might not care to pass on; and the other would be the military question, upon which I know the Congress would be glad to have your views.

General BRADLEY. I do not think the Chiefs would have any trouble making a proper certificate to you as long as you do not make it read so strong as to indicate, let us say, full capacity, or something of that nature. We think they are doing a fair share of this thing now, but I think it would be very difficult for us to say they are doing everything in the world they should. I hope you get my distinction.

Mr. VORYS. Yes.

Here is a Senate resolution and a proposed concurrent resolution which, as to sections 4 and 5, proposes a certain sort of certificate. Now, as I understand it, this resolution does not now have the binding effect of law, but as to the certificate, the only way it would have the effect of law would be to put it in the law, and the law to put it in would be this bill.

General BRADLEY. We would not hesitate, I think, to give the certificate required in paragraphs 4 and 5 the way they are written now.

Mr. VORYS. Thank you. But as to 6, regardless of the constitutional question, suppose Congress did have the power and attempted to exercise it to prohibit the sending of additional forces above the two there and the four divisions now contemplated? What would be your military opinion on that sort of limitation?

General BRADLEY. I do not think that would cause too much difficulty in peacetime if it is understood in time of an emergency, or war, that you would not have to wait for action on it.

Mr. VORYS. If we had war Congress would have declared war and pulled off all limitations, I imagine.

General BRADLEY. Of course, there are conditions where you might not be able to declare war, and we might have to start action without getting that declaration, knowing you would declare it when you got the conditions under which you could declare it.

Chairman RICHARDS. Are you through, John?

Mr. VORYS. Yes.

Chairman RICHARDS. How about you, Mr. Javits?

Mr. JAVITS. I have not had an opportunity to question the general. I have one or two questions.

General, it occurred to me considering the situation in Europe there might be something worthy of consideration in the idea of bringing over here for some or all of their training, some of the divisions which would be made available by the NATO countries, and training them in the zone of the interior of the United States, especially in the course of the next year or two, when our strategic position, as has been publicly stated, is open to so much concern in that area.

Would you give us any observation you care to make on that idea?

General BRADLEY. Yes, sir. I would be glad to comment on it. I assume you mean by that divisions other than United States divisions. That is, French divisions, or Belgian divisions, or something of that nature.

Mr. JAVITS. Yes, sir.

General BRADLEY. Possibly it was prompted by the fact that some of those countries have limited maneuver areas, and they have to train somewhere else in those cases, and we could give them possibly better training. I grant you then they could get better facilities, and so on.

I think you would have for consideration, however, the transportation costs and the costs of maintaining them away from home which would then get into the dollar exchange problem. One of the things they are short of is dollars. A lot of expense for their being over here would really have to be paid in dollars, I should think. I think if it has to be paid in dollars you would find yourself having to pay some of that yourself. I am not too sure that the advantages of having them over here with more training area, and so forth, would offset a lot of the disadvantages.

There is also the disadvantage that if you keep them over here for any length of time we are faced with the same problem we have with the troops in Germany when they are away from their families for a long period of time. I had not thought about it before, but at first thought I would think that the disadvantages would outweigh the advantages of it.

Mr. JAVITS. General, would you be good enough, if you care to, to comment on just two other points? One is that in that way we could avoid what happened to the French Army in the fall of France, during this period when manpower in organized military terms is so important.

Secondly, we talked a great deal about letting the people in Europe know how we feel and think, and how we are geared in terms of our democratic system. Of course, would that not be an excellent way of accomplishing that objective with the men on the firing line?

General BRADLEY. I think it would have a tremendous influence in spreading our way of life and certain of our standards, and so on. It would certainly accomplish that, and you would accomplish some of the same things you accomplish by interchanging students, and so on. You would have the interchange of a lot of young men on that scale, except in a different way. They would be in uniform instead of coming to school. There would be a lot of advantages to that situation.

Chairman RICHARDS. Will the gentleman yield?

Mr. JAVITS. Yes, sir.

Chairman RICHARDS. On the other side of the picture, General Bradley, is it not a fact that soldiers are not very popular with localities in which they train; nor are the people very popular with the soldiers as a rule, immediately?

General BRADLEY. I do not know. I think that is a broad statement, Mr. Chairman, and it requires a good deal of qualification.

Chairman RICHARDS. A lot of irritations arise out of a situation like that everywhere.

General BRADLEY. I think in some communities, for example, in this country, they fight to get military installations in their districts. Certainly there must be some advantages to offset some of those disadvantages, or they would not do it.

Mr. VORYS. Will somebody yield?

Chairman RICHARDS. I yield.

Mr. VORYS. If a French poilu were over here and he gets 5 cents a day, or 10 cents a day, is it?

General BRADLEY. He would have a hard time, sir.

Mr. VORYS. And if he went on leave to this neighboring town he would have a pretty dull time, would he not?

General BRADLEY. He would probably only be able to walk the streets.

Chairman RICHARDS. Four dollars per square meal would be how many months' pay?

Mrs. BOLTON. I was wondering about the real facts of what students learn when they come over. I talked with a great many of the men who were overseas, and they know nothing about the countries they are in. It was off limits to go here, or there, or some place else, and they came back home completely ignorant of where they had been.

We had foreigners over here and we saw a great many of these students who come over. Unless the community takes a hand in it

and sees to it that the students get off the campus and get some idea of what we really are like, they get an idea of little more than narcotics rings, things like that, all in general confusion.

I think there are a great many sides to such a proposition that have to be taken into consideration unless there is a tremendous organized effort made, and there is the danger that they go away with very false impressions.

Mr. JAVITS. If I might be permitted to say so, I raised the question because it ought to be considered. I think it is a question as to whether we in the NATO countries are really a military unit or not.

If NATO is going to be successful, we have to think of self-help and mutual cooperation as a two-way street. We want to get from our allies better cooperation and more forces and more action, and I think there is an enormous amount to be desired on that score; we are in a so much better position to get it, if we ourselves show that we consider that we are just as much a part of the team as anybody else, and we really have a right to expect it.

General BRADLEY. I think there is one related matter that ought to be introduced at this point to clear up the record; that is, while they do not send the divisions here as such, there is quite a training program under way which brings a lot of individuals over here—selected individuals and people of the highest type, both noncommissioned officers and commissioned officers, and they go to our schools. That number runs into a very big number.

The advantages you are talking about are accomplished by that in a better way than if you had a unit and you would not have to have this special training program, which Mrs. Bolton points out you need to get the maximum good out of it, due to the fact that they would have no place to go except if we organized it.

Mr. JAVITS. Is it fair to say the NATO military organization is being animated by the American military doctrine and concept and training ideas to an increasingly important degree?

General BRADLEY. I think that is a safe thing to say because of this exchange. It is mostly one way. That is true. People come into this country to school, and they go to our infantry and artillery schools, and some of our colleges. Some of their enlisted men come over here and take tactical training. So through that means they go back and act as training cadres for their own outfits, both in schools and units.

Some of the people in Europe, in learning how to use this equipment, have sent cadres up into Germany, where our forces are, and they have trained with our forces in Germany and learned these things. Then they go back and teach them. So through all that we are able to get across a certain amount of tactical training doctrine to some of these countries.

Chairman RICHARDS. General, along that line, when we were over there a few weeks ago on this study we went to north Italy. There was an officer there who came back from Fort Benning or Fort Sill, and he practically dominated that operation. Of course, he spoke English, and I asked him, was he following the tactics he had learned over here. He said, yes, they were following them almost to the letter in tank operations.

That just bears out what you said.

Mr. JAVITS. General, is it fair to say we are making great progress in the direction of standardization induced by the fact that we are responsible very heavily for the weapons, and also for a great deal of the doctrine?

General BRADLEY. That is right. We have officers in all of these countries where we turn over this equipment to see that they get proper instruction in how to use the equipment. We are all bound to get certain ideas on the tactical as well as the technical side of it.

Mr. JAVITS. Does the general consider that one of the major achievements of the NATO organizations?

General BRADLEY. I do, and the philosophy goes a long way toward ironing out many of the difficulties that normally occur after you form an alliance and start fighting a war. We are ironing a lot of them out now.

Chairman RICHARDS. Are there any other questions?

Mr. JUDD. Yes. I have a couple of questions, Mr. Chairman.

Chairman RICHARDS. Mr. Judd.

Mr. JUDD. General, on page 2 you say:

Our security demands that the Soviet-satellite combination be prevented from picking off any more nations.

Recently General Marshall, and I think Mr. Acheson, have said that they now believe it is important to our security to keep Formosa from falling into the hands of forces hostile to us.

Is your sentence broad enough to include preventing the giving of Formosa to agents hostile to us, as well as their picking it off by force of arms?

General BRADLEY. Yes, sir. I think it would apply to whether they got them by force of arms, or propaganda, or anything else.

Mr. JUDD. Or maneuvers in the United Nations.

General BRADLEY. Yes, sir.

Mr. JUDD. If it is that important—and I think it is—I wonder why your Joint Chiefs and others high in the Military Establishment have not given it much attention, at least publicly, as you have given Europe?

For example, on page 10 you say:

One of my main purposes in making the recent trip to Europe was to make my own estimate of the progress being made in Europe under General Eisenhower.

Now we have all kinds of reports and information respecting Europe. Yet General Eisenhower went over in January and came back to report to us, and you have gone over recently to make your own estimate, but to date no top man, military or civilian, has gone to Formosa. If it is important, why do you not go over and take a look at it to make sure we are doing everything possible that is reasonable and workable in support of whatever strength there may be there?

General BRADLEY. Maybe we should. We have had high-ranking officers there.

Mr. JUDD. You have had higher-ranking ones and lots of them in Europe. The only really high-ranking one who has gone to Formosa was General MacArthur, and he got spanked for it.

General BRADLEY. I do not think he got spanked for going to Formosa.

Mr. JUDD. Well, he certainly did by the press, and by some of our allies.

General BRADLEY. I think there is some difference in degree of importance here between Formosa and Europe.

Mr. JUDD. I recognize that, but Asia is the place where we have been getting the licking and where a war is going on. If we win the war we are in, then surely there is a better chance of preventing the war that we are not in. Is that not true?

General BRADLEY. Without answering your question directly—and I am afraid I do not quite follow you—as far as Formosa is concerned, if they had or if there was a war going on there, or if there was a military capability that they contributed to, or if we had a formal alliance with them and bilateral arrangements for mutual defense, and so forth, I think you would have a little different problem. I am not saying some of us maybe should not go to Formosa, and maybe some of us will go to Formosa, but it is not United States territory, and it is not quite in the same category as these European countries, because we are not in a formal alliance with them in which we have mutual support.

I am not saying you are wrong on it. Maybe we should.

Mr. JUDD. I mean, I have been perplexed at the statements that Formosa is important to our security and yet no top persons, civilian or military, with the exception of General MacArthur, have gone there to survey the situation in the last 3 or 4 years, or since the Chinese forces moved to Formosa. There is more public confusion on that situation than anywhere else and it ought to be cleared up.

Now, the only other comment I want to make is this: The question has been raised several times as to whether, if a truce were achieved in Korea, that would permit us to reduce our military effort. May I ask you this question? If the Communists agree to a workable truce or an armistice in Korea, would that increase or decrease your apprehension as to the probabilities of their starting something somewhere else?

General BRADLEY. I think it would increase the possibility of something starting somewhere else.

Mr. JUDD. That is what I, too, think would be the case. So that if a cease-fire comes, actually we are probably in greater danger than if it does not come?

General BRADLEY. You might go so far as to say that because we have solved it in Korea—if you could confine this thing to Korea, aside from the fact that you do not like to take the losses, and so forth, you might say that you are accomplishing so much in Korea that maybe it would be fine if it went on, in order to keep it from going on somewhere else, and maybe a third world war breaking out. However, I do not think I should quite say that, because we are not too sure that is proof against it.

Mr. JUDD. But it is true that since in Korea we have their feet pretty well held to the fire, they are not in so good a position to start trouble in Indochina or even in Iran. Is that not true?

General BRADLEY. Certainly, as far as China itself is concerned they are fully occupied.

Mr. JUDD. I hope our people understand fully what you have just said; that judging by the past performance of the enemy we are dealing with, he is likely to agree to an ending of the operation in

Korea only if he has in mind that it will better enable him to start another and more profitable one. Therefore, that should stimulate us to greater effort, rather than cause us to relax.

General BRADLEY. I think that is definitely the case. I think there is one other point which has not been brought out, however, and which might be. That is, having gotten their fingers burned so much in Korea, they might be more hesitant to start somewhere else than they were to start in Korea.

Mr. JUDD. I think that is right. Some of us in this committee 2 years ago urged that we not withdraw all of our forces from Korea. I was convinced that if we had even a battalion in Seoul as a symbol of American determined interest in the survival of that young republic, and as a symbol of American power, it was very unlikely that there would be an attack.

Contrariwise, if we withdrew it was a gilt-edged invitation for the Reds to come in.

If they know we are determined, I do not think they are nearly so likely to start something somewhere else.

Thank you very much.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. General Bradley, thank you very much, sir. We appreciate your coming up here and I am sure we learned a lot from your testimony.

General BRADLEY. Thank you, sir.

Chairman RICHARDS. The committee stands adjourned until 10 o'clock Monday morning.

(Whereupon, at 4:30 p. m., the committee adjourned until 10 a. m. Tuesday, July 17, 1951.)

THE MUTUAL SECURITY PROGRAM

TUESDAY, JULY 17, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please. We will continue the hearings on the so-called Mutual Security Program.

We have with us this morning our old friend Mr. Hoffman, who is the former chief mogul of this program, and who did a wonderful job with it.

We are glad to have you back with us, Mr. Hoffman.

Mr. HOFFMAN. I am glad and delighted to be here. I am glad to have the opportunity of expressing certain views.

Chairman RICHARDS. Will you proceed, Mr. Hoffman.

STATEMENT OF HON. PAUL G. HOFFMAN, PRESIDENT, FORD FOUNDATION

Mr. HOFFMAN. If I can say so, I think there are some advantages once in a while in getting quite a long way away from Washington and looking back on the Washington scene. Out of this perhaps come some convictions.

I thought, before I started expressing my views, I ought to tell you something of the assumptions that I hold underlying those views.

My first assumption is that no nation or group of nations can win a thoroughly hot war. By this, I mean an all-out conflict of the scope of World War II. Such a war could produce only devastation, destruction, and human misery on an unimaginable scale.

Not that we would not be successful militarily. We would. But there would be no real victory, because such a war could not produce a peace worthy of the name.

How could there possibly be a meaningful victory when, according to reliable authority, the money cost to the United States alone would be one billion dollars daily? And that is the least important cost of all.

So, I want to repeat, this is my thinking about what we should do in this field of foreign aid, which stems from assumption No. 1, which is, it is not possible to have a meaningful victory under present conditions.

My second assumption is that we can win the cold war which the Kremlin has declared against the free world. By this, I mean it is

possible for free men to create, within a decade, the conditions upon which enduring peace can be built.

We can win it because the free people of the world have overwhelming material and spiritual advantages. Consider one statistic alone. The United States has half the industrial productive capacity of the world. The free countries of Western Europe have another quarter. Three-quarters of the industrial productive capacity of the globe seems to me to be an overwhelming material advantage.

Consider one fact alone which bears directly on the question of spiritual strength. The free world of Western Europe and the United States is made up of more than 400 million people who have certain inalienable rights as individuals. They cannot be pushed around by secret police. They live as men should live, in freedom and dignity.

It is only under such conditions that men can be genuinely productive and can have genuine spiritual strength. If anyone wants to have that thought driven home to them, I suggest they spend a few days in Berlin.

In the morning they should be in West Berlin, in the afternoon in East Berlin, and you will see what I am talking about, when I am talking about the great spiritual advantage that we have in the fact that we have 400 million people in the Western World living in freedom.

How we set about winning the cold war, then, is first of all a matter of realizing on our overwhelming potentialities by locking arms—by pooling our resources and talents in a common effort.

In other words, we have all the advantages that will enable us to win the cold war if we are just willing to take advantage of it and mobilize our strength.

That conviction has become a very deep conviction of mine, as I perhaps have had an opportunity since I have been free from official duties to look around and form a judgment that I assure you is completely nonpartisan and nonpolitical.

The second part of the "how," in my opinion, is to recognize that the Kremlin deliberately and systematically has mounted the cold war on four distinct fronts—military, political, informational, and economic.

One of the most disastrous approaches to this problem of winning the cold war is to approach it from the standpoint of one front only. That applies to all things.

It is a four-front war, a four-front cold war, and we have to find out what the Kremlin is doing on each one of those four fronts.

This is not a plug for the book which I wrote recently which dealt with the four-front approach to the cold-war victory. I have learned since writing a book that that does not mean it will automatically be read. I hope the few of you who have read it will bear with me if I recapitulate some of the discussions of the four-front approach.

Paradoxically, the free world first, and foremost, needs military strength if its great hope for a just peace is ever to be realized. We need sufficient military strength for a completely persuasive posture of defense.

We plan no aggression. But we need military strength of an order that will retard any aggressive idea other nations might get. We need, in short, to have whatever military strength may be necessary to neutralize and cancel out any military plans the Soviets might have.

Second, we know that on the political front the Kremlin has done everything in its power to break down democratic institutions, to destroy interest and confidence in the free way of life.

It has tried to sell the notion—all too successfully in many places—that freedom and democracy are frauds. It has asserted Moscow's everlasting concern for the downtrodden and distressed of the world while depicting the capitalistic free societies of the Western World as systems designed explicitly to grind down these same people.

Against this political aggression—for it is aggression different only in kind from military aggression—we have much to do. At the very least we have the obligation of carrying out a positive foreign policy which recognizes the upsurging desire of men everywhere to better themselves.

In other words, until the world of people generally recognize that the United States of America is interested in seeing that all peoples of the world have a chance to better themselves, our position as a great world leader is not as strong as it should be.

Closely related is the need for concerted action on the informational and propaganda front. Big lies are being broadcast daily by the Kremlin throughout the world. And, by big, I mean quantity as well as quality of lies. We need to counter those big lies with big truths.

At the same time we cannot delude ourselves that big truths, however potent they may be, will have lasting results in the minds of men unless they are accompanied by big deeds. Actually, in my experience the most effective propaganda is the propaganda in which the deed comes first and then the word.

In other words, it is the day that you open up the minds of people to any big truth you have.

This is another principle that seems to me all-important—the principle of action—then words. That is why I put so much stock in our particular ability to achieve a great cold-war victory—perhaps a decisive victory—on the fourth front I mentioned—the economic front.

If anything today should be clear to us, it is that weary, hungry, and desperate people will accept almost any nostrum that promises to fix up their ills—even the evil nostrum of communism.

This was the cure-all that was accepted by—or, more realistically, forced on—millions of people in Europe in the 3 years following World War II. It is the same cure-all that is being dangled before many millions of others today on the opposite side of the world.

Now consider the economic counteroffensive the United States launched with the Marshall plan. All the evidence indicated that it rocked the Kremlin back on its heels from the first.

Why? In my opinion, because it was positive. It was action. It was a modern method of helping people to help themselves. It was leadership of an affirmative kind, that of a leader among equals.

The idea of a supernational dictating to other nations of the world is an obsolete idea. We have to exercise leadership of a different kind. That also, I might say, applies to industry; it applies everywhere. The day of the dictator in business is gone. The day of the dictator in modern nations we hope soon will be gone, and the dictator of other nations is going, in my opinion.

I think we have to earn the right of leadership among equals. It seems terribly important to me that we continue our leadership here,

that we keep on the offensive, that we follow up on the job which has been started so well. Not for a moment am I advocating that we go on a spending spree.

A year ago, in terms of the 1950 dollar, I estimated that at an annual cost of approximately two billion dollars we could wage the peace on this front with great effectiveness in those areas throughout the world of vital interest to us.

If that two billion dollars is not spent, there is a grave question in my mind as to whether our present vast military expenditures, here and abroad, which I thoroughly approve, of around 50 to 60 billion dollars yearly will have lasting value.

Here I would like to emphasize a paragraph in a statement recently made by the Research and Policy Committee of the Committee for Economic Development:

Next to the failure to rearm, perhaps the costliest error that the United States and its allies could make in the next few years would be to act as though rearmament and security were synonymous.

The contest between the Soviet Union and the West is ultimately a contest of strength, not of arms alone; strength embraces not only armed might but, in addition, all those less measurable elements—such as greater productivity, efficiency, equity in the distribution of income, political and economic stability, and social cohesiveness and spirit—which are the real sinews or national power.

The Marshall plan, which has been the most successful element in our postwar foreign policy, was successful precisely because it recognized and emphasized the economic and social aspects of European security. It is imperative that this emphasis be preserved and sustained in the rearmament period upon which we are entering; the rearmament program must be regarded as supplementing, not replacing, the cooperative effort to build a productive, stable and united Western Europe.

Your committee has under consideration the problem of United States aid abroad. It is my understanding that, of the total of more than 8 billion dollars which you are considering 2.3 billion dollars is for economic aid, a figure which is well in line with my estimate of a year ago.

I am not in a position to pass any judgments on the amount asked for military aid—although, if General Eisenhower says that is what is needed, I am for it. But I do hold very strong views as to how foreign aid, for whatever purpose, should be administered.

Speaking now both as an individual and as a member of the Committee on the Present Danger, I would like to give you my views as to how to obtain maximum efficiency out of the dollars we spend abroad.

On this question I shall read from the report of the Committee on the Present Danger:

Military aid and economic aid are under present conditions, essentially the same. They are now parts of one program: to make our allies in all parts of the world strong enough to stand together and prevent the spread of aggression.

Both forms of aid should be administered by the same agency, which should not be a part of any existing Government department. In it should be placed the administration of all existing economic and military aid as well as the point 4 program.

It should take over the functions and personnel of the Economic Cooperation Administration and of the units of the State Department engaged exclusively in this work.

The two kinds of aid are inseparable. Both are really economic assistance; but both are principally for a military purpose. One consists largely of military equipment produced in the United States and the other is for the most part assistance to make possible greater military production in the recipient countries.

It is only through one agency handling both kinds that waste and duplication can be avoided, and intelligent, effective coordination made possible.

A single agency can better answer the many questions which have to be answered: the extent of the need in each country; whether that need can be filled better by military items or by civilian items; the extent of the ability of each country itself to produce and service items, military or civilian; the ability of our own resources to supply the needs, and the best way our resources can be so used in any particular area; what help can be interchanged between two foreign countries themselves. These questions—difficult as they are—should not be made more difficult by splitting and duplicating responsibility in budget making and administration.

Of course the single agency must operate within the broad limits of our foreign policy, which is the responsibility of the State Department, and within the military policy laid down by the Department of Defense—but its administration at home, and through its offices abroad, should be independent, as ECA has been.

Under this plan the Defense Department would still do in effect what it is now doing. All funds for procurement of military items in the United States would continue to be allotted to the Defense Department for procurement through its regular channels.

I would like to just speak informally on this matter of the importance of having the supervision of every dollar that goes abroad loaned by a single agency. It is just the simplest kind of common sense to know that if you do place that responsibility in one agency, instead of 33, which Nelson Rockefeller tells me we now have that have something to do with foreign aid, you are going to get better supervision, you are going to get value out of a dollar.

It is not a question of how many dollars; it is a question of getting maximum value out of every dime we send abroad, and that our taxpayers are certainly entitled to.

When we send money overseas, we should make \$1 do all \$1 can do. You are never going to get value out of your dollars you send abroad until you have a single agency, and you are never going to get away from some of the confusion you now have until you have a single agency.

This idea which is advanced that you cannot have an operating agency taking over certain operating functions from State and Defense, and have them work with State and Defense harmoniously, I do not think will stand up in the light of ECA experience.

The Congress, if I read correctly the testimony in the congressional hearings, was very much concerned with this question of whether, if an independent agency were created and there was an Administrator appointed, whether you would not have the problem of two Secretaries of State.

There was a provision in that law that if there was a difference of feeling between the Secretary of State and the Administrator of ECA, it should be taken to the President for resolution. For almost 2½ years there was never a difference taken to the President of the United States. We did not have a difference. It was our job to operate within policy lines.

I say that one of the difficulties that comes from any organization is if you have too much confusion between staff and operating functions. The operators ought to operate, the staff people ought to work on policies, and lay out policies, and then I think you have a proper division of labor.

Because I have given so much emphasis to the economic aspects of this program, I want to repeat a statement I made earlier. Today's cold war is a four-front war. We must have effective action on all four fronts. To be effective we must keep constantly in mind that our

aim is peace; therefore the tactics and methods used must be tactics and methods appropriate to that end.

If we bear that in mind, the strength of the free world will steadily mount; and with each day that our strength increases, our opportunity for achieving a just and enduring peace will be by that measure increased.

It seems to me altogether possible that the time may not be too distant when, from this position of strength, the free world may be able to bring into being universal disarmament under proper safeguards. That will indeed be the beginning of a new day.

We must have this effective action on all four fronts. That seems to me a matter of extreme importance. I say it because I have heard so often the statement made that if we are to be successful in this cold war we must fight fire with fire.

That means if the Kremlin engaged in some dirty work, we ought to figure out some way to engage in some dirty work. I do not believe that.

On the contrary, I believe if your program is to be effective we must keep constantly in mind that our aim is peace.

That is a background statement of the assumptions on which my views are based, and a statement as briefly as I could make it of my views.

Chairman RICHARDS. Mr. Hoffman, we thank you for that very able statement. As you know, I think everyone around the table has great admiration for the job you did.

We will proceed under the 5-minute rule. What is your situation in regard to your time today, sir?

Mr. HOFFMAN. My next engagement is 1 o'clock.

Chairman RICHARDS. We will try to get you away from here at 1 o'clock. A few of the members are pretty bad about asking questions. You can just tell them you are going, including myself.

Mr. Hoffman, you are talking about this new organization. Would you put that into effect right now or in the next fiscal year?

Mr. HOFFMAN. I happen to be of the opinion that it should have been done months ago, not now, months ago. In other words, it seemed to me that with the Korean War new factors have entered into the situation that make necessary a reappraisal of all that is going on in the foreign field.

I feel that, therefore, the quicker that you get after this creation of a single agency to handle these operating functions the better off we will be. A dollar going overseas is a dollar. Somebody has to watch that dollar.

I have used the expression, "The biggest thing we learned in ECA was the importance of guiding our dollars." In other words, they had to submit a program to us, had to tell what they were going to do with the money, what they expected to get out of the money, and then we said, "O. K., we will put up the dollars, and we will follow through." We guided and followed, in other words.

In that way you get benefits. I do not want to make any contrasts, but I think the \$12 billion that was spent under this new principle, which the Congress itself wrote into the bill—it was no invention of ours—produced much more than many times that amount of unguided dollars.

I have a great respect for governments, but the moment that governments get their hands on billions of dollars there are so many ways it can be spent.

In this case our job was to promote economic recovery, and we kept the dollars beamed on economic recovery. If you know what you want done with dollars, and guide them, you then have a chance to make their use effective.

I think if you just take, without mentioning any specific items, the appropriations to foreign governments since World War II, and contrast what happened when the dollars were unguided and when they were guided, you can get an answer to this question of whether it is worth while to have a thoroughly competent agency guiding, directing dollars.

Chairman RICHARDS. That sounds like a good proposition. But here we are in the middle of a program of technical assistance, military aid and economic aid. They are in operation now. It would take some time to reorganize them and to keep them functioning as they should, would it not?

Mr. HOFFMAN. Around 30 days.

Chairman RICHARDS. Thirty days?

Mr. HOFFMAN. Yes, sir.

Chairman RICHARDS. You feel that 30 days would allow you enough time to keep the keymen in all of them?

Mr. HOFFMAN. I do not have any doubt of it. I think the quicker the better. The danger is delay, because it is uncertainties that result in losing good men.

You have to save some of these good people. You have good people in all of these programs. The thing is that somebody has to take on the job of welding the organization together and getting it under way. You have to do it quickly.

After all, you started ECA out with one individual, and we had to start spending money at a very large rate in a very short time. You can get an organization together. You have the people. You are not out seeking people. You have good people.

It is a case of putting them together. There might be a few people dropped out of each organization, I do not know; there always are, without loss. But if someone took over that job, in 30 days you could have a functioning organization.

Mr. ROOSEVELT. What was your four-front program—military, political—

Mr. HOFFMAN. Informational and economic.

Chairman RICHARDS. You would lump all of them—military, technical and economic—into one outfit. If this new organization worked as well as this one did with its loose set-up, it would be all right?

Mr. HOFFMAN. I would like to read to you a chapter of my book. It would give it to you in greater detail.

Chairman RICHARDS. My 5 minutes are through. Dr. Eaton.

Mr. EATON. I want to express my gladness at seeing the wonderful improvement in your personal appearance. You look perfectly healthy with nothing to do.

Mr. HOFFMAN. That is fine.

Mr. EATON. If we are going to have all these functions consolidated under one head, do you suppose we could induce you to be the head?

Mr. HOFFMAN. No, sir; I have a job. Nobody seems to want me anyway.

Chairman RICHARDS. The doctor said you were not doing anything, did you not?

Mr. EATON. Yes.

Chairman RICHARDS. You are working pretty hard now.

Mr. EATON. That was the first time that he was not doing anything.

Mr. FULTON. Is Mr. Hoffman of draft age, Mr. Chairman? We should draft him for the job.

Mr. EATON. I do not think I can add anything to the very lucid and characteristic statement that our distinguished friend has made to us today.

I hope we will have the benefit of your counsel and leadership as we thread our pathway through this maze; will that be possible?

Mr. HOFFMAN. Mr. Foster, I am very happy to say, appointed me a consultant yesterday.

Mr. EATON. He did?

Mr. HOFFMAN. Yes, sir.

Mr. EATON. Mr. Foster is a genius. I am glad to hear that. You accepted the job?

Mr. HOFFMAN. Yes, sir.

Mr. EATON. Are you going to move back to Washington?

Mr. HOFFMAN. I am going around the world.

Mr. EATON. It is a great comfort to all of us to know that you have joined the army. I want to wish you all the health and strength in doing that. That is all.

Mr. HOFFMAN. Thank you, sir.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Hoffman, it is always a pleasure to have you before the committee. As always, you have given us something to think about.

I would like to say that I am sure that this committee as a whole regrets your relinquishing the post as Administrator of the economic recovery program; we think we have a very good man in Bill Foster, who has taken over since you left.

You have mentioned what I think this committee has been considering for some time, that is, considering the possibilities of amalgamating all of these various agencies into one organization. Would it be too much, Mr. Chairman, to ask Mr. Hoffman if he could supply this committee with an outline of that proposed organization, so that we could give it serious consideration? I think it is a sound idea. If we can do something like that within 30 days, it is my impression we ought to get busy on it. As I recall Mr. Foster's testimony, it is in accord with the views expressed by him before this committee last week.

Mr. HOFFMAN. I think in my statement, Mr. Mansfield, I said that every independent agency that studied this question of foreign aid came up with the same answer. In other words, the Gordon Gray report recommended a single agency; the Rockefeller report recommended a single agency; the Brookings Institution recommended a single agency.

I would think, without having had a chance to give the Brookings report any thorough study, that they would have gone into this problem of internal organization the way I could not have, as an outsider.

They are down here, and that is a job that would take a staff of people, I would think, perhaps a month to work out all the details. No outsider could do that. The Brookings Institution has already done that. I would think their report would be good. I am sure if the problem was put up to the Budget Bureau they could work the thing out.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. MANSFIELD. Yes.

Chairman RICHARDS. Does the gentleman yield to the gentleman?

Mr. MANSFIELD. Yes.

Mr. ROOSEVELT. Nothing is ever quite black or white; something is gray in between—maybe the Gordon Gray report.

What are the disadvantages? I have heard you give very eloquently the advantages of this single institution; what are some of the disadvantages that you have thought of that come about in setting up a single agency?

Mr. HOFFMAN. I think the principal disadvantage is, as the chairman points out, that there would be a period of 90 days in which there would have to be a considerable amount of tact used by whomever was the head of this agency, because as you stepped into certain areas and began to take direction of the spending abroad, you would find some of those resistances that come up when functions are being taken away.

But I think we are in a period of such danger at the moment that the right amount of tact could be used and the thing could be worked out satisfactorily. On this particular question, I do not know any dissent from the view, except on the part of the individuals who have vested interests.

Everyone who has gotten back and looked at this has come up with the same answer, that we are not going to have the most effective use of the dollars we send abroad until the spending of those dollars is directed by a single agency.

The Gordon Gray committee was a committee of distinguished people; Dr. Mason, from Harvard, and others. I do not recall the full list of people. They were all distinguished people.

I know I always discounted my own views on this question, strong as they were, when I was at ECA, because I thought I was prejudiced in the matter. Now that I am away from ECA, it still seems rather clear to me that a single agency is the answer.

When the Rockefeller group came along and studied the situation, and came out with the same answer, and the Brookings Institution came out with the same answer, I was even more sure that I was right.

Chairman RICHARDS. The time of the gentleman has expired. May I say that when you ask other members to yield it is going to be pretty tough on them, because we are going to move down the table here. Mr. Chipperfield.

Mr. CHIPPERFIELD. Thank you for a very thorough statement, Mr. Hoffman. I have no questions.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Good morning, Mr. Hoffman. I have no questions at this time.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. It is great to have you back again, Mr. Hoffman. Not only do you do a great job, but I think you are doing one now.

Of course, this organizational problem is a difficult matter. Here is the difference between ECA and the problem that lies ahead. ECA was a temporary organization that helped write its own death sentence in that you proclaimed abroad and at home, "This is a 4-year job, and that is when it should wind up." And you told us, "Please, do not whisper anything else," and so forth.

Now we are talking about a period where Hoover says 10 years and Eisenhower 20 or 30 years. This is something permanent.

Mr. HOFFMAN. I would like to distinguish the situations, if I could, Mr. Vorys, in this way: I think that any program of aid that does not have a terminal date is missing something. In other words, I believe that the program should have a terminating date. I happen to believe after all, if you just go back to the records, you will find we have extended other countries, in the way of loans and other amounts, aside from military aid—a figure which I was never able to get accurately because it is a large figure—total aid of something over \$50 billion in the last 30 years.

I think we have not recognized—this may not be politically a wise statement—that we have to accept leadership of the free world. As leaders of the free world we have certain responsibilities.

I want to make my position clear. One of the questions that the Congress was always asking me was, "Are the Europeans grateful for what we are doing?" I took my life in my hands and said that was a matter of no consequence, that whether they were grateful or not was not important, that we should not send one dollar abroad in order to earn gratitude, because you cannot buy gratitude with dollars.

It is not that kind of a deal. We should only send money abroad for American interests. I think the best advice I got, and the first advice I got when I started in business many years ago, forty-odd years ago, from a very wise man, was to get in a growing business and a growing country and you will do all right if you are any good.

I went to Los Angeles and went into the automobile business. I could hardly get out of the way of prosperity. I think the United States is a leader of the free world; it has an interest in a prosperous world.

In other words, we will be better off in a prosperous world than a world in which there is suffering and privation. That is just horse sense.

That does not mean we are going to go out and throw money around to have a prosperous world. It means we will do the sensible thing to build prosperity. It is just the same as with any businessman in any enduring business today, a business that has lasted 50 years—you can put this down in the book—that businessman has set aside a certain amount every year to build future markets.

I say you have to have an agency figuring out what is smart for us to do in order to bring about better conditions in the world.

Mr. VORYS. That is right. But what you have just described to us, it seems to me, is a new State Department. The fellow who hands out economic aid and decides whether it goes or not, and the military aid, and whether it goes or not, is the fellow that has the political-in and know-how all over the world.

What I am wondering is if what you are describing is not a new kind of State Department.

Mr. HOFFMAN. Actually, is this not true, that the foreign policy of the United States is the policy of the United States Government? The guiding agency that guides and develops that policy is the State Department. But the State Department cannot function without considering what is in the best interest of the people locally, domestically, what is the best interest of the country from a military point of view.

So, actually while the development of policy should be clearly the function of the Department of State, the policy has to be synchronized at the Cabinet level.

You will find in the testimony that was taken in the congressional hearings on the original Marshall plan that it was said this was really a case where we are setting up a second Secretary of State. That is not true.

Because, of course, if any man takes on this job of operating in this field he must have Cabinet status. Without that he is gone. This is the kind of town you have to have that in.

Assuming that you have people of competence and good will, you will have no problem there. We had no problem in ECA. We worked within the framework of policy, of course. You have to have that.

As I say, I think this new agency should be permanent. I think it should be recognized that we have this new task. There is no way, in my opinion, of escaping it. Let us do the kind of leading that will be in our interest.

Chairman RICHARDS. Mr. Carnahan.

Mr. RIBICOFF. I will yield the gentleman my time.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. Continuing this same line of thought, are you not saying that we do have two Secretaries of State; we have a policy Secretary and an operational Secretary?

Mr. HOFFMAN. I will accept this change of language. We can say that you have two agencies of the United States Government primarily operating in the foreign field; yes. If you have this new agency, it is operating in the foreign field, and so is the Secretary of State.

Actually, your framework of policy has got to take into consideration not only the operational problems that would come to this new agency, but also the problems of the Department of Commerce and the Department of Defense.

I think that the big hope is this. Of course, I think most of you gentlemen on this committee gave solid backing to what my great friend Senator Vandenberg used to call an unpartisan foreign policy.

We are not going to be able to exercise the leadership that we have to exercise in the world until we have an unpartisan foreign policy.

While the Secretary of State can operate in an unpartisan manner, I do not think you have the same need that he be unpartisan forever. But this new agency has to be unpartisan in the full sense of the word. If it is to be effective it has to represent the American people. It cannot represent either party.

I happen to agree with Senator Vandenberg, that when it comes to foreign shores we all ought to become Americans. We have this new, to me, somewhat terrifying responsibility of world leadership.

We cannot exercise it unless we do once more reinstitute unpartisan-ship in foreign policy.

Mr. CARNAHAN. You stated that the economic and military aid are the same. I wonder if you would expand on that.

Mr. HOFFMAN. I meant this: When it comes to the impact of the dollar abroad, it does not—I will put it another way—when a dollar goes abroad and is spent in a given country it has an economic impact of one dollar.

Someone has to say how those dollars should be guided, so that in their economic impact abroad you get the most constructive result possible. This will illustrate what I mean—in relation to Great Britain and Italy, I would, as far as possible, try to concentrate military production abroad in Italy and certain other countries, rather than in Great Britain.

A person who is informed would know the exact status of employment in every country; he would know the exact facilities available; he would know if he put the dollars in one country, whether they went for military production or went for economic purposes, that the result would be to add to inflationary pressures.

He would know in another country it would be a great offset to deflationary pressures. In Italy you have substantial unemployment. You had that at least a year ago when I was familiar with it. You had something far short of effective use of Italian plants, due to the fact that with underemployment there was a tendency always to pad payrolls—unavoidable, but that was taking place in Italy.

If you could guide those dollars to Italy and the production of Italy, you would help meet that situation.

When you get to Great Britain they would have exactly the opposite effect because they have full employment. That is the judgment you have to pass on the dollars to go one way or the other.

Chairman RICHARDS. The gentleman's time has expired.

Mrs. BOLTON. I am happy to yield my time to the chairman for such use as he sees fit.

Chairman RICHARDS. I appreciate that. Mr. Ribicoff.

Mr. RIBICOFF. Mr. Hoffman, do you believe that if we are to be effective, economic assistance cannot end June 30, 1952?

Mr. HOFFMAN. No. Can I repeat again, I think you want to distinguish here between a terminating date on the program and otherwise. The Marshall plan was to end in 1952. But I am still saying today it should end ahead of schedule. I think the conditions under which that plan was set forth have changed; therefore, you are faced with a new situation.

It would be utter tragedy if you terminated ECA and did not have before you something by which to establish a new agency to operate the new economic aid program. But today you will have and will need out of the experience of ECA, in my opinion, something by which to establish an agency that will operate on a world-wide basis instead of just in a limited area, and give the kind of guidance you will get out of a competent staff directing a world-wide organization.

Mr. RIBICOFF. If this committee were to do an effective and constructive job should we immediately study and look forward to the creation of that new agency in this bill?

Mr. HOFFMAN. At once.

Mr. RIBICOFF. Because we do not have the time.

Mr. HOFFMAN. I do not think this committee could be any more constructive than to concentrate its energy, in the economic field, in getting such an agency established now.

Mr. RIBICOFF. I think your statement about our having spent \$50 billion over the last 30 years without knowing about it is correct.

If we are to be the world leaders, at least for the foreseeable future, it is going to take large sums of American money to keep the free world going, and United States, too, as a matter of fact?

Mr. HOFFMAN. I would like to break that one down. May I say that my approach is entirely, and has always been, based on what is in the United States interest. The United States is the leader of the world and should and must do certain things in its own interest.

That interest has to be an integrated interest. There is nothing less smart than I know of than to take too narrow a viewpoint. I think we have a great stake in world prosperity. You have to have a hard-headed look to see what you can do to promote that prosperity.

You can waste an enormous amount of money. That is easy to do. It is difficult to see that the dollars are spent in such a way that you can get effective results.

I do think the thing that concerned me 2 years ago, when the Spanish loan was suggested to Congress, was that it was going to one government. I was not thinking in terms of any special government. I hated to see \$50 million of American money go to any government. I figured that was a good way to see those dollars were not spent in the most constructive manner.

I think Congress wrote many things into the ECA bill. As a result, I studied that legislation and had an extremely high view of Congress, which I maintained fairly well. That was a remarkable piece of legislation. It brought new principles into this whole question of foreign relations; principles that you want to hang on to.

The first thing was, I think, that that bill made perfectly clear that we had to put the responsibility for the development of programs on the nationals of the countries we are trying to help.

We never formulated the program. That is your job, we said. You go ahead and tell us how you think, and how the recovery effort should be done for the country, how many people it will take. If you want our counsel, all right, but do not hold us responsible. We want you to tell us how to spend that money.

That put them up to the task, in the first instance, and made them responsible. That is a first principle. That was written into the bill. The principle of counterpart was written into the bill.

Chairman RICHARDS. The gentleman's time has expired. Mr. Smith.

Mr. SMITH. Mr. Hoffman, I want to first associate myself with the statement of the gentleman from Montana and his remarks about Mr. Foster.

I wonder if we have in this whole program too much emphasis upon government and not enough upon people. It leads me to this question: We know that productivity has increased beyond prewar conditions in Europe. In all of that productivity the people have not shared in it. My question is:

How can we overcome that very vital situation? It may be a very difficult thing to work out, but until the French people and the Italian people can raise the standard of living, it seems to me we are just bogged down.

Mr. HOFFMAN. I could not agree with you more, Mr. Congressman. It was a subject I did have intensive interest in. Here is the hope.

There is nothing more difficult than to change the distribution of old wealth. That should be done by revolution. But you do have a chance to change the distribution of newly created wealth.

In other words, I know that ECA today under Mr. Foster and Mr. Joyce is putting great emphasis on increased productivity and upon the importance of taking the benefits flowing from the increased productivity, and distributing them equitably.

No one knows better than I do the problem you have in Italy, of getting some of the people in authority—not in government, people in business—to recognize that these savings or earnings that come from higher productivity are distributed primarily to your workers.

Mr. SMITH. Where have they been going these years that the program has been in operation?

Mr. HOFFMAN. I am speaking particularly of France. I never felt happy about what we had accomplished in France. At the same time I felt that a great deal had been accomplished.

Let me explain why. When we started operating in France in July of 1948, workers were being paid in francs at the official rate. The official rate then was 119 to the dollar, and the black-market rate then was around 500 to the dollar.

The only place the worker could buy goods at the official rate was in those stores where they had ration goods, and there were almost no ration goods.

What he had to do was take these francs, which he got at the rate of 119 to the dollar, and get what he could with them, which was practically nothing.

In the 2 years of ECA operation these things happened: The most important thing was that the franc was revalued to about 300 to the dollar. There is no black market in France today that I know of. So the franc became a medium of exchange again.

There was a raise in wages of somewhere around 20 percent. It should have been more than that. But a trend was established.

You cannot turn these things upside down in a year. I really feel reasonably hopeful that this new emphasis that ECA is putting on productivity and an equitable distribution of those fresh earnings may have a very real impact in France and Italy.

It just happened that I discussed this morning with Bill Joyce what could be done in Italy and France to create an understanding on the part of the more forward-looking business people as to the manner in which it should be done. It is like Henry Ford when he announced that he was going to pay \$5 a day in 1914 rather than \$2 a day. He said that he was not proceeding in an unsensible way, but a sensible way.

Mr. SMITH. Do you not think the initiative should come from within those countries? Why should we be compelled to tell them what to do?

Mr. HOFFMAN. We are not telling them, but trying to persuade them.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I will pass, Mr. Chairman.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. It is a pleasure to have you with us. You made a very excellent statement. I was glad to hear you emphasize the necessity of considering United States interest in these aid programs.

It seems that it would be well to bring about as rapidly as possible an integration of Western Europe in the economic field, the military field, and the political field.

I wonder if you will comment on ways and means to accelerate integration as we continue to give our assistance and economic aid.

Mr. HOFFMAN. I do not know any single problem. It is a long story. You had a 50-year trend against you. There were 50 years in which you moved in only one direction. That was to build the trade walls around each country higher and higher. We were trying to breach those walls. I think we were very successful in breaching those walls.

We were able to build up European trade to something in the order of 20 percent above prewar, within 2 years. We did greatly ameliorate the situation as to the currency exchange restrictions. We did point out that the greatest inequities lay in these trade barriers. We got those pretty well eliminated or reduced. We did not do too much with tariffs. Like any other country, when you hit tariffs, you hit vested interests.

You cannot move too fast. I think the trend was clearly established. I think all these things all come about gradually as the result of pressures that are built up. If you are trying to build pressures, you will move in the direction of pressure.

The big chance now is in the military field. There you have General Eisenhower, a man of such stature that he has already been able to accomplish a great deal in welding together these field forces in Europe. I think in that process he starts breaking down these barriers to unity.

You have fundamental conflicts that will not give way overnight. If we can keep the pressures on in every direction, I think it will create a situation in time in which there will be a relatively free movement of goods and people among the countries of Europe.

Mr. MERROW. You speak of keeping the pressures on. Would you comment on the advisability of writing conditions into legislation that we may enact, conditioning aid on certain accomplishments?

Mr. HOFFMAN. I think it is very hard to set those conditions rigidly. I think you have to give any administrator a good deal of flexibility.

You see, we had a provision in the 1949 act which was used to great advantage. I have forgotten the exact language—it was clear that the United States believed that the economies should be integrated. We used that. You can use general language like that, and very effectively.

I think if you try to take over the operating function itself, you will inject a rigidity which will work in the opposite direction that you think it will work when you put it into legislation.

Chairman RICHARDS. The gentleman's time is up. Mr. Hays.

Mr. HAYS. Mr. Hoffman, is our emphasis on production sufficient to give our own people an assurance that this is not a matter of favoring foreign countries over our own? Let me be specific.

There will be a tendency in times of distress such as we have in Missouri and Kansas, for example, to say that we neglect our own people. We built levees and bridges and railroads in other countries.

Now, I do not want to ask you to get into a field that you would probably wish to leave to us. However, we have to hammer these

questions out on the basis of national policy. Now, to ask you a leading question, Is not our emphasis very likely to be on military aid and production? I am asking if there is any justification at all that these proposals are in competition with domestic interests and projects?

That is a broad question, but on the basis of your experience, have we done anything under ECA that is subject to that criticism as between domestic and foreign interests? Have we indulged in grandiose schemes, for example, that represent too much capital outlay, not justified in terms of productiveness?

Mr. HOFFMAN. Well, we are getting into economics here, and I would like to make a statement. I will explain it in more detail later, if you wish.

Of course, any dollars that go abroad have to come home to be spent. The only place that dollars can ultimately be spent is in the United States. So when you send dollars abroad and they come back home, the question is, Who gets them? Now, if there is any lobby that missed me during my 2½ years down here, I do not know what it was. I think I was hit by every lobby in the United States. I think every interest has a right to fight for this provision or that. That is a part of our system, and I am all for it. I do not say that critically, but when a particular group will come to me and say, "Now, we want this law written in—"

Chairman RICHARDS. Mr. Hoffman, would you suspend for just a moment, while I make a statement? We have someone who will inform us here when they go in the well to have a roll call and I will let you know in plenty of time.

Excuse me, Mr. Hoffman. You may continue with your statement.

Mr. HOFFMAN. One lobbyist would say, "We are all for this ECA program, but we want you to support us when we put a provision in the law for any dollars spent back in America, so that if they are spent in the fruit fields they should be spent for apricots." I would say, "Wait a second. I happen to believe in free competition. When that dollar hits our shores, I am all for the apricot people and the apple people, and all other competitors having a crack at it. Let the man who can get it, get it."

"The minute we start writing provisions in as to how those dollars are spent, we are not protecting you against foreign competition, but against domestic competition, and I do not believe we should do that."

Let me say I do not know of a single case where I was able to sit down with the people who thought their interests were being adversely affected where we did not talk the thing out and prove by facts and figures that it just was not so.

Just on the figures of total production in America,—or gross national output, rather—it was in the neighborhood of \$275,000,000,000 a year. Now, these figures are not fresh in my mind, but it seems to me if I remember it right that the total value of our industrial and agricultural output was something around \$150,000,000,000, or in that neighborhood.

What was being talked about was the impact of perhaps \$500,000,000 more of imports in America. It was that \$500,000,000 more against \$150,000,000,000. When you break it down to show where it hits individually, I never found a case myself where it seemed to me that industry had to be protected against anything except its own fears.

Those goods coming here for the most part were not in competition with our goods.

I can go over that case by case if you want me to.

Chairman RICHARDS. The gentleman's time has expired.

Dr. Judd.

Mr. JUDD. Thank you, Mr. Chairman.

Mr. Hoffman, I applaud thoroughly what you have said this morning so much better than I have been able to say it. I especially am grateful for your saying that we must get this organizational problem hammered out now, late as it is. I think there is a lesson to be learned from what happened in the spring of 1948, when we were facing the problem of ECA organization.

In this committee we were in executive session for four solid weeks, and we debated and rewrote and voted up and down various provisions of the bill day after day. The commentators and cartoonists and the Administration and most everybody else blasted us as few committees have ever been criticized. They said it was delaying and stalling the foreign aid program and that speed was the most important factor. They said we were dilatory and obstructionist and so on.

But we stayed at it until we got what we thought was sound because that was even more important than speed. We finally got the bill in shape and passed within one day of schedule.

I think the best thing we did was to take the time necessary to get a good law that you say has worked well. I believe we ought to learn a lesson from that for dealing with our problem now.

I have only two questions at this time. Is it not true that the weaker or the less developed a government is, the stricter must be the supervision in guiding and following the dollars?

Mr. HOFFMAN. Yes, sir.

Mr. JUDD. Now, referring to the technical assistance program it is said this must be handled through the United Nations. The United Nations is still a somewhat sketchy organization and in general has not developed good operating organization, and it cannot in so short a time.

Do you think that our money for technical assistance can be either guided or followed through that international organization in its present condition as well as it can be guided by the kind of organization you talk about, a United States organization that you recommend our setting up here now?

Mr. HOFFMAN. I do not really feel qualified to answer that because I am not too familiar with the United Nations Technical Assistance Committee. I do feel it is highly important that there be the closest collaboration and, if possible, a working through the United Nations wherever they are able to do the job. I think that would have to be a case of an individual judgment.

If they are set up so that they can handle this, then all right; but I think the important thing is to see that the dollars that our taxpayers send out are going to produce results in the form of economic recovery, military production, or whatever their purpose may be, to the maximum result.

I, therefore, would not deal with that in terms of the specific, but rather in generalities.

Mr. JUDD. Thank you. That is all.

Chairman RICHARDS. Mr. Roosevelt.】

Mr. ROOSEVELT. Thank you, Mr. Chairman.

Mr. Hoffman, may I join my other colleagues in congratulating you on, I think, one of the most able and clear presentations that has been made on the necessity of this whole program. I am particularly interested in this operating-agency problem—the four-pronged attack, as I see it, as you stated, was military, political, information, and economic.

Now, I can see how the military and economic could very readily be put into a successor to ECA—an operating new agency. I am not worried about the time element of how long it ought to go, because I think that will depend on the situations, which will vary from one area of the world to another. Our program in the Far East and southeastern Asia will undoubtedly be a much longer program than the program in Western Europe.

However, when you get into the political and into the information end of the program, I am not at all sure that those two functions ought to be in this operating agency, because the political, it seems to me, really is a function under the Constitution and the President of the United States, and also, through him, of the Secretary of State.

The information program is more of an adjunct of the political than it is the military or economic, although, of course, it overlaps, and there is a need for propagandizing the truth in those two fields too.

Do you contemplate that this agency should take on the political and information aspects of the program, Mr. Hoffman?

Mr. HOFFMAN. I did not make myself clear, Mr. Roosevelt. I think this agency should take on only the economic aspects of the program. In other words, the political aspects of this program should be carried out by the State Department. The military, obviously, should be carried out by the military. I happen to believe that the informational activities which are now lodged in the State Department and are scattered through some agencies insofar as the foreign field are concerned, would be much better carried out if that agency was independent; but that is a separate issue.

Mr. ROOSEVELT. That is Bill Benton's idea. My worry is that each one of those fellows is going to come in on his independent phase of the program and set up a separate agency for that. Bill Benton happens to be a bug on information. He wants a separate agency for that. You want one for economic.

Mr. HOFFMAN. No. I am talking about economic only, because only where the military has a position in the economic field would this new agency undertake any responsibilities in that field.

Mr. ROOSEVELT. Would the military end items be excluded from this agency?

Mr. HOFFMAN. Anything shipped from this country or made in this country, in my opinion, would have to be decided upon by the military—talking now about the dollars that go for military items to be shipped abroad.

Mr. ROOSEVELT. I see.

Mr. HOFFMAN. I think this agency should have a great deal to say about what is produced here and what is produced abroad. I think they should have a voice about that, but I do not think their voice should necessarily be controlling. I do think there is a question of judgment there, and I think there is an inclination always to solve a problem here by giving out a new contract in America, which you may

not be able to get filled for 3 years; whereas you might get that contract filled in some foreign country the day after tomorrow.

So I think he should have independence so that he will have his voice heard when it comes to decisions as to where end items can best be made. But he would have nothing whatever to do with developing the military strategy.

Mr. ROOSEVELT. Do you draw a parallel between this situation and the similar problem that confronted us last year in setting up Charles Wilson as an independent agency for the defense mobilization effort outside of the Department of Commerce, because he could, of course, have been put in the Department of Commerce? Do you draw a similar parallel to that?

Mr. HOFFMAN. I think, of course, that was a very wise move. I believe it took someone of Mr. Wilson's stature to get this program under way.

Mr. ROOSEVELT. Of cabinet level, reporting to the President.

Mr. HOFFMAN. Of cabinet level, at least. It certainly had to be of cabinet level to get the job done. I think this other agency differs from Mr. Wilson's. I think it should be a permanent agency—and again I will say that this program, like every program authorized by Congress, should have a terminal point, but the agency itself would be there, and we would be saying we will have this job for that agency.

Mr. ROOSEVELT. One last question. You used a phrase which I think is very important and very significant, that the United States must earn the right to world leadership. I would like for the record to state we can only really earn anything—and you have said this in different words by your use of the word "enlightened," I think you can even make it stronger and say "unselfish," because what is unselfish in the short run is going to be to our long-run advantage.

Chairman RICHARDS. The gentleman's time has expired.

I will recognize Mr. Fulton. Then we will have time to go down to the floor, and the committee will recess for 10 minutes.

Mr. FULTON. It is a pleasure to have you back, Mr. Hoffman. We always feel we are welcoming you back on the team again.

After the start of the Marshall Plan program in 1948 we look at you as one of the ex-officio members of this committee, and one in whom we have great confidence. I would like to suggest that we draft Mr. Hoffman for the 90 days to help set this agency up. It is going to take somebody with experience, who will look at the agency as it should be, without trying to build an empire. It will be the greatest help to have you serve, and I am sure this committee has the greatest confidence in your diplomacy and ability along that line.

As a matter of fact, as a Republican I am very proud of you too, and I would run you for President if I had a chance.

Now, going back to the bill itself, there has been a guaranty provision that permitted American businessmen to invest abroad. We will not go into the provisions because we are rushed for time.

Do you think it would be wise to continue some sort of a guaranty in future legislation for American businessmen, and even to extend that guaranty, possibly, to a guaranty against loss on the depreciation of currency?

Mr. HOFFMAN. I wonder if that is not a question Nelson Rockefeller could answer better than I could, because he has been in that whole field and made a thorough study of it.

Mr. FULTON. Then we will skip that for now. The question is on amount. Among many conservative people who feel we might be just throwing dollars away, they all wonder is the amount right. What, in your judgment, as a businessman, and with the interests of America first, do you feel about the amount? Can it be reduced, or what will be the effects if the program is reduced in amount?

Mr. HOFFMAN. Of course, as I said earlier in my written statement, I can express a judgment only on the economic area.

Mr. FULTON. We will limit it to economic.

Mr. HOFFMAN. I felt there as a continuing policy we could well afford to put 1 percent a year of our gross income into what I call promotional activities throughout the world—promotional from the standpoint of promoting peace and prosperity. As a businessman, it would not worry me a bit; I would feel I was very negligent if I did not find ways to seek out investment for the long-run interests of my concern.

Mr. FULTON. May I ask you this, because the question will come up, and it should be said directly, without any rancor, or without putting one personality against another: Senator Taft recommended that the program be divided over 2 years with the same amount, which, in effect, seems a 50-percent cut. What, in your estimation, would be the results of that on this program?

Mr. HOFFMAN. I just think if a program is going to be effective—in the first place, we are going to spend a certain amount of money on it, whether it takes \$2,000,000,000 or \$1,200,000,000, or something like that. I believe we should either get the \$2,000,000,000 to do it effectively or else we will be cutting it down to the point where the whole program is a waste of money.

Mr. FULTON. You dilute it so much that you waste money.

Mr. HOFFMAN. Yes.

Mr. FULTON. And then you lose the confidence of the people.

Thank you very much.

Chairman RICHARDS. The committee stands in recess for 10 minutes.

(Whereupon, at 11:30 a. m., the committee recessed for 10 minutes, until 11:40 a. m. of the same day.)

Chairman RICHARDS. The committee will come to order, please. We will resume the hearings.

Mr. Jackson.

Mr. JACKSON. Mr. Hoffman, as is always the case, you made an excellent presentation here this morning. It is always good to see my fellow Californian. Not only did I read your book but I bought it.

Mr. HOFFMAN. That was a mistake.

Mr. JACKSON. While I frequently find myself cast in the role of a devil's advocate on this committee and sometimes disagree with the broad policies that are laid down, I still find that you are the most pleasant person to disagree with, even on minor points.

I know comparisons are odious; but, without any reflection on the Studebaker, I would say that you probably are more like a model T Ford, because we know once you step on the starter that a certain consistency is to be found in your work. That is, the things you

said in 1947 you said in 1948, 1949, 1950, and now. That, in itself, is unusual, because we have met with some pretty sharp-angled changes of course here in this committee.

On the matter of "unpartisanship" that you mentioned—and I think it is extremely important—it appears to me that if we are going to win this mortal struggle in which we find ourselves today, we are going to have to return to nonpartisanship in foreign affairs. Mr. Hoffman, what do you consider to be the necessary ingredients for a return to bipartisanship?

Mr. HOFFMAN. Why, of course, I was thinking, Mr. Jackson, in terms of this agency. I think the first thing that has to be done is it has to be operated in a thoroughly unpartisan way. I think Mr. Foster, for example, is operating ECA that way, and completely unpartisan, so that I have something very specific in mind. That means very definitely when it comes to the matter of personnel that that personnel be selected on merit, and not selected for political reasons, as a practical thing. It means, when it comes to the development of policies, that it would be my hope we could return to that situation we had for a time, when Senator Vandenberg was in the Senate, in which we did have a genuinely unpartisan foreign policy.

You remember, I think, it was in 1948, and I think through most of 1949, and at least it was during the Eightieth Congress, if I remember correctly, that there was not a single vote that came out of the Senate Foreign Relations Committee that was not unanimous. They took their time, as Mr. Judd suggests, to study the issues thoroughly and get a look at all the facts. Then they looked at those facts as Americans and decided what were the best interests of America when it came to foreign policy.

I think we have got to get back to that as one of the assumptions.

Mr. JACKSON. Acknowledging that, is it not also essential as a necessary ingredient in any nonpartisan or unpartisan program that in back of the policy and behind the operation, in the analysis stage and at the policy level, that consultation is also vital to the success of any program?

Mr. HOFFMAN. Surely.

Mr. JACKSON. We wrote a minority report here on the first arms-aid bill, and I will never forget one sentence that said it is not enough; that our differences end at the water's edge and they should end at the conference table long before they reach the water's edge.

Mr. HOFFMAN. I completely agree with that.

Mr. JACKSON. Lack of such consultation on policy is probably the rock and the whirlpool upon which the unpartisan policy has come to rack and ruin. I agree that Mr. Foster is doing a splendid job of carrying out the excellent tradition that you established during the time you were with ECA in the operational field and in the administration of policies which have been determined upon, but I think unpartisanship has to spring from policy.

Mr. HOFFMAN. I completely agree. I think what has got to resurge is a recognition in the Congress and in the Executive that we cannot afford partisanship in foreign policy. That does not mean we do not need debate. That is not the point at all, but it is the whole question of how you approach it.

If you approach it from the determination of foreign policy as an American, to find out what is best for America, I am all for it. If

you decide to approach foreign policy from the question of what is the party advantage one way or another, we do not come out with the kind of foreign policy that will give us the position of leadership we must have.

Mr. JACKSON. I am in the fullest measure of accord with you on that. I recall the Vandenberg days, when it was not at all unusual for both the chairman of the committee and the minority member of the committee to leave the committee room to go to the White House. I think we have suffered in the interim from that lack of consultation and lack of conference as between the two great political parties, and I certainly hope we will return in time to the point where we will have that nonpartisan approach to foreign policy.

Mr. HOFFMAN. It will be a very wonderful thing when it happens.

Mr. JACKSON. Thank you.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Thank you, Mr. Chairman.

Mr. Hoffman, I want to associate myself with the very nice things that have been said about you in the operation you conducted, and particularly compliment you on the fact that you have been giving so much thought to the organizational side of the problem. I think often we thought of the program in terms of cash and not how it was going to be administered.

If I may sum up, it seems to me you said with respect to this organization that it should be primarily an economic organization operating overseas, and that it should embrace within it all direct economic aid or technical assistance programs wherever they may be found.

Mr. HOFFMAN. That is correct.

Mr. HERTER. Further, that it have a consultative voice at least in all offshore procurement programs of a military nature with regard to the economic impact, but should not directly concern itself with, say, the allocation of end items that come from the United States.

Mr. HOFFMAN. That is correct.

Mr. HERTER. Because that is essentially a military function.

Mr. HOFFMAN. That is correct.

Mr. HERTER. I am glad of that clear statement of what you envisage in this organization, but may I go one step further? We have two very important organizations, both having their headquarters in this country, one international and one national, which put dollars into the foreign field. They are the Export-Import Bank and the World Bank. How would you tie them in? It seems to me their operations, both from a technical assistance point of view and from the point of view of putting dollars into foreign countries, ought in some way to be tied into the picture.

Mr. HOFFMAN. I definitely think they should. In other words, my view is that, as far as Export-Import is concerned, the head of this central agency should have at least a veto power on any moneys going abroad and loans going abroad, because otherwise you have just one more channel for duplication.

Mr. HERTER. The World Bank is an international organization.

Mr. HOFFMAN. Obviously, you cannot have the same kind of control in the International Bank. I am not as familiar as I should be with the exact organization of that bank, but I think the administrator of this new central agency would have to have a seat of power

within it. I mean, he would have to be on the executive committee, or some place where his views would have to be heard. It actually happened during the time I was down here. I think the same thing is true with Mr. Foster. Our personal relationships with Mr. McCloy and Mr. Black were such that we had no problem, because we discussed all these loans they were thinking of making and they were always good enough to come to us and say, "What about the impact of this loan to Turkey? Do you think we ought to go ahead with it?" That was informal, and that is one of the best ways of control; but I think in developing legislation there ought to be some place provided for the administrator of this new agency where he could have a formal right to voice his views as to loans made by an international agency in which the United States is putting up a substantial part of the money.

Mr. HERTER. I wonder if you would care to comment on that one great problem Mr. Jackson raised, which is a very important one, I think, when he talked about the operational job being an unpartisan job entirely? The difficulties, I think, have arisen at the policy level, as Mr. Jackson indicated. There the mechanics were different. When we go back to the Vandenberg days, when consultation was an essential, because the Executive did not control both branches of the Government. Since then they have controlled both branches of the Government, and a lot of the unpartisan or consultative operational and policy determinations have been made without consultations at any level at all.

I am very glad to hear what you said, and perhaps you will want to emphasize it even more strongly.

Mr. HOFFMAN. Of course, I believe with you that unpartisanism does start at the consultative level on policies. That is where it should start, I believe. I just feel that perhaps in the setting up, or in the consideration of the setting up of the whole agency, this question of unpartisanism should be brought out in the open, and its importance again stressed.

As I told the story in my book, I thought Senator Vandenberg really salvaged unpartisanism last year when he was desperately ill at the Wardman Park Hotel and took over that task.

I would like, if I may, partly for the record and partly to be sure this is clear, to read one more paragraph from the statement of the Committee on the Present Danger on this point of the relationship between the Department of Defense and this new agency on procurement.

What was recommended is that—

The Defense Department's relationship to the new administration would be essentially the same as Defense's present relationship to State in the mutual defense-assistance program. Defense would do in effect what it is now doing. It would supply the data as to what equipment is necessary for the proposed troop basis of our allies, its cost, the necessary timetable for its delivery, the fitness of facilities to produce a particular item, the items which as a matter of security must be produced in the United States, and the availability in the United States of facilities to produce items needed to be produced here for reasons of timetable or security. All funds for procurement of military items and parts in the United States would be allotted to the Defense Department for procurement through its regular channels, as is done now.

Chairman RICHARDS. The time of the gentleman has expired.
Mr. Reece.

Mr. REECE. Referring to your statement regarding the foreign policy, with which I am in complete agreement myself, I just want to make this remark based on my observations: That I think most, if not all men in public life—and I am referring particularly to the Hill—do believe in that policy and try to live up to it; but, of course, that does not mean that, especially since they are not brought in on a consultative level, they may not have a difference of opinion.

Mr. HOFFMAN. Surely.

Mr. REECE. But when that difference of opinion to which they give expression arises, that is based on the same patriotic feeling arising out of their conception of the good to the country and to the world, and that probably the adverse opinion arose from it. I think sometimes we fall into error in assuming that anyone who expresses a difference of opinion is basing it on partisan grounds, since most of the people in our country belong to one of two great political parties.

Now, having made that statement, I want to ask a question, if I may, Mr. Chairman, which is outside of the purview of this bill. I am asking it particularly of you since you are present, and there is also present Mr. Rockefeller, and you are two gentlemen who are associated with two of the greatest evolutionary and philanthropic institutions in the whole world.

There is quite a displaced persons problem—an individual relief problem—that we run into and which I am sure you have encountered in various nations. Turkey has one, of their refugees coming from behind the iron curtain. Israel has one of people coming into that country. The Arab countries have another.

Now, how to deal with that problem is really a big one. I am wondering if the institution with which you are associated—and the same thing applies to the one which bears the name of your associate who is with you here this morning—has given any consideration as to whether or not the scope of your activities would enable you to give consideration to setting up, for instance, taking Turkey as an example, a small city or housing project into which you might bring these refugees; then, in connection with that, setting up some kind of vocational or industrial activity which in the long run might, under some terms of agreement, be made available to those people who would come in and work in that industry, so that ultimately it would revert to private enterprise? If so, it would seem to me as if that kind of a project in Turkey, or Israel, or one of the Arab countries, would stand as a magnificent memorial to private enterprise.

I am just wondering whether your organization would enable you to give consideration to that. I am asking this more or less out of my personal interest in the possibility of that, and it has no immediate connection with the bill.

Mr. HOFFMAN. I will speak first for the Ford Foundation and say that our first interest in this displaced persons problem was perhaps from an American viewpoint. There were among the displaced persons in Germany and other countries men who we felt could greatly enrich American life; men of high professional standing and some men who were scientists, and men of real parts and real intellectual attainments.

We gave to a committee headed by Mr. Reinhold Niebuhr \$500,000 to assist in bringing that particular group to America, prior to the expiration date for the entrance of displaced persons, which I think is the end of this year.

The broader problem of what can be done to assimilate these people into the fabric of the life of these countries is a problem to which a good many people have given much attention. One of the reasons that I am going abroad shortly again is to go into the Near East to see what is being done there, and to go to India to see what is being done there. Mr. Chester Davis, whom most of you know, will be one of the group, as well as Mr. John Cowles. We will just take a look at this problem to see if we can find out something about it. What we can do we do not know yet, but that is one of the purposes of our trip to the Near East and India at this time of the year.

Just about nobody I know of knows as much as Mr. Nelson Rockefeller of what can be done abroad with this type of activity.

Mr. REECE. That is the reason I am asking this question, since you and Mr. Rockefeller are both here at the same time.

Mr. HOFFMAN. You heard from an amateur, and you will soon hear from a professional about it.

Mr. REECE. I was impressed with what you said, that we should assume our position of enlightened world leadership. I am one who feels rather that world leadership comes to a nation involuntarily, and it is something you assume by reason of the position that is occupied and the personalities involved. I feel we must recognize our responsibility in that regard.

But what I would like very much to see is that we assume or exercise the position of leadership in fields other than spending.

Now, as to our position of world leadership when it comes to spending, that is, making money available, I think that is recognized abroad and at home, but when some of the more acute political questions that bodily involve our interests come up, then I do not know that our leadership is so well recognized.

Take, for instance, the disagreement among our allies or associates in the free world with reference to giving Red China a seat in the United Nations, or with reference to the admission of certain countries like Turkey, Greece, and Spain, to the NATO orbit. When those more or less political questions come up our leadership is not so acknowledged as it is when it comes to providing billions for aid abroad.

I am kind of expatiating there rather than asking a question, but it would be interesting to have your reactions on it.

Mr. HOFFMAN. Well, that is a pretty big question. I think there again we have got to earn the right of leadership by demonstrating our political wisdom. I think wisdom is something you acquire the very hard way.

Some of my most assured convictions had to give way as I began to learn something about the world. I think that the point there is that we do not have all the right answers. I am not speaking of the particular questions you raise at all. My position on Red China is very clear. I do not think Red China should be recognized and never have thought it should be recognized. I do not think any regime should be recognized that has acquired power by violence until it has demonstrated over a sufficiently long period of time that it is the only government in that country. When that time comes, even though you may not like the government, it is the government, and there you are.

However, I do not think that is necessarily the case, and I hope it is not the case insofar as Red China is concerned.

I do think that we have got to recognize that by leadership we do not mean that the American position always has to be taken by everyone else. I think we have got to get into the discussions and we have got to learn ourselves as we go along. We have to be willing to give and take.

I think one of the most dangerous notions—and I can say this now very freely because I am no longer in Government—one of the most dangerous notions is the idea that the fact that you give aid gives you the right to dictate. That is not the way to get results. Even if you could use it that way, it is not the way to get results. You have got to use persuasion and have to have a little giving and taking, as you go along.

Mr. JUDD. And there is no assurance our way is the right way for others.

Mr. HOFFMAN. As I say, I have learned a certain amount of humility and I am not nearly as sure that my way is the right way as I was 20 years ago.

Mr. REECE. I am in complete agreement with that statement. I think we all assume that posture as we grow a little older and have a little wider experience. But it would seem to me one of the first considerations in assuming leadership or asserting leadership, or persuading others to accept your viewpoint, is making sure that you have no selfish interest back of the position taken.

In these questions that arise now there is one great interest involved. That is, the maintenance of the free countries of the world. That should be the one guiding principle, I think, in any recommendation that is involved. We have no right to ask other countries to take the position that advances our selfish interest. Another country does not have any right to advise on a course of action that is for their selfish interest and is not for the interests of the strengthening and the maintenance of the free world. I am not one who feels that our history during the past few years is such that we ought to be looked upon with great suspicion, because we have asked for no gains that can be seen anywhere along the whole front.

Mr. HOFFMAN. I think you are raising quite a question there. We have a tremendous problem throughout the world. America is not understood. The Russians have always pictured us, of course, as highly materialistic, interested only in bathtubs and automobiles; and particularly among intellectuals in other countries there is not a recognition, I think, of what American progress in areas other than the material area has been.

I think by one method or another we have to acquaint people with what really is the glory of America, and that to my mind is the great enhancement that has come about here in this country in the past 50 years, and has given opportunity to the individual to grow and develop materially, intellectually, and spiritually. That is our great achievement and that has come, I think, in a particularly rapid manner in the past 50 years. The world does not know about that. They know about our automobiles and our bathtubs, but they do not know how much greater the opportunity of the average man is today just to grow and develop intellectually and to grow and develop spiritually than it was 50 years ago.

That is not known, and that is the real achievement of America. That is what we have to bring about an understanding of throughout

the world, and that does not come easily, but comes slowly by deeds rather than words.

Chairman RICHARDS. That is all, Mr. Reece. Your time has expired.

Mr. REECE. Yes, Mr. Chairman. Thank you.

Chairman RICHARDS. Mr. Hoffman, may I ask a question, and then we will go along to some of the others who may have some additional questions?

You want to set up a new organization to handle the whole program except military end items. If that is the case, this committee would not have any jurisdiction over military end items. We have been given jurisdiction because it is assumed these different forms of aid are related to each other and the requirements in the field of one type of aid might decrease or increase the needs in another.

When you talk about end items, what are military end items? How far do they go? Maybe we should ask the military men about that, but I would like to have your idea about that.

Mr. HOFFMAN. Of course, I think as a matter of practical operation the head of this new agency, as it is set up, has got to have a very loud voice after this data is supplied, in accordance with this program which I read to you—a very loud voice in deciding whether end items should be produced in this country or abroad. I do not think an agency dealing entirely in the foreign field should have exclusive authority there, but I think the voice should be loud.

In other words, I think that the military would be naturally inclined to have as much of that military equipment built here as possible. On the other hand, I think that you should do here as you did in setting up the ECA where you gave the administrator a voice. Then if he cannot make his voice heard, that is his fault.

Chairman RICHARDS. Should he say so many of these end items should be manufactured abroad, and so many in this country? Should he have authority to that extent?

Mr. HOFFMAN. You have in the room here a man who knows so much more about this than I do that it is a shame to ask me that question. That is Tracy Voorhees, who was Assistant Secretary of War and who would know much more about the practical operations of this than I would. If, under your regulations, I could give way to Mr. Voorhees, I think that would be much better.

Chairman RICHARDS. We will hear him later.

Mr. JUDD. Why not hear him at this particular point if he is here?

Chairman RICHARDS. The present witness has a time limit.

Mr. JUDD. All right.

Chairman RICHARDS. I think we had better hold that over. We will certainly remember that point.

Mr. HOFFMAN. Just save that for Mr. Voorhees.

Chairman RICHARDS. Mr. Hoffman has to get away from here.

Are there any other questions on either side of the table?

Mr. VOYRS. Yes; I have a question, Mr. Chairman.

We heard from Mr. Cabot, who is the present Director of Mutual Security—that is his title. He is down two or three layers in the Department of State, and he says that if you set up this new organization you will still have the problem of coordination between departments that you have now, a problem that is so baffling to us. There-

fore, according to this view, you will not have solved anything by setting up one new separate department that still has to coordinate.

What do you think of that?

Mr. HOFFMAN. Well, I will tell you. This has been my observation: There is no real difficulty in getting coordination at the top level. The lower down you go, the more difficult the cooperation and the more jurisdictional issues become controlling. In other words, I never had a difference with the Secretary of State or the Secretary of Defense while I was here that we could not resolve by talking things out. But, down the line I used to have to jump in at times and settle some terribly important jurisdictional battles as to who did this or this rather unimportant thing. I think that I am trying to answer that question quite bluntly and say to you in other words that as to coordination the lower the layer, the tougher the coordination.

Chairman RICHARDS. Will the gentleman yield?

Mr. VORYS. Yes.

Chairman RICHARDS. If it works so well, what is the use of setting up a new organization on this thing?

Mr. HOFFMAN. Well, I am talking now about the—I do not know quite what the question is.

Chairman RICHARDS. I mean, one central organization.

Mr. HOFFMAN. Well, I want one central organization to handle economic aid. The reasons for that I have tried to give. I think they are very real. If you scatter them out as you have now among a large number of agencies, then obviously you have multiplied your problem of coordination.

Chairman RICHARDS. You are talking strictly from a business standpoint as to how you would organize an operating partnership or corporation.

Mr. HOFFMAN. I am afraid that is so.

Chairman RICHARDS. I think that is a good path to follow. However, there are some other difficulties in this, such as constitutional difficulties, and matters of policy, and other matters that come into this that would not come into the operation of a private enterprise.

Go ahead, Mr. Vorys.

Mr. VORYS. I have two things I want to ask about. You said you had no differences with the Secretary of State. I heard Mr. Foster at the annual meeting of ECA this year say, "We have never had any differences." Frankly, that is an awfully good reason—

Mr. HOFFMAN. I did not say that. I said I had no differences we could not resolve.

Mr. VORYS. Yes. That you could not resolve.

Mr. HOFFMAN. That is right. We had some very real differences.

Mr. VORYS. Maybe he said the same thing, but I recollect he said "no differences." That is an awfully good argument for not setting up a new organization, it seems to me. If you have no differences, that is what it indicates to me.

We hear constantly about differences between Cabinet officers that have to be resolved by the President. That is a healthy thing in that it shows we had to have these separate departments and we have to have a President to resolve their differences. But if out of these turbulent times there is nothing that needed to be referred to the President, that may indicate, one, that we have had godlike men administering it, which may be true; and, two, it also may indicate that there is no need for a separate set-up.

Mr. HOFFMAN. I would not or I do not follow your logic on that. In the first place, my real point is that there are at least a dozen agencies in Government that have a considerable influence²—either direct control or influence over the flow of dollars abroad. So we are talking now about consolidating those functions into one agency. I think if you want to limit your argument as to whether you should take, for example, point 4 away from the State Department, then I think what you would have to say would have some application. The other agencies, no.

But I would argue very vigorously for this point of view, Mr. Vorys, and say the great advantage and the reason why this agency was given Cabinet status is this. It was nothing I knew about until I came to Washington, but the Congress put that in the bill and I found it was an extremely important provision. I found as far as privileges are concerned, all it ever got me was the right to have the use of my car and driver in the evening. That is the only practical thing I ever got from getting Cabinet status; but what it did psychologically was this: If something was happening in some other department of the Government, not only State or Defense, but any other department of the Government, I would go and call on whoever the head of that department was and say, "You know, things are going on here that I think you are not familiar with. Let us talk them out because the issues are very important ones to me and I want to get this thing squared away. There is no reason why, if we have all the facts in front of us, we cannot settle it and not have these jurisdictional conflicts, and not have your boys start over where our boys are operating." We would talk it out right there.

If I had not had Cabinet status, sir, they would have issued the orders and I would have been down the line and coming up and pleading with them please not to do it. In every case they knew, and I hope I was never indelicate enough to stress the point, that I had the right of appeal to the President; and, believe me, that is an extremely important right here in Washington if you want to be able to argue on terms as an equal among equals.

Mr. JUDD. It was only because you had a separate agency that you could resolve your differences. Otherwise you would just have had to bow to them.

Mr. HOFFMAN. Otherwise you could never have resolved them, and in my opinion ECA could not have been operated if it had not been independent fully in that field, and if it had not had independent status, and if as head of it the Administrator had not had Cabinet status so that he could talk as an equal among equals.

Mr. VORYS. In some of these questions I am the devil's advocate bringing up various points of view that have been brought before the committee.

Here is one: You used the word "operating." As I get it, ECA does not operate at all in that it does not procure anything.

Mr. HOFFMAN. That is right.

Mr. VORYS. Other agencies procure.

Mr. HOFFMAN. That is right.

Mr. VORYS. You have to coordinate.

Mr. HOFFMAN. That is right.

Mr. VORYS. That is, you cannot give orders.

Mr. HOFFMAN. Oh, yes; you do.

Mr. VORYS. But in this coordination business, you have to get some other department, such as General Services or Treasury, to do the procurement. Is that not right?

Mr. HOFFMAN. We were not a procurement agency. I think the best way to say it or to describe our function is in a very real sense, or in a very big sense, we were investment bankers. In other words, we were acting as investment bankers for programs for these foreign countries, and we were following their procurement to make sure they complied both with the law and with common sense.

In other words, whatever they bought in the United States had to be bought at the lowest competitive prices.

Mr. VORYS. But you had your own budget?

Mr. HOFFMAN. That is right.

Mr. VORYS. You did not have to go to anybody else for the money. When you signed something—

Mr. HOFFMAN. When we O. K.'d a program for a foreign country that country could then step in and proceed with its buying in a normal way and, as far as possible, under the law, through private trade channels.

Mr. VORYS. But on the operating part of it the control was that you had the power to say "yes" or "no" as to whether some foreign country got the money.

Mr. HOFFMAN. Surely. That is right.

Mr. VORYS. And in that sense you were operating.

Mr. HOFFMAN. We were operating. Surely. I think the best way to describe it is we were operating as bankers. We were following through.

As you know, under the law, we were directed to follow through, and we did make sure to follow through in order to make sure, No. 1, the buying was done intelligently in this country; and, secondly, we were to follow through to see that the end use for which that money was spent was in accordance with the programing. That was our job to follow through on.

Mr. VORYS. And to procure through private enterprise.

Mr. HOFFMAN. And let them buy normally. We just furnished the dollars. They did the buying themselves. You had to watch once in a while on kick-backs or little things like that.

Mr. VORYS. But you had a control there.

Mr. HOFFMAN. Surely.

Mr. VORYS. Through your post-audit on a country that was an operating control.

Mr. HOFFMAN. We post-audited everything. You bet.

Mr. VORYS. And you could put the squeeze on after the fact.

Mr. HOFFMAN. Surely. We could charge back anything to a country if there was evidence they had not bought intelligently, or had in any way violated any of the provisions of the law. We relied largely on the post-audit.

Mr. VORYS. I yield.

Chairman RICHARDS. Mrs. Bolton, I believe you have a question.

Mrs. BOLTON. Yes, sir. I have a question or two I would like to bring out at this point.

On this following-up business, Mr. Hoffman, you suggest we should follow up the dollar. To do that there would have to be certain political climates in order to have the dollar produced. Who has the responsibility for seeing to it that the political climate is right?

Mr. HOFFMAN. In a given country if, for example, without mentioning any country in particular, there was evidence that either tax laws, or trade barriers, or anything of that kind existed—because there again we had the backing of the law itself, the backing also of the original OEEC agreement among the countries, and the backing of our bilateral agreements, in which there was an agreement that the trade practices, and the laws, and their own laws would be such as to encourage the maximum effective use of those dollars—we could always step in and say that the situation in this country was very bad, with the tax laws as they were, let us say, and something has to be done or these dollars were going to be wasted. We would take these problems up with the embassy, and the embassy would deal with the matter. That was not our business. In other words, that entered another field.

You had to have the closest kind of cooperation between your Chief of Mission of ECA and the—

Mrs. BOLTON. Would you include in such cooperation the moral background of what is going on in a country?

Mr. HOFFMAN. Oh, yes; I would.

Mrs. BOLTON. And the integrity of a country insofar as its agreements are concerned with other countries and, let us say, with the United Nations?

Mr. HOFFMAN. Yes. I would feel that we had a right, or I always felt we had a perfect right either to extend aid or withdraw aid, depending on the conditions within that country as they affected the use of that aid from a recovery standpoint.

Mrs. BOLTON. As they affected the use of it there and also as to its influence on other countries, and with what it did with that money. Supposing there was a project considered which might make it far more difficult for a neighboring country to pursue its peaceful course.

Mr. HOFFMAN. Oh, of course. Sure.

Mrs. BOLTON. In that regard, would you then feel there was any possible justification in stipulating the attitudes that would be involved if a country were to have aid?

Mr. HOFFMAN. Yes; I do. We really felt in this piece of legislation you wrote for us, particularly in the preamble, where you laid down certain general conditions, that we had all the moral things we needed to step in and point out to the ambassadors that certain things were going on that we felt were definitely antagonistic to our attainment of the goals that had been set for us to attain. That was a broad generalization.

Of course, as you all know, some day—it will be a long time from now—but some day we can perhaps write the next chapter in the history of ECA as to what was done in these countries really to get action. You do not get action by giving out public statements.

Mrs. BOLTON. No; you do not.

Mr. HOFFMAN. You get action by dealing very quietly, and the less you talk publicly, the more results you are able to get.

Mrs. BOLTON. You spoke of the tax situations in certain countries. I brought that up because at one of our hearings I was asked to wait until we were in executive session before discussing the various countries. It is my understanding that you have been only partially successful in that, of course.

Mr. HOFFMAN. That is right.

Mrs. BOLTON. Because there can be no more than persuasive action on our part?

Mr. HOFFMAN. I might say we have been only partially successful in getting a good tax system in America.

Mrs. BOLTON. Yes; but the American taxpayer is being taxed pretty heavily because the other fellows are not doing their bit in some of the other areas.

Mr. HOFFMAN. That is right.

Mrs. BOLTON. Do you think there should be a qualification, possibly, on any of the aid because countries might not be following through with agreements they have made?

Mr. HOFFMAN. I think the more you try to write the directives in detail, the more you make difficult the task of the Administrator. I really think that you have in the original ECA Act, as passed by the Eightieth Congress, one of the most intelligent pieces of legislation ever written.

Mr. CHIPERFIELD. Tell that to Mr. Truman.

Mr. HOFFMAN. That is my own feeling.

I operated under that, and I am glad to testify, as I did on other occasions, that it was an entirely intelligent piece of legislation. We found in the broad clauses all that we had to have. I really think that you only have to recognize that you cannot get these things done overnight.

I do not mind saying this publicly because I think it is all to Mr. DeGasperi's credit—I remember very well the first conversation I had with Mr. DeGasperi about taxes in Italy. I was very unhappy about what I had found in Italy in regard to taxes. He made this statement to me, and it made quite an impression on me. He said, "You know, if our tax laws were applied at the present moment we would take 100 percent of income." He said, "That has been true for a good many hundreds of years now." He said, "We know in this new government we are never going to have a solid democracy in Italy until we have tax morality. But do not forget that for 500 years a man in Italy has had to evade the tax law, and it is going to take some time to bring about an appreciation of the fact that we must have tax morality."

He said also, "Now, I want you to judge us by what we do each year. We know the goal, and we know what we are driving for, and we are going to get there as fast as we can."

Mrs. BOLTON. Mr. Richards is getting a little disturbed about the time, and I do not blame him for it. I just want to ask you again to state whose job it is to handle the political conditions under which aid will be given. You said it was the Ambassador's job?

Mr. HOFFMAN. I think on this whole political arena, if I can make that distinction, that obviously it is the State Department that should control.

Mrs. BOLTON. I have asked this merely to emphasize this point for the record.

Mr. HOFFMAN. So that, in other words, when it comes to any problem that develops in the administration of economic aid of a political nature, that problem should be taken to the Ambassador and it should be said, "Here is the problem and here is where we stand. We have got to have your consideration of this because we do not believe these dollars can be effectively spent unless this condition is corrected."

Mrs. BOLTON. Thank you very much.

Chairman RICHARDS. Suppose you go to the Ambassador to talk this over and he says that for political reasons you should not give this economic aid. Then you say, "Political reasons be hanged. This is a good business proposition and we are going to do that." What is the Ambassador going to say about it?

Mr. HOFFMAN. The Administrator would not say that.

Chairman RICHARDS. We hope he would not.

Mr. HOFFMAN. First of all, if there is any difference of opinion between the Ambassador and the ECA mission chief, that difference is, under the terms of the legislation, referred back to the United States for consideration by the Secretary of State and by the ECA Administrator.

As a matter of fact, there were only two or three cases where we ever had to resolve that.

Chairman RICHARDS. Are there any other questions? Mr. Hoffman has to get away from here. You should be away about a quarter to 1. Is that right?

Mr. HOFFMAN. About 20 minutes to 1, Mr. Chairman.

Chairman RICHARDS. We have 20 minutes yet, then.

Mr. Judd.

Mr. JUDD. I would like to say in support of what has just been said that on our recent trip abroad there was only one Ambassador who even hinted there had been any friction between them, where there were two voices speaking for the United States. As I recall it, one said there had been some interference by the ECA, or at least some confusion as to the Ambassador's being the spokesman for the United States of America.

Mr. Chairman, out of this discussion here this morning it is possible to draw a conclusion that I had not thought of before: That, maybe, in order to get a good nonpartisan policy, we ought always to have a Congress of the opposite political party from that of the President. If the President controls the majority in the Congress, he can push through whatever he sends to it, because his party has the votes.

ECA was a case where the program had to be made good enough to win the support of an opposition Congress, and in order to be good enough to convince the opposition Congress—which is also made up of patriots who want to do what they think is good for the country—it had to be a lot better than either the Democrats or the Republicans alone could have made it. Therefore, we got a nonpartisan policy because the Congress was under the control of the opposition party.

I had not thought of that before, but maybe there is something to it. Maybe both sides could do the same in the domestic field also and get together better if that were the situation.

Chairman RICHARDS. Is the gentleman advocating the general principle that the Congress be of a different political faith from the President, generally speaking?

Mr. JUDD. No. I am merely noting that the best things done since the war in the field of foreign policy were the ones that came out of a Democratic administration and a Republican Congress.

Mr. FULTON. The Eightieth Congress.

Mr. JUDD. I am just making an observation that may be of some value. Perhaps I can use it in a political campaign sometime, although I did not have that in mind.

Mr. HAYS. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. HAYS. In the use of the word "nonpartisan" I hope my dear friend and fellow advocate of bipartisanship is not going to abandon our word "bipartisan," which is preferable, on the legislative side, to "nonpartisan." You are not abandoning bipartisanship, are you?

Mr. JUDD. No, indeed. The right word is "bipartisan" which means that both parties are necessary and must make their respective contributions by working on a problem until they achieve something that both are convinced is right and both will support.

Mr. FULTON. Your statements about a Republican President, I take it, were not partisan?

Mr. JUDD. I did not say anything about a Republican President. Mr. Hoffman, when you were here last year the main concern you had was the Payments Union plan.

Mr. HOFFMAN. That is right, sir.

Mr. JUDD. What is your estimate of its success?

Mr. HOFFMAN. I should be able to answer that question much more explicitly than I can answer it. I think, of course, as it started to operate you had the new problems thrown at it coming about with the necessity for rearmament. But my impression is it has worked very well and has greatly facilitated the movement of goods through Europe. They had a problem with Germany which they quickly corrected by insisting the German Government balance imports. As far as I know, it has worked very well.

Mr. JUDD. The biggest problem in Europe now, it seemed to us, was how to get full mobilization of the production capacities of all the countries for the whole program. May I give an illustration that poses the problem for the committee.

Here is a country for which we are building mine sweepers. Right next to it is a country for which we are making and sending over small arms and ammunition. The country which is getting the mine sweepers from us can make the small arms and ammunition its neighbor needs. The country getting the arms and ammunition can make the mine sweepers. Yet they are not able to get together in a pooling of effort because there is not an exchange mechanism to take care of the finances of it. The country that needs the arms and ammunition does not want to put an order with its neighbor because then it would have to pay for the goods with its own money, whereas if they get it from the United States we pay for it with our money.

That is a problem to which I do not see the answer. I wish you could help us on that—and we have to get an answer because otherwise we will have to continue holding them up.

Mr. HOFFMAN. I do not think there is any easy answer. I think you have to take a specific situation and see what can be done to bring about a balanced trade between the countries that would give you what you want. You will not get it by just a Payments Union, because that is just temporary in effect. That merely operates well when you have approximate balance of trade among the countries. It will not operate for long if there is a continuing unbalance.

The only way to correct a continuing unbalance is to get at the source and try to get trade in some reasonable balance on a multilateral basis and not a bilateral basis.

As I say, that is actually a job that Mr. Herod is supposed to be giving thought to now. I know Mr. Spofford is, because I raised the question with both of them.

Mr. JUDD. If you get any ideas on it, I wish you would share them with us, because they see the problem but not the solution. They said they have been working on it for 5 months, but they have not got an answer to it yet, and they have to get an answer to it.

There is only one thing you have said this morning with which I would disagree. You said a dollar abroad for whatever purpose has the impact of a dollar; it is a dollar of aid. I do not believe that is always quite true. When we put in a dollar's worth of military end items, say, jet airplanes, that require them to spend money to build up so-called infrastructure, barracks, airfields, and so forth. Then our military aid increases the drain upon their economic set-up instead of relieving that drain a little.

Mr. HOFFMAN. I think you are quite right, and I am glad you made that clear, because what I really mean to say is this: When a dollar goes into a country it has economic impact, and unless you have some single agency measuring or attempting to appraise all the impacts of those dollars, you cannot develop a program, or the most sensible program for that country.

I am glad you cleared that up, because it was very loosely stated.

Mr. JUDD. I appreciate the answer.

Chairman RICHARDS. I believe Mr. Chipperfield wants to ask a question.

Mr. CHIPPERFIELD. Would you recommend a grant to aid the Schuman plan?

Mr. HOFFMAN. I do not know.

Mr. CHIPPERFIELD. Would you recommend a loan, or do you not know?

Mr. HOFFMAN. I just do not know. I have not followed that close enough to have any judgment.

Mr. CHIPPERFIELD. Thank you.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. When we build up these countries, the question then comes as to what will be the system under which they operate in international trade. That, then, brings the question up, should we not have some system of general principles under the United Nations that all countries operate under to stop cartels internationally, prevent monopoly, trade restrictions, and import quotas, and all of the old jungle international warfare economically that we have had previously?

Would you then recommend that the United States again try to make some progress toward some sort of an international organization where the countries sit around a table and try to develop good practices of private trade, and to cut down these restrictive practices?

Mr. HOFFMAN. Of course, my position was that the International Trade Organization that was proposed, even though there were many things in the charter I did not like, was at least an international organization, and I would rather sit down and battle these things out around a table than not battle them at all.

I think the day will certainly come when we ought to make another effort to get an International Trade Organization that would be

considering. In the meantime I think there are things that can be done.

Mr. FULTON. What would those things be, specifically?

Mr. HOFFMAN. Not necessarily under governmental auspices at all. For example, there has not been any codification of international commercial law. That is a project that Mr. Ward of the National City Bank is very eager to get on with. He thinks it can be done entirely through private sources, and will be quite a costly job. It is worth considering.

I think also there is hope that more can be done with international private organizations than has been done up to the present time. It is a field that is certainly worth exploring.

Those are areas outside of government.

Much to my surprise there are some 1,900 international organizations in the field. Among those there are quite a number that are potent and important, and perhaps could become much more effective if there were a coordination among the more important ones.

Mr. FULTON. How would you suggest getting that coordination? Could Government help encourage such a movement, or could we help maybe on the educational line by getting people thinking along the lines of the best methods of dealing in international trade?

Mr. HOFFMAN. This happens to be another subject in which we are interested. I do not know that we can do anything about it in the Ford Foundation, but a man named Ordning has been very active in it, and a man named Von Zealand has been very active in developing a clearinghouse for these international organizations.

Now, what can be done, I do not know. There has been some exploration in the field, but in Europe particularly everybody has been so busy trying to get back on his feet that they have not had time to get back to these particular activities, but they are turning to it; and I think in this field of private international organizations there lies a considerable potential that has not yet been realized.

Mr. FULTON. I do not intend for you to bring it up here at this time. If you could, let us hear how we could integrate such efforts of the 1,900 organizations into some sort of program or at least a liaison. If you could do that, we would like to have it later. Thank you for your fine cooperation.

Mr. HOFFMAN. It might be possible at a later date to work out a liaison between Government and these private organizations. I think, of course, liaison has to be done strictly in their private field.

Chairman RICHARDS. Thank you, Mr. Hoffman, for your testimony. I am sure I express the opinion of the whole committee when I say we have profited very much by your coming here.

The committee stands adjourned until 2:30 this afternoon, when we will hear Mr. Rockefeller.

(Whereupon, at 12:40 p. m., the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

(The committee reconvened at 2:42 p. m., the Hon. James P. Richards (chairman) presiding.)

Chairman RICHARDS. Ladies and gentlemen, we will continue hear on the so-called Mutual Security Program bill.

We are privileged to have with us this afternoon the distinguished American, Mr. Nelson Rockefeller. Mr. Rockefeller, do you have a prepared statement?

Mr. ROCKEFELLER. No; I have not, Mr. Chairman. I have some notes.

Chairman RICHARDS. Will you proceed in your own way.

STATEMENT OF HON. NELSON ROCKEFELLER

Mr. ROCKEFELLER. Mr. Chairman and members of the Foreign Affairs Committee, I appreciate very much the honor of coming before you, and also the opportunity because this bill which is up for discussion and consideration contains important elements relating to international economic affairs, particularly relations with the so-called underdeveloped areas. This is the field I had the opportunity of working in for a good many years, particularly during the war.

Chairman RICHARDS. May I say there that the Rockefeller Foundation itself is engaged in that field now, and you have experiments at a good many places. Where are those places?

Mr. ROCKEFELLER. I would like to say I am not a trustee of the Rockefeller Foundation, nor have I any connection with the foundation. So, I am not intimately familiar with their program.

But they have been working abroad in the field of public health for the last 40 years, and now in the field of agriculture. They developed experience that was very useful to us in the Coordinator's office during the war.

Chairman RICHARDS. I thought you were a member of that Board?

Mr. ROCKEFELLER. No; I am not, sir. I have a brother who is.

Mr. HERTER. Would not Mr. Rockefeller tell us a little about himself? He as a private individual, with his brothers, has carried on very important experiments.

Chairman RICHARDS. Will you give us that background in that field?

Mr. ROCKEFELLER. Before the war I was associated with private companies that operated abroad and had worked in the Chase National Bank in some of their foreign branches.

During the war I was Coordinator of Inter-American Affairs, which worked in Latin America in the field of economic and social cooperation and carried on the information program in that area for the United States Government. That was for 4 years.

The office was an independent agency, reporting to the President, but working closely with the State Department, which naturally has a direct bearing on the problems before the committee now.

Then I was a year in the State Department as Assistant Secretary for Latin-American Affairs, working with the operating agencies outside the State Department.

Thus I had the opportunity of seeing these relationships from the departmental point of view.

Since the war, as Congressman Herter says, my brothers, and I have been doing some experimental work in private development of the production, procuring, and distribution facilities of underdeveloped countries both on a business basis, and also working through two philanthropic organizations we set up in some of the basic service areas.

These provide agricultural and nutrition services in collaboration with two foreign Governments—Brazil and Venezuela. Last fall the President asked me if I would take the chairmanship of the Advisory Board on International Development, which was set up by the Congress in connection with the Act for International Development.

The President also asked if the Board would prepare a report on international development, which we did. There were 13 members of the Board and the report reflects the unanimous conclusion of all, after study with a very competent staff. It has been published under the title, "Partners in Progress." It was made public by the President, and later published by Simon and Schuster as a book.

That briefly, is the background, Mr. Chairman.

I would like to speak first, if I may, on certain specific phases of the Mutual Security Program bill, primarily economic cooperation in the underdeveloped areas, and the economic interdependence between Europe, the United States, and the underdeveloped areas.

Then I would like to speak to the question of money—how much, and the question of organization—how to get the maximum efficiency from the program which is before you.

I think perhaps one of the questions which must be in the minds of everybody here—and I know it is in the minds of a great many people in the country—is, Why should we be worried about the problems of international development at a time when we are so concerned with our own national security. When we have to spend so much money on our own security problems, how can we afford to be concerned about international development?

It seems to me that the answer to these questions is really the crux of the problem before us. In order to find the answer, I think one has to examine the question of what is the basis of our national security. Then find the relationship of our national security to international development.

To do that, I have broken down the question of our national security into its two component parts: First, economic and social security—the standard of living, the well-being of our own people—their opportunity for the future; and second, military security of our country—the defense of our freedom.

I should like to speak on the economic and social aspect first, stressing some facts which may throw some light on the problem before us.

As a nation we have 6 percent of the population of the world and 7 percent of the land area of the world. Just before the last war we produced about 33½ percent, a third of the world's manufactured goods, and we produced about 33½ percent of the raw materials of the world. The two had been in balance. I have an interesting statistical chart showing that growth of production, industrial goods, and raw materials from 1899 to 1940.

It shows a comparable increase in production of both raw materials and manufacturing capacity from 1899 to 1940. Then the next chart shows a very interesting fact which took place after the war, that is, that the growth of our manufacturing capacity moved ahead of our raw material production. So that today in 1951, we have 50 percent of the world's total manufacturing capacity, while our raw material production has barely kept pace, and is still about a third of the world's total production of raw materials.

Thus there is a gap between our manufacturing and our raw material production. Now we are dependent on foreign countries for those raw materials to supply more than one-third of the raw material requirements for our factories.

Mr. EATON. You consider that a permanent condition?

Mr. ROCKEFELLER. I consider it is going to get worse rather than better—that our dependency is going to become greater as time goes on. We will be lucky if we can hold the present rate of raw-material production in the United States.

At the same time the present plans of our Government call for an increase of more than 20 percent in our manufacturing capacity by 1953. Through this expansion we will be able to produce all of the consumer goods, soft and hard goods, which we are consuming at a peak rate, and in addition, produce the guns, tanks, and planes which we and our allies need.

That 20 percent planned increase amounts to more than Great Britain's total current productive capacity for military and civilian goods—a capacity built up over her history as a nation.

So, in 2 years we are increasing our production by an amount greater than England has been able to build up throughout the history of her development. That gives you a little feel of the weight of our economy in the world scene today.

Mr. VORYS. Will you say that over again?

Mr. ROCKEFELLER. This 20-percent increase in our manufacturing capacity, which is at the present time under way, will be completed by 1953, and that 20 percent is greater than Great Britain's entire production capacity for military and civilian goods developed throughout her history.

Mr. VORYS. Including her present production?

Mr. ROCKEFELLER. Yes. It was the subject of a very interesting speech made before the House of Commons by Mr. Bevan, the Minister of Labor, at the time he resigned.

He said that the United States was increasing its production by 20 percent and asked, Where are we going to get the raw materials? If the United States cannot produce them herself, he asked, is she going in the world market to buy them? He pointed out that we have already bid up the price of raw materials, making it hard for Great Britain to compete on price. He asked whether we, the United States, were going to take Great Britain's sources of raw materials and, if so, where would Great Britain be?

Mr. JUDD. Has not General Marshall said that the total defense effort for our domestic military program and our foreign-aid program will amount to about 20 percent of our total production?

Mr. ROCKEFELLER. I would think that was fair.

Mr. JUDD. So we are increasing our production by roughly the amount that we are putting into the expanded defense effort?

Mr. ROCKEFELLER. Yes. It represents about \$60,000,000,000 a year of production.

I would like to show you the next chart, which shows the total world production of raw materials and manufactured goods.

You will see that from that same period back in the late 1800's through to the war period, world manufacturing capacity and world raw materials stayed in step.

The next chart will show you that after the war the same split that we have seen in the United States is taking place on a world basis. Manufacturing capacity, including our own, is moving ahead of world raw material production.

The gap now is made up by stockpile use of raw materials and scrap.

That is a temporary thing which we cannot count on permanently. Therefore, we are faced with a very serious problem of getting enough raw materials to supply our expanding production in this country—production which is the basis of our economic strength. The question is from where do we get the raw materials we import. The answer is that 73 percent of our needs for strategic and critical materials come from the underdeveloped areas. Thus we find that our domestic economic strength today depends to an important degree on the underdeveloped areas.

There are a lot of people in this country who do not realize this. Take manganese, for instance, for which we are largely dependent on the underdeveloped areas. There are 13 pounds of manganese in every ton of steel. If we use all we can get in scrap in this country, we could produce half a pound of manganese per ton of steel. Thus we see that the basis of the great strength of our industrial economy, which is steel, is dependent on foreign sources.

There is another important point also in our relations with the underdeveloped areas.

If at some time in the next 5 or 10 years we have a peacetime economy, and our military production goes down, in my mind there is a very real question of what we will do with this additional 20 percent plant capacity.

We cannot just close the doors of those factories and let the labor go unemployed. We have to preserve that production in order to preserve the standard of living of this country, and preserve the security of our people.

We may find ourselves sometimes in the not too distant future—I hope we will—with \$60,000,000,000 of productive capacity built for armament which is no longer needed. Then we may be looking for markets abroad because I do not think our economy can absorb that \$60,000,000,000 of civilian goods overnight.

Europe is not going to take \$60,000,000,000 of manufactured goods from the United States. Europe is also increasing her productive capacity. Therefore, the one area of the free world we can look to is the underdeveloped areas of the world for markets.

If they are increasing their production of raw materials their income will go up, their buying capacity will go up, and our trade with them will go up.

I think we have to look to those areas for our future markets on an even greater basis than in the past. I can give you a very concrete bit of evidence of the possibilities. I remember in 1939 our trade with Latin America was running at the rate of somewhat over \$500,000,000 a year. Now it is just under \$3,000,000,000 a year. In a short period of 10 or 11 years the 150,000,000 people of the Western Hemisphere have moved forward with a dynamic thrust that gives an evidence of the possibilities in other parts of the underdeveloped areas of the world.

Our dependence on them is very real. But this dependence for raw materials and markets on other countries and other people is not something that we can take for granted. We cannot take for granted that we will be able to obtain raw materials we need from other countries, nor that they will buy our manufactured goods. It will depend on mutual cooperation.

Today, cooperation with other peoples in other countries depends on the will of the governments and on the will of the people. I think Iran is a good illustration of the serious condition that one of the industrial powers can find themselves in, in this case Great Britain, when overnight there is a threat to her major source of oil being cut off.

The significance of our dependency is highlighted by the situation there.

So much for our economic dependency as a Nation on the underdeveloped areas of the world. Let us take a look for a minute at the military aspect of our national security.

I remember in 1944 General Embick, whom probably many of you knew, who was Chief of War Plans and Chairman of the Inter-American Defense Board, made a talk to the members of the Board.

He predicted that after the war there would only be two areas of the world that could make war, one the Soviet Union and the other the Western Hemisphere.

He said that in the future, war could only be waged with raw materials, industrial capacity, manpower and land mass, and those two areas were the only ones that would have those things. He said that the balance of power between these two areas would be China. China is at the present time lost to the free world. Therefore, we find ourselves not only dependent on the raw materials and manpower and land mass of the Western Hemisphere, but without China the other Asian countries have become doubly important from a strategic point of view.

So we find ourselves dependent on these areas for our military production and military strength and security. We find ourselves dependent on these areas for material goods, but also for political support. With the Security Council not functioning effectively as a security agent for the world, because of the use of the veto, the General Assembly has become the only body which can take effective action, and the majority of the votes in the General Assembly is in the hands of the underdeveloped areas.

Therefore, we find from a military, economic, and political point of view that these areas are increasingly important to us as a nation, in terms of our own security, or our capacity to preserve our security.

We face the blunt fact that the United States today no longer finds the base of its own security within its own borders. That is a pretty startling fact in view of our history of complete, as we thought, independence.

With this dependence on other peoples and other governments for the preservation of our national security, the question arises, How can we get their cooperation? What is the basis for getting their cooperation to preserve our own security?

I think the answer is really quite a simple one. This cooperation, must reflect their own military security, from the point of view of freedom, and also their economic security from the point of view of human well-being, as much as it affects yours and mine.

If they feel there is genuine mutuality of interest in cooperation, and they are able to find in it the things which they need for their security they will be anxious to help us in the things we need for ours.

Briefly, I would like to examine some of the basic problems which these areas face in order to determine the nature and form of our cooperation needed to help them meet their security.

Let us look at Europe's problems briefly. I hesitate to speak on that subject following Mr. Paul Hoffman who was here this morning. But, as I see the picture, Europe is faced with the threat of lowered standards of living if she curtails civilian productive capacity to produce armaments. That is a situation that could have serious repercussions as you know better than I.

If they reduce their exports to provide manufacturing capacity for armaments, they cut off the essential supplies to the underdeveloped areas. About 44 percent of the supplies of the underdeveloped areas are for machinery and equipment, spare parts, all of the things which the industrial world makes and the underdeveloped world needs. They are the items which make for the economic strength and the social stability of those countries and they have not the capacity to produce them themselves.

So there would be a very serious problem if Europe cuts off her exports of those items. We cannot provide these supplies because our economy is already strained. Thus, there is a real danger that there could be economic and social chaos in many of the countries of the underdeveloped world if they lost their European sources of essential supplies.

Looking at it from another point of view, if Europe cut off her exports where would she get her foreign exchange? Foreign exchange which she needs to pay for the raw materials and foodstuffs she must import to exist. Europe finds herself right up against it, and her only answer is an expanding world economy with more raw materials coming in and more exports going out, while at the same time she expands her plant capacity and production of military goods.

Let us now look at the underdeveloped areas. You all know the general conditions there. There are 1,057,000,000 people in the underdeveloped areas of the free world, in Africa, the Near East, Asia, southeast Asia, and the Latin-American countries.

Their standard of living is reflected in their total national income, which is \$80,000,000,000 for the 1,057,000,000 people, or about \$80 per person per year. That ranges from around \$30 in southeast Asia up to \$150, Latin America as compared to Europe's \$450 and the United States \$1,475 per person.

You know the deplorable health conditions. You know the degree of illiteracy. It averages approximately 70 percent. People who are on the verge of starvation, who are riddled with sickness and handicapped by ignorance, are not people who can produce and are not people who can participate effectively in the development of democratic institutions within their own countries.

Thus the very things we look to them for, both from an economic point of view and a political point of view, are almost an impossibility under present conditions.

Therefore, any mutually advantageous cooperation with those people, will only reflect their security needs if it gives them some chance to better their own living conditions.

Not long ago I was at the home of Sir Benegal Rau, the Indian delegate to the United Nations. His sister-in-law who is very interested in rural problems showed some movies.

One scene showed two Indians sitting on the bare ground. One of them was pulling a rope, revolving a wheel which turned the lathe, and the other was working with a chisel on a copper bowl fastened to the lathe. They represented the rural copper industry.

Sir Benegal Rau's sister-in-law said at the end of the movie that India had lost her copper exports to the United States. I asked how that happened.

She said that the two men that I had seen in the movie used to earn 2 cents an hour, but now due to social improvements in the country they were getting between 40 and 60 cents per day, and their product had been priced out of the United States market. Gentlemen that story gives you a perfect illustration of the problem with which the worker without machinery is faced in trying to produce and sell when he's up against the skilled worker with machinery.

In another country we were making an economic survey of this particular problem. They were particularly concerned as to how to increase their dollar exchange in order to purchase more machinery and equipment needed in the development of their country. The question was what items they could export for the creation of more dollar exchange.

Rice and wheat seemed to be the two most promising. In that country it took 20 men to produce what one farmer in the United States could produce. But these 20 men earning 21 cents a day, as compared to, say, \$4.80 or higher for the American farmer, produced wheat that cost twice as much in the world market as the American farmer's wheat.

There was a real problem of how they could achieve an export position in wheat. The only solution they could see was to cut the wages from 21 cents to 10½ cents, which, of course, was out of the question.

I cite these two examples because I think we have reached the point where high-priced American labor no longer needs to fear the competition of cheap labor. Rather cheap labor has industrial labor to fear. The worker with \$10,000 or \$12,000 worth of machinery and power at his disposal can produce much more than labor with low wages and low standard of living.

As the disparity between the standard of living of our economy and those of other parts of the world increases, their chances of developing their own countries and increasing their production are becoming less and less.

Some people have advanced an interesting analysis, however, which I am not in a position to confirm. But it has been pointed out that Lenin's original theory was to win over labor in the industrial areas of the world in order to bring about world conquest. But in view of the fact that this tactic has not been as successful as it was hoped, the strategy now may be to cut off the source of raw materials for the industrial world from the underdeveloped areas. In this way it would be possible to cripple the economic strength of the industrial world and make it vulnerable to aggression from without or submersion from within.

However we reach this position: If this mutually beneficial cooperation is basic to our obtaining the things we need for our own security,

the question is now, How do we bring it about? What base can we work on?

We have to work together, permanently, as nations and peoples, not just in the emergency. I frankly have been somewhat concerned with the undue emphasis upon emergency in this present bill.

I think we have to be frank with the people of our own country, that our relations with these other countries is not just a matter of the emergency, that it is a permanent thing.

We are dependent on them; they are dependent on us; neither can solve his problems alone. We have to work out mechanisms and relationships which will permit us to work together over a continuing period, and give a sense of stability and confidence to all.

That is why our Board recommended the centralization of all economic activities in a new agency which would bring them together where economic policy could be formulated within the framework of the State Department's over-all policy, and where operations could be effectively and efficiently carried out.

We felt to put the operation temporarily in ECA indicated an emergency duration, that it would perhaps be misleading. The fact is that we can no longer set up emergency agencies and hope within 2 or 3 years the problem will be gone and we can return to our old days of withdrawing within ourselves.

That is why we suggest a permanent new agency. It is not just a problem of government alone. It is not just a problem of giving a few dollars for technical assistance. The flow of capital and management must be encouraged and stimulated. This is not a problem of government alone, but of all public and private groups and organizations.

Business and production in this country is largely private, whether represented by the single man on his farm or the big corporation. All those productive forces must be integrated into the world scene if we are to do a job on a long-term basis if production is to be increased.

No palliatives or program of long-term charity is going to solve the problem. We have given up trying to solve our problem on a charity basis or a dole at home. The thing is to help people to help themselves to become productive free citizens so that they can carry their own weight and be self-respecting citizens in a strong free world. We must strike at the roots of the problem.

I now come to the question of organization, the question of money and methods. In this bill I think the problem is well and clearly presented. I think the objectives are clear and sound as far as the emergency is concerned, but perhaps limited as to the long term. I believe too much attention is given to the short term and not enough to how this thing is going to move out on to a long-term basis.

As far as the organization problem is concerned, our Board came to the unanimous conclusion there must be a single independent agency which can deal with these economic problems, that it must report directly to the President and take its policy guidance from the Secretary of State, we found that today 23 United States agencies and 32 international agencies are working in this field. Certainly this is not conducive to clear policy formulation or effective coordination of action.

Under these circumstances the money that is spent cannot bring corresponding results.

As far as methods are concerned, I think the ECA, not only in Europe but also in the underdeveloped areas in which it is working, has done a magnificent job. However, I believe there has been too little emphasis on private enterprise and the part that private enterprise can play. Nor has there been sufficient stimulation to encourage a larger participation.

I think there is too much attention paid to so-called technical assistance and too little attention paid to the problem of financing. I think the flow of capital is of major importance, whether it is loan money or investment money.

I would like to discuss that later, if you would care to have me.

There is too much reliance on technical assistance as a short cut to success. This country did not grow on technical assistance alone; it grew on the flow of capital from European savings, and United States management which had the ability to use the capital and technicians.

To have one without the other is like trying to sit on a three-legged stool which has only one leg.

I think there is too much emphasis on aid and the giving of money without enough emphasis on the active cooperation in an integrated, effective, mutual effort by the individual nations, both through governmental and private channels, as well as through the United Nations.

Now as far as the amount of money for aid is concerned, I have no basis for judgment. However, there is no question about the importance of the armament program in this present world scene. There must be the strength to resist aggression, whether from within or without in these countries.

As far as the European economic program is concerned, there again I think its importance is well documented, and I am in complete accord with the objectives. Again, however, as far as the amount of money necessary for these programs goes, I have not the background for a judgment.

When it comes to the underdeveloped areas, I can say without hesitation that I think the figure of 512 million dollars which is recommended is sound providing it is well handled from an administrative point of view. The money is largely for expenditures of an emergency character and for technical assistance for economic development.

The Gordon Gray report laid the foundation for the present effective approach. I think that he in his report made a major contribution. It was extremely well presented.

Our Board, on which was represented labor and agriculture, business, voluntary agencies, and academic groups, studied the whole problem, and we came to unanimous conclusions on all major points. As far as the size of Government expenditures, we took the figures which the Gray report had given of 500 million and adopted that.

To be perfectly frank, the problems are so tremendous that it is very hard to say what should be spent.

It is a question of getting started on the basis of a joint effort and of creating a sense of direction, of common purpose with the peoples of other areas, a sense of common objectives which will give them hope and faith in the future. How the money is spent may be more important than the amount of money.

The most important thing, I think is to get an effective organization which can deal with these economic and social problems, see them in their over-all interrelations, see them in relation to the political,

military, and psychological factors, integrate them, and then gradually develop programs which will be effective.

They must have money for emergency purposes in many parts of the world. So far as the development programs are concerned, we have had experience in some parts of the world, like Latin America, where we know money has been spent effectively and sensibly. It has been proven.

I would say that the funds called for here for the underdeveloped areas are not out of line, that experience will tell us as we go along what we can do and do intelligently. In my opinion, these moneys should be appropriated, and a single independent organization be set up to use them effectively. This latter is of paramount importance, that can intelligently deal with them.

Perhaps, Mr. Chairman, you would like to have me stop at this point for questions, or I can go into more detail on the recommendation of the organization itself.

Chairman RICHARDS. I know that all the members of the committee are extremely interested in this point. If you could cut it as short as you can. I think we want to get your fundamental ideas on that matter.

Mr. ROCKEFELLER. I will then give you briefly the opinions of the members of the Advisory Board for International Development set forth in our report "Partners In Progress," with which I concur 100 percent.

The first was the essentiality of a single agency. There are new problems to deal with and, therefore, the orientation should not be simply what it has been in the past. There must be a looking forward to a permanent relationship with the other free countries on a sound basis. The administration should be outside the State Department but subject to State Department policy, given on behalf of the President. It should have responsibility for economic policy formulation in the field of international economic cooperation and development.

These are the factors which I think are important: First is the integration of the economic problems between the different areas of the world. We have dealt in the past too much with Europe as one separate area. Latin America as another one, Asia as another when, as a matter of fact, they are all interdependent.

Raw materials from China and Korea which Japan has lost, leave Japan today completely dependent on the Western Powers for raw materials. What Japan will do in the way of trade and economic development in her relation with southeast Asia is going to influence what we and European countries will have to do.

These economic factors are all interrelated, and they must be seen from an over-all point of view as far as geography is concerned.

Second, it is important that the problems of the individual regions be given consistent attention and that they not be neglected as has been too often the case in the past because of crisis in other areas. In order to equalize treatment we recommended that the work be carried out on a regional basis in which divisions will have direct responsibility for certain areas and stay with those areas despite the crises in other parts of the world.

I think that would give us greater continuity in our dealings with such areas as Latin America and Africa.

Next, it seemed to our Board very important there be real coordination between the economic and the political, military, and psychological phases of our foreign policy. We felt that the economic work could more effectively support those and that they in turn could support the economic. We can have far more effective foreign relations if they are coordinated and support each other. If this is to be achieved the foreign economic operations must be centralized and not spread around in 23 different departments and agencies as at present.

Another important factor we felt was the integration and coordination among the following fields of foreign economic activity because they are all interrelated: The production of raw materials and food, allocation of essential supplies and scarce materials, development of productive and manufacturing facilities, building of public works, long- and short-term financing, and basic services such as health and sanitation.

For instance, you could not get rubber out of the Amazon during the last war because of disease, sickness, and lack of food.

Until you could lick those you could not get the rubber. You find there is an interrelationship between all of these factors, particularly in the underdeveloped areas of the world. They cannot be separated from the industrial world because without the flow of machinery and equipment and without markets for their raw materials you cannot get the development. There needs to be a central agency to deal with all these complicated relationships and integrate them. An overseas economic agency that can give effective leadership.

Another point we felt of extreme importance was the participation of private enterprise. The proposed agency could give real leadership in encouraging and facilitating its participation. We recommend that a deputy or an assistant director of the independent agency be appointed to work with private enterprise.

United States trade with the underdeveloped areas has been running at the rate of about \$10 billion a year, and is pushing up to \$12 billion. That is two-way trade. In contrast let's look at the point 4 program. Last year \$35 million was appropriated for it. Thirty-five million, if intelligently spent, can be very useful. But when you put \$35 million against a background of 12 billion of trade, the preservation of that \$12 billion in trade is more important than the assistance, important as that is. Thus it is essential that the overseas economic agency encourage private trade and have authority to deal with the problems of export controls, essential requirements and procurement and development of strategic and critical materials.

Most important is the question of the flow of private capital. Private capital has been going out at the rate of about \$700 million a year to underdeveloped areas since the war. That is a very small percentage of our national income. If private capital were flowing from this country at the rate of only 1 percent of our national income, it would amount to around \$2.5 billion. That amount intelligently invested in productive facilities could revolutionize the economic base of those countries.

I have mentioned the great productivity of the American worker based on the \$12,000 worth of equipment and machinery that he has at his disposal in this country. Without machinery and equipment, mere technology alone means little to the worker in underdeveloped areas.

But the savings of the people in the underdeveloped areas average only \$5 a year. At \$5 a year per worker it would take them 2,000 years to save enough money to buy the \$10,000 to \$12,000 worth of machinery necessary to put them in the same position from the point of view of productivity as the American worker.

Thus it is clear to see that the encouragement of the flow of capital from the industrial areas to the underdeveloped areas is one of the major problems with which we are faced today, whether it is money on loan or direct investment combined with local capital.

This central agency must take active leadership in solving this problem.

We recommended a special assistant, deputy or director for cooperation with the international and regional economic bodies.

As it studies and sees these problems, the new agency should be in a position to recommend legislation and international agreements which will facilitate their solution.

We recommended specifically legislation to encourage the outflow of private capital, including tax incentives.

We also recommended the use of joint commissions with other countries to develop national and regional development programs. There was a joint commission during the war, with Mexico, on which I had the privilege of serving as the United States representative.

The results of its work are interesting. Under its direction the engineering, the financing and the management was worked out for 22 power, irrigation, and industrial projects in Mexico. Contracts were let for the purchase of necessary machinery and equipment in the United States. The minute the war was over those contracts went into effect.

Those industries are now a vigorous and effective part of Mexico's economy. Because of that joint planning instead of dissipating the foreign exchange which she had built up through the sale of raw materials, Mexico was able to build for the future, and not, as a friend of mine said about another country, "In the immediate postwar, spending all of their wartime dollars for yoyos and plastic suspenders."

Such joint commissions can be very effective. The recently set up United States-Brazilian Commission suffered a great loss the other day when its director, Frank Truslow, died aboard ship on his way to Rio. He was admired and respected in Brazil and had, at personal sacrifice, left his job as head of the Curb Exchange to go down to Brazil.

In such a cooperative approach we can work along with them and help them to work out their programs and the financing of their development to the mutual interest of all.

This can include the development of over-all and specific economic plans, the coordination of operations, and the economic support of the military. I mention the military here because many of these countries are being given military equipment but the impact of the added financial burden on their national resources is not always figured out in advance.

Without some pretty careful planning they may run into serious economic and social problems as a result.

As I said before, I feel very sincerely that not only for the underdeveloped areas but also for Europe and Japan such cooperation, leading to an expanding world economy, in which all of us benefit, can do more than any of us realize.

It can revive the sense of hope and faith where it has lagged, and can create it where it never existed. I think for our own people it will give a sense of purpose the lack of which I think is felt particularly by the young people of this country.

I do not think we can overlook the importance of the impact of such a program on the peoples behind the iron curtain. If they see the free people really moving forward together toward a common goal they will tear the iron curtain to pieces as they come out from behind it to join the free world.

On the other hand if we do not take the leadership in providing a basis for free peoples to work together in this common interest, there are others in the world who are ready to do so.

In closing may I say, Mr. Chairman, I think that the organization for international development when created, has to give primary consideration to this question of the out-flow of capital.

If we do not see that there is an out-flow of capital for productive use, the problems which will result from the lack of necessary production will have to be dealt with later on an emergency basis through a huge give-away program. This will cost us a great deal more in taxpayers' money than if we had helped the people get on their own feet so that they could deal with their own economic and social problems.

The Advisory Board made a series of recommendations to stimulate the out-flow of capital including tax incentives, the underwriting by the Export-Import Bank of the availability of exchange on foreign bonds sold in this country, and an International Finance Corporation, all of which I will touch on later, if called upon.

I do appreciate the opportunity to present my views.

Chairman RICHARDS. Thank you, Mr. Rockefeller. You have really given us something to think about here this afternoon.

I am going to start at the lower end of the table. Mrs. Kelly.

Mr. HERTER. In about 7 minutes they are going to vote.

Chairman RICHARDS. We will take a 15-minute recess.

(Whereupon, a 15-minute recess was taken.)

Chairman RICHARDS. The committee will come to order, please.

We will proceed with questioning of Mr. Rockefeller under the 5-minute rule. I am going to start down at the other end of the table.

Mr. Hays, have you any questions you would like to ask?

Mr. HAYS. I do, Mr. Chairman.

Mr. Rockefeller, I would like to say first that I do not know when I have been as greatly impressed by a presentation. We are all deeply grateful to you, sir, for a very excellent story of what has taken place.

Now, I believe that you rest your case primarily upon the need for stabilizing world conditions. Is that a fair generalization? That is, rather than any primary economic returns for us. If we were to put them in order, you would say primarily the stabilizing of world conditions and, secondarily, serving our national economic interests.

In other words, the two converge in support of America's interests. It is not a matter of other nations against our own.

Mr. ROCKEFELLER. That is right.

Mr. HAYS. As a matter of fact, then, the need for such a program would still exist if we were to find ways of producing raw materials from low-grade supplies which we have. I am thinking of such items as manganese and bauxite, which at one time were probably in abun-

dant supply here and were mined economically here, and are now in short supply and mined expensively. In other words, the supply or the source of some items has moved to foreign countries.

If we were to develop cheaper ways of restoring or supplying those commodities at home, there would still be the need for this program? I am not discounting the tremendous force of your argument on raw materials, but I was just trying to think in terms of the priority of these arguments.

Now, you referred to the experience in Mexico, and there I believe you said the health program was given considerable emphasis, or did you?

Mr. ROCKEFELLER. I did not mention that in Mexico. I mentioned the Amazon Valley, sir.

Mr. HAYS. Yes. It was in South America. Is Mr. Hudgens with a private organization?

Mr. ROCKEFELLER. Yes. He is director of one of the nonprofit or philanthropic organizations we set up.

Chairman RICHARDS. And he is a good man.

Mr. ROCKEFELLER. Hear, hear.

Chairman RICHARDS. I know that.

Mr. HAYS. He is from South Carolina. The record should show that.

Chairman RICHARDS. He was my old captain in the First World War, and I have known him ever since. He is a wonderful man and has great ability. I can vouch for that. Although, he has had a few knocks around this Congress himself when he was down here.

Mr. HAYS. As a matter of fact, the experience Mr. Hudgens had with the Farm Security Administration—which was an American form of Point 4—

Mr. ROCKEFELLER. Exactly.

Mr. HAYS. That is, for our own underdeveloped areas—gave him fine equipment for this service.

Mr. ROCKEFELLER. Exactly.

Mr. HAYS. That is one of the reasons why I mentioned it, Mr. Chairman.

Mr. ROCKEFELLER. I appreciate it.

Mr. HAYS. When I was in Mexico a year and a half ago I went out to meet Mr. Harrar at the Rockefeller Foundation Headquarters. He told me of that splendid nongovernmental program. That sort of thing, on not too grand a scale, but on a large scale, is what we are projecting in this program?

For example, I think he gave me these figures. For the first time in 35 years, as a result of this program, Mexico was able to meet domestic needs. The country imported no corn in 1949.

Mr. ROCKEFELLER. That is right.

Mr. HAYS. That has tremendous significance in terms of nutrition for the population and, in turn, tremendous productiveness for the people.

Now, concerning the point you made about the world needing some form of structural relationship, Mr. Rockefeller, I would like to take that up. It fits in with what Mr. Hoffman said this morning about our place of leadership in the world. The world is going to be organized, and if we fail in leadership qualities, as I understand it, your point is that others not so democratically minded and not so devoted

to the things in our civilization that we cherish, will organize neglected areas.

Mr. ROCKEFELLER. That is right.

Mr. HAYS. There will have to be a structural relationship. So that you feel we are serving in this program the twofold ends of great cultural and spiritual goals and an economic program that serves our own ends and our own economic system, and is justified by that.

We are greatly in your debt, sir, for developing those two points.

Mr. ROCKEFELLER. I appreciate that, sir.

Congressman HAYS, might I make one comment on that?

Mr. HAYS. Yes.

Mr. ROCKEFELLER. Where you mentioned at the beginning the stabilizing of world conditions I would like to add to that the creation of a dynamic forward motion. It seems to me that is a very important part of it. Our own economic life and our own political life have evolved in an expanding economy. We were very fortunate in being able to expand domestically. We reached new frontiers with increased markets and increased production. An expanding economy fosters free institutions, and a contracting economy is very hard on free institutions, as we can see today from the problems Great Britain is facing domestically.

So I think one of the important things is the development of an expanding world economy within which all nations can move forward. No longer can we expand within our own borders alone. We have to participate in an expanding world economy to get the benefits we enjoyed in the past from an expanding domestic economy.

Mr. HAYS. Thank you.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. Mr. Chairman, I do not know whether I have a question. I have an observation that might lead up to one, though.

Am I right in the thought that over the years American initiative has taken the leadership, maybe not on a world-wide organized basis, in the development of the other countries, which has been done largely through private initiative and private enterprise, and which resulted in our nationals having tremendous investments in almost every country, and which had a tremendous importance in furnishing technical assistance and encouragement to the development of that industry, and in providing wider opportunities not only for the countries themselves, but for the individuals?

Now, as a result of, or, rather, following the turbulent conditions arising out of World War II, that has become very much stabilized. The risks have become great. There has not been as much of that going on. The Government has stepped in and it has furnished in one form of assistance or another some \$30,000,000,000 for foreign aid or foreign assistance.

Without discussing the merits of that aid, it has to a very considerable extent gone for services and consumer goods. Possibly to a certain extent of necessity. But, after the expenditure of these really tremendous sums—because, after all, when you begin to get into the the business it is a lot of money and it does not make any difference what nation is furnishing it—but one thing that disturbs me somewhat after all this has been done is the thought as to whether we have set up as a result of our expenditures and our efforts not so much organizations in the different countries, but whether we have set in motion

economic forces that constitute a permanent effort which improves the standard of living of those various peoples; or, whether we spent this money to its best advantage except for the temporary assistance that is given?

I have been somewhat disappointed, and that gets back to the statement that you embodied in your general discussion, as to whether we, in connection with this Government effort, had brought in sufficient cooperation from private industry and used our efforts and our guidance and our expenditures to help and encourage setting up of industrial and manufacturing activity in this country which provides increased opportunity for the people and has a tendency to increase their standard of living. I do not know to what extent the question was raised in connection with Mr. Hoffman's testimony this morning by Mr. Hays about the fact that the standard of living of the individual has been very greatly improved.

I just wondered to what extent we had furthered the systems that tend to improve the standard of living of the individual and provide opportunities to him. That is more or less of a general observation, but it is one thing about all of this that gives me some cause for concern in my own mind with regard to justifying the expenditures.

Mr. ROCKEFELLER. I see the point you make there, and frankly I agree with it.

I might put it this way: On the private investment side historically American capital has gone abroad for two purposes: One, to get raw materials we needed; the other was to sell manufactured goods we had in surplus. Those are the two motivating forces, to oversimplify it a little.

As markets abroad were established, tariffs were raised, United States manufacturers started first assembling abroad, and finally manufacturing. Opportunities for capital were so great at home that United States capital only went abroad for these specific purposes.

However, in contrast, European capital went abroad to find an outlet because opportunities abroad more often than not offered greater returns. It went into a much broader range of investment that benefited the internal economies of other nations. Our capital has done a great deal to help develop the economies of other countries. However, that has been largely incidental to its primary purpose of getting raw materials or selling United States goods.

I think private capital in this country must be encouraged to go abroad to cooperate directly in the development of economies of other countries.

Now, as far as Government aid is concerned, I think the history of its origin and development explains part of your concern. It really was initiated during the war. We started out with emergency relief—UNRRA—right after the war. This was followed by a series of loans. However, as communism spread in Europe, it became clear that relief alone could not do the job. Thus the Marshall Plan was initiated and the ECA established. The basic objective here was rehabilitation to build back production and standards of living. Only in the last year or so has the concept of development as such entered the picture as far as the Government is concerned.

I would like to make one other point, and that is this: There are three major areas of international economic relations. I think to bring those out clearly helps one to understand the problem.

First is production and distribution of goods, whether by a small farmer or a big manufacturer. That is a private enterprise function in the free world. That is not an area in which government can be directly active.

Second is the area of basic services, such as public health, sanitation, agricultural extension education, and so forth. Those are largely Government services, and that area is largely a Government area, although private philanthropic organizations have pioneered international cooperation in this field.

Then there is a third area, which is public works—roads, highways, railroads, ports, power, irrigation. That is an area where private enterprise and Government have been both active.

If, when we are talking of international development, we keep a sharper focus on which of those areas we are talking about, then it becomes a lot easier to determine whose function it is.

Really, this whole field is not a field that Government alone or private enterprise alone can do. It really calls for cooperation between the two.

There is a place for both. Particularly there is need for the encouragement of private capital. There is also the need for the development of new financial vehicles.

Chairman RICHARDS. The gentleman's time has expired.

Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman. I do want to express my appreciation to Mr. Rockefeller for being here today, and I do want to say I read his report when it first came out with a great deal of interest.

I wonder, Mr. Rockefeller, to what degree, if any, the United States could restore some of our own raw material deposits in this country, for instance, copper? I know I have been present at hearings where there was a great deal of discussion on the part of some of our mining interests that some of our copper mines were filled with water.

Do you believe an expenditure at that end should be appropriated by Congress, or do you think that those mines have given all they could?

Mr. ROCKEFELLER. Well, I am not really in a position to speak authoritatively on that question, but if I understand the subject that you are raising, we have certain marginal properties in this country which are higher cost operations than those abroad.

The question is, from a national economic and security point of view, is it worth giving a subsidy or paying a higher price for domestic production than for production from foreign operations? That is a question on which I frankly am not in a position to speak. I think it is a question of national policy.

Mrs. KELLY. Due to the fact that a large number of our imports consist of strategic materials, do you believe that sufficient funds have been earmarked in this bill to help the productivity of our undeveloped areas?

Mr. ROCKEFELLER. Not as far as raw materials are concerned. I do not think there is very much in this bill which really directly relates to the increasing of production of raw materials. There are other agencies dealing with that, but personally I feel, and I know the International Development Advisory Board felt, that they should be very intimately interrelated. If you are to increase the production of raw

materials in a country, you must have transportation and housing, public health and sanitation work, and the other services that are needed in connection with economic development. One of the very fortunate things in connection with this whole question of economic development of the underdeveloped areas is that we do need their raw materials. Then there is a mutuality of interest that gives the base for an intelligent and effective program of cooperation.

Mrs. KELLY. I stayed away from the word "assistance" because I knew you did not like that.

Mr. ROCKEFELLER. Thank you very much.

Mrs. KELLY. Then on your organization, the Overseas Economic Administration, from this report, if I remember it correctly, that is more or less in the administration field entirely.

Mr. ROCKEFELLER. No. We recommended there be created a separate agency into which ECA, the TCA Point 4 functions presently located in the State Department, the Institute of Inter-American Affairs, and other overseas economic operations would be placed. We recommended that the Bureau of the Budget should study such operations as export control and foreign procurement, etc., and come up with a recommendation as to how they can be integrated with the other functions in an over-all Overseas Economic Agency. Thus our whole foreign economic policy and programs would be coordinated and operated under one direction.

Mrs. KELLY. I was very much interested in that because I had hoped we would have a director to coordinate all of our overseas agencies, including the military.

Would you include the military appropriations under that?

Mr. ROCKEFELLER. Frankly, that was a new thought to me. I cannot see how the military program can be intelligently handled by an economic agency. It seems to me the Army, Navy, and Air Force are not going to relinquish their powers in that area, nor should they. They are the ones who are qualified to judge what is needed and what can be done in the military field with other nations. If there is a question of whether certain material be produced abroad, and how would it affect the economy of another country, then I think the military should consult the economic agency, and that they should take over at that point and cooperate with the military.

As I see it, there are four basic factors in our foreign economic relations—political, military, economic, and psychological—there needs to be clear direction and policy formulation in each area, but close coordination between them. I would not favor putting them together, but would have them work closely together where there was a community of interest.

Mrs. KELLY. I agree with you as far as the military is concerned. However, I do think we need the common items to be incorporated under this single agency. I think we will get to the point where we would save a great deal. I do not like the purchasing angle of the military. I would like to have it incorporated under this in order to direct not the policy, but to oversee the expenditures. Let us put it that way.

Mr. ROCKEFELLER. Where production was being contracted for abroad I should think the economic agency could be of assistance. Where it is to be determined how much of a certain type of equipment can be used effectively in one country, and how the men can be trained

to use it, I do not see that an economic agency could contribute. If the economic were not separated in that agency from the military I should think it would be extremely difficult for either of them to develop effective programs.

Chairman RICHARDS. The gentlewoman's time has expired.

Mrs. KELLY. Thank you.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. In connection with a single agency which you have in mind, I recall in your report that you went pretty far from the point of view of suggesting further financing bodies to supplement the work of the Export-Import Bank and the World Bank. The first thing, it seems to me, is how you can coordinate the Export-Import Bank and the World Bank in this picture. That is not a very easy thing to do.

I take it your supplementary financing agency would have largely to do with equity financing. Is that not the idea, or is it partly equity financing and partly debt financing?

Mr. ROCKEFELLER. There was one additional one—the financing of public works essential to development which could not be financed on either a debt or an equity basis. It was for this reason that we suggested the possibility of an International Development Authority administered under contract by the International Bank, but with a separate board that had policy responsibility. The Authority would receive funds from all of the nations in the United Nations or the free world who were willing to participate, according to their capacity. Thus the Development Authority would have funds that it could make available on a grant basis to projects financed by the International Bank to supplement the loan where the loan was not enough to make possible the development of the public works.

Mr. HERTER. Has not the bank itself in its experience found that quite frequently it could make a good loan if there were alongside of it some sort of a grant that could be made for transportation facilities, or something of that kind?

Mr. ROCKEFELLER. That is right.

Mr. HERTER. Which would justify what they considered a worthy loan otherwise.

Mr. ROCKEFELLER. Exactly. I might say, if you permit me, that one of the reasons why we felt that this was important was: That public works are basic to development. Without roads, or power, or irrigation, and so forth, an area cannot develop effectively. The development might be important not only to that area, but to the free world as a whole because it involves the strength of that nation or strategic raw materials for export. However, we did not feel the United States should make large-scale unilateral grants to other countries for public works except during the emergency. We felt it could be justified neither to the Congress nor the people. We felt also it might bear the seeds of international political corruption. Embassies in Washington might be judged in their own countries by how much money they got out of the United States in the form of grants or gifts. It would put an entirely wrong emphasis on our political relations with other countries.

Therefore, we agreed that while the United States should not continue a large-scale program of direct grants for public works after the emergency, it must find some way to participate with other nations

on an international basis, promoting basic developmental projects. Therefore, we suggested the formation of an International Development Authority.

I would like to give just one illustration of how it might work. The tensions in the Near East between the Israeli and Arab groups are well known and can have very serious repercussions not only in that area, but throughout the world. One of the problems is the settlement both of people coming into Israel and the 750,000 displaced Arabs.

If for instance it were possible to develop a Jordan Valley Authority which cut across Arab territory and Israeli territory, and opened up lands for both groups for settlement, it might be the basis of resolving the serious international problem as well as one of the major economic and social problems of both groups. Neither of those groups can do it alone. They do not have the money, nor are they likely to get together. But if there were an International Development Authority working with the International Bank, the Bank might organize the Jordan Valley Authority and make a loan for half the amount and then secure from the International Development Authority a grant to make up the other half of the funds needed. Thus broad objectives would be realized which are in the interests of all, but which today cannot be accomplished because the mechanisms do not exist.

Mr. HERTER. Have you examined into the possibility of the creation of that authority under the existing charter of the World Bank?

Mr. ROCKEFELLER. Yes. We discussed it with the World Bank and while they agreed that it was within their powers to establish an International Finance Corporation, they felt that there would have to be a new international convention in order to create the authority.

Mr. HERTER. So it would have to be done internationally.

Mr. ROCKEFELLER. Yes.

Mr. HERTER. It cannot be done unilaterally by ourselves, merely by the passage of legislation.

Mr. ROCKEFELLER. No. In this connection it is interesting to note that the four members of the United Nations Commission which recently made a study recommended the formation of an International Development Authority and an International Finance Corporation. If you permit me, I might say a word about the Finance Corporation.

It was largely designed to help mobilize investment capital for productive use in the underdeveloped areas. There are no investment banks in those areas and the savings are small, and they have no channel through which to join together to finance productive enterprises. In addition, American capital has great difficulty in finding partners in those areas, and they cannot sell securities because there is no market. They need United States and European capital to join with local capital.

We recommended that the International Bank set up an International Finance Corporation as a subsidiary corporation and that it invite the member countries to subscribe to a preferred stock on the same percentage basis as their participation in the International Bank. The International Finance Corporation would then be in a position either to loan money against senior securities or participate

in nonvoting common stock in the local currency of any one of the underdeveloped areas. For example, if you wanted to set up a shoe factory and were willing to take your machinery with you but did not want to convert dollars into pesos or rupees; or whatever it was, because of the added exchange risk, you could get local capital for equipment and building expenses through the International Finance Corporation. The corporation in turn, when the business became successful, would resell the securities to small investors, and in that way act as an investment bank on an international basis.

We explored the possibility of having the Export-Import Bank perform this function. The Bank did not want to do it, and anyway it seemed better that this function should be performed by an international institution.

Mr. HERTER. Has not the World Bank done that on a limited scale in Turkey, for instance, in setting up a local bank?

Mr. ROCKEFELLER. Yes. Through a round-about method which is cumbersome for them. At present, they have to set up a small corporation and go around Robin Hood's barn legally rather than do it directly through an investment capital subsidiary.

If I may do so, there is one other point I want to bring out. Before the war there was considerable investment in foreign-dollar bonds sold in this country. A sound railroad or a sound utility, or a manufacturing company in India, or Brazil, or Africa, could sell dollar equipment bonds to buy machinery in the United States.

However, with increasing exchange restrictions this became more difficult because of the risk of not being able to get exchange to meet the interest and amortization payments. To meet this situation we recommended that the Export-Import Bank—and this is the only form of guaranty we called for—underwrite the convertibility for a fee. Thus if the Paulista Railroad of Brazil wanted to buy railroad equipment in the United States, which they did recently, they would be able to offer dollar bonds to United States investors with an underwriting by the Export-Import Bank covering the availability of dollar exchange with which to meet interest and amortization payments on due date. For the underwriting of this risk, naturally they would pay a fee. In this way sound foreign companies should again be able to sell dollar bonds in the United States market. This should open up an important source of investment money for foreign countries.

I have a chart here which shows past trends in this field. You will see that the black line on this chart indicates the dollar bond sales in the United States. This is our total United States investment abroad. These are local currency investments, both long and short-term. You will see Canada is practically the only country which sells dollar bonds in the United States. Few others do because of the fear of exchange risks. Canada has a total of \$1,525,000,000 dollar bonds outstanding in the United States. Europe and Latin America have very small amounts. Most of the United States investments in Latin America are direct investments.

These charts, representing facts pertinent to the subject are available, if the committee would like to have them in photostat form, as statistical material.

Mr. HERTER. You have not assembled these charts in any publication or anything like that, have you?

Mr. ROCKEFELLER. Some of them we used in the report, Partners in Progress. However, I am sure the Advisory Board would be very glad to have photostatic sets made for the members of the committee.

Here is a very important one. This shows the trend in different types of United States investment abroad by United States manufacturing concerns during the period 1919 to 1949. Investment abroad in this field increased slowly during the thirties, and then during the recent years it has gone up substantially. Petroleum since the war has gone up very sharply, while the total investment in public utilities has gone down. Mining and smelting have stayed about the same. These are indicative trends.

Now, here we have the figures on the amounts invested in the field of distribution. That affects the internal life of a country, and that is starting to go up.

Mr. VORYS. Is that chart in billions?

Mr. ROCKEFELLER. Yes; billions of dollars. Sears, Roebuck has set up 20 stores in Latin America which have had a significant effect on merchandising methods in Latin America. It has been a most important thing from the point of view of the domestic economic life in those countries. Sears is now working with the local manufacturers to help them in introducing new methods of production at lower costs, improve style and quality and increase volume. That kind of cooperation is very important.

Mr. HERTER. Mr. Chairman, I think it would be very important to get photostats of these for the committee.

Mr. ROCKEFELLER. I will see that that is done with great pleasure. This chart shows American investment abroad since the war. It has gone mostly to Latin America and the Middle East.

Here are the various fields into which it has gone. Petroleum has been the largest one—\$1,800,000,000. Manufacturing and distribution next. Mining and smelting are very slow, and yet the Government is supposedly making every effort to step it up. Public utilities lost ground to the tune of \$171,000,000 invested abroad. They have been liquidating their investments abroad. Statistically these charts are quite interesting and very revealing.

Mr. REECE. Has the movement toward nationalization affected the investment in utilities and mining?

Mr. ROCKEFELLER. I think the small return on utilities investments, due to the refusal to grant rate increase, and rising costs, has resulted in their just amortizing their investment and not reinvesting the funds. There has been some expropriation, but I think really it is a rate problem and low earnings more than anything else that has caused a decline in United States investments abroad in this field. Naturally rates are a very hot political subject abroad, as they are at home. However, the result is that there is a growing shortage of power in most of the underdeveloped areas.

Mr. BATTLE. Mr. Herter, I have just consulted with Boyd. He will get these charts photostated.

Mr. HERTER. That will be fine.

Mr. BATTLE. Your time is up, Mr. Herter. I believe Mr. Roosevelt is next.

Mr. ROOSEVELT. I have no questions, but simply want to apologize to Mr. Rockefeller for my own and that of the other members' rather scattered attempts to be here, because of the importance of the legislation down on the floor.

Mr. BATTLE. Including several votes.

Mr. ROOSEVELT. That is right.

Mr. BATTLE. Mr. Javits.

Mr. JAVITS. Mr. Rockefeller, I would like to join with Mr. Roosevelt in that. I hope you will understand that is why I will be leaving after these questions. However, I do have some questions.

Do you feel, in what you have outlined in this Partners in Progress, that you have tried, or at least made a beginning at outlining what should be the role of American leadership in the world?

We have all heard a great deal about the fact that we are said to be "shoring up" status quo regimes' bad land holding. We know, for example, a good deal about practices which are at the heart of so much that is retarding the underdeveloped areas. Do you feel that this outline showing what is needed if the world is going to continue the upward march industrially is an ample supply of raw materials, and that this involves a natural partnership between the developed areas and the underdeveloped areas, and that you are laying out a plan for such partnership which is truly the American system in world leadership?

Mr. ROCKEFELLER. Yes.

Mr. JAVITS. So when you speak of an independent agency which, as I recall it, you called the Overseas Economic Administration, you are speaking of an agency which is going to symbolize and make concrete that program? Am I correct in that?

Mr. ROCKEFELLER. You certainly are, and you have expressed it perfectly.

Mr. JAVITS. So it is of very great importance in the foreign policy of the United States, and this truly should be a new program, which is what everybody here has been saying.

Mr. ROCKEFELLER. I think it is essential we have it for our national interest.

Mr. JAVITS. Do you feel by doing that, by concentrating on the economic-development side in this way, in this partnership, by which we get raw materials and we give know-how and we invest capital for manufactured goods and for better agricultural practices, and for roads, and harbors, and health education, and so on—

Mr. ROCKEFELLER. Pardon me. You do not mean "give" but you mean "invest"; do you not?

Mr. JAVITS. Yes. We invest. Do you feel by this partnership we can cut through to the heart of the difficulties created by archaic economic and social institutions in these areas without force—or revolution—bringing about the needed changes?

Mr. ROCKEFELLER. Very well put. I think it is exactly what will happen. Through that dynamic evolution forward the social changes will move with the economic strength.

Mr. JAVITS. And the partnership is 50-50 on both sides. We get dollar for dollar everything we invest in the way of raw materials, which we urgently need?

Mr. ROCKEFELLER. Exactly. And they get vice versa, the same.

Mr. JAVITS. Is it a fact that for the most part these are raw materials could not be developed in the United States?

Mr. ROCKEFELLER. They do not exist in the quantities we must have.

Mr. JAVITS. As to the raw materials in this country, obviously we are running down on the petroleum, and we do not have bauxite, and various raw materials.

Mr. ROCKEFELLER. If we can maintain our present rate we are doing well.

Mr. JAVITS. If our economy is to move up productionwise in output—not in dollars, but in actual output—we have to have these raw materials.

Mr. ROCKEFELLER. Exactly.

Mr. JAVITS. And to Europe they are even more necessary than they are to us.

Mr. ROCKEFELLER. Exactly.

Mr. JAVITS. One final question. You spoke of this as a program for youth. Could you take the rest of my time and just tell us why? Because of all of the problems of our country domestically which to my mind are the most serious, the one which stands out is that of giving our young people a feeling that in this world you can still go out and make money and become independent and really get somewhere in the traditional way in which we have known it in the United States. It seems to them so often that they face frustration in our own country.

Would you be good enough to say something about that?

Mr. ROCKEFELLER. First I would like to say that you have expressed much better than I can, Congressman Javits, the essence of this concept, and I would like to associate myself with your very clear remarks.

Secondly, as far as youth is concerned, I have been traveling around the country for the last few months since the publication of the Board's report, making talks on this subject. Included in these talks have been various university groups and other groups of young people. I have found more interest among them, and perhaps more enthusiasm for the possibilities in this kind of cooperation on a world basis than in any other group in the country.

With the closing of our own frontiers there is hope that other frontiers still exist in the world. These young people are seeking new opportunity, the chance to move out, to go to other parts of the world.

Our country was settled by people with that dynamic urge to find new opportunities, and they found them for many years in the country. Now the opportunity seems to be in other parts of the world.

Secondly, I think the young people of this country naturally assume that we are an integral part of a world scene; and they want to be identified positively with that world scene. I think they want to feel that we are not just working for our own limited interests as a Nation, but that we are working for our interests plus the interests of the people of the world as a whole. I think psychologically that is a very important factor. I feel the same myself.

Mr. JAVITS. Thank you very much.

Mr. ROCKEFELLER. Thank you.

Mr. BATTLE (presiding). The gentleman's time has expired.

Mr. Ribicoff.

Mr. RIBICOFF. Mr. Rockefeller, I gather from what you have said you believe there is still ample room for United States capital and United States private industry to take part in the development of this program. Yet there have been quite a few of us in this committee who have been interested in that end and who find very little encouragement from the people who have been charged with the various

parts of this governmental program. They tell us that even with the various guaranties there is basically no interest on behalf of United States capital or industry to take the attendant risks of going abroad, with the lack of stability there, when the incentives are so much greater for the equivalent amount invested in time and money in the United States.

Under those circumstances, what do you think is the important factor needed to bring in private capital as part substitute for the taxpayers' dollars?

Mr. ROCKEFELLER. I am delighted you asked the question and put it as you did, because that is a pretty fair description of the point of view which exists in most of the agencies, and of the problem itself. Our advisory board studied this question with great care.

First, we came to the conclusion that guaranties were not the answer. Guaranties are not what make private enterprise function. It is a profit-and-loss system. It is a system of risks and gains, and guaranties are not an integral part of the motivating forces of the system. Therefore, we came to the conclusion that guaranties would not serve the purpose.

With the opportunities which exist, as you mentioned, for profitable investment at home, and with the high taxes necessary for our Government to meet the social and the security responsibilities which the people of this country want, there is no point in capital going abroad, where the risks are far greater than they are at home, and where the returns are very little greater, if on the basis of having overcome those risks they make an earning, when the earnings are then taxed at the same rate as domestic earnings.

Therefore, we felt that the only major stimulus which could be given to the outflow of capital would be the removal of domestic taxes on earnings from abroad and allowing those earnings to pay only the taxes of the countries in which the earnings are made.

Mr. RIBICOFF. But in the light of the world instability, and of course we deal with it all the time and we have to recognize it, do you think private capital, even on that basis, would go out? I think we agree that the question of unlimited profits from investments abroad is wrong. The Iranian oil situation proved that point.

Mr. ROCKEFELLER. Correct. That is right.

Mr. RIBICOFF. So, therefore, private capital X goes into country Y and sets up some sort of an arrangement, with the hope the arrangement would take in local capital too on a sort of partnership basis.

Mr. ROCKEFELLER. That is right.

Mr. RIBICOFF. And they would get a fair return, commensurate with the risks.

Do you believe, in view of the question of expropriation and the question of revolution and the question of changes that could take place, that they would risk their capital on the basis of not paying the double taxation? Do you think that?

Mr. ROCKEFELLER. It is not always a question of double taxation, because where a United States company has a majority ownership of a foreign company local taxes can be deducted from United States taxes. It is the difference in tax rates on corporate earnings, let us say, of 15 percent paid in most of the underdeveloped areas, and 47½ percent or 52 percent, or, let us say, around 50 percent tax on corporate earnings here. That is a tremendous difference.

Mr. RIBICOFF. I know about the tax, but let us say company A is going into an underdeveloped area and invests \$1,000,000. I mean, if it is a sound business with a sound end in view, it is obvious they are not going to start drawing profits the first year. It is going to take them some time before they can start earning.

Now, the average businessman might feel it would take him 5 years before he can start getting a return. Do you think he will make that investment of \$1,000,000 on the tax incentive alone, separate and apart from the assurance that his capital will not be in jeopardy during the time it will take him to start earning on his investment?

I think this is a great problem or hurdle we have to jump.

Mr. ROCKEFELLER. I know that some will not agree, but I do not think the expropriation or confiscation risk is as big a hurdle as a lot of people think it is to private capital going abroad. People talk about it a great deal, and there have been cases of it. But I believe a company that goes abroad and renders a useful economic function in another country runs very little risk of having its property taken away if the people and the Government of that country feel it is serving their interests.

Mr. RIBICOFF. Then it becomes very important as to the type of investment that is undertaken.

Mr. ROCKEFELLER. The type of investment and the manner in which the company conducts itself in the country abroad. I think increasingly capital today is recognizing its responsibility to the community—its social responsibilities abroad, just as it does at home, and I think foreign countries are responding to that recognition.

Mr. RIBICOFF. From your acquaintanceship and personal experience, do you think that there is American capital today ready to go abroad?

Mr. ROCKEFELLER. Yes; I do. Capital is now going at the rate of about \$700,000,000 a year.

Mr. RIBICOFF. Which, as you said, is basically little, considering the amount of our production.

Mr. ROCKEFELLER. I was talking to an executive of a corporation just the other day who was considering setting up a manufacturing establishment abroad. They figured their returns would be such that they could write off the investment or get their capital back through earnings in X years. But when they had to pay the domestic United States tax on top of that, the period of return was so prolonged that they could not afford to run all the contingent risks of exchange, and so forth. So, they did not make the investment.

I think there are many marginal operations where corporations would go abroad if it were not for the high rate of domestic taxes which is levied on foreign earnings. I think everybody would be surprised at how much private capital, in addition to corporate capital, would go abroad, if private capital were given relief from domestic taxes corresponding to the relief recommended for corporate earnings from abroad.

Mr. RIBICOFF. Just take another facet of your statement. Say the main problem is the question of production and distribution, and that has mostly been by private enterprise in this country. I think you said that would be the pattern that would continue. But all over the world you find a solidification in government control of business and enterprise in exports and imports. Certainly that is the case behind the iron curtain. We saw Hitler doing that with Germany.

Mr. ROCKEFELLER. Yes.

Mr. RIBICOFF. As some of these newly developed countries are coming up with a nationalistic spirit, it does not seem that private enterprise is playing too great a part in these young countries, which are so basically poor and probably are in a position now and in the foreseeable future of controlling their exports and imports on a governmental basis.

Do you think that the United States could assist in that type of a world market, where it might find itself one of the few countries on a private enterprise basis, dealing with all other countries on an export or import basis where the Government controls?

Mr. ROCKEFELLER. I think it is going to be extremely difficult and is going to force more and more controls domestically on our economic life.

Mr. RIBICOFF. In the United States.

Mr. ROCKEFELLER. Exactly. Because our economy is integrated and interdependent with the economies of these other countries. Therefore, I think we have to do everything possible to make available the tools which have made this country great, which are the tools of private enterprise. We must give those tools encouragement to go abroad and contribute to the development of other countries.

Mr. RIBICOFF. As an example for these countries to follow that system?

Mr. ROCKEFELLER. Exactly.

Mr. RIBICOFF. While they are in the embryo stage?

Mr. ROCKEFELLER. That is right. I think there is a greater tendency for them to accept and be willing to, shall we say, experiment with private enterprise now than there was before, because the peoples of the under-developed areas are demanding of their governments a higher standard of living, and those responsible in the governments are finding themselves unable to bring about those conditions. Therefore, they are exploring every avenue they can to increase production.

To increase the productivity of labor today means investment in machinery and equipment, and that means capital. They have not got it, and therefore they have to look abroad for it.

Mr. RIBICOFF. With the rapid drift toward nationalization, if the United States then wants to preserve a free enterprise system for a good segment of the world, it does not have too much time, does it?

Mr. ROCKEFELLER. That is right.

Mr. RIBICOFF. In other words, it has to work fast.

Mr. ROCKEFELLER. Yes. There is a nationalistic drift, but I do not think it necessarily means nationalization. Brazil, for instance, I think is going the other way. They find their Government deficit is largely made up of the deficit of the railroads and port operations, and other businesses that the Government found itself in. They would like to dispose of these businesses in order to cut down their Federal deficit, so that they will have more money for the functions which they feel the Government should be carrying out.

Mr. RIBICOFF. Not only South America, but southeast Asia and the people of India and the Middle and Near East, and those areas of the world.

Mr. ROCKEFELLER. I sincerely feel we should study and explore fully this possibility of a tax incentive before we give up hope. I believe that it can be effective. There is a precedent for it, and I do not see, nor did our board see, any other really hopeful avenue.

If I might, Mr. Chairman, I should like to tell you a story.

A representative of a foreign government press service came in to talk over the report. He was a young fellow, and he said, "I am a great student of Marx."

He said, "One thing about your report I cannot understand, because it does not fit in with Marx's theories. That is, we were taught when a capitalistic society reaches its maturity that its capital goes out to all parts of the world and dominates exports and enslaves labor of the underdeveloped areas. Yet, in your report you say that the major problem is how to get or how to stimulate the outflow of capital, which will not leave this country." He said, "There is something wrong, because that is not the way that is supposed to be."

I said that I thought there were three reasons for that: One, Marx made his studies and observations in the early stages of the industrial revolution before democratic capitalism had reached its maturity and came to recognize its social responsibility. Therefore, he was drawing his conclusions from an incompleting evolution of the capitalistic system.

Secondly, the tremendous capital investment in machinery and equipment per worker in this country, and the skill of the workers themselves that capital can produce more at lower cost and earn more with high-priced industrial labor at home than it can with cheap labor in the underdeveloped areas.

Thirdly, that as capital has to pay high United States tax, which our democracy levies in order to meet its high standard of social responsibility, whether the earnings are from investments at home or abroad, it would rather invest at home where the risks are less and the opportunities great.

He was very interested, and somewhat confused. I think these facts provide a major denial of the basic Marx philosophy. The great task ahead is to see that this same system not only works for us in the United States but that it contributes to the development and well-being of peoples in the rest of the world upon whom we are dependent for our freedom and security.

Mr. BATTLE. That is very interesting. Do you have any other questions, Mr. Ribicoff?

Mr. RIBICOFF. Thank you very much.

Mr. BATTLE. Mrs. Bolton.

Mrs. BOLTON. You have spoken of the average income of the underdeveloped countries being very low, namely, \$80.

Who determines what is a minimum standard, or who determines what that \$80 does?

Have you taken into consideration that the needs are actually less in certain countries than in America? To give the picture that \$80 is the minimum is rather a deceptive picture, is it not? Is it not a little fuzzy? If people read a statement stating that the average income is \$80; it sounds unthinkable, when in reality the equivalent of that \$80 in certain countries would mean possible existence at least.

Mr. ROCKEFELLER. I think that is a very fair comment. In this country you could not live on \$80, whereas in some countries you can exist on \$80. However, I do think that the illustrations I gave regarding the copper industry and the agricultural workers is an indication of the inability of people at that level to produce enough either to earn a decent living for themselves and their families or to

contribute to the strength of the economy in which they live. They can just produce what they can do with their own hands without the aid of power or machinery. It is in these areas where human labor is cheaper than animal labor, where the people carry things instead of using even donkeys, because human energy is cheaper than any other form of power.

Mrs. BOLTON. Yes. Of course, where they use ancient ploughs and are then persuaded that the village blacksmith can put on a metal cover and so make possible the preparation of ten acres instead of two.

Mr. ROCKEFELLER. I think what our industrial evolution has proven is that with an investment in machinery and tools the worker can produce more and he can live better, and the whole economy moves forward with greater strength.

To give that dynamic thrust to these other economies, I think greater productivity of labor is the really important element. Only through greater productivity can the people of these areas become self-respecting, producing citizens in the free world.

Mrs. BOLTON. It seems to me one of the great problems ahead for the world is its human over-production. The Colombo report says India is going to have 720,000,000 people in 20 years.

Mr. ROCKEFELLER. That indicates a tremendous population growth.

Mrs. BOLTON. Yes; population. There are people who are hoping in another couple of hundred years that something will be developed in the minds of the various races so that they will control populations at least to a degree.

Now, if we go in with either private enterprise or Government aid and we save the babies and keep the old people living, and if we do that ahead of the economic development, then we are really doing a rather terrible thing, are we not?

Mr. ROCKEFELLER. It is a serious problem, indeed.

Mrs. BOLTON. Or do you think it will serve as an incentive to an increase of economic development?

Mr. ROCKEFELLER. I think personally it would serve as an incentive for increased development, because I know from personal experience in the Western Hemisphere that a man who has hookworm, malaria, and one or two other diseases, and who is undernourished, just cannot produce enough even to keep himself alive.

One of the things we talk about in this country is the lack of willingness to work, of other peoples—the existence of the “manana” spirit. What so many people do not realize is that so many of these people cannot work. They are sick and undernourished. They have not the physical strength to work more than a couple of hours a day.

Mrs. BOLTON. That is very true.

Mr. ROCKEFELLER. Those people cannot produce enough to keep themselves alive. As their health is improved and they begin to get more food and better education, and as capital moves in to give them tools with which to work, I think their productivity can move ahead of their population growth.

I believe the knowledge, and the capital, and the managerial experience exists in the world today to increase production of food and other essentials more rapidly than population.

Mrs. BOLTON. There is another health question I would like to ask. There is a good deal of mention of minimum health standards. Who determines those?

Mr. ROCKEFELLER. The United Nations has set—and I think we have a chart on health here—2,550 calories a day, I believe, as being the minimum.

Mrs. BOLTON. I am glad you spoke of calories, for we are beginning to learn that a man can eat 3,400 calories and yet be minus some of the most important things that mean health. For instance you have many calories—but if you do not get any iodine, you produce feeble-minded children, cretins, epileptics, deaf-mutes, etc. That is what I mean by minimum health standards.

Just to do it on a calory basis is not enough. Am I wrong in thinking that different areas of the world will have different minimum health standards for at least 500 years.

Mr. ROCKEFELLER. I think that is also a very important point to bring out. Undoubtedly calory consumption in one area will be different than in another. However, when their lack of basic foods reaches the point where millions of them starve, it is pretty convincing.

Mrs. BOLTON. Yes. That is the disturbing thing, but on the other hand a man who works in a mill must eat more than a man who just mows his lawn.

Mr. ROCKEFELLER. That is a very good point. If these people are to produce in mines, or factories, or on the farms, they have to have corresponding strength. I think that it is a matter of general agreement among public health officials that in most underdeveloped areas the majority of the people are undernourished, and, therefore, unable to produce what they should be able to do in their own interests and in their country's interests.

Mrs. BOLTON. There was a very interesting experiment made on one of the South Sea islands by a Cleveland man, who went out to see what might happen if primitive people were exposed to our western foods. There had been no cripples and no feeble-minded people on this particular little island. He persuaded a family or two to take our flour and our sugar and so forth. They began almost at once to develop the various types of which I spoke a moment ago.

It would seem to me that such things should be taken into consideration in whatever we set up. Let us not foist upon others the stereotyped methods we have become all too used to here. I hope we shall not spread that really unsatisfactory type of health standards across the world.

Mr. ROCKEFELLER. I am awfully glad you made these points because I do think the tendency is for all of us to generalize to develop certain yardsticks which are dangerous when applied specifically.

Mrs. BOLTON. I am glad to find you in agreement.

Mr. ROCKEFELLER. I know the records of various oil companies who have done into the underdeveloped areas where they have recruited large numbers of workers locally. Their experience has been when they give these people proper medical treatment and adequate food they gained on the average between 25 and 35 pounds. The time out for sickness and disability was greatly reduced, and as the next generation came along the children averaged 4 or 5 inches taller than their parents.

This is pretty tangible evidence that certain necessary elements were lacking.

Mrs. BOLTON. As long as we do not do it all on a calory basis or all on any one basis.

Mr. ROCKEFELLER. I think that is very well taken. This chart shows the export trade of the world as a whole has gone up 12 percent since the war. In the United States and Canada it has gone up 69 percent. In Western Europe, 11, but trade in the underdeveloped areas is down 7 percent, while their population is up about 10 percent. So that there is definite statistical evidence which is very significant.

Mrs. BOLTON. Thank you very much.

Mr. ROCKEFELLER. Thank you.

Chairman RICHARDS. The time of the gentlewoman has expired.

Mr. VORYS.

Mr. VORYS. Mr. Rockefeller, when we had point 4 we were told that underdeveloped areas meant those where people got less than \$100 a year. Now, your underdeveloped area figure is \$80 a year. What is your yardstick for what an underdeveloped area is or are?

Mr. ROCKEFELLER. We have taken the areas of Latin America, Africa, Southeast Asia, South Asia, the Middle East Turkey and Greece, and Oceania, as the underdeveloped areas of the free world.

Mr. VORYS. Yes.

Mr. ROCKEFELLER. Their annual incomes range from an average of \$152 in Latin America down to \$30 in South Asia. Europe's runs around \$473, and ours \$1,400. I suppose you could draw that line somewhere else, as parts of Latin America certainly have industrial developments which would not be called underdeveloped.

Mr. VORYS. But the world maps on the point 4 hearings are approximately the same as yours. Now, of course, what we will spend on that is a secret, for some reason, so I cannot tell you what is in the books, but a professor from out at Ohio State University wrote me that he heard the amount was to be around \$80,000,000. Suppose we just take that professor's information. I would like to get your opinion on that, as opposed to the \$500,000,000 which I understand you recommend.

Mr. ROCKEFELLER. I have just used the figures in the bill that is before you. The total is \$8,600,000,000. For the military, \$6,300,000,000; economic, \$2,197,000,000; for the underdeveloped areas, the total is \$512,000,000. Of this TCA, whose operations are limited to the Arab countries, three African republics, and Latin America and Israel, receives \$72,950,000. This is an arbitrary division between TCA and ECA. Our Board feels very strongly that TCA, the point 4 program, so-called, should be taken out of State and put into the proposed new central agency. If ECA is going to be the central agency, TCA ought to be in there.

To have two principal agencies working in relatively similar types of work divided arbitrarily into geographic areas of the world seemed to us to make no sense. Such an arbitrary division prevents the proper integration of both planning and operations.

Secondly, the ECA operates on a different philosophy from the TCA. ECA operates its own programs. It procures personnel and carries the work abroad itself. TCA operates within the State Department and really is a recording or accounting department. It really has no planning or operating functions of its own. There are about six divisions of the State Department who do various parts of the planning and supervisory work. TCA provides the money. The program is carried out through grants to other departments and

agencies of the Government—the Departments of Agriculture, Interior, and so forth—each one of which has set up its own Foreign Department to direct the use of its share of the money for overseas work. There are 23 Departments and Agencies of the United States Government working in the foreign field.

You have—as these figures show—all of these different agencies carrying out the overseas programs.

The Advisory Board does not feel that the present set-up gives either centralized planning, policy formulation, or efficient operation.

This chart shows where the TCA financed technicians presently are in the underdeveloped areas.

Mrs. BOLTON. Will the gentleman yield a minute?

Mr. VORYS. Yes.

Mrs. BOLTON. Will you explain, is TCA the same thing as point 4?

Mr. ROCKEFELLER. Point 4 is a great concept. It was that section of the President's inaugural address in which he outlined the basic philosophy of international economic cooperation. TCA is an embryonic program of technical assistance in the State Department which is a far cry from the President's original concept.

Mrs. BOLTON. Thank you.

Mr. ROCKEFELLER. You passed the Act for International Development.

Mr. VORYS. AID, we call it.

Mr. ROCKEFELLER. Which was supposed to translate this concept into action. That was a year and a half later.

Mr. VORYS. Now, let us get this straight. We had both technical assistance and stimulation of private investment before the President ever made his speech, but we did write up a new act that restated a lot of stuff that was in the legislation that you administered long before the point 4 speech was made?

Mr. ROCKEFELLER. In that connection, I think you will find this chart interesting. It shows the number of people and the department and agencies they represent who are carrying out technical assistance programs in the underdeveloped areas. The black dots on this chart represent the people from the Institute of Inter-American Affairs who are now operating programs with TCA money. As you see, they account for more than half the personnel carrying out TCA programs abroad.

Here is the key. The Agricultural Department people are shown in green. The Commerce Department people in orange. Also the Federal Security Agency, Institute of Inter-American Affairs, Interior Department, Labor Department, State Department, and a series of other agencies. Really, as you see, there is no TCA program, as such. It receives the funds while other departments or agencies make the plans and carry out the program.

If we are going to have a really effective international program of economic cooperation as envisioned by the President it has got to encompass more than just technical assistance. There must be a central agency which can bring together and coordinate in one place over-all economic and financial policy, strategic material procurement policy, export policy, and requirements of other nations, developmental program planning and assistance of various kinds. As things stand now TCA's funds go only for work in the area of basic services, such as health, agriculture, and education. It does nothing in the

field of production and distribution, or public works. The proposed new overseas economic agency would work in these areas through close cooperation with private enterprise and the various specialized agencies of the United Nations, including the International Bank.

Mr. VORYS. I think you will find as far as agreement around the committee table is concerned, that we are certainly not going to have two kinds of economic aid going on. Now, here is something interesting.

The Brookings Institution last September said there were 43 agencies carrying on overseas activities—not the 23 you mentioned.

Mr. ROCKEFELLER. United States Government?

Mr. VORYS. Yes. United States Government agencies. Here they are.

Mr. ROCKEFELLER. Forty-three?

Mr. VORYS. Yes. And the Civil Service Commission, says there are 172,000 civilians employed, stationed outside the United States, of which 88,000 are in foreign countries, and 84,000 in our own Territories and possessions.

So that that little list of dots there and that little measly 23 agencies you talked about is not the whole story.

Mr. ROCKEFELLER. We took the major ones.

Mr. VORYS. Of those 43 agencies the Army, Navy, and Air Force are 3. They are the military ones. So all the rest of them, 40 in fact are economic. At least they are nonmilitary.

Now, as I get it your organizational proposal would be that there be some sort of over-all policy and administration set up covering all of those activities?

Mr. ROCKEFELLER. As I am not familiar with the list of 43, I do not like to say that they should all be put in. What we did say and what I feel is that the major ones such as ECA, TCA, and the Institute of Inter-American Affairs should be centralized, thereby creating a good nucleus with which to start.

There is one major policy question affecting operation abroad which has been under dispute in the executive branch of the Government for a long time. The question is whether the domestic departments and agencies of the Government should undertake the operations abroad in their respective fields or whether they should be carried out by the foreign economic agencies such as ECA, TCA, and the Institute of Inter-American Affairs themselves. ECA and the Institute of Inter-American Affairs both operate on this latter policy—namely on a regional rather than a functional basis. TCA on the other hand gives its money to other departments and agencies of the Government who each set up little foreign departments of their own to handle their new work abroad. The disadvantage of this procedure is that it requires great duplication in overhead and handicaps effective coordination of planning, programing, and operation in the field as well as in Washington.

For these reasons, the Advisory Board came to the conclusion that it was imperative that there be one central overseas economic agency for both planning and operation—working of course within the framework of policy laid down by the State Department.

Mr. VORYS. Of course, what is happening is that we find the same thing with committees of Congress. There is not one committee, but there are a half a dozen or more in the House that deal with

various phases of foreign affairs, because the world is shrinking. Just as every one of these departments and committees deal with 48 States, pretty near every department and committee deals with 48 countries, and that sort of thing. That is because the world is growing smaller.

However, on this organization thing I agree with you that every program, certainly in a particular country, should be headed up under one American boss. However, I am inclined to think that person should be the direct representative of the President from the State Department, or the Department of Foreign Affairs. It is perfectly silly what is going on right now, having ECA and TCA fellows in the same country, and then having a United Nations man there, with all of them competing for the interest of the country in telling them how to improve themselves. I believe that is not a very good way to do it.

I also would like your judgment as to whether it is a good thing to have the Overseas Economic Administration have their fellow running the show in Brazil, or India, or any place else. If he does not run it, there has to be some head man, and if the State Department man runs it then you do not need the other man.

Now, it is a dilemma, and to me an extremely puzzling one. I know you have had vast experience with it. I would like to have your view on both the organization in this country, where I understand you prefer the ECA basis, that they get the other fellows on their payroll, and also in a foreign country. What would be your idea of the United States organization here and in foreign countries?

Mr. ROCKEFELLER. I am very clear on this, based on my own experience of having first been responsible to the President for running an independent agency which operated both economic and informational activities for our Government in Latin America and then having been in the State Department in charge of our relations with the other American Republics. I have seen both sides of the problem.

Secretary Hull always had a very deep conviction that the State Department ought to keep out of operations, that it ought to confine itself to policy and be free from the day-to-day administrative problems involved in these increasing complicated economic programs. He believed the State Department ought to be free to concentrate on broad policy, within which the operating agencies would work.

I was brought up in that school, as it were. While in the early days of the Office of the Coordinator of Inter-American Affairs we had some adjusting to do, to adapt ourselves to State Department policy we soon were able to develop a relationship and procedures which worked out very well. Only once did we run into a conflict with the State Department. It went to the President who straightened it out.

We worked out a project system and sent to the Department of State a complete description of each proposed project, including the need, the cost, the required personnel and the objectives. The State Department went over it for policy, and if there were any disagreements that could not be ironed out at the operating level it would go to a higher level. We found the procedure perfectly satisfactory.

Mr. VOYTS. Mr. Chairman, I want to remind Mr. Rockefeller, if I may, that one more thing has been added since you were working for

the Government. Up above the State Department, at the stratospheric level of foreign policy, is a Special Adviser to the President, Mr. Harriman, who is not only an individual, but I understand has an office—a whole office force. So that you have the State Department, it seems to me, being squeezed down from the top on the broad policy and squeezed over from the side by ECA and Defense, so that their functions are becoming less and less important.

You have that situation. The Special Assistant, or Adviser to the President, is represented on this Mutual Security Board. That is a new thing.

Mr. ROCKEFELLER. I see what you mean, but I do not believe it means the Department's functions have been reduced or limited. Just judging by personnel there are 20 times the personnel they had when I was in the Department of State less than 6 years ago. So that certainly whatever they are doing they have more people doing it.

The fact, is that we as a nation have far more responsibilities in the world and face far more problems than before. We find ourselves thrown into the middle of new relationships and, therefore, we have to take on new responsibilities. It is a period of difficulty certainly, but I think the encouraging fact is that you here and people all over the country are interested in and anxious to do something about the problems. I am sure we will come out with something that is constructive and useful. We may go through a trial-and-error period, but that is the history of a democracy.

I think the Department should concentrate on the policy issues. I know from my own experience in the Department that it was the greatest relief in the world to look to the President of the Institute of Inter-American Affairs or the heads of the other operating agencies for the responsibility of organizing and operating the programs.

Mr. VORYS. You mean when you were in State?

Mr. ROCKEFELLER. Yes. It is just like building a house. You do not try to organize to build it yourself, but go to a contractor.

If the Department sees that there is need for the development of an economic program in a certain country, and it can call on an efficient overseas exporting agency to organize and integrate the program it would seem to me that it would be an ideal set-up from the Department's point of view. On the other hand, if the Department itself has to organize the program its officers will be diverted from policy and bogged down in operations.

Naturally, whatever the set-up in Washington, the Ambassador in the foreign countries must be the top representative of the United States abroad. He is responsible for policy in all matters pertaining to United States relations with that country, but not for the actual operations of the field parties.

Chairman RICHARDS. Will the gentleman yield?

Mr. VORYS. Yes.

Chairman RICHARDS. You and Mr. Vorys have been up in the ethereal atmosphere of a perfect reorganization to handle the whole problem and all the problems in our foreign relations. One of these days we may have a kingdom of Utopia with statesmen wise enough to do that. However, we have a bill here. This bill envisions military aid, economic aid, and technical assistance.

I believe you said that you did not feel capable or qualified to speak as to whether or not the military aid we are talking about could be

integrated in a new organization effectively with economic aid in technical assistance. I believe you said that.

Mr. ROCKEFELLER. No. I believe I referred to the amount of money for the military program, but I think I also stated that I did not feel the military assistance should be in the same organization with the economic except where there is a question of production of military equipment abroad, in which case the economic might be of assistance.

Chairman RICHARDS. If the military aid comes under this umbrella which we are talking about, and which is desirable, and in which I am interested, as is every member of this committee, do you think a study should be made of the production you will have to have abroad and the production you will have to have at home. If you found you needed it here, that would have some repercussions on the economic set-up of the nations you seek to help.

I do not know whether you are right about the 23 organizations, or Mr. Vorys is right about the 43 organizations. The Hoover Commission made recommendations concerning this, and others have made recommendations concerning this. However, you would not seek in this bill, if you were a member of this committee, would you, to set up an organization that would handle it all? Would you not try to refine the other features of this bill and make a long study on the proposal you are talking about?

Mr. ROCKEFELLER. Unfortunately, I am not in a position to know your base of reference, as a Foreign Affairs Committee, in relation to this bill, so I really do not know with what point of view you are coming to the bill.

Chairman RICHARDS. We are trying to write a bill which is a good bill to provide economic and military aid and technical assistance to certain other parts of the world.

Mr. ROCKEFELLER. One specific point, in answer to your question is where should the point 4 program be located. If I am correct, in his message of transmittal the President said that question has as yet not been decided, but that the executive branch of the Government was giving consideration to transferring it to ECA. If I am correct, there has been some feeling in the executive branch that perhaps the Congress would express itself on that subject.

Mr. VORYS. I feel they will.

Mr. ROCKEFELLER. Our Board reported personally to the President our recommendation that all the foreign economic functions including the point 4 program be centralized in one independent agency. On that specific issue I think your determination would be important in his decision.

He has sent up recommendations on the basis of ECA being the principal operating agency. I am inclined to agree with you that for the present you do not have time to do anything more than to accept that recommendation, although ECA is scheduled to expire, if I am correct, in the not too distant future.

Therefore, if you do not make the study this year, I presume you are going to have next year or the year after in order to determine whether these activities will be carried on permanently. Therefore, I would agree with you that a study now would certainly be useful. There is a great deal of material already available including

the study and recommendations submitted to the President by the Advisory Board.

Chairman RICHARDS. But if it could be done economically for this country and the nations that we propose to aid, you think it would be a good idea for the military part to be integrated in this picture?

Mr. ROCKEFELLER. No. Frankly, I take the opposite position, that the military assistance program should continue as it is, as part of the Defense Department's responsibility. I believe that only where it seeks procurement of military equipment abroad it might use this economic agency to assist in the procurement.

I think in many countries the combining of the military and the economic would be very much misunderstood. They might feel economic activities were a front for some military penetration. It seems hard for us to understand such suspicion, because that is not the way our country works, but others might not know us that well.

I think that is a major factor to consider in talking about putting them together. But as I read this bill, there is no proposal to put them together.

Chairman RICHARDS. No.

Mr. ROCKEFELLER. The bill simply puts the budgets together, but not the organizations.

Chairman RICHARDS. That is right. There is no reference in the executive proposal, but we have to write a bill.

Mr. ROCKEFELLER. I see.

Chairman RICHARDS. Witnesses like yourself, who have given us a lot of valuable information, will contribute a lot to the writing of that bill. We appreciate very much your coming up here this afternoon.

Are there any other questions?

Mr. VORYS. Will the gentleman yield?

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. You heard Paul Hoffman say this morning that he thought this colossal, super-duper reorganization can be done in 30 days. What do you think of that?

Mr. ROCKEFELLER. I do not really think it is such a colossal reorganization. First there is the physical merger under one administration. That will require certain personnel adjustments, but is not too difficult.

Secondly, there is the evolution of the organization to meet the new problems. I presume the ECA personnel group would form an important basic part of the structure, and such groups as the Institute of Inter-American Affairs, which has an effective organization in Latin America, would fit in and supplement the ECA work in that area.

In connection with TCA, I would like to say that Dr. Bennett, its Director, is a man for whom I have tremendous respect and great admiration and affection. He is doing an outstanding job personally in using his knowledge and experience in the field of agricultural development work. I think he could play a very important part in such a new organization.

So my answer to you would be that I think the job could be done in 30 days and there would be far less of a stir than one might think. The thing is more simple than appears on the surface.

Chairman RICHARDS. A good business group could put this thing together in 30 days, I have no doubt, but do you think it will hurt the efficiency of the existing organization to do that?

Mr. ROCKEFELLER. No. To tell you the truth, I think it would help it, because there is tremendous uncertainty among these groups as to what the future holds. If they were put together in a permanent central agency dedicated to meet all problems in the international economic field, I think that it would give new confidence and a new sense of confidence to the people working in them.

Chairman RICHARDS. Thank you very much, Mr. Rockefeller.

Are there any other questions?

Mrs. BOLTON. It has been a wonderful afternoon.

Chairman RICHARDS. Thank you very much.

Before the committee adjourns, I wish the members of the committee would look at this report we have on the termination of the whole thing.

The committee stands adjourned until 10 o'clock tomorrow.

(Whereupon, at 5:35 p. m., the committee adjourned until 10 a. m. the following day, Wednesday, July 18, 1951.)

THE MUTUAL SECURITY PROGRAM

WEDNESDAY, JULY 18, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10:21 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue our hearings on the Mutual Security Program. The first witness this morning is the Assistant Secretary of State, the Honorable George W. Perkins.

I would like to say for the information of the committee that this is an executive session, but practically all of this testimony, or as much as can be made public, will be included in the record of the hearings.

Mr. Vorys, you and some of the others, and myself included, complain sometimes about a lot of material that should not be executive and should be in the record.

Mr. Perkins agrees that, except for parts of this testimony which must be considered strictly secret, it will appear in the record as if in open hearings.

Mr. VORYS. As I understand it, the committee allows the witnesses in this sort of hearing to delete any matter in the interest of national security, or which is of a diplomatic or military character and is classified as secret, but otherwise leaves us as full a record as possible.

Chairman RICHARDS. That is right. We would prefer the witness to so state, when the matter comes up, if he considers it to be strictly off the record. You cannot always do that. Sometimes you have to look it over afterwards.

But you understand, Mr. Secretary, we hope as much as possible of your testimony will be in the record; is that agreeable?

Mr. PERKINS. That is agreeable.

Chairman RICHARDS. You may proceed, Mr. Secretary.

Mr. PERKINS. Mr. Chairman, I have a statement here which I can read or we can submit it for the record, whichever you prefer.

Mr. VORYS. I ask that the gentleman be granted permission to revise and extend his remarks in the record, and make such comments on it as may be helpful.

Chairman RICHARDS. Would you like to read the complete statement?

Mr. PERKINS. I think it would be better if I went through the complete statement.

Chairman RICHARDS. You have permission to put your entire statement in the record, if you desire, and you can just touch on the main

points now, and then subject yourself to questioning. Go ahead in your own way.

STATEMENT OF HON. GEORGE W. PERKINS, ASSISTANT SECRETARY OF STATE FOR EUROPEAN AFFAIRS

Mr. PERKINS. Mr. Chairman and members of the Foreign Affairs Committee, today, we are beginning discussion of that part of the Mutual Security Program which relates to the nations of Europe. I would like to discuss the broad outlines of this program, to review the premises and conditions on which it is based, and to indicate the major results which we expect from it. As the representative of the Department of State, I will give special attention to the current political situation in Europe and analyze briefly the most important political problems affecting the joint effort we have undertaken with the European peoples.

I will be followed by Mr. Porter of ECA who will deal with the economic side of the program, and by General Collins who will discuss the military aspects of the proposed European program.

I believe there is little disagreement within this country about our basic objectives in Europe, which have been recognized and developed by various important congressional actions during the past 5 years.

Our over-all objective is to work with the free nations of Western Europe in building and maintaining the political, economic, military, and moral strength which will permit our way of life to survive and prosper.

This objective is based upon our recognition of the simple fact that the strength and security of free Europe are vital to the security of the United States.

We all know the enormous contribution which our Western European allies can make to our common cause in terms of skilled manpower, industrial facilities, access to sources of raw materials, strategic geographical position, and so forth.

Conversely, we know that the military or political conquest of Western Europe by Soviet imperialism would give the Soviet Union the things it needs most and overnight would more than double its war-making potential. In recognition of this fact, the Kremlin has conducted an unceasing campaign to gain possession of the power represented by free Europe.

To assist the nations of Western Europe in meeting this challenge, the Congress of the United States, after various other aid measures, authorized the European recovery program. The success of this program is now a matter of record. A remarkable degree of economic recovery has been achieved, and a solid foundation laid for continued political stability.

But the Soviet imperialists do not give up easily, nor do they confine themselves to any single strategy. As the danger of economic and political collapse has subsided, the threat of armed aggression has grown. Recognizing this threat, the United States and 11 other nations of the North Atlantic community entered into the North Atlantic Treaty, and have undertaken to build the individual and collective defensive strength needed to deter, and if necessary, to repel, a military attack by the Soviet Union.

Several members of this committee who recently visited Europe are already familiar with our efforts to implement the treaty and with the results achieved. However, permit me to review briefly our major accomplishments:

Together, the United States and its allies have created machinery through which we are coordinating our common defense efforts. As we have gained experience, this machinery is being constantly refined and improved.

One important development in this connection has been the establishment of certain full-time bodies, such as the Council Deputies, the Finance Economic Board, and the Defense Production Board, assisted by expert international staffs, to carry on the work of various international committees which had previously met intermittently and therefore lacked continuity.

Important progress has been made in integrating the military programs of the NATO nations. Joint strategic plans have been agreed on, and are now being implemented. The most striking achievement in this field, of course, has been the creation of an integrated NATO defense force under the command of General Eisenhower, embracing not only command responsibility but also the strategic planning functions formerly performed by three regional committees.

There has been a substantial increase in the level of defense spending. The defense budgets of the European members of the North Atlantic Treaty Organization for the forthcoming fiscal year are 60 percent greater than the pre-Korean expenditure rate, and are nearly 80 percent above the 1949 rate.

There has been a significant and continuing growth in European defense production. The production by European nations of military equipment and supplies is now approximately double the pre-Korean rate, and will continue to increase rapidly during the forthcoming year.

All of our European allies have compulsory military service, and most of them in the last year have substantially lengthened their service periods. These lengthened periods of training, together with more efficient organization, improved military facilities and substantial additions to available equipment, have substantially increased the combat effectiveness of the European forces.

Finally, we have witnessed a steady improvement in the morale of the peoples of Western Europe. There is clear evidence that both their determination to defend themselves and their confidence in the ability to create a successful defense have increased appreciably in recent months.

The demonstration by the United States of its resolve to stand with its European allies, through its military and economic aid, its assignment of additional ground troops to Europe, and its designation of General Eisenhower as Supreme Commander, has been a most important contribution to this improvement in popular morale. The net result is a "heads-up" attitude in Western Europe.

While I believe that both the United States and its allies can justly take pride in these accomplishments, I do not wish to leave the impression that the job has been done, or even that a major part of it has been done. What we have accomplished to date serves primarily to prove that it can be done.

In order to understand the task remaining ahead, and at the same time to appreciate the reasons why we are able to view the future

with hope, it is desirable to analyze existing conditions in Europe and some of the special problems confronting that area.

The most striking fact, I believe, is that the over-all political situation in Western Europe is immeasurably better than it was a few years ago. I have already mentioned steady improvement in public morale. There has also been a marked decline in the power of Soviet-directed communism. In most countries, party strength and voting strength have fallen off substantially, and even in those areas where voting strength remains relatively high, the Communists have suffered heavily in terms of effective influence, as evidenced by the loss of parliamentary seats and the loss of control over important cities. Simultaneously, Communist influence in the European labor movement has diminished. The uphill fight of the free trade union leaders of Western Europe against Communist domination is one of the most heartening developments of recent years. The success of their efforts is reflected not only in the gradual growth of free trade union membership, but also in the failure of the Communist campaign to block the unloading of MDAP shipments and the collapse of their loudly-proclaimed demonstrations against General Eisenhower.

The governments of the western European nations, on the whole, are more stable than they were a few years ago. We still witness frequent cabinet crises in some countries, followed by a reconstitution of governments. While such events inevitably produce difficulties, it is well for Americans not to exaggerate their significance. The important thing to remember is that, among the European members of NATO, there has not been and there is very little likelihood that there will be, any governmental change within the foreseeable future which would result in a basic revision of the defense policies of the nation concerned.

We have witnessed a growing cooperation among the free European nations. In addition to NATO itself, such organizations as the OEEC, the Council of Europe, the European Payments Union and the Schuman plan have served to penetrate political and economic barriers and to help the western European nations achieve a degree of integration that would have seemed visionary a few short years ago.

On the debit side of the ledger, we must consider the fact that the internal Communist threat has persisted. While the danger of armed attack is Europe's greatest immediate concern, it is clear that the Soviet imperialists have not yet abandoned hope of a cheap conquest of Western Europe through political means. Communist propagandists are still actively seeking new bottles and flashier labels with which to peddle their discredited elixirs.

As we all know, a traditional political tactic of the Communists has been to exploit whatever social and economic ills they can find in free societies. Despite the success of the European recovery program, it would be a fatal error to assume that there are no weak spots in Europe for them to exploit. The rise in the price of raw materials during the past year has again revived the threat of inflation, and retail prices have risen correspondingly. The large number still voting for Communists in such countries as France and Italy reflects a situation in which millions of people still live at or below the subsistence level, in which acute discrepancies in living standards and social privileges have embittered the population, and in which signs of a new inflationary trend have aroused widespread anxiety. Most of these people

realize that their standards of living would be lower still if the Soviet stooges should come to power. But in countries where average monthly income ranges from \$35 to \$55 per month—where a laborer must work five or six times as long as an American worker in order to buy a dozen eggs or a pound of sugar—it is not easy for people to resist the mirage of Communist promises. Even those who actually don't want the Communists to gain control of the government sometimes vote Communist as the only emphatic method of registering a violent protest against existing social conditions.

While continuing to exploit hunger and misery, the Communists have also undertaken a major campaign to neutralize Western Europe by spreading terror and confusion. They seek to paralyze the free European through fear of war and occupation—to convince the non-Communist population that opposition to Soviet aims means devastation of their homes and business establishments, and to threaten them with personal reprisals when the Communists eventually seize power. At the same time, with their usual disregard for consistency, the Communists set themselves up as the champions of peace, implying that the destruction of war can be avoided if the peoples of Western Europe will break off cooperation with the United States and accept the octopus-like embrace of the Soviet Union.

A basic feature of this campaign, of course, is a relentless propaganda attack upon the United States and its motives in Western Europe. The Communists accuse the United States of a desire to launch a preventive war, in which Europe would be the main casualty. They charge that the United States seeks to destroy the sovereignty and the independence of its European allies and reduce them to the status of satellites. They call American policy inconsistent and whimsical and predict that the United States may at any moment suddenly decide to abandon Europe to its fate. They declare that the United States is solely interested in Europe as a base for warfare against the Soviet, and view the Europeans only as potential cannon fodder for American military designs.

We know that these charges are false, and the great majority of the western Europeans also know that they are false. Nevertheless, the widespread fear of war and the fact that many Europeans are confused about the real policies and intentions of the United States combine to provide a tempting target for the Communist political artillery. It is indeed encouraging to note that, despite these tactics, the Communists have thus far failed in their campaign to capture Western Europe.

To a considerable extent, the doubt, fear, and suspicion which still linger among the people of Western Europe result from the simple fact that free Europe is not yet capable of building the strength it needs without assistance.

Many people often ask why this is true. In view of free Europe's great human and material resources, it is natural to ask why our European allies can't build adequate defenses solely through their own efforts.

This, of course, is one of the key questions underlying the whole program. The answer involves a number of political, military, and economic facets, and we will undertake to provide whatever information the Congress needs on this subject. At this time, I will confine myself to a brief summary of the major reasons why free Europe needs help in building its defensive strength.

The chief problem is the time element. Over a long period of years, it is possible that Western Europe, acting alone, might be able to produce sufficient strength to play its proper role in the defense of the free world. But the Soviet threat is immediate. Our own security and that of other free nations demand that strong defenses be built quickly enough to forestall the designs of a ruthless Soviet dictatorship to which weakness is an ever-present temptation.

Our allies cannot meet this deadline solely through their own resources. They do not have the industrial plants required to produce the quantity of modern heavy weapons which have been found essential to effective defense against present-day attack. More important, their total economic capacity is not great enough to enable them to purchase these weapons or to bear fully the other costs of an adequate defense program. The European peoples have launched a substantial defense effort and have accepted heavy sacrifices. They are prepared to accept even more painful sacrifices. But let's remember that there just is not much fat for them to cut away. The knife doesn't have to go far before it hits bone. We must keep in mind, for example, that the gross national product of our European allies, divided on a per capita basis, comes to only \$597 per annum as compared with \$2,143 in the United States. Nothing whatever will be gained, either for our own security or that of other free nations, if Western Europe avoids military disaster only at the cost of economic disaster. If the inflationary trend I have already mentioned gets out of hand, the entire defense program will go up in smoke. Moreover, an economic breakdown would simultaneously pave the way for the ever-alert Communists to take over free Europe without firing a shot.

The Communists derive a unique advantage from their ability to apply strong military pressure and strong politico-economic pressure simultaneously. In the same way, the ability of the Soviet Union to concentrate on building its military machine in total disregard of human values also provides them an immediate advantage. There can be no doubt that if Western Europe were organized into a gigantic slave state, on the Hitler or Stalin model, the speed with which military instruments are created could be increased. In fact, I am sure this is exactly what would happen if the Russians took over Western Europe. But neither our own people nor the people of Western Europe would ever consider any such alternative. There is little profit in becoming slaves in order to defend ourselves against slavery. And we are convinced that the imagination, skill, and moral determination of free peoples will always, in the long run, offset whatever temporary advantages a slave society may possess.

In concluding this review of the current situation in Western Europe, I would like to take note of the political differences which occasionally arise between the United States and its allies. We all know that differences between free nations are inevitable, but we should be careful not to exaggerate their significance. And we should never forget that the things we have in common with Western Europe are much more important than the things in which we differ. It is useful for us to remember always that the basic issue dividing the world today is not a struggle between the American way of life and the Soviet way of life. Instead, it is a struggle between the Soviet way of life and every other way of life that freemen have ever known. We are not seeking to remake the remainder of the free world in the

image of America, but are seeking to prevent its being pounded into a new and horrible shape on the anvil of Communist tyranny.

Let me turn now to the proposed aid program for Europe and consider how it fits into the picture I have presented. As you know, we are proposing an aggregate of \$5,293,000,000 for military assistance to free Europe during fiscal year 1952. Most of this money will be used to provide what we call military end items—tanks, guns, planes, ammunition, and so forth—to the NATO countries, although a small part of the sum will be used for military training and technical assistance. We are also proposing \$1,675,000,000 in economic assistance to 14 countries. These include eight NATO countries, Belgium, Denmark, France, Iceland, Italy, Luxemburg, the Netherlands and Norway, and six non-NATO countries, Austria, Greece, Trieste, Turkey, Western Germany, and Yugoslavia.

While proposed assistance has been separated into "military" and "economic" components, there is actually no such sharp distinction between these two parts of the program. Military aid and economic aid are closely interlocked, and both are directed toward the same basic objectives. A strong defense must rest on a balanced and stable economy. Taken as a whole, the program may be expected to yield these major results:

The military-aid program will directly provide our NATO allies with the military instruments which are essential to the effective build-up of their armed forces, and which they themselves cannot produce rapidly enough to build an effective shield against the military might of a Soviet dictatorship whose threat is immediate and constant.

The proposed economic aid to our NATO partners will serve as the hard core of an expanded European program of military production, permitting our allies to move forward with a total defense effort far out of proportion to the amount of aid received. At the same time, the aid program will make it possible for this European rearmament effort to be carried out without destroying the economic foundations on which it depends. Expanded armament output requires imports of machine tools and raw materials. Expanded defense budgets create further inflationary pressures which cannot be held in check without imports of essential goods. The proposed economic aid will help finance the necessary purchases from the dollar area.

The assistance proposed for the European countries outside NATO—Austria, Greece, Turkey, Trieste, Western Germany, and Yugoslavia—is designed to meet somewhat different needs in each country, which we can discuss in more detail later. In general, however, all this assistance will help to strengthen these important strategic areas against Communist political and military aggression and will contribute both directly and indirectly to the security of the entire free world.

The aid program as a whole, in addition to its direct contribution to military strength, will give additional impetus to the rising determination and confidence among the European peoples. A nation's will to resist is closely related to its capacity to resist. It is hard for a man to work at anything if he feels that he doesn't have even a fighting chance to succeed. But once he is given this fighting chance, once he knows that his task is not hopeless, he has a real incentive to reduce still further the odds against him. As western Europe's defenses become stronger, so will the people's determination to assure successful defense. To many Europeans, the idea of victory has little meaning

if it comes after occupation and annihilation. But when they realize that Europe can be successfully defended in the first instance—that their homes need not be overrun and their families broken up—I believe they will do everything possible to insure that it is defended. And I am also convinced that the knowledge that both the United States and the European nations are firmly committed to the initial defense of Western Europe, and not just to its ultimate liberation, will do more than anything else to discourage the Russians from undertaking a suicidal military gamble.

In discussing the political situation in Europe, it has been necessary to deal to some extent with intangibles. There is no statistical formula by which a given number of guns may be converted into a measurable quantity of political stability, or individual income into a precise level of popular morale. But these intangibles are nevertheless real and important. Faith and courage are as important to an army as guns and ammunition, and the beliefs and hopes of a people are as essential to their survival as meat and bread.

For years, the Soviet Union has regarded the political and social ideals and institutions of the free world as its No. 1 target. For the Soviet dictators know that the long-term struggle confronting the world is a battle for the minds of men. They know that freedom is not an abstraction. They regard the existence of a free society anywhere on earth as a constant threat to the slave system which they are trying to maintain and propagate. They realize that no tyranny can ever be secure so long as the people bound under its yoke can still catch glimpses of the light of freedom in other lands.

To me, the aid program now being presented to the Congress represents a very sound investment. It is an investment in military power which is of direct and immediate concern to the safety of the United States. It is an investment in economic health which is both vital to the immediate defense effort and essential to the long-run security and prosperity of the entire free world. And last but not least, it is an investment in a way of life and a common civilization that has brought mankind more progress and happiness than any other the world has ever known.

Chairman RICHARDS. Thank you, Mr. Secretary. We will now proceed under the 5-minute questioning rule. I have one or two questions.

Will you please turn back to page 6 of your statement, the second paragraph down from the top? Would you break down that figure of \$5,293,000,000 for us?

Mr. PERKINS. In which way would you like it broken down?

Chairman RICHARDS. I would like to know about the end items, the military assistance and technical assistance. That is what you mentioned as coming under that.

Mr. PERKINS. I think perhaps I could refer that to General Scott. I have the breakdown by countries on that. General Scott, do you have the breakdown?

General SCOTT. By countries?

Mr. PERKINS. No; the chairman would like the breakdown between end items, technical assistance, and military assistance.

Chairman RICHARDS. That is, over all.

General SCOTT. Five and a quarter billion for military assistance, which is broken down as follows—

Chairman RICHARDS. We can get that later. You are talking about regions, is that right?

General SCOTT. I can give it to you any way you want it.

Chairman RICHARDS. How much did you say the military items were for the whole thing?

General SCOTT. Five and a quarter billion for military.

(Discussion off the record.)

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. Are we going to run through to get economic and point 4?

Chairman RICHARDS. We can. General Scott, of course, will testify more definitely about regions in regard to the military. If you want to go into this other question, go ahead.

Mr. VORYS. No questions.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. No questions at this time.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. No questions.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. I will pass.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. I am concerned that this is another statement with a lot of generalities, more or less in different words, but similar to what we have heard so far.

I would assume that in executive session, and Mr. Perkins being in charge of a most vital area of the world, one of the most vital, we would hear a little different angle of what is going on there in Yugoslavia, what pressure is on Yugoslavia at the present time, also the questions of Turkey and Greece. I believe that comes within Mr. Perkins' jurisdiction.

I have no special questions to ask. I would like my 5 minutes taken up by a little more specific explanation from Mr. Perkins. That is all.

Chairman RICHARDS. Mr. Perkins, can you answer his question?

Mr. PERKINS. Might I say this was prepared for the public record.

Mr. RIBICOFF. We are having three sessions a day. I apologize, Mr. Chairman, if I am intruding here. But my feeling is that I have nothing to learn from a statement like this, which is full of generalities. We have heard a lot of it.

We had better start getting more facts if we are to get out a good bill that means something.

Mr. FULTON. May I add my 5 minutes, because my questions were going to be on Yugoslavia. I would like to hear what they are doing, and I think that should be public.

Mr. ROOSEVELT. This is an executive session?

Chairman RICHARDS. This is executive session. But as I stated awhile ago, most of it will be screened for inclusion in the open record, except very strict security matters.

Mrs. BOLTON. I wonder if you would announce what you said in the beginning before these gentlemen came in, about the nature of the hearing.

Chairman RICHARDS. I announced that both the Chair and the witnesses are as anxious to put as much of this testimony in the record as they can. This is a mild form of executive session, because we want to get as much of it in the record as possible. The witnesses have agreed to put most of it in the record for the benefit of the committee itself. So we remain in executive session.

I do not believe you were here, Mr. Roosevelt, when that statement was made.

Mr. Ribicoff, Mr. Secretary, has raised the question of Yugoslavia. Maybe you could tell us a little something more definite about that.

Mr. PERKINS. I would be glad to. As you remember, last winter we came before the Congress and asked for \$70,000,000 for the Yugoslav emergency relief assistance. That was granted. That money has been spent. The food has arrived in Yugoslavia and has carried Yugoslavia through this drought period.

Their crop situation at the present is favorable. The only difficulty they have had so far this year has come from floods rather than from drought. That may to some extent impede their ability to export foods from this current crop. But it certainly is not serious enough to in any way impair their ability to feed themselves. So that part of the Yugoslav situation seems to be getting in order.

You will also remember that this spring, because of the raw material shortage in Yugoslavia, we used 29 million dollars of military assistance to supply raw materials which could be used in support of their military organization to help out their raw material situation.

That money has been either all spent or committed, and most of the goods are on the way, although some will not arrive for a few weeks yet.

Despite those two acts, which accomplished their purpose I believe, Yugoslavia is still in a difficult situation. As I explained here before, their balance of payments situation is critical. And until they can build up their investments in Yugoslavia to produce more of the things that they themselves need without imports, and to produce additional exports, they will have a balance of payments problem.

We have been working with the British and the French on that problem. We have worked out an understanding with the British and the French that they will participate in making up that balance of payments deficit. With them we are approaching other countries to obtain their participation also. Our share of this aid program for fiscal 1952 is now planned at approximately 60 million dollars, which is included in this estimate which is before you. It is impossible to provide final figures until the negotiations with the smaller countries are completed.

(Discussion off the record.)

Mr. PERKINS. We are pleased that the British and the French have been willing to come forward and take that part of the burden. We think it is an encouraging sign.

Mr. JUDD. Do they provide that in dollars or in their own currency?

Mr. PERKINS. Presumably in their own currency. Goods they can acquire in their own currency or available from their own production.

Chairman RICHARDS. Your time has expired, Mr. Ribicoff, but Mr. Fulton has suggested that his 5 minutes be taken on the same subject. Will you continue on the same subject, Mr. Perkins?

(Discussion off the record.)

Chairman RICHARDS. Does the gentleman yield to Dr. Judd out of his time?

Mr. FULTON. It happens to be my time.

Chairman RICHARDS. But he has control of it. You gave Mr. Ribicoff his time.

Mr. FULTON. I said to add my own to Yugoslavia.

Chairman RICHARDS. That is out of order, under those circumstances. Mr. Ribicoff, your time has expired. Mr. Merrow.

Mr. MERROW. Mr. Perkins, on page 3 of your statement you have referred to the growing cooperation among the free European nations and have cited the OEEC, the Council of Europe, the European Payments Union, and the Schuman plan as evidence of this fact in the political, economic, and military fields.

Is this cooperation as great as we have reasonable right to expect?

Mr. PERKINS. That is a difficult question to answer. It certainly has not been as great as we have hoped for. I think, on the other hand, that perhaps it is fair to say that it has been as great as we had any reason to expect.

The problems of integration are very great. When you suggest to sovereign states that they give up part of their sovereignty, you get into serious complications.

I think given that fact, what the Europeans have done, particularly the initiative which they themselves took on the Schuman plan, has been very encouraging.

It is too early yet to talk very much about how far the European army may get. But their again their initiative in suggesting that a European army be formed, which in substance would give up one of the most critical points in national sovereignty, I think shows they are ready and willing to go quite a long way in integration.

Mr. MERROW. Is it correct to state that until there is a much greater degree of integration, economically and politically, it will be necessary for us to continue assistance to Western Europe?

Mr. PERKINS. I am sure that a greater degree of integration would strengthen Europe economically. I do not think it is correct to say that we will have to continue that assistance until that integration has been achieved.

Mr. MERROW. But the greater the integration the smaller the need will be for our assistance, is that right?

Mr. PERKINS. You get into a time factor there. And I am not sure that the integration economically can come fast enough to make a very marked effect on our assistance.

You have economic problems in Europe which simply take time. I was talking with a foreign minister as to the problems in his country with a neighboring country.

He said that if the tariff barriers were taken down between those two countries, 50 percent of the labor force in his country would be unemployed immediately.

They have to take and they are taking steps to improve their costs and their productivity, so they can take those tariff barriers down.

Until something is done along those lines, which is a time-consuming process, it is not feasible to take down those barriers.

Mr. MERROW. What would you say they are to do in the immediate future to accelerate integration?

Mr. PERKINS. I think the lines along which they are working are the ones along which they should work, and we should endeavor to help them, particularly on the side of economic integration, which from the point of view of over-all economic strength and their individual ability to defend themselves, is the most important.

Mr. MERROW. It seems to me if they have not advanced as rapidly as we had hoped for that perhaps there is something lacking here.

I have heard many people say, "Well, they have not integrated as rapidly as we hoped they would." What is the basis for hoping that they could integrate more rapidly?

Mr. PERKINS. I do not think you always have a basis for a hope. I think that is perhaps the difficulty with that, and that we in our enthusiasm have perhaps hoped for more than, as I think I indicated, was reasonable to expect.

Chairman RICHARDS. The gentleman's time has expired. Mr. Hays.

Mr. HAYS. Mr. Perkins, when General Eisenhower was here he spoke of Germany as being in a separate category, that he could not move on military programs until certain policy matters were determined.

Now Germany is included in the economic plans?

Mr. PERKINS. Yes.

Mr. HAYS. You refer to that on page 8. That program of economic aid in Western Germany at least is something of an exception to this general assertion that we have been making, that economic and military aid is tied up together, is it not? How can we be entirely consistent on that point?

Mr. PERKINS. The strength of Germany depends on further economic assistance. Germany is not yet in a position where it can build up its own armed forces. When it is in that position, the economic strength of the country will be very important to that effort. So this is a preliminary, if you will, as the European program was to the ability of Europe to build up its forces.

Mr. HAYS. I am not questioning the fact that aid is justified in the light of that hope. Of course, you can understand how we have certain reservations just as, I am sure, General Eisenhower had about Germany's future.

I do not want to take too much time on that. But what is your feeling about the German people's attitude? Are they going to be more reasonable about their own plans, militarily, in the light of the great exposure themselves? It seems to me their official attitude has been disappointing. What is your feeling about it?

Mr. PERKINS. I think that is a question which you could more properly ask Colonel Byroade, who heads our German office.

I might give you a very brief and somewhat general answer. The Germans find themselves next to the Russian-dominated countries. They are in the most exposed position. They are therefore concerned that before they start to rearm that there should be some reasonable prospect. It is the same thing I indicated in my general remarks, that the defense will be successful. There is no point of getting into a defense that will be unsuccessful. That is one of the things that concerns them. I think the actions that have taken place in the last 6 or 8 months have gone a long way to dispel that fear that they have.

They have another feeling which I think is fairly generally held in Germany, which is that they do not themselves want to have a na-

tional army. They would much prefer if they are to rearm to be part of some larger military concept than merely a German concept.

Mr. HAYS. You find that feeling is pretty general?

Mr. PERKINS. That is reasonably general, as I understand it. To that extent they are on the same side of the argument that the French are on.

Mr. HAYS. It poses a very difficult problem. In other words, it is in a class by itself; is it not?

Mr. PERKINS. That is quite right.

Mr. HAYS. You mentioned the eight NATO countries. There are four others, are there not? I am just trying to get my own thinking clear on that. We are giving no aid at all to the United Kingdom in this \$1,675,000,000?

Mr. PERKINS. That is right.

Mr. HAYS. There are 12 NATO countries, are there not?

Mr. PERKINS. Portugal, I think, is the only other NATO country—

Mr. HAYS. Portugal, the United Kingdom, Canada and ourselves make up the 12?

Mr. PERKINS. Yes.

Mr. HAYS. So that really in Western Europe the UK and Portugal are the only ones in NATO that do not share economic aid. You have not discussed Spain. Is there anything you want to add in the light of more recent developments and the conversations that have been held on that?

Mr. PERKINS. I think you are referring to the military side of the thing in Spain. As you know, we believe that Spain can be of assistance in the defense of Western Europe.

It becomes a very complicated problem because of the feeling of so many Europeans, which is shared also by a fair number of people in the United States, that we should not try to take Franco into our family.

However, we felt that despite that there were certain minimum arrangements we should attempt to make with Spain. As was indicated in the paper this morning, they constituted largely the right to use facilities in Spain.

(Discussion off the record.)

Mr. PERKINS. That is in general what we are thinking about discussing with Mr. Franco at the present time.

Chairman RICHARDS. The gentleman's time has expired. Dr. Judd.

Mr. JUDD. Since I have used 1 minute of the time of the gentleman from Pennsylvania, I will yield 4 minutes of my time to him.

I would like to pursue that which I was not able to finish earlier. Is there objection to putting into the record what other countries are providing?

(Discussion off the record.)

Mr. PERKINS. May we consider that and see what kind of a statement we can put in the record?

(The information referred to is as follows:)

U.K. and French Contributions to Yugoslav Aid Program

Great Britain and France are going to provide a substantial share of the assistance to Yugoslavia under the recently negotiated tripartite program. We also hope other countries will make some contributions. Of the amount which the three Governments are to provide—and this amount is not fixed because we don't

know exactly how the situation will develop during the year in regard to Yugoslavia's trade and debt payment situation—the British and French together will put up slightly over one-half of what we put up. This is a significant factor in reducing the potential burden on the United States. It also provides a concrete proof of the common interest of the western nations in Yugoslavia's continued independence.

Mr. JUDD. The more we can show they are doing the better off we are in presenting the case before Congress; is that right?

Mr. PERKINS. Right.

Mr. JUDD. Thank you.

Chairman RICHARDS. Mr. Roosevelt.

(Discussion off the record.)

Mr. ROOSEVELT. The next question is, Do you feel that the program voted by Congress by the loan formula last year is the most effective way to extend Uncle Sam's dollars, or do you feel with Mr. Hoffman, who did not express any political attitude but simply an economic attitude, that he considered the loan formula to be a very good one, and that we would have gotten more for our dollars, the 62½ million, if we had used the ECA formula?

Do you think we should consider bringing Spain into the ECA set-up, or under unilateral administration by ECA, or the successor thereto, or should we set up a separate ECA for Spain?

Mr. PERKINS. Let me answer part of that question and then refer the other part of it, if I may, to Mr. Porter. On the question of bringing Spain into ECA, you would simply agitate the feeling in Europe toward Spain, and would make it more difficult for us to do what we think is desirable to do on the military side of the situation.

I think from that point of view we should avoid that particular action now and in the immediate future, certainly.

I think Mr. Porter can perhaps answer better on the question of loans versus grant aid.

(Discussion off the record.)

Mr. VORYS. Will the gentleman yield?

Chairman RICHARDS. The gentleman's time has expired. I think you have a half minute. Of course, we want Mr. Porter, when he testifies, to go deeper into that.

Mr. ROOSEVELT. I have a great deal more to talk about on this subject. I will be glad to yield my half minute to you, Mr. Vorys.

Mr. VORYS. You say we have had no economic ECA mission in Spain. Why is that? Is it not because although the law directed ECA to make the loans, ECA turned it over entirely to the Export-Import Bank?

Mr. PORTER. The law gave us the responsibility.

Mr. VORYS. Did Spain prevent you from having an ECA mission there?

Mr. PORTER. Nor have they proposed that we have one.

Mr. VORYS. The law proposed that you have one.

Mr. PORTER. That is not my understanding, Mr. Vorys.

Chairman RICHARDS. The gentleman's time has expired. Mr. Fulton.

Mr. FULTON. The questions that have been previously raised and which should be touched on in detail, I should like to outline shortly so we can get some statement later for the record.

For example, first, the church prisoners. What has been done since my amendment of last year directed toward releasing the church

prisoners and toward freedom of religion that I had tried to put in as a condition of granting aid?

Secondly, how about political prisoners? And how much of a release was there last December when it was announced they had almost an amnesty?

I would like to know the provisions of that amnesty.

Thirdly, what about the return of the Greek war orphans? What number are not returned, if there are any not returned? Also, I raise the question if there are any in the country that are hidden and there is no opportunity given to the Greeks to find out where they might be.

Next, in regard to the Trieste question. What progress is being made toward the settlement of that problem?

What about the Carinthian question? Is that being settled? Drew Pearson wrote a short time ago that there were certain areas of Yugoslavia where there was almost the equivalent of an armed opposition to this Government. What areas are they and what people do they have that refuse to accept the present Yugoslav Government?

In addition, in this country we have the problem of dual citizenship. The Yugoslav Government claims that the citizens of the United States are still citizens of Yugoslavia. That is also true of former Yugoslavs now in Argentina.

What is the progress on the Yugoslav Government giving exit visas and exit permits to those people wishing to emigrate? I understand there are a number of families who have always been for freedom in Yugoslavia and he will not permit those families to emigrate or to be reunited with relatives, husbands and wives, fathers and mothers now permanent residents and citizens abroad. If you want some names, I will give them to you. I certainly want those families reunited.

In addition to that there is the question of the treatment and repression of certain minorities and ethnic groups. I would like to hear about the current status of these groups in Yugoslavia.

In Greece, when we had to go in to make up the balance of payments deficit, we insisted upon representation in a policy committee in connection with the Bank of Greece operations. The British had done the same thing. I would like to know if we are doing the same in Yugoslavia and, if not, why not. Why are we not adopting the Greek formula? That was the chief complaint of this committee on China, that the administration did not adopt the successful formula in Greece in dealing with that government.

If we are making up the deficit of that nature and are making commitments, I think Congress should first be asked for the authority to participate in the fundamental financial decisions of the government.

And at least if the United States is going to spend its money, and insure any deficit that comes up, we should have some say as to the currency and financing level, at the level of the Bank of Yugoslavia.

I am interested in the various freedoms in the school systems, and in the cultural institutions. I would like to know what is the progress since we have given the aid last year towards permitting freedom of expression, and toward taking off the terrific slant of untruth and propaganda in the school system about the United States.

We are still being called imperialists by many of the Tito groups. And in addition are being told that we are part of the imperialist group that will finally have to be eliminated.

I would like to know definitely whether that has been changed.

Chairman RICHARDS. The gentleman's time is up. Mr. Secretary, he gave you a large order there. If you answered it you would tear the 5-minute rule all to pieces. Will you provide that for the record?

Mr. PERKINS. I have the answers to some of those questions, but on others I have not the most up-to-date information. I think if I provide it it will be better.

Chairman RICHARDS. It will be provided for the record?

Mr. PERKINS. Yes.

(The material referred to is as follows:)

FREEDOM OF RELIGION

The United States Government has continued to make known to the Yugoslav authorities its attitude toward impairment of religious freedom in Yugoslavia and to press for improvement in this connection. There has been no basic change with regard to the situation regarding church members who are imprisoned or toward freedom of religion. There have been a number of instances on non-fundamental issues of efforts on the part of the Yugoslav Government to be more conciliatory in its relations with the churches. The Roman Catholic Bishop Peter Cule of Mostar and the Serbian Orthodox Bishop Varnava Nastic of Sarajevo have been released from imprisonment prior to the expiration of their sentences although neither has been permitted to resume his former ecclesiastical duties. On June 2 the Yugoslav Government informed the Holy See through the Papal representative at Belgrade that it was prepared to release Archbishop Aloysius Stepinac of Zagreb from imprisonment provided that he leave the country. The Holy See replied on July 2 that, as the Archbishop prefers to remain near the members of his archdiocese it does not intend to impose a removal from Yugoslavia as a means for securing his release. State controls at the parish level continue relaxed so that attendance at religious services remains free and unimpeded.

AMNESTY FOR PRISONERS

The Yugoslav press announced at the beginning of the year that approximately 11,700 prisoners were being released prior to the expiration of their sentences, on the basis of amnesty decrees of the Federal and regional governments of Yugoslavia. It appears that most of the persons involved had been sentenced for failing to meet their compulsory food-delivery quotas, for sheltering fugitives, and for minor criminal offenses. It does not appear that the texts of these amnesty decrees have been published.

RETURN OF GREEK CHILDREN FROM YUGOSLAVIA

The progress already made with regard to returning to Greece the children who were removed from their homes during the period of guerrilla warfare may go a considerable distance toward clarifying and resolving this problem.

On November 25, 1950, 21 children were returned to Greece, a second group of 54 children was repatriated on March 14, 1951, and a third group of 214 children was returned on May 27, 1951. In addition, about 100 children have left Yugoslavia to join their parents who have emigrated to Australia. Through the assistance of a mission from the Swedish Red Cross, which at the invitation of the Yugoslav and Greek Red Cross Societies has interceded in this matter on behalf of the International Red Cross, it is expected that in the next few months approximately 400 additional children will be returned. The Swedish Red Cross mission visited Yugoslavia and Greece in the spring. While in Yugoslavia the mission inspected Yugoslav camps in which Greek children reside to identify, and to prepare and check lists of, those to be repatriated. The activities of the Swedish mission have been directed toward the return of children to parents in Greece who have homes in which to receive them and who request their return.

It now appears that of an approximate 10,000 children who formerly lived in Greece but are now in Yugoslavia, the great majority are living with their parents who are part of an estimated 30,000 persons, principally members of the Slav Macedonian minority from northern Greece, choosing to remain in Yugoslavia after the collapse of the guerrilla war in Greece. Of the remainder totaling about 1,500, many of whom are also ethnically Slavs, some are orphans or cannot be identified while others are children of parents now residing in Communist countries; several hundred are considered likely to be eligible for repatriation.

TRIESTE

There is no fundamental change in the situation with respect to the Free Territory of Trieste. It is obvious that both Italy and Yugoslavia, the two nations most directly concerned, would benefit if a bilateral settlement could be worked out between them, since only the Soviets and their allies profit by the present tension over Trieste. However, long-standing territorial questions are notoriously difficult to solve, and this is one on which strong popular sentiments are involved on both sides. It is apparent from information reaching this Government that a propitious moment has not yet arrived for achieving a workable solution of this problem.

THE CARIANTHIAN QUESTION

Following World War II, the Yugoslav Government advanced a territorial claim against Austria involving a sizable portion of the province of Carinthia and a smaller portion of the Province of Styria. This claim was considered in the Council of Foreign Ministers in 1947, 1948, and 1949 during negotiation of the as yet uncompleted Austrian Treaty. In the course of these deliberations the claim was modified on several occasions by the Yugoslav Government. It was rejected from the start as unjustified by the United States, British, and French delegations at these treaty conferences, and ultimately in June 1949 it was rejected by the Soviet delegation as well, following the break in June 1948 between Yugoslavia and the Cominform. Thus the frontier issue no longer is one of the obstacles holding up conclusion of the Austrian settlement. In the interval since 1949 the Yugoslav Government has ceased to press the territorial or reparation claim it had advanced against Austria during 1945-49, and there has been a steady improvement in Austro-Yugoslav relations. In addition to virtual solution of the issue of Austrian nationals held in Yugoslavia as prisoners of war following the conclusion of hostilities, the Austro-Yugoslav frontier has been reopened, and trade and normal diplomatic relations between the two countries have been resumed.

EXIT PERMITS FOR UNITED STATES CITIZENS AND THEIR RELATIVES

In November 1950 the American Embassy at Belgrade gave to the Yugoslav Government a list of about 300 persons having close ties in the United States, who were regarded by this country as American citizens but by Yugoslavia as its nationals. The Yugoslav Government agreed to consider this list favorably. These persons appearing in the list had been trying for a number of years to leave Yugoslavia. Between November 1, 1950, and mid-July 1951 about 250 of these dual nationals and 30 of their non-American relatives left Yugoslavia for the United States. Approximately 30 others whose names were included among the 300 persons discussed with the Yugoslav authorities in November have since indicated to the American consular officers in Yugoslavia that they do not wish to travel to the United States at this time. The applications for exit visas of the remainder are still under review.

In April 1951 the American Embassy submitted to the Yugoslav Government a second list of dual nationals in Yugoslavia desiring to come to the United States but without close ties in this country. As yet only a few of the persons included in this list have been issued exit visas.

The Embassy at Belgrade is reviewing the remaining cases of persons in Yugoslavia claiming American citizenship, with a view to adding their names, if their citizenship is established, to either the list submitted last November of persons with close ties in this country or to the second list submitted in April of persons without such ties. Attention is also being given to facilitating the departure from Yugoslavia of non-American relatives of United States citizens, where it is possible to document these persons for entry into this country. While progress in this regard has been slow, there are indications that the Yugoslav Government is showing increasing awareness of the humanitarian principles involved in permitting families to be reunited.

MINORITY GROUPS IN YUGOSLAVIA

In addition to the major Yugoslav ethnic groups (Serbs, Croats, Slovenes, and Macedonians) who together form approximately 85 percent of the total population, there are a number of minority groups. These groups have lived in the same areas for generations and are well intermingled with the other people around them,

although the largest ethnic minority group, the Albanians, which numbers about 750,000 persons, is also the most compact. Other groups are the Hungarians (500,000), Rumanians and Vlachs (165,000), Czechs and Slovaks (125,000), Italians (80,000), Bulgarians (60,000), Germans (55,000), Ukrainians (35,000), and Russians (20,000). In 1951 the Germans (Volksdeutsche) formed the largest minority but most fled or were expelled during or following World War II. Most of the 10,000-15,000 Jews who survived the war have emigrated to Israel; less than 7,000 remain.

While the present regime manifests considerable concern for the welfare of its minority groups and has accorded some of them a status which they did not previously enjoy, there has been considerable emigration from among particular groups principally the White Russians and Italians, in addition to that by the Jews. After World War I a sizable number of refugees from Russia settled in Yugoslavia, many of whom became Yugoslav nationals. Some collaborated with the Germans during World War II. Following the war the present Government revoked the Yugoslav citizenship of all persons of Russian origin. Some who took Soviet citizenship chose to return to the Soviet Union but most either fled to the west or continued a precarious existence in Yugoslavia. As the result partly of pressures placed upon them after the Yugoslav-Cominform break by the Yugoslav authorities, concerned over the security aspects of the problem, over 2,000 left for the United States-British zone of the Free Territory of Trieste during 1950, and the movement has continued during 1951.

As a consequence of the boundary changes between Italy and Yugoslavia following World War II, the size of the Italian minority was considerably increased. Many Italians moved to Italy from these areas rather than remain under Yugoslav rule. The status of those who remained has been a subject for Italian-Yugoslav negotiation and has been a source of great concern to the Italian authorities, particularly as regards Italians in the Yugoslav zone of the Free Territory of Trieste. Many of the Germans who remained in Yugoslavia after the war are now going to Germany on the basis of arrangements made with the German Federal Government.

CONTROL OVER YUGOSLAV FINANCES

In working out the proposed plan of assistance to Yugoslavia the United States, British, and French Governments have all shown awareness of the need to have such controls as were necessary to make the aid effective. The question is what methods are possible and the most practicable as a means of attaining the desired end. In the administration of the recent food-aid program and of the current raw-materials program we have had the full cooperation of the Yugoslav authorities in regard to the use of the funds granted and the distribution of the commodities sent. They have shown themselves willing to take American advice on financial and other matters. Furthermore, under the existing bilateral agreements covering food and raw materials assistance and under the proposed legislation, provision is made for counterpart funds in Yugoslav currency which can be spent only as agreed between the United States and Yugoslav Governments.

FREEDOM OF EXPRESSION AND ACADEMIC FREEDOM

While the present Yugoslav Government continues to countenance no organized opposition to established governmental policies, and remains a dictatorial regime, there has been a noticeable increase in the readiness of Yugoslav citizens to speak their minds on many issues. The campaign of vilification of the United States, which was pressed so actively only a few years ago, has completely abated, and the great reservoir of good will toward this country which has long existed among the Yugoslav people is now given expression by the official organs of the Government.

The school system of Yugoslavia continues to imbued with a Marxist approach and a considerable portion of the curriculum continues to be devoted to political indoctrination; however, it appears that this country is portrayed in a much more objective manner than was formerly the case. The former school textbooks which glorified the Soviet Union have been discarded, and in many schools the teaching of Russian has been replaced by the teaching of other languages, especially English. The Yugoslav universities and learned societies have shown great interest in American publications, a need which the Department of State is endeavoring to help meet through the information library of the Embassy at Belgrade.

YUGOSLAV VIEWS REGARDING IMPERIALISM

The Yugoslav Government appears to have changed considerably its views of the United States and the role it plays in international affairs today. While the Yugoslav press and authorities formerly followed closely the propaganda line taken by the Soviet Union, after the break with the Cominform and particularly during the last year they have demonstrated a much more objective approach with regard to such matters. They recognize frankly that the imperialistic threats to the peace of the world today do not come from this country, as alleged by the Soviet bloc, but from the Soviet Union itself. They are willing to cooperate with the United States and other free nations in support of the United Nations Charter against Soviet imperialism. This does not mean that the present Yugoslav regime has abandoned the classic Marxist-Leninist dogmas concerning "capitalist imperialism," that it is at no time critical of this country, or that it has been prepared on all occasions to associate itself with the United States; however, it does mean that the United States is no longer depicted as an imperialistic force in world affairs.

OPPOSITION TO THE YUGOSLAV GOVERNMENT

Since Yugoslavia does not have a democratic political system, it is difficult to measure the degree of opposition to the Government. However, there is no significant armed opposition presently existing in this or that area, either on the part of Cominformists or on the part of anti-Communist opponents of the regime. According to our best information, the Government's authority extends throughout the country. Moreover, on the issue of defending Yugoslavia's national independence, the Government's position has widespread popular support.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Chairman, I would like to ask the Secretary what he would think of including Spain under the same title as Yugoslavia.

Mr. PERKINS. I am not quite sure I understand what you mean.

Mr. MANSFIELD. What is your reaction to the possibility of including Spain under the same title in this bill as Yugoslavia? I asked that question because fundamentally the reasons why we would be considering aid to both countries would be the same.

Mr. PERKINS. What part of the act would that be?

Mr. MANSFIELD. There has been no bill introduced that I know of. I understand that Yugoslavia is treated in a separate title under the proposed bill or the bill which will be proposed.

It appears to me that on the basis of the defensive possibilities in both areas, that they might well be considered together.

Mr. PERKINS. I am not clear that that is what was proposed for the act. I think a year ago we all considered that Yugoslavia and Spain came in the same category as a practical matter in connection with the act.

Mr. MANSFIELD. Then I would assume that the answer would be yes, because as I understand it, what we are considering for Yugoslavia this year is not a continuation of famine relief, but the possibility of strengthening Yugoslavia for defense against the satellite countries on its borders.

It would appear to me that on the basis of testimony which this committee heard in Europe, and on the basis of Admiral Sherman's visit this week, that the same consideration should be given to Spain in that respect.

Mr. PERKINS. I think we can well consider that. There is one basic difference, which is that we know what the Yugoslav requirements are and we do not know what the Spanish requirements are.

But, from the point of view of principle, I think it is something we could well consider as to whether the language of the act should not cover and would be broad enough, as I believe it is, to cover both.

Mr. MANSFIELD. Thank you, Mr. Perkins. That is all.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Perkins, we are glad to have you with us again. It is a special pleasure for me.

I would like to ask you whether or not it is a fact that such aid as we give Yugoslavia or Spain, or both, is not straight economic warfare against the Communists?

Mr. PERKINS. I think that is correct.

Mr. JAVITS. And, if so, is it not a fact that each must stand on its own bottom? It may be very desirable to give aid to Yugoslavia because of the tactical or strategic situation, that is, with regard to Communists and our own alliances, and extremely unwise to give aid to Spain.

Mr. PERKINS. Well, certainly each case ought to stand on its own feet. There is no question about that.

Mr. JAVITS. I would like to go further than that. It ought to stand on its own feet because it is economic warfare and there is no question of principle. You do it where it does you good. Is that the way you feel about it in the State Department?

Mr. PERKINS. That is correct.

Mr. JAVITS. Will we do anything or do nothing to indicate, if we do give aid to Spain, that we are thereby undertaking to support the Franco government?

Mr. PERKINS. We have not reached that point in our thinking about the thing as yet.

(Discussion off the record.)

(The following was submitted for the record:)

Question. Are there any GARIOA funds available for Germany from prior or proposed appropriations?

Answer. No. GARIOA funds were last appropriated for the fiscal year 1950. There are no funds appropriated by Congress which are available at the present time from any past GARIOA appropriation.

1. GARIOA stands for "Government and Relief in Occupied Areas." Appropriation requests have been sought by the Army from the Congress for occupied areas under the administration of the Army since 1946. For the fiscal years 1947, 1948, 1949, and 1950 appropriations for Germany were included within the GARIOA appropriation. These appropriations were available for the following purposes:

- (a) Economic assistance to Germany;
- (b) Supporting the public affairs program in Germany;
- (c) Supporting U. S. administrative costs in Germany.

Fiscal year 1950 was the last year for which GARIOA funds were appropriated for Germany. GARIOA funds for Germany, as such, have therefore not been appropriated in fiscal year 1951 and are not being requested for fiscal year 1952. There are no GARIOA funds appropriated by the Congress available at the present time from any past appropriations.

2. In fiscal years 1949 and 1950 economic assistance to Germany was financed by two separate appropriations. Funds for economic aid to Germany were included in the Army GARIOA appropriation on the one hand and in the ECA appropriation on the other. In September 1949, the Federal Government of Germany was established and, at the same time, military government was abolished and the Allied High Commission was created. The former United States element, Office of Military Government for Germany (U. S.)—OMGUS—under the Department of the Army, was replaced by the Office of the High Commissioner for Germany—HICOG—under the Department of State. In accordance with the terms of the fiscal year 1950 GARIOA appropriation act, funds appropriated by the Congress under the GARIOA Act were transferred to the

Department of State and to the ECA. The Department took over the funds for administration and for public affairs, and ECA took over responsibility for funds for economic assistance to Germany. For the fiscal year 1951, the Department of State requested funds from the Congress for the public affairs program in Germany and for administrative expenses in an appropriation known as GOAG (Government in Occupied Areas of Germany). All the economic aid for Germany for the fiscal year 1951 was provided by the Foreign Economic Assistance Act of 1950. For fiscal year 1952 the Department of State has submitted a request for a GOAG appropriation to cover administrative costs and the public affairs program. All the economic aid for Germany is covered by the request contained in the Mutual Security Act. In other words, the split appropriation for economic aid to Germany which occurred in fiscal year 1949 and fiscal year 1950 has been abandoned since the end of military government in Germany. Since then all economic aid for Germany has been consolidated in the ECA appropriation act for fiscal year 1951 and in the current Mutual Security Act.

It should be noted that the special responsibilities which the United States has in Germany, which were supported by the GARIOA appropriation during Military Government, are recognized in section 114 (b) of the ECA Act of 1948, as amended. This authority has been continued in section 2 under title I of the Mutual Security Act. Under this authority, in periods of emergency, funds are available at the discretion of the President for the prevention of disease and unrest in occupied areas of Germany.

3. Economic assistance to Germany since fiscal year 1947 under the above programs has been provided in the following amounts:

Fiscal year	GARIOA	ECA	Total
1947.....	\$243,189,616		\$243,189,616
1948.....	551,766,147		551,766,147

¹ 15-month period Apr. 45 to June 49.

² At the termination of Army administration \$187,167,000 was transferred to ECA to be allotted by ECA during second half of fiscal year 1950. Of this amount \$174,194,000 was expended as GARIOA assistance and is included in the above total. The remainder amounting to \$12,973,000 was removed from this GARIOA account for 1949-50 and transferred to ECA funds for 1950-51.

Source: GARIOA, Mr. Martino, Department of the Army; ECA, Mr. Fishkin, ECA.

Mr. JAVITS. Will you be prepared, or are you prepared to give us a country by country justification, economic and military, or economic alone—whatever you are responsible for—showing the allocation and showing in each case why each country is entitled to the money that you want to see it get?

Mr. PERKINS. Yes. We are prepared to present that information to you.

Mr. JAVITS. When will that be presented, and in what form?

Mr. PERKINS. It is my understanding—and I do not know if this is correct or not—that after we have gone over the four parts of the world and the four titles generally, then the country presentations will be made individually.

I do not know whether that is correct or not.

Chairman RICHARDS. I believe it is.

Mr. JAVITS. Can you give us any statement of principle upon which this program country by country allocation is proposed? In other words, if economic aid is proposed on a balance-of-payments basis, or if military aid is proposed on some other basis, are you responsible for that part of it so that you can state the principle upon which each of these programs has been made?

Mr. PERKINS. I think Mr. Porter would better state it for the economic part, and that General Scott or General Collins, when they are here, would do it on the military.

Mr. JAVITS. Mr. Perkins, I still have a half a minute or so, I think. Does Mr. Porter desire to state it now?

Mr. PORTER. That is what I expect to devote my remarks to later, Mr. Javits.

Chairman RICHARDS. You have a minute or two, but Mr. Porter is going into that very exhaustively. He is the next witness.

Mr. JAVITS. Certainly. If I do have a minute or two, Mr. Perkins, I would like to turn to page 4 of your statement, referring to the very top of the page, in which you say:

Most of these people realize that their standards of living would be lower still if the Soviet stooges should come to power.

Then you go on to say:

* * * it is not easy for people to resist the mirage of Communist promises.

I notice that the main point of your statement is taken up with the fact that the Communists are putting on a terrific drive in Europe for the purpose of winning Europe by intimidation.

Can you specify in executive session just how they are operating, and in what secret or open ways they are operating, more than we get just from the press? Do you people know any more than we get from the press about it, as to just what they are doing in order to intimidate Europe, or to delude or fool Europe in this way?

Mr. PERKINS. They are using, generally speaking, every known means of propaganda that I think anybody has ever thought of, and perhaps a few nobody previously had thought of, but if you want a full statement on that I think it would be preferable to supply that.

(The information requested is as follows:)

COMMUNIST TACTICS IN WESTERN EUROPE

The Communist Party—as the advance guard of Soviet expansionism—seeks to infiltrate every organ of authority or influence in the state. Those it cannot seduce to its purposes it seeks to destroy or immobilize by counter-organization. No group is too small or too remote to feel its hand—trade unions, educational groups, sports clubs, community social organizations, children's groups, women's clubs, professional associations of every type and purpose—all are targets of Communist infiltration and Communist maneuver.

In these drives the Communists operate not only on a basis of infiltration, but on that of intimidation as well. In the Italian trade-unions, for example, it would be a brave man who got up in a CGIL meeting to denounce Stalin and Stalinism, or to maintain that the propaganda of the Communists in the trade-unions was primarily to aid the foreign policy of the U. S. S. R. and only secondarily to aid the workers. Not only in the Communist-dominated CGIL is the threat of the beating ever present; in the opposition CSIL trade-union group there is always a long list of organizers, workers, and leaders beaten up in the past month by Communist goons.

The experience of anti-Stalinist Frenchmen is further evidence of the good squad intimidation methods of the party in Western Europe. When LeCorre broke with the Communist party and attempted to set up a Communist movement independent of Moscow control his first press conference was broken up by Communist hoodlums and he was himself beaten so severely as to require hospitalization. Today meetings of this group in France are harassed by criminal Communist elements as are similar gatherings of like-minded citizens in West Germany.

A type of intimidation less easy to expose is that of the whisperer who lets it be known that it would be wise not to attack communism and Communists lest the Red Army "take care" of the attacker when it "liberates" western Europe. Sometimes it is indicated the prospective victim will be "eliminated" by the local Communists, but often it is frankly stated that when Der Tag arrives he had better be on the good side of the Soviets. One aspect of this type of intimidation may be seen in the advertisements of reputable, obviously non-Communist firms

in Communist newspapers and magazines. While these types of intimidation are of little import in northern Europe, they have considerable effect in France and Italy, where communism has its strongest political parties, and in Germany, where fear of a Soviet attack against an undefended West German area is always present.

In addition, one of the recurrent features of the propaganda techniques employed by all Communist-controlled organizations is the attempt to induce a general reaction of fear and panic against the defensive policies of the non-Communist governments. There are, of course, numerous variations on this theme, but they are all intended to paralyze the popular will to resist Soviet aggression by incessant reminders of the horrors of war, the futility of resistance, and the human and economic sacrifices entailed by rearmament.

The World Federation of Trade Unions, to take one instance, has played the fear theme on every chord that might possibly find sympathetic response among workers. When our program of shipping arms aid was inaugurated last year under the mutual assistance provisions of the North Atlantic Pact, this Communist-controlled international trade union agency quickly brought into play its maritime trade department and its national maritime trade union affiliates in an effort to obstruct, or if possible, halt the unloading of United States arms shipments. In this anti-MDAP drive, the Communists in control of French and Italian dockers' unions found their rank and file members unwilling to follow them in what was obviously an out-and-out attempt to use these unions to promote political interests of the Communists and the foreign policy interests of the U. S. S. R. Communist propaganda therefore made increasing use of the fear device to supplement its other propaganda appeals. Thus, for example, we may glean something of the nature of this play on fear from an anti-MDAP leaflet distributed among the dockers of Naples in the spring of 1950 which barbed its appeal in the following words:

"Also you, ordinary man, woman, mother, father can do what the port workers of France and Italy have done. You can lend a hand to repel from our ports and our shores the curse and the death of foreign arms that hangs over us and our children. Woe to those among us who do not lift away the curse of foreign arms from the heads of our children * * * to remove from our ports the deathly mold of American ships with their cargoes of horror and death. From every port of Italy, babies mutilated in the other war, mothers who have seen their sons fall, peasants, workers, and intellectuals have written to the dock workers and the railway workers tens of thousands of letters and they have sent their delegations to the ports and to the rail centers. They said to the port workers and to the rail workers: 'We know of your hunger and your misery, we know of your unemployment. But don't let your hands touch these cargoes of destruction and of death, which will bring malediction on our homes. We know that your luck is bad, but we will all be at your side, the entire people will be at your side in solidarity, to support your secret resistance against the curse of foreign arms.' Already, in hundreds of factories, and in the pastures, the workers have pledged themselves to support not only morally but with material aid those port workers and those rail workers who are involved most directly in the struggle against the unloading of malediction and death."

Another sample of WFTU propaganda which seeks to implant this psychology of fear by emphasizing the hopelessness of effective resistance is afforded in the following passage in the official organ of that body published last January:

"The facts have demonstrated that moral superiority and the consciousness of a just cause are more important and stronger on the battlefield than supremacy in technical means. It follows from this that the American imperialists, who have powerful technical means at their disposal but who follow a reactionary policy cannot be successful in the military sphere * * *."

"The rulers of the United States have lost all sense of reality and are dragging the whole world into a new world war. American politicians are behaving like neurotics and anti-Communist maniacs and not like statesmen who are capable of solving coolly and thoughtfully problems on which the destiny of the world depends."

"Consequently, these maniacs are becoming isolated in the world: Truman's government is becoming isolated in its own country, the United States is becoming isolated from its allies and satellites and from the millions upon millions of working people of all countries."

The technique of intimidation is not confined, however, to popular sentiment against war. Communist trade-union propaganda is equally replete with warnings to workers that our ECA aid to Europe entails a steady decline in their standard

of living and the prospect of a future collapse of the economic system of Western Europe, and with it their chances of a steady livelihood. Characteristic of this political exploitation of the European workers' sense of economic insecurity is a statement by the leader of the Communist-controlled French General Confederation of Labor:

"* * * the facts tell all Frenchmen that the few hundred milliard francs given through the Marshall plan went into other wallets than the lean purses of the housewives, which grow thinner and thinner as the results of the Marshall plan (sic) become more and more evident.

"Everyone sees, everyone except for a few cosmopolitan capitalists, who always save their own bacon, that this plan of 'aid' for French economy has in fact led to the decay of our national economy."

But oblique threats of military defeat or warnings of economic collapse do not exhaust the Communist armory of fear propaganda. Hints and indirect themes of intimidation have also been supplemented by propaganda which seeks to inspire a psychology of outright terror at the prospect of the physical destruction of Western Europe and thus to undermine the willingness of the populations to support the defensive policies of their governments. In this the Partisans of Peace, with their Stockholm appeal and other spurious "peace" campaigns have proved to be veritable specialists in injecting the terror note into their propaganda. One may see this in all its directness in an article which appeared in their organ, *In Defense of Peace* (November 1950), in which the English reader is pointedly reminded that:

"* * * the transformation of Great Britain into an air and naval base directed against the U. S. S. R.—which has nothing in common with defending English soil—exposes us to the danger of Russian attack. As a soldier I can well imagine that Russia would feel obliged to reduce England to annihilation the day a third war broke out * * *

"* * * the idea of sending our troops to Europe is quite ridiculous. If there were a Russian sweep—which I think highly improbable—there would be no chance of stopping it * * *

The same theme was again piled by Dr. Hewlett Johnson, a perennial spokesman at the "peace" gatherings, on the occasion of the first session of the World Peace Council last February.

"The prospect is grim. The U. S. A., from her safety zone across the Atlantic, will hurl atom bombs on Russian cities. Russian troops will answer the attack. Our men of Europe—English, French, Germans, and Italians—will receive the assault. We English, they tell us, knew how to take the bomb in World War II and we shall know how to take the atom bomb in world war III. And even if all Europe is overrun, the U. S. A. will ultimately liberate us, as in Korea, by razing every city and village to the ground.

"My countrymen dislike the prospect. They dislike its present demands for impoverished living. They dislike its threat to their wives and children and fatherland; they dislike it because it has shed every moral pretext in the name of which it has been planned."

Similarly, for women the various agencies of Communist propaganda, particularly the Women's International Democratic Federation, have had recourse to a set of fear themes especially designed to appeal to the special interests of women in their role as mothers and wives. Thus it has constantly been emphasized that the policies of the United States are designed to precipitate a war with Russia, preparations for which would undermine the educational opportunities and the health of their children, and the outbreak of which would mean mass slaughter of the infant population of the world. The latter point has been enormously exploited after the outbreak of the war in Korea when appeals and articles have been put into mass circulation, charging that American airplanes are killing thousands of children and concluding on a note that—

"We do not want our children to condemn us later on. Now is the time for each one of us, each mother, to ask herself: 'What have I myself done personally to defend peace?'"

It is thus quite apparent that the psychology of fear and intimidation constitutes one of the principal props of mass propaganda, being carried on by the various agencies of the Communist movement in Europe. It is impossible within brief compass to detail all its manifestations, but enough has been said above to indicate that it is coming to occupy an increasingly important role in the propaganda output of European Communists. Even a close reading of the press in this country fails to convey a full appreciation of its extent and intensity, and of the energy and careful planning invested in its purveyance.

Mr. JAVITS. Do you know anything as to whether they are suborning the heads of governments? That is something we ought to know if there is any such information.

Mr. PERKINS. There is no such information I know of.

Mr. JAVITS. Or suborning the heads of armies or navies or industrial establishments?

Mr. PERKINS. No.

Mr. JAVITS. The heads of labor unions?

Mr. PERKINS. The heads of labor unions, some of them are Communists. There is no question about that.

Mr. JAVITS. What I am trying to get at, Mr. Chairman, if I may be permitted to, is where are the sensitive areas in high places which we would not read about or get in open session? I think that is what Mr. Ribicoff had in mind, and I sympathize with him. This is executive session.

If you have any inside information, let us know it, or if you do not, let us know negatively that you do not, but let us know what the score is, at any rate.

Chairman RICHARDS. Your time has expired.

Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman.

Mr. Secretary, the same arguments can be applied against Tito to a greater degree than against Franco. Is that correct?

Mr. PERKINS. I think, generally speaking, that is correct. Yes.

Mrs. KELLY. You said we are going to recognize Tito and the Tito government.

Mr. PERKINS. We also recognized the Franco government too, of course. In fact, we have never unrecognized it.

Mrs. KELLY. Our Ambassador was recalled from Spain for years—which is diplomatic disapproval of a regime. However, I feel by giving assistance that we are supporting the regime, and I think something ought to be done to make the peoples of those countries realize it is expedient for us to do it at this time and not because we are in agreement with the regime.

I now refer to page 4—the first paragraph on that page, you say:

Even those who actually don't want the Communists to gain control of the government sometimes vote Communist as the only emphatic method of registering a violent protest against existing social conditions.

That applies to colonial administration, particularly in Asia.

The estimated obligation assistance to France is very high, both military and economic, and on another page here I see where the estimated obligations to Indochina are military and economic.

Could you tell me if you are going to give that assistance to Indochina directly to the regime set up by the French Government, which the Vietnamese object to?

Mr. PERKINS. I think Mr. Rusk, when he is here, who is responsible for that area, can give you a better answer on that than I could.

Mrs. KELLY. It is not estimated for the French Government, but estimated for Indochina.

Mr. PERKINS. My understanding is that there is an interrelationship between both the French Government and the local governments, but I think Mr. Rusk can describe that for you much more accurately than I can.

Mrs. KELLY. Thank you.

Mr. ROOSEVELT. Will the gentlelady yield?

Mrs. KELLY. I yield.

Mr. ROOSEVELT. Mr. Porter, I think you can answer this. When Mr. Foster was here he told us they expected to sign the ECA agreements with those three dominion status countries—Cambodia, Laos, Vietnam—the end of last week or the beginning of this week. Now I understand the French have reneged on their former agreement and there is considerable throwing of monkey wrenches in the works, and the situation has bogged down completely. That is not because of the Vietnamese at all, but because of the French going back on their original program of independence, and so forth. Is that correct?

Mr. PORTER. The French have created difficulty in the signing of these agreements by insisting that before the agreements were signed they must have the approval of the High Council of the French Union which, however, is not yet functioning actively. So the French have agreed that the President of France may give approval instead.

Mr. ROOSEVELT. That was the situation 2 weeks ago.

Mr. PORTER. Ten days ago. Yes. The agreements as of yesterday had not yet been signed, but it appeared that they were about ready for signature.

Mr. ROOSEVELT. That is the long and short of this disagreement with the French?

Mr. PORTER. I did not understand that.

Mr. ROOSEVELT. Is that the long and short of this disagreement with the French?

Mr. PORTER. Yes. The French have raised no objection in substance. It has been purely a matter of form.

Mr. ROOSEVELT. Thank you, Mr. Chairman.

Chairman RICHARDS. Your time expired, and the gentlewoman's time expired.

Mr. HERTER, they are on the R's or the S's now, so you will have plenty of time to get your questions in before you go down.

Mr. HERTER. I have a question in connection with General Eisenhower's status in Europe. When he made a speech the other day in London it was a pretty strong speech in relation to the integration and political unity of Europe. Was he speaking then as an individual who was selected as Supreme Commander, or was he Commander in Chief of the American Forces, and so was what he said subject to the approval of the State Department before he said it?

Mr. PERKINS. I think he was speaking as an individual. Not that we in any sense disagreed with him.

Mr. HERTER. Does he not come under the general provision of not being able to say anything unless it has been cleared with the Government first?

Mr. PERKINS. He may have cleared it. I do not know.

Mr. HERTER. His status, since he is wearing two hats there, is a very confusing one. I want to find out when he does make a speech how we should interpret it, and as to whether it is the policy of the United States Government, or what it is.

Mr. PERKINS. He is an international servant, so to that extent he has a status that is quite different.

Mr. HERTER. He has both. It is a matter of which hat he is talking under.

Mr. PERKINS. Yes.

Mr. VORYS. Will the gentleman yield on that point?

General Bradley pointed out the other day that for NATO President Truman is not the Commander in Chief. Eisenhower was personally chosen. Is that not correct?

Mr. HERTER. That is right. It was in a letter of appointment of the President. He appointed him as Commander in Chief, and the chain of command remains the same as far as the American troops are concerned. Then he gave him the other hat. So I wondered what his status was. It is a very confusing one.

The other question is a very brief one. I understand that in terms of the present time there is a considerable amount of surplus for some industrial facilities.

Chairman RICHARDS. Will you allow us to suspend now? They are standing in the well now.

The committee stands in recess for 10 minutes.

(Whereupon, at 11:30 a. m. the committee recessed for 10 minutes, until 11:40 a. m. of the same day.)

Chairman RICHARDS. The committee will come to order, please.

Before resuming the questioning of the witnesses, the clerk wants to make a statement about some documents he has placed here.

Mr. CRAWFORD. We just placed before each member of the committee some papers entitled, "European Economic Aid Estimates, Fiscal Years 1951 and 1952." They have been furnished by Mr. Paul Porter. You will notice they are marked secret. They are particularly anxious to keep the military strength and the military estimates as confidential as possible.

Chairman RICHARDS. Mr. Carnahan, will you take the chair for a minute, please?

Mr. PERKINS. Mr. Chairman, might I make a correction first?

Chairman RICHARDS. Yes. Go ahead.

Mr. PERKINS. I think when I indicated the plan was to take up the country programs after the four regions or four titles had been presented, I was in error. I think the plan was we were ready to present the country's figures as soon as Mr. Porter and General Collins had finished their general statements about the principles involved.

Chairman RICHARDS. I think that will be satisfactory.

Mr. PERKINS. So we are prepared to do that.

Mr. CARNAHAN. Mr. Herter, you may proceed. You still have some time.

Mr. HERTER. When we broke up I had one question I wanted to ask in connection with the German situation. I understood—and perhaps incorrectly so—that the High Commissioner in Germany feels there is considerable productive power in Germany that might be utilized in connection with the joint production program on military items, and that today there is no adequate machinery to explore that thoroughly.

There is an awful time lag and drag in getting that done. I wondered whether you had any political objections to the German workshop, so to speak, being utilized more extensively from the point of view of the joint military effort, forgetting for the moment any contribution of men.

Mr. PERKINS. We have no political objection to that. It is a very complicated thing to work, and it is being worked on. I think some

items are now actually being produced, but I do not think the volume amounts to very much as yet.

Mr. HERTER. That had been dragging quite a lot, though.

Mr. PERKINS. Yes.

Mr. HERTER. From the point of view of getting all the military effort in Europe underway.

Mr. PERKINS. That is correct.

Mr. HERTER. When you say it is being worked on, would you want to be a little more explicit. I have been trying to find in all of these different titles, or somewhere in the draft bill, funds that might be made available, that is, dollar funds that might be made available for a joint effort to get them into a pool or something of that kind, if a pool is being worked out, I presume if you are buying arms in Germany and assigning them to the armed forces of the other nations, the problem of who is going to pay is going to come up somewhere, and we are likely to pick up the check.

Mr. PERKINS. That is one of the real problems and one of the difficulties, to get the pool of some of the countries to place orders in Germany on some sort of a basis which would permit German industry to go ahead. The DPB has been very much concerned with that whole problem, and there is a committee considering it here in Washington today, I think right now. We are hopeful ways and means will be found to expedite substantially not only procurement in Germany, but joint procurement elsewhere.

Mr. HERTER. The Belgian problem is of a somewhat similar nature.

Mr. PERKINS. Yes, because that is one of the most difficult things in Europe, to get joint procurement, which provides for a larger production, and increased efficiency, and lower costs. That is one of the important things that has to be still worked out, and it is being studied and worked on very earnestly. We are hopeful steps can be taken that can produce results in the not too distant future.

Mr. HERTER. There again what of your utilization of funds are available? Can ECA funds be used for that purpose, assuming that the appropriation went through in the form in which it was presented to us? Would you require new appropriations, or would it come out of the military aid or offshore procurement expenditures, or what?

Mr. PERKINS. I think it is a little difficult to predict exactly what the form would be. For that reason it is important, as has already been indicated, that there should be substantial flexibility in this legislation, so that if we do really work things out, we can use the funds to the best advantage.

I think there are two general principles that perhaps I am safe in putting forward. That is, that the transfer of procurement by Europeans to procurement by the United States does not accomplish anything. Your saving and your advantages will arise when we begin transferring procurement from the United States to Europe. If we can achieve that, then I think there are probably some savings to be achieved that are substantial. But if we simply substitute dollar procurement for franc procurement, I think we get no place.

Mr. HERTER. That, sir, is a very important point, because dollar procurement exchanged for franc procurement certainly puts dollars within the country, and the balance of payments is helped considerably by that. Obviously, it is an entirely different thing for the French to put francs into an arms program, which is then turned over to their

own troops, or to have the dollars to do the same thing and turn them over to the troops. They have the dollars, and having them, it is much more advantageous to them from the point of view of a balance of payments program than having francs.

Mr. PERKINS. There are two points about that. In the first place, you presumably get no more procurement.

Mr. HERTER. That I think is something that ought to be developed, as to whether you get no more procurement or not.

Mr. PERKINS. Because you get no more francs into the French Government with which they can procure. What you do is shift the dollars from the economic aid which we have been giving, and for which we get some counterpart, and have some say in the disposition of the counterpart, to a straight procurement. I do not think anybody contemplated we would procure and give the European countries through procurement more dollars than they would get as dollars. So, you have a bearing on the number of dollars you can give in the country anyway for procurement.

Chairman RICHARDS. The time of the gentleman has expired. You may continue with it later.

Mr. Burleson.

Mr. BURLESON. No questions.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. No questions.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. Mr. Herter, we are off the 5-minute rule now. If you want to pursue that question, you can do it right now.

Mr. HERTER. I would like to for just a moment.

Chairman RICHARDS. We have finished with the 5-minute rule.

Mr. HERTER. The practical situation, as it exists today, is that the military are actually placing orders today for a great many different things in a great many different countries, first of all, for the ordinary needs of our soldiers over there. A lot of them you will find are taken care of by purchases within the countries where they are stationed. In addition to that I am told by General Scott a number of contracts have been placed by the military, as orders for bazookas and what not, for which dollar payments will be made.

The whole purpose of this program, as I understand it, is to get Europe in a position as soon as possible where, through its own productivity and own manpower it can defend itself, and in a sense where it is sufficient in power to hold up, except for some particularly tough situation. In that process if you are entirely dependent on the letting of French contracts from French budgeted funds for military items, the program may be slowed down considerably, or it might be speeded up, contrariwise, if a certain amount of dollars are used in placing the contracts by ECA or military channels, it does not matter which.

The speeding up of the British, or the French, or the Italian armament production might move a great deal faster if you would entirely divorce our budgetary items from the Government itself.

Mr. PERKINS. You would still be related to the budgetary items of the Government itself.

Mr. HERTER. Why are you related to that? If we place orders and pay dollars for them, that would have nothing to do with the budget of the Government itself. That might relieve the budget a little bit.

Mr. PERKINS. It has this to do with the budget of the Government itself. There is no counterpart for the dollars placed in that way, which means a reduction in the amount of local currency which the country has to use in its defense effort. Therefore it has to make a readjustment in its defense program to allow for the procurement which we are making by dollars.

You can work that out and it may be that you could get contracts placed more rapidly that way, and it might be that you could not do it and you might upset the procedure rather than speeding it up. But, the net effect would be, I think, that we would lose our say in the disposition of the counterpart which we now have.

Mr. HERTER. There is no question about that, but assuming there is an over-all limit to what they can produce from their point of view, and let us assume in their budget they have made provision to place orders in France to take care of that total limit of productivity. Then, from an economic point of view it seems to me it makes very little difference whether or not the thing is paid for in francs and we pay for the raw materials in counterpart funds if they are sold to the Government in francs, and then turn it back to relieve the budget; or whether, in the first instance, we pay dollars for the finished item, and their budget is relieved of that amount, so that they can turn their francs that would have gone for that production to something else. That is, except in a sense ECA loses part of its control over counterpart funds, which I can understand they want.

Mr. PERKINS. I think that is basically correct. The two things you have to consider are the lack of control of the counterpart, or lack of counterpart funds which you would control or have some say in.

The other is whether in starting a procedure of that kind, which would have to be integrated with our present procedures, whatever those are, you so upset the machine that you let less contracts, rather than more.

You might let more and get the thing moving, but you also have the risk inasmuch as they have their plans all developed on their own budgets with the counterpart they estimated is coming into those budgets, you do run the risk of getting the thing confused to a point where you might let less rather than more.

Mr. HERTER. You are a little optimistic, I think, when you say they have a plan all developed. I am talking about the French budgetary system, where there are a number of things from a legal point of view that have not yet been done, so I do not think there is anybody who could say there are plans that could be upset.

Mr. PERKINS. I think the use of the word "all" is a little extreme, but whatever they have done has been done on that basis, and I think you will find a great deal of it has been done.

However, whatever you do that dislocates whatever they have done, causes that much confusion.

Mr. HERTER. I can fully appreciate the disadvantages of the disincentives when you begin putting American dollars for production where you think local currency and the local production can take care of it. On the other hand, getting things moving seems to me one of the most important things, and there any method that will get it moving seems to be what we want now.

What I was wondering about in connection with any appropriation here is whether there is sufficient flexibility from that point of view,

and whether the military ought to be given definite authority for off-shore procurement that they would work out with the ECA when it was considered desirable that an order ought to be placed.

Mr. PERKINS. I should think that was correct. Also, we ought to allow sufficient flexibility so that if a central purchasing agency can be set up and it proves desirable for us to contribute to that central purchasing agency with proper safeguards as to the way our money would be disbursed, that that ought to be also included. It is very important to have that kind of flexibility, because I think the chances of getting a real advantage in this suggestion you are making is in being able to work through some central agency that we conceivably could arrange to give some power to, to negotiate and consolidate and place contracts.

Mr. HERTER. There I would assume when foreign contracts are being placed that neither the State Department nor ECA has done the job and you may find the military placed the contracts direct through their military missions, and it is not being done through the political or economic agencies, but being done direct by the military.

Mr. PERKINS. Is General Scott here?

Mr. PORTER. No.

Mr. PERKINS. I think most of what the military has been doing is what we used to think of when I was in the Army as local procurement. If you were in a theater you bought as much as you could of what was produced there.

Mr. HERTER. I thought the same thing, but General Scott said they were procuring for the military program as well, and he is placing the orders and letting the bids.

Chairman RICHARDS. Are there any other questions?

Mr. JUDD. Yes, Mr. Chairman.

Chairman RICHARDS. Mr. Judd.

(Discussion off the record.)

Mr. JUDD. To come back to Yugoslavia, in the law, as we passed it last December, there was an amendment that the President was to require that Yugoslavia undertake to take all appropriate economic measures to reduce its relief needs, to encourage increased production and distribution of foodstuff within Yugoslavia, and to lessen the probability of such emergencies. We were trying to insist that Tito moderate his land collectivization measures, and so forth, which were discouraging production and thereby increasing the burden on us.

Has there been some moderation of his policies in that respect?

Mr. PERKINS. Yes. Very drastically. They very drastically modified their collectivization program. I think I am correct in saying this, that they completely halted it, or in some instances may be going backward and turning loose some of the collective farms into private management.

Mr. JUDD. Have your representatives over there reported that there is greater incentive for farmers to produce the maximum amount of food, or is it too early to tell yet?

Mr. PERKINS. I think it is too early to notice any marked change from that point of view.

Mr. JUDD. One other short question. On the bottom of page 2 of your statement, is what you say about General Eisenhower's status and appointment correct? You say the Europeans were encouraged among other things by America's "designation of General Eisenhower

as supreme commander." Is it not true that NATO chose him, rather than that we designated him?

Mr. PERKINS. The technicalities of the thing I think were this. They asked us to designate a commander for the armies in Europe. They also suggested it would be very acceptable to them if General Eisenhower were the one designated. I think I am right in that.

Mr. JUDD. He is appointed supreme commander by the President and not by the Council of Deputies or the Military Standing Committee?

Mr. PERKINS. They confirmed his appointment after he was appointed.

Mr. HERTER. I had a copy of the letter of appointment of General Eisenhower. It is my understanding that the Council of Deputies indicated to the President that if the President appointed Eisenhower, he, as an individual, would be acceptable as supreme commander.

Mr. PERKINS. That is correct. What actually happened was this: We had a meeting in Brussels last December, and the Foreign Ministers and Defense Ministers were there. They passed a resolution asking the President to designate a commander, and they said they hoped it was General Eisenhower.

Mr. HERTER. But they did not give the President any alternative to appoint anyone else.

Mr. PERKINS. Yes; they did. They simply said they hoped the designee would be General Eisenhower.

Mr. HERTER. All the records are top secret coming to the point of the President's letter of appointment, so we do not know what the background is.

Mr. PERKINS. I think I am right in this. While the meeting was still in session, the President replied he was designating Eisenhower, and the Foreign Ministers and Defense Ministers all signed a paper approving his appointment.

Mr. JUDD. That is all right, but I thought your statement might well be changed to read "America's willingness to have General Eisenhower appointed as supreme commander", because we ought to try to avoid the impression the United States is designating Eisenhower as it designates someone else.

Mr. PERKINS. I think that was a very good suggestion and I think it improves it.

Mr. JUDD. Thank you.

Chairman RICHARDS. Are there any other questions?

Mr. ROOSEVELT. Yes, Mr. Chairman.

Chairman RICHARDS. You wanted to pursue a matter you had in mind a little while ago, Mr. Roosevelt.

Mr. ROOSEVELT. Yes, sir; on Yugoslavia.

Has Yugoslavia been brought into any of the economic integration of Western Europe?

Mr. PERKINS. You mean any of the organizations?

Mr. ROOSEVELT. Yes.

Mr. PERKINS. No; it has not.

Mr. ROOSEVELT. Is there any possibility that as things go along Yugoslavia will be brought in? I ask that because I think it is quite important if we hope to wean away any of the satellite nations who begin to see the economic advantages of being tied to Western Europe rather than Russia it is important that they feel there is an

opportunity, if they pull a Tito, to break into the league. I was wondering whether the OEEC, or any of the other organizations that have been set up, have discussed this point at all or have any program on it?

Mr. PERKINS. Paul, has it been discussed in any of the organizations?

Mr. PORTER. It has been discussed informally, but not formally.

Mr. ROOSEVELT. Maybe Mr. Porter can explain it.

Mr. PERKINS. I was asking Mr. Porter about it. My recollection was it has not been discussed formally in any of the organizations. I believe that is correct. But it has been discussed informally among some of the members of the OEEC and EPU.

Mr. PORTER. That is right.

Mr. ROOSEVELT. Do they seem to feel this is a good road to pursue? (Discussion off the record.)

Mr. ROOSEVELT. I suppose any question dealing with the military integration or relationship with Yugoslavia should be held for General Scott. Is that correct, Mr. Chairman? Or maybe I can ask Mr. Perkins this.

Have we any military commitments to Yugoslavia as of this time to go to their support in case they are attacked by any of the Russian satellites or Russia and the satellites?

Mr. PERKINS. We have no commitments.

Mr. ROOSEVELT. No commitments?

Mr. PERKINS. No.

Mr. ROOSEVELT. Is there any staff coordination between the NATO group and Yugoslavia, or between our own Joint Chiefs and Yugoslavia's General Staff?

Mr. PERKINS. I think General Collins can answer that more authoritatively than I can. I think I know the answer, but I think it would be better for you to get it from him.

Mr. ROOSEVELT. To go back to Spain for a minute in this problem of a loan versus ECA-type aid, could you give us—and this would probably be Mr. Porter—the procedure by which applications are made by individual Spanish citizen-applicants for participation in the \$62½ millions, excluding the \$6,000,000 that was permitted for wheat or food grants? How does an individual Spanish company go about getting in on this pie?

Mr. PORTER. Do you want me to answer that?

Mr. PERKINS. Yes.

Mr. PORTER. The procedure is that any particular Spanish company that wants to apply for a loan first raises the matter with the Spanish Government and gets the endorsement of the Spanish Government for the application.

Mr. ROOSEVELT. At that point, that is the key to this whole thing, as I see it. Whom do they take it up with in the Spanish Government first? The Interior Minister?

Mr. PORTER. I believe it is the Ministry of Commerce and Industry.

Mr. ROOSEVELT. Commerce and Industry?

Mr. PORTER. Yes.

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Mr. ROOSEVELT. Then, Mr. Porter, when the Ministry of Commerce and Industry has approved one of these applications internally

within the Spanish Government, it goes to the Foreign Minister for transmittal to the ECA or the Export-Import Bank?

Mr. PORTER. To the Export-Import Bank directly; but we receive an information copy.

Mr. ROOSEVELT. I see.

Mr. PORTER. We then review the action taken by the Export-Import Bank, and in every instance thus far we have approved the loan which they proposed to make.

Mr. ROOSEVELT. Now, does the Export-Import Bank have somebody in Spain observing the processing of those applications within the Spanish Government and looking at the project at first-hand before it comes over here?

Mr. PORTER. No; they do not. Most of the loan applications which have been received up until about 60 days ago were for commodities like wheat and cotton. I think the bank properly felt for those kinds of loans they did not need anyone in Spain to make any on-the-spot investigation.

(Discussion off the record.)

Mr. PORTER. I should say up until the last 60 days there had not been the kind of loan applications that required an on-the-spot inquiry.

Mr. ROOSEVELT. Have these applications for commodities such as food been direct shipments to the Spanish Government, or Spanish importers of these commodities?

Mr. PORTER. In the case of wheat the Spanish Government itself has acted as the procuring agency. In the case of cotton, if my recollection is correct, private importers have imported the cotton, but the Spanish Government has assumed the responsibility for repayment.

Mr. ROOSEVELT. That is very helpful, Mr. Chairman. Now, my next field of questioning is on this whole organizational problem again.

We heard very eloquently from Mr. Hoffman and Mr. Rockefeller yesterday. Mr. Cabot seemed to dodge behind the general recommendation that things were going well now, so "why monkey with the works?" Secretary Acheson mentioned two or three other proposals that have been made.

Have you any opinions, Mr. Perkins, as to how this program could most effectively be administered?

Mr. PERKINS. I think the thing that we have to start out by recognizing is that in this kind of a program it affects a great many agencies of the Government. I think I understand that was brought out quite thoroughly by Mr. Rockefeller yesterday afternoon. Having had some experience in trying to run businesses and other things, I think you have to recognize when you get beyond a certain size that you run into administrative difficulties, no matter how you set up the administration. Size, per se, is the thing that you have to cope with and grapple with. You generally have to wind up with some kind of a coordinating system.

Your coordination at the top in large and complicated situations is seldom adequate because the top people have simply not got the time or ability to know really what is going on in the various fields where decisions have to be reached, and even in smaller situations, in the United States Government, I have called together people who were in charge of respective departments and we could not reach a decision. They would never actually know what the details were in the particular problem before them.

So one of the important things is that you have to recognize the fact that you do have to establish positive coordination and must use coordination agencies and people to carry these things through. Only the most critical policy questions ever do or ever should come up to the top.

I think that is generally the theory of the creation of Mr. Cabot's committee, ISAC, and the setting up of that in that way. Personally I agree with that theory. I think that is the right way to do it. I think you are going to have to do that, no matter what else you do. I think it is the kind of a situation where that is going to be essential, because you have certain specific elements in this situation which you cannot put together in one place, and even if you did you would still have to coordinate them because they would still be big and complicated problems.

So I think my personal feeling is that the way we are operating now is not a bad way of operating. That does not mean it cannot be improved and if it can be, of course, it should be.

We ought to be careful in making any drastic changes until they have been carefully worked through, and we are certain that an improvement will result rather than further confusion and delay in the program. I can well imagine that there may be better ways of setting up the over-all situation, but I can also well imagine that if that were done without careful thought and careful preparation, we might have a let-down in our ability to act in the United States for a period of 3 or 4 months while some new agency was getting set up or organized, and that that might be very serious from the point of view of the over-all program.

Mr. JUDD. Will the gentleman yield for one short question?

Mr. ROOSEVELT. Yes; I yield.

Mr. JUDD. You can have this off the record, if you prefer, but have you in the political departments felt that ECA, because it is handing out millions of dollars, was having more influence in the countries involved than the ambassador? This is the old question of whether there are two voices for America.

Mr. PERKINS. I do not think we need to put that off the record. I do not think that is correct, that there has been any evidence that the head of the ECA mission has in any way established a position of more prestige than the ambassador.

Of course, it is extremely important that in the field in particular the United States be represented with one policy. We do not have any divergent elements representing the United States going off in different directions.

There will be some instances, of course, and it would be bound to be so, where there have been a few things which happened which it would have been better not to have happened, but generally speaking, I think the relationship has been extremely satisfactory.

Mr. ROOSEVELT. Now, the major point made by Mr. Hoffman and Mr. Foster was that they were operators and that their agency was an operating agency and that policy questions were to remain in the State Department or in the other permanent departments, where policy was made on a Cabinet level.

Now, that sounds good to me, but when I begin trying to analyze it in individual cases I get rather confused. For example, if we followed Mr. Hoffman's and Mr. Rockefeller's and perhaps Mr. Foster's ideas

and set up this super-duper economic aid agency, we might come to a question of whether the economic aid should be directed into military production or into civilian production. That would be a question which would vitally affect the ability of that government to remain stable politically. With a drop in the standard of living, communism might infiltrate and take over.

Now, although that is an economic policy question and, therefore, might be reserved by the supereconomic operating agency, it still fundamentally involves a political question, and in my judgment the best people able to determine the political effect on the stability of the government would be the State Department.

What is a definition of where policy stops and where operations begin? That is really the key, as I see it, to this whole question.

Mr. PERKINS. That is a very difficult question and it is very hard to make policy judgments or to make operating judgments without being pretty well familiar with what is going on at either end of the problem.

Mr. ROOSEVELT. Can I ask you there, what is the difference between an operating judgment and a policy judgment? You just used those two phrases. That is why we are confused.

Mr. PERKINS. Well, operating judgment would basically be, when, where and how do you do a particular thing, I should think. When you get into a question of what kind of a program to have, like the question you stated of should you throw your support to the economic end or the military end, I think that is definitely a policy question, and I think everybody would recognize it.

What I was trying to indicate was that unless you worked closely together on these matters, you are not conscious of when you are running into a policy question when you are operating, nor are you conscious of when you are running into an operating question when you are trying to form policy.

So the questions have to be very closely correlated, and I think that can be done.

I think this is true of the people as a whole. We know pretty much what ECA is doing, and they know pretty much what we are doing, and our people are in contact daily on a terrific variety of matters. I think sometimes they think we raise policy questions when we should not, and I think that sometimes we think they do operating things when they should not do it; but at least we know what the other is doing and have an opportunity to discuss it and straighten it out.

Mr. ROOSEVELT. Mr. Perkins, you have very clearly stated the really basic need of complete coordination between the State Department and any operating economic-aid agency. In a set-up whereby a new operating agency was directly placed under the policy supervision of the Secretary of State, and perhaps reserving the right of the Administrator of the operating agency to take any basic dispute to the President, would that facilitate this coordination?

Mr. PERKINS. I am afraid I do not have any very good judgment on that. It might and it might not. I think one of the things that we should remember is that the State Department has not been set up basically as an operating agency. If you were going to give it supervision of an operating agency, which means putting it in the operating business, it would need a rethinking a little bit as to what the State Department was and what it should do, and how it should be organized. It might be helpful and it might not.

Unless the thing were very carefully worked out, I would hate to try to give an opinion on that.

Mr. ROOSEVELT. I think there is one other factor here that many of us feel one of the reasons for the success of the ECA was because of the kudos and the stature of the Administrator within the Government. He was on a Cabinet level and, of course, the personal abilities of both Mr. Hoffman and Mr. Foster, as well as Mr. Harriman, and later on Milton Katz, were responsible for it too.

One of the questions I brought up with Mr. Cabot was that perhaps he was not given enough kudos. I think it was Mr. Judd who asked him whether he could go directly to the Prime Minister of France on a given problem. He said "No." There was not any real need to because the Ambassador would do it.

The reason I made this suggestion was to take care of this need of stature and kudos there should be the creation of an independent operating agency, but subservient to the Secretary of State, as far as all policy questions are concerned. It would help the Congress then to put its finger directly on the responsible officials for the program.

Mr. PERKINS. As I basically understand the situation, that is the way we now operate. ECA does or is guided by the State Department on policy. If they think there is something wrong that is going to interfere with their objectives, they have a right to take it to the President, and they would so do if they felt they should.

You are perfectly right on the question of kudos in this situation. It is right from another point of view, and that is your ability to recruit the kind of people you want to get into this kind of job. That is very important. It is becoming increasingly difficult with the large number of people at relatively high levels in the Government to get an outstanding man to come in and make him feel he is going to have an outstanding job.

So that anything we can do from that point of view is also useful to enable us to recruit people of capacity and stature.

Mr. ROOSEVELT. One last question on this line, Mr. Perkins. It is my hunch this committee is going to favor in general the setting up of a new independent agency, and will do it in this bill. I think that is fine, provided we fully understand the implications and surround this new agency with enough safeguards to prevent it from ultimately becoming a superduper agency which could conceivably take over the State Department, and even the Defense Department. I say that somewhat facetiously, but if you think it through it becomes an absolute possibility.

I think that we have to start thinking here in this committee, and that is why I am asking you for this guidance, because you have been in both the agencies, as to the kind of safeguards we can set up to prevent this agency from becoming, because of its tremendous economic power, a policy agency in itself, or a molder of policy in itself. I think that is a very key question in this whole organizational problem.

Mr. VORYS. Will the gentleman yield?

Mrs. BOLTON. Will the gentleman yield? Is your question on that subject, Mr. Vorys?

Mr. VORYS. Yes.

Mrs. BOLTON. Go on with your question on that subject. I have another one.

Mr. VORYS. On that subject, I think we make a mistake by assuming that everyone agrees with the glowing reports of success that ECA and the State Department give themselves on this military and economic program. If there has been no conflict, and if everything has gone smoothly among the Americans in these countries, but if the total net result is that while recovery--the thing each country can do for itself--has proceeded beyond our expectations, yet integration and unification, both military and economic, has fallen far below the expectations and hopes of everybody, including these agencies, then that is not necessarily a situation which could be described as successful. If all the military, the State Department, and ECA people say, "We are just a sweet, happy family in every country, but we have not gotten the results Congress expected or we wanted after pouring out billions of dollars," then that does not necessarily wind up with the view that we ought to leave the organization as is. It may point to a necessity for doing something different from the way we have been doing it.

You can consider that as a question or a comment, Mr. Perkins.

Chairman RICHARDS. I have one thought on that. Mr. Perkins, you, of course, agree that ECA is an independent agency?

Mr. PERKINS. Yes.

Chairman RICHARDS. All right. You testified, and other witnesses have testified, that nevertheless there has been no real conflict that could not be solved between the desire of the agency and foreign policy itself. If that be true, then what is the great danger in setting up a new agency with an enlarged scope on the basis that it will have no conflict on the matter of policy and being assured of putting the right man at the head of it?

Mr. PERKINS. I think it can be done. The caveat I was trying to throw up was that if you make too many changes in doing it you may confuse the situation to a point where we would no longer operate effectively for a while. I think undoubtedly it could be straightened out. Continuing the ECA or giving it a different name and perhaps slightly changing its power, if you will, I think would present no difficulties, but I just do not know.

The thing that worries me a little bit is what you have in mind as to how superduper an agency this is going to be.

Mr. ROOSEVELT. My understanding of Mr. Rockefeller's and Mr. Hoffman's recommendations was to change the name of ECA. Mr. Rockefeller has his own recommendation as to the name. They also recommended that we keep the same personnel; put point 4 into it, and take it out from the State Department; put all military production aid, as distinguished from military end-item aid, into it; and put the right to make bilateral commercial agreements, such as the Mexico agreement, which he referred to, which was made during World War II, into it as a new authority; and broaden its scope from Europe to include the rest of the world. The STEM missions would no longer be just STEM missions, but would be regular Overseas Economic Aid Agency missions.

Mr. VORYS. And permanent.

Mr. ROOSEVELT. And permanent.

Now that, as I understand it, is his recommendation for the agency. I think, if you do that, you are going to set up a superduper agency which is going to have policy-making temptations.

Maybe Mr. Hoffman is one of these people who can refrain from the temptations that go with such tremendous power, but I do not like to set up a permanent agency which is dependent on the morality of just one man. I think we are dealing here with a problem that is going to go on for 30 years or more. Maybe Mr. Hoffman will not be around for 30 years. Maybe Mr. Foster will not be available in 30 years, and maybe people on this committee will not be. We have to look for the time when the person is not the deciding factor in the effectiveness of the arrangement we create.

Chairman RICHARDS. Did you have any comments to make, Mr. Perkins?

Mr. PERKINS. I want to make a comment on what Mr. Roosevelt just said. I did not know there was in consideration setting up a permanent agency. I thought what was being considered was the proposal of a temporary agency which would carry through this particular problem we have now as ECA did the economic problem.

Mr. ROOSEVELT. All of these people considered it to be—and I would say the better word is—semipermanent. It is not going to be, like ECA, for 4 years, and then it is finished. It is an agency which will go on as long as there are underdeveloped areas in the world, as I see it, and Communist aggressive threats.

Mr. PERKINS. I think some of the things I have said need to be tempered if they are addressed to a permanent agency. I think that raises a separate bunch of problems that becomes quite difficult.

Mrs. BOLTON. Might I just ask this question?

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. In the report on this bill, in the material sent us by the State Department, there is a statement that the economic situation in Yugoslavia has deteriorated very much.

What has been the cause of the deterioration?

Mr. PERKINS. I am not sure I know that statement.

Mrs. BOLTON. It is page 23, I think. It says it quite definitely.

Mr. ROOSEVELT. Mr. Chairman, while Mrs. Bolton is looking for that, may I just finish this line of questions I have?

Chairman RICHARDS. Mr. Roosevelt.

Mr. ROOSEVELT. Mr. Perkins, if such an agency were set up, have you any idea as to how we can restrict the authority of such an agency to maintain it as an operating agency and to maintain foreign policy in the State Department?

Mr. PERKINS. I think basically it would do what was done in the ECA. I think it can conceivably be strengthened a little bit, but the ECA Act did provide, as I recall it, that policy matters were to be done only after approval of the Secretary of State.

Is that not right, Paul?

Mr. PORTER. Upon consultation and policy guidance.

Mr. PERKINS. I think the wording could be perhaps improved a little bit.

Mr. VORYS. Will the gentleman yield?

Mr. ROOSEVELT. Yes.

Mr. VORYS. Section 105 (c) reads:

The Administrator and the department, agency, or officer in the executive branch of the Government exercising the authority granted to the President by the Export Control Act of 1949, shall keep each other fully and currently informed on matters, including prospective action, arising within the scope of their respec-

tive duties which are pertinent to the duties of the other. Whenever the Administrator believes that any action, proposed action, or failure to act on the part of such department, agency, or officer in performing functions under this title is inconsistent with the purposes and provisions of this title, he shall consult with such department, agency, or officer and, if differences of view are not adjusted by consultation, the matter shall be referred to the President for final decision.

That is the one between the Administrator and the Secretary of Commerce. There is a similar one—

Mr. PORTER. And (b) preceding that.

Mr. VORYS. And (b) preceding that is the one that spelled out in a little bit longer language—different words, but the same music—what I have just read. The administrator and the Secretary of State talk with each other and—

* * * if differences of view are not adjusted by consultation, the matter shall be referred to the President for final decision.

That is the way it was done in ECA.

Mr. ROOSEVELT. I read that section, and that section in my judgment is completely inadequate in this situation because there is no statement in there which says that this fellow is an operator and not a policy man. It says when he determines a policy he must consult and keep the other fellow connected with the policy in the other agency informed. If there is a difference in policy, then they go to the President.

In other words, there is no restriction on the making of policy written into that act, as I read it. Maybe my legal interpretation is inaccurate.

What I am worried about is that so much power will go into this fellow because of the tremendous funds he has that his judgment on policy will always be determinative. If there is a fight and it goes to the President, the President will almost have to go along with this fellow.

Mr. PERKINS. Was that not true in the instance of the ECA Act, because Congress did establish the policy which was to guide ECA?

Mr. ROOSEVELT. Yes. I think so, but Congress is going to decide the policy in broad forms here, but the secondary-level policy question is the one I cited, about how much goes into military production, and how much into civilian production, for example.

Mr. PERKINS. Yes.

Mr. ROOSEVELT. That is a question which Congress will not and should not attempt to lay down the policy on. It is what I call a secondary-level policy question. That is the question which this new Administrator could, if we followed the language of the old act, decide almost exclusively by himself. There are no safeguards around it, and that is why I suggested perhaps he ought to be under the Secretary of State.

Mr. PERKINS. I do think perhaps the reason—although I was not here at that time—the reason this act was drawn that way is because Congress did establish the policy and told the Administrator to carry out that policy.

Mr. VORYS. If you would like the history of it, the Secretary of State brought an act up here and said, "We want it this way," and was quoted in the papers as saying, "If you do not have it this way—"

Mr. ROOSEVELT. Then you will have two Secretaries of State.

Mr. VORYS. Yes, and he said do not pass it at all unless you head the administration in the Department of State.

Mr. ROOSEVELT. That is right. That was Secretary Marshall, and he also stated if you do not put it under the Secretary of State and create a separate agency you will have, in effect, created two Secretaries of State.

Mr. VORYS. And we proceeded to set up an independent agency.

Mr. ROOSEVELT. Luckily it was not a big enough program and you had men who did not want to be Secretary of State.

Mr. HERTER. They are four times as big as the Department of State.

Mr. ROOSEVELT. Not in the long range it is not.

Mrs. BOLTON. Could we refer back to my question, Mr. Chairman?

Chairman RICHARDS. Mrs. Bolton.

Mr. PERKINS. I think, Mrs. Bolton, the comment in this report refers to the condition which developed as a result of their splitting with Moscow.

Mrs. BOLTON. But that is old history.

Mr. PERKINS. That is old history. This does not mean currently.

Mrs. BOLTON. The inference one draws from the written statement is definitely current, and is worse than the last time when we were discussing Yugoslavia and helped her out. If there has been any improvement then I would suggest that the statement is somewhat confused, and that is why I am asking that. I wish you would check on it.

Mr. PERKINS. That refers to the history over the last 3 or 4 years, but the situation has not recently deteriorated. On the contrary, it is getting better.

Mrs. BOLTON. I am somewhat relieved to have the impression corrected and to know that the deterioration is of the past. When the Yugoslav situation was before us last year there were opinions expressed that the deterioration was due to Communist methods. Were this continuing it might make some difference in the method we might employ from here out.

The strategic position of Yugoslavia would make it seem advisable for us to assist her in continuing her firm position against Moscow.

Mr. PERKINS. The situation is not now deteriorating, but is getting better.

Mrs. BOLTON. Thank you very much.

Chairman RICHARDS. Are there any other questions?

Mr. MERROW. Mr. Chairman, I have just a question in reference to this matter of integration that you spoke about on page 3. I referred to that before.

It seems this matter of European unity is of great importance. So much so, that General Eisenhower devoted a speech to it in London a short time ago.

I wonder if you would give us a report on just how the OEEC and the Council of Europe and the European Payments Union, and so on, have penetrated the political and economic barriers in Western Europe? You made that as a statement here. I think it would be helpful if we could have a detailed statement on how these agencies have done that.

Then, in connection with this, would you be willing to set forth the steps that you think they ought to take in the immediate future

to bring about the degree of integration that we hope for in order to make the Continent an entity that will be able to support itself economically and build up military machines so that it can protect itself? We would be very glad to get such a statement from you. Would you make that statement for the record and perhaps indicate what we can do to accelerate integration.

Mr. PERKINS. Yes.

Chairman RICHARDS. Would you place that statement in the record as a part of your testimony?

Mr. PERKINS. We will.

(The information requested is as follows:)

EUROPEAN EFFORTS TOWARD POLITICAL AND ECONOMIC INTEGRATION

The OEEC has contributed significantly to reducing the economic barriers separating the nations of Western Europe, particularly through its program of trade liberalization and its creation of the European Payments Union. Under the trade liberalization program it has set specific standards for the member countries to achieve in freeing their trade from quota restrictions on imports. The effect of these quotas has been to hamper seriously the flow of trade and to encourage an inefficient use and distribution of European resources. The OEEC Council first agreed in 1949 that each member country should free from such restrictions 50 percent of its imports from other member countries; later it raised the goal to 60 percent; and has now directed a 75 percent liberalization standard. Nearly all the OEEC countries have complied with the 60 percent decision and a number of countries have already reported their achievement of the 75 percent objective.

The European Payments Union, which the OEEC was active in creating and which is operated under the authority of the OEEC, is essentially an automatic system for the clearing and settlement of the payments among the member countries. In the absence of such a multilateral clearing system each country was in effect forced to balance its accounts bilaterally with each other country; i. e., no country could buy from one country and cover the necessary payments by a surplus of sales to another country. This situation led governments to impose numerous restrictions on their trade and fostered discriminatory trade and payments practices. Under the EPU the currency of any member is freely transferrable in terms of the currencies of all other members, so that the direction of trade within Europe need no longer be distorted by bilateral payments difficulties. This improved payments arrangement has contributed to a rapid increase in the level of intra-European trade, to measures liberalizing trade, and to the encouragement of efficient, low-cost production.

The significance of the OEEC, however, extends beyond its specific accomplishments in fostering an integrated European market. In the OEEC an intensive process of mutual examination of various aspects of national programs is continuously taking place, and the member countries have exhibited a willingness to make readjustments in the light of these examinations. As a result many problems are now subject to international review and recommendation which have traditionally been considered of purely domestic concern.

The Council of Europe is composed of a deliberative body, the Consultative Assembly, and a Committee of Ministers. Members of the Assembly are normally selected by the participating governments; unlike the members of the Committee of Ministers, however, they do not represent governments. The Assembly has debated many problems of European significance, including social security, human rights, full employment, treatment of refugees and the elimination of visas, and has made recommendations to the Committee of Ministers. Although the powers of the Assembly are currently quite limited, the Council of Europe serves as a focal point for the movement toward a united Europe, as a unique forum for consideration of problems from a European point of view, and as a testing ground for the concept of a European parliament.

To mention briefly other important developments—in the NATO the process of questioning national programs and harmonizing them through intergovernmental agreement, which is apparent also in the OEEC, is being extended from the economic to the political and military fields. Under the Schuman plan, a bold experiment in functional integration is being undertaken. The six participating

countries will institute a genuine single market for coal and steel to be regulated not by national governments acting together, but by a supranational High Authority, responsible to its own specially elected Common Assembly representing the peoples of the six countries. The extension of the Schuman plan functional approach to other fields is being considered, most importantly in connection with the proposed European Army.

The concept of a unified Europe is thus finding expression in a variety of ways, and various devices are being explored and tested. European integration appears to be emerging in a series of political and economic groupings which are mutually reinforcing: first, a center core of European countries, the Schuman plan countries, who because of the dual pressure of economic necessity and geographic location can probably move most rapidly toward the establishment of common institutions; second, a wider geographic area, Western Europe as a whole, which has a common cultural heritage and many economic problems which can be effectively resolved on a Western European basis; and lastly, a broader grouping representing the North Atlantic community as a whole which must act in concert economically, politically, and militarily to strengthen the defenses of the free world. From a historical viewpoint the progress which has been made in this pattern since the war is remarkable.

Although it must be recognized that the decisions on measures for integrating Europe are the responsibility of the Europeans, the United States believes that further progress can be made along the lines outlined above, and will continue to encourage this evolution toward European unity. Among the specific measures under consideration in this area which the United States is currently encouraging are those for extending the trade liberalization effort by establishing a "common list" of liberalized items for all OEEC countries, by liberalizing so-called invisible transactions (e. g., payments for services), and by reducing disparities in European tariffs; for strengthening and continuing the functions of the European Payments Union; for applying the Schuman plan principles to the establishment of a European army; and for coordinating the economic work of the NATO and of the OEEC.

Chairman RICHARDS. Thank you very much, Mr. Secretary. We appreciate your coming up and we have profited by your testimony.

The committee stands adjourned until 2:30 o'clock, when Mr. Porter will be the next witness.

(Whereupon, at 12:45 p. m. the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

The committee reconvened at 2:30 p. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order. We will resume testimony on the so-called Mutual Security Program. We are privileged to have with us this afternoon Mr. Porter, Assistant Administrator for ECA.

Mr. Porter, we will be glad to hear from you now. Do you want to give us a prepared statement or do you just want to subject yourself to questioning on salient points?

STATEMENT OF MR. PAUL PORTER, ASSISTANT ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION

Mr. PORTER. Mr. Chairman, I do not have a prepared statement. I propose, if it is satisfactory to the committee, to make a brief extemporaneous statement as a prelude to questions.

I thought through questions we could best get down to brass tacks, how, why, and where we propose to spend the aid which is being requested of the Congress.

(Discussion off the record.)

Mr. PORTER. I thought it would be useful if I took a few minutes to tell you how we arrived at the estimates of the amount of aid which we think will be needed during this coming fiscal year.

We have not been content to accept the Europeans' own estimate of their military capabilities, that is, their capabilities for the production of armaments, or of their own estimates of the amount of aid they need.

We have preferred to make our own estimates which are uniformly higher with respect to what Europeans can do and uniformly lower than what they would like to obtain from the United States.

The preparation of our estimates has been a much more complex task this past year, or in preparation for the new request, than it has been in previous years.

In previous years a balance of payments study, showing the deficit of the members of the OEEC, has been our basic document. This year we have had to make a number of other studies leading up to a balance of payments estimates.

We have felt with the 3 years' experience which we have had in analyzing the different economies of Europe that we were able to make a reasonably reliable estimate of what they can do, the amount of aid which will be necessary to enable them to meet the military production targets that we propose they undertake, and so on.

We felt this experience we have had has enabled us to make better judgments than we have received from the European countries.

The steps we have followed in the preparation of our request for aid this year is to begin first with an estimate of the capabilities for military effort, based upon our knowledge of the manpower and facilities available in each of the European members of the North Atlantic Treaty Organization.

We have, of course, had to take into account certain limitations. The first of those is the availability of raw materials. All of our estimates have been fitted within the framework of materials which we estimate will be available during the forthcoming year.

Secondly, we have had to temper our estimates with a judgment as to the feasibility of increased taxation in order to support a higher military budget in these countries, and also a judgment as to the limits in which consumption could be curbed in these countries, so that they make the maximum contribution of their own resources.

We have, for instance, estimated about all we can expect in the way of increased taxation for the European NATO countries as a whole is a 10.9 percent increase in taxation.

(Discussion off the record.)

Mr. PORTER. We tried to be realistic in estimating what will be done.

Somewhat the same kind of estimate has been made as to the level of consumption in the various European countries. I can give you our estimates for all of these countries. But I will take at this time just a few as an illustration.

We have estimated, for instance, that in the United Kingdom consumption can and probably will be reduced. We have estimated it will be about 98.8 percent of what it has been during the past year.

We estimate that in the Netherlands they will be able to cut their consumption level to about 98.3 percent. However, to be realistic, we have assumed that in Italy as military production increases, many

of the unemployed are put to work, that it is inevitable that when unemployed people go to work there will be an increase in the total level of consumption.

We saw that in the early 1940's in the early part of our defense program here. We have therefore in making our estimates forecast for Italy a per capita consumption level for this coming year of 103.9 percent of the past year.

In France we have forecast a per capita consumption level of 102.7 percent for the forthcoming year as compared with the past one.

Per capita personal consumption in the United States has increased by somewhat more than one-third since 1939. The rearmament effort in this country will probably mean a check on this increase or even a small decline. As nearly as can be estimated per capita personal consumption expenditures in the United States in 1951-52 will range from a maximum of the same level as per capita personal consumption expenditures in 1950-51 to a decline of approximately 3 percent. The data on which these calculations are based are in terms of prices in the first half of the calendar year 1951.

The composition of consumption in the United States is substantially different than the composition of consumption in other areas of the world. A very significant difference is that a relatively large portion of consumer expenditures in the United States is on automobiles, household appliances, and other consumer durable goods. While per capita personal consumption expenditures on nondurable goods and services may actually show some increase in the current fiscal year over 1950-51, the expenditures on durable goods will certainly show a substantial decline. It is in this sector of consumption that the major direct impacts of rearmament will be felt.

In making adjustment as to how much of a reduction in consumption is possible in the European countries, in order to further their defense efforts, I think it is well to keep in mind that our per capita income in the United States is $3\frac{1}{2}$ times that of the average consumption level for the other European NATO countries, excluding Canada.

Mr. VORYS. Will you just give us those figures? You have GNP but not income.

Mr. PORTER. That is right. You mean, on what the per capita income is or consumption levels that we have estimated?

Mr. VORYS. National income. We have gross national product figures. Give us the national income figures.

Mr. PORTER. The national income figures for the past year are as follows, for the following countries: Belgium and Luxemburg, \$626 per capita of national income; Denmark, \$679; France, \$542; Italy, \$286; Netherlands, \$446; Norway, \$535; Portugal, \$216; the United Kingdom, \$631; the United States, \$1,916. All of these figures are computed as of current prices.

Mr. JUDD. Does that mean, when you say that England's is \$631, that you are just taking the number of pounds they get per capita and converting that into dollars at the present rate of exchange, or is that a weighted figure that means their purchasing power per year is comparable to what an American can purchase with \$1,916?

Mr. PORTER. It is not related to American purchasing power.

Mr. JUDD. Then the gap is not quite so great, because in most things the price level is higher here. The American gets 3 times as much money, but he cannot buy 3 times as many commodities, can he?

Mr. PORTER. It varies from country to country, Mr. Judd. Their food costs are less than our own. Their clothing costs are somewhat higher. The cost of an automobile in the United Kingdom is substantially higher than in the United States. That would apply to almost all luxury items.

Mr. REECE. Do you have the 1938 figures?

Mr. PORTER. I do not have them before me, but I can obtain them.

Mr. VORYS. Before you go to that, will you give us the totals? We have the gross national product for Europe. What is the national income? Have you that for NATO?

Mr. PORTER. I do not have the totals before me for total national income for the NATO members.

Mr. VORYS. Per capita?

Mr. PORTER. The average per capita?

Mr. VORYS. Yes.

Mr. PORTER. Yes. The average per capita is \$597, average per capita GNP.

Mr. VORYS. I want to get the difference between GNP and income. I am always puzzled over those statistical things.

Mr. REECE. Will the gentleman yield? I think it would be very helpful, so it could be made of record, if you could give us a brief description of gross national product and national income.

I think that question just keeps bobbing up.

Mr. HERTER. I asked that question of Mr. Harriman, and he passed it over to Mr. Gordon. Mr. Gordon amplified his remarks in the record. I think it took five pages.

Mr. PORTER. May I say, Mr. Reece, that I am also bewildered as to the distinction.

Chairman RICHARDS. Mr. Reece, is five pages enough on that?

Mr. PORTER. As I have tried to boil down the five pages as used by the experts, I would define it this way:

Gross national product is the total output of the nation; national income is gross national product less depreciation on capital. So, national income generally runs around 90 percent of gross national product.

Mr. REECE. I think that is a very good statement.

Chairman RICHARDS. Let us let Mr. Porter get along on his statement.

Mr. PORTER. I get just as lost by the experts as you do, Mr. Reece.

In answer to Mr. Vorys' question, I do not have the average per capita of national income for all of the NATO countries.

The average per capita of gross national product is \$597. I think if you reduced that by 10 percent you would come out just as accurately as I would after doing a lot of figure work.

Mr. SMITH. Mr. Chairman, may I ask if Mr. Porter could furnish the figures of the per capita to cover those same two points, national income and gross national product as of the period when this started. I believe this program started in 1948. Would that be possible?

Chairman RICHARDS. Will you do that for the record?

Mr. PORTER. We will do that.

(The material referred to is as follows:)

Per capita gross national product and national income, nine European NATO countries and the United States, 1938, 1948, and 1951

(In dollars, at current prices)

	Gross national product per capita			National income per capita		
	1938	1948	1951	1938	1948	1951
Belgium-Luxemburg.....	312	710	764	259	590	626
Denmark.....	402	625	812	362	526	679
France.....	253	439	668	230	390	542
Italy.....	198	256	341	158	238	296
Netherlands.....	374	428	560	314	346	446
Norway.....	399	445	624	332	411	535
Portugal.....	138	221	237	118	201	216
United Kingdom.....	571	676	789	469	547	631
United States.....	674	1,767	2,143	538	1,524	1,631

NOTE.—Changes in the above figures from one time period to another should be interpreted with caution, since the figures are expressed in current (i. e., changing) prices. For most countries, the increases in the figures between 1938 and 1948 reflect largely or entirely price increases, and do not represent actual increases in gross national product or national income in real terms. In addition, comparisons both between time periods and between countries may be inaccurate because the exchange rates used to convert into terms of dollars may not closely reflect the differences in actual purchasing power of the several currencies.

Source: Economic Cooperation Administration, Division of Statistics and Reports, July 19, 1951.

Mr. PORTER. I have described our first step—just to repeat it very briefly—as an estimate which we have made ourselves of what the Europeans are capable of in the way of military production, taking into account certain realistic limitations, such as their willingness or ability to increase taxation, their ability or willingness to reduce consumption.

The second step we have used in arriving at these estimates is to prepare a statement of internal accounts for each country, showing for that country its gross national product, its level of consumption, investment, employment, its government budget, both military and nonmilitary.

May I emphasize that these are a forecast of what we think is possible during this coming year. These are not based necessarily upon official estimates. We have always taken official estimates into account, but we have not taken the official estimates of another government as the last word. We have made our own estimate.

Next, after having prepared these internal accounts, we then prepared a balance-of-payments statement, taking into account all of the foregoing factors which I have mentioned, and also taking into account that country's foreign trade.

We have been obliged to make our estimates of their exports during the coming year and their probable imports.

In that connection we have estimated, taking the OEEC members as a group, an over-all increase in the volume of imports amounting to 5.9 percent.

The reason why we have estimated that increase in imports is that it is an increase in raw materials necessary for armament manufacture.

Only in a few instances, as in the case of Italy and France, will those imports represent an increase in consumption levels, because in our

estimate to some extent consumption levels will rise in those particular countries.

We have made an estimate that there will not be during this coming year an increase in the volume of exports of the European countries to the rest of the world. That is an over-all estimate.

We recognize in a few instances there will be an increase in exports.

Mr. HERTER. I have before me your balance-of-payments table, which I must say is a little difficult to read. In that you show a very considerable increase in exports of the 14 nations. Between 1950-51, 1951-52, you have an increase for all countries of roughly a billion and a half dollars. Maybe this represents changes in prices.

Mr. PORTER. I think that is it, Mr. Herter. I will have to check on that.

Mr. HERTER. This whole table takes considerable reading. It would take an expert to explain this table as it is set forth. Certainly the dollar amounts are increased. Perhaps you are speaking of volume.

Mr. PORTER. May I have the opportunity to explain that at a later time?

We have estimated that in volume, exports would not increase because of a diversion of goods which would otherwise go into exports going into military production.

We have estimated there would be an increase in export prices which we have calculated at 4.9 percent.

I would like to check that percentage against the difference in the table that you refer to. We have also in making these estimates taken into account an expected decrease in trade between the countries of Western Europe and the Soviet bloc.

As you know, we are pressing the countries of Western Europe to reduce all their trade in items of strategic importance. And we have assumed there would be a considerable decrease this coming year in that trade with the Soviet bloc.

We have also estimated there will be an over-all increase in production of 5.3 percent. Then, having made these balance-of-payments estimates, before we accepted them in the form in which they had been presented to you, we have cross-checked them against the export-import tables, which we have always prepared in the past, which show commodities by major category, and also by source and destination.

In this connection we have taken account of the fact that some of the commodities will be in short supply during the coming year.

Finally then, as an end product, we have arrived at an estimate of aid needed by each country. In that connection may I speak about these very thick white books which have been laid before you. I would not recommend that you try to read everything in them. We have not presented them to you with the purpose of overwhelming you.

Mr. VORYS. You did anyhow. I asked for it and I got it.

Mr. PORTER. These are our work sheets. We have laid them before you so that, where in connection with a particular country, if you wish, you can trace through our own thinking in arriving at an estimate, beginning with the internal accounts, and looking at the import-export balance of payments until we arrive at the estimate of aid.

At any time the committee wishes I will be glad to try to answer any particular question you may have in connection with these work sheets we have laid before you.

Mr. VORYS. Could I ask just one question at this time? What is the difference between "short form balance in payments" and the other kind of balance in payments? Is that time or is that merely a summary? What does "short term" mean?

Mr. PORTER. It means it is a condensed balance of payments statement.

In the aggregate, for the members of the OEEC who will be receiving aid next year, we estimate there will be a need amounting to \$1,512,000,000, compared with \$1,954,000,000 that was given as dollar aid during this past year.

That is not the total assistance received last year, because there was some aid received by some of the European countries from the other European countries through the European Payments Union.

If we take into account the net aid made available through the European Payments Union, the total amount of foreign assistance received by the members of OEEC last year was \$2,088,000,000.

Mr. VORYS. That means the amount received, not programed or obligated, but the amount we got there during fiscal 1951, does it not?

Mr. PORTER. No. I am glad you corrected me. This is what is obligated and not yet necessarily delivered, because some of the procurement may still be in the pipeline, on its way.

Mr. VORYS. Can you tell us how much we got there during fiscal year 1951?

Mr. PORTER. I can, sir, if you will give me just a few minutes to present those figures. What it really means is adding what was in last year's pipeline and subtracting what is in this year's pipeline. I can do that a little bit later.

I would like to say to the committee that our estimates, of course, are subject to human error. I think that we are quite modest about them. We recognize that these are simply an estimate based upon the best judgment of pretty well qualified people who have been in the business of making these estimates over a 3-year period.

We are reasonably confident that they are as reliable estimates as it is possible to make under the present circumstances.

I think we would have more confidence in them than we would in the estimates made by the other countries themselves. I think we have made these estimates more objectively.

The estimates which we have made lead us to certain general conclusions which I will now state very briefly.

The first is that we believe that the estimate of what our partners in the North Atlantic Treaty Organization can do to rearm themselves are realistic, or reasonably so, and can be achieved.

However, the achievement will require very hard and patient negotiation on the part of our teams in Europe, to induce the Europeans to achieve the high targets of military effort that have been set.

A second condition is that United States aid will be needed to cover the margin between what we have estimated they can do and what they could do without our aid.

I think we might say this is to cover the margin between a high effort and just a mediocre effort.

The second general conclusion which we have tried to keep constantly before us is that while we should press the Europeans very hard, we cannot, and should not press them to the point that there will be serious inflation in Europe or that the Communists would make major gains because of increasing hardships.

Mr. Chairman, I am also prepared to comment, if it is desired, on the level of military production in Europe during the past year and what our forecast for the coming year is, both by country and by major category of equipment.

Perhaps it would be just as well if that were to come out in the question period. I do not want to make a long statement. I am prepared to go into that if the committee wishes.

Finally, at some time, Mr. Chairman, I would like to make some brief comments on some of the recommendations we have made with respect to legislation.

Chairman RICHARDS. Do you want to make those now or later?

Mr. PORTER. If it is agreeable to you, I will make them now and I think I can do so briefly.

In the draft legislation which has been prepared by the executive branch, we propose that there should be certain modifications of the section concerning counterpart.

We would like authority in the legislation to permit the wider use of 95 percent counterpart funds, that is, the 95 percent that is available for general program purposes.

We would like to have a specific authorization to use that to promote military defense efforts; and also in this legislation, as we have indicated, a general indication of the priorities which should guide us in approving the use of counterpart.

Chairman RICHARDS. Ninety-five of all counterpart?

Mr. PORTER. You see, 5 percent of the counterpart is reserved for administrative and other United States purposes. I am talking now about the remaining 95 percent.

Mr. VORYS. You mean to use outside the country or within the country?

Mr. PORTER. Within the country. All of this 95 percent would be used within the country. I believe that we now have the authority to use it for these purposes.

(Discussion off the record.)

Mr. PORTER. We would like to have an expression of priority.

Mr. HERTER. I wonder if we could have a clarification of that at this point? There has been a good deal of discussion about counterpart in the past.

The position taken by ECA has always been in regard to the 95 percent that they did not want to retain more than the veto power over its use and did not want original jurisdiction whatsoever.

They said they wanted to leave that to the country. This is a reversal of the position, in which you want to have the initial say as to the whole sum, 5 percent being reserved for administrative purposes, and the 95 percent to be spent only as you direct for military purposes; is that correct?

Mr. PORTER. Mr. Herter, this is the first time I have appeared before the committee, and I am not fully familiar with what we have stated in the past.

I think that it would be correct to say that based upon our experience, we have reached the conclusion that we should exercise a more positive influence over the use of counterpart.

What we propose to do during this coming year is to reach an agreement with a country receiving aid as to how they will use the counterpart before dollar aid is allotted to them.

In other words, we want to know before we grant the dollars not only how they will use the dollars, but how they will use the counterpart generated by those dollars.

The purpose of that is to direct a considerable part of the counterpart into rearmament.

Another purpose is to use a part of the counterpart to encourage increased productivity through our productive program.

Mr. VORYS. You said that before you will grant it you will get an agreement as to how it will be used. In the past it has been that you had to get an agreement as to how it is to be used before you could spend it.

I am wondering if this is very much of a change. Prior to this you had the veto; they had the veto, too.

If your proposal is, legislatively, as you stated it, that you make an agreement with a country as to disposal of counterpart before you give them the money, they still have a veto over counterpart——

Mr. JUDD. Over the counterpart they do not get.

Mr. RIBICOFF. Is not this a better deal for the United States? I do not interpret it the way Mr. Herter does, that it makes us the absolute boss and we still have to get their agreement.

Basically, we are using the counterpart funds for military production. And to the extent that you increase military production there, that means less funds from us.

Mr. HERTER. I am entirely in favor of our present arrangement. When we first came to this and the first recommendation was made to us, it was that the counterpart funds be used in this way and we were overridden by the testimony that was given here.

We were told that would hurt the sensitiveness of a lot of the European countries, and that it would not be workable that way. I am interested in the shift of attitude.

Mr. JUDD. I raised the question specifically with Mr. Hoffman because I fought for that position in 1948.

Mr. RIBICOFF. It shows that it takes 4 years for an idea to come to fruition.

Mr. VORYS. I understand from reading the report of the fellows who went abroad that one of the problems is to get these European countries to buy from each other in military production.

I think there is still a limitation on the use of counterpart outside the country. Some of us would be glad to see authority given to spend lira in Belgium or francs in Belgium, to procure military stuff for Italy or France from Belgium. That is part of your proposal?

Mr. PORTER. I was just coming to that. I think it is the point you have in mind. We would also like to request authorization in the new legislation to use the 5-percent counterpart that accrues to us for administrative purposes, to use that outside of the country of origin.

Then there is another point I am going to make in connection with that in a moment, which I may as well do now.

Mr. Ribicoff. Before you leave the 95 percent, I have the impression from a statement that Mr. Foster made, or someone else may have made, that you will take all these counterpart funds and, going along with Mr. Vorys' thinking, pool all those counterpart funds.

You have a European Payments Union where the United States puts up X amount of dollars. Go one step further and take all the counterpart funds and use that as a pool to have that distributed by OEEC to the ECA nations.

Is there any interest on your part to do that?

Mr. PORTER. We are always interested in the idea.

Mr. Ribicoff. And is the idea worth anything?

Mr. PORTER. If I understand you correctly, what you have in mind is that the 95-percent counterpart is used by the United States----

Mr. Ribicoff. No, OEEC.

Mr. PORTER. Outside of the country of origin?

Mr. Ribicoff. Let us say that you have a situation where Belgium is plus over-all and Greece and Italy are definitely minus.

You would take some of the Belgium funds that is in the counterpart fund and allow Italy or Greece to utilize that for some purpose that is for the mutual benefit of all the OEEC nations.

Mr. PORTER. I see what you have in mind, Mr. Ribicoff. I think we are already achieving that purpose. A year ago the European Payments Union, where some countries were earning a surplus, like Belgium, a surplus in intra-European trade, and the United Kingdom, have themselves extended aid to other European countries through the mechanism of the European Payments Union.

Mr. Ribicoff. This proposal of yours to use counterpart funds for defense in individual countries, basically that would be anti-inflationary, too, would it not?

In other words, by using these funds that have been set aside for military purposes, and since the Government would have to go into a military purpose program, it would avoid the necessity of issuing additional currency or financing a defense effort and would act as an anti-inflationary force in that country itself. Inflation is one of the greatest dangers of the entire military effort, as the gentleman from Wisconsin has been pinpointing all through these hearings.

Mr. PORTER. It could have that effect in a certain limited degree, depending on how the fund would be administered.

It can be, I think, anti-inflationary in the sense that it is not necessary to have it result—I would like to withdraw that statement, Mr. Ribicoff—on balance I do not think the use we have proposed here would have any anti-inflationary effect.

Mr. HERTER. Burning it up would do that best, would it not? Burning up the counterpart, that is.

Mr. PORTER. Yes. That would be better.

Mr. VORYS. Just to get this straight—and Mr. Cooley or some of the lawyers can correct me—was it not last year that we cut out “within such countries for such purposes as may be agreed upon” and put in “in furtherance of any central institution or other organization formed by two or more participating countries” to further the purposes set forth in the EPU section?

Mr. COOLEY. That is correct, Mr. Vorys. In effect, last year the “within such countries” limitation was knocked off as far as the 95 percent was concerned. It was retained as far as the 5 percent was

concerned, and this year we are suggesting that it be removed with respect to the 5 percent.

Mr. VORYS. How much of it has been used for EPU purposes? Under this change we made last year, has much of the counterpart been used outside the country of origin for European Payments Union purposes?

Mr. PORTER. I do not believe any has been used directly for the European Payments Union. An equivalent result has been obtained by the contribution which the British and the Belgians have made to the capital position of the European Payments Union, but I believe we are correct in saying that no counterpart in any country has been transferred to the European Payments Union.

Mr. VORYS. Why was that?

Mr. PORTER. I think the answer to that would be that the same purpose has been accomplished by the initial deal which was established for Belgium and for the United Kingdom. That is, when they contributed an equivalent amount of sterling, or of Belgian francs, the same purpose was accomplished as if the fund had been taken from the counterpart.

Mr. VORYS. Except to this extent, that it left the counterpart to the extent of those contributions subject to a veto by us. I wondered whether it was at our instigation or theirs that they did not use counterpart for those contributions under this provision of law.

Mr. PORTER. Mr. Vorys, this relates to some past history with which I was not associated.

Mr. COOLEY. Perhaps I can give some of the past history.

Mr. VORYS. Is this proper, Mr. Chairman?

Chairman RICHARDS. Yes.

Mr. COOLEY. It is my recollection that the provision which permitted the use of the 95-percent counterpart in support of the EPU was one which was included in the legislation last year as a matter of caution. It is my recollection we advised you then that we did not see very much likelihood that the local currency counterpart would be used in that connection, but when it was suggested in this committee that it might be advisable to make it available in case the need for it did arise, we were more than happy to see that provision.

When we were here before you last year the EPU, or full details of the EPU, had not been worked out, and there was some thought that this might be a valuable provision.

As Mr. Porter said, in fact the way it worked out the same result was accomplished by other means, so we have not had occasion to take advantage of this provision in the EPU connection.

Mr. PORTER. In connection with counterpart, Mr. Chairman, there is one other recommendation I would like to submit to the committee. That is, that we be authorized to use some of the 5-percent counterpart for what we would call operating as well as administrative expenses. Heretofore we have been restricted to the use of that 5 percent for administrative purposes, as contrasted with operating proposals.

When we speak of operating purposes, what we have in mind specifically is to use some of this to pay for technical assistance, that is, the local costs of technical assistance, and to use it in support of the productivity program.

Those are the three recommendations that we have incorporated in the proposed legislation, and which I mention now so that we can have a discussion of them.

Mr. RIBICOFF (presiding). I may state that the chairman suggested in view of the way this discussion was going, and since we are on this technical aspect, it might be advisable to allow freedom in asking questions from any part of the table, instead of confining ourselves to the 5-minute rule. It is a good suggestion. Whoever wants to ask questions will take into account and consider the other members.

Mr. JUDD. Mr. Chairman.

Mr. RIBICOFF (presiding). Mr. Judd.

Mr. JUDD. Does this suggestion for changes with respect to use of the 95 percent of counterpart apply to the STEM countries too, that is, the underdeveloped countries, where ECA is working? Would you try to use most of the counterpart in Burma or Siam for building up their military strength, rather than improving their economic conditions?

Mr. PORTER. I doubt if we would wish to do that, Mr. Judd.

Mr. JUDD. You have in mind primarily the ECA countries?

Mr. PORTER. Yes. We are speaking now of the countries of Europe under title I.

Mr. JUDD. I myself think the initiative and the dominant position in the control of counterpart everywhere ought to be in the hands of our Government. However, I think it would be a mistake to write into the legislation that they must use all these funds for military purposes or give priority to that in some of the backward countries where there is not anything to support a military effort until the economy is strengthened.

Mr. PORTER. Yes. I would entirely agree with you on that, Mr. Judd. What we are proposing here is that this be permissive authority rather than a mandatory direction to us. But in the countries of Europe we would propose to use a considerable part of the counterpart for military purposes, and I doubt very much that we would wish to do so in southeast Asia.

Mr. JUDD. Mr. Acheson said, when I asked him about counterpart, "I most earnestly hope the present method will be continued."

Later he said he thought the way we now do these things has been working very well, and that ought not to be changed. Of course, while it does not need to be done this way, in essence your suggested changes would amount to telling them "You have to agree on what we want to do with counterpart, or you are not going to get the aid." That is a powerful whip in our hands.

That is all.

Mr. VORYS. Are you going to give us a statement such as we have had in the past of what the billion and a half dollars is going to be spent for?

Mr. PORTER. In terms of commodities?

Mr. VORYS. In a commodity breakdown.

Mr. PORTER. We will give you an estimate of how we think it will be used for commodities.

Mr. VORYS. We have always had before a showing of what the ERP countries needed and what they could get with their own, and what the deficit was in the dollar area. Now, as I get it we are going to hear sometime or other how this billion and a half dollars is connected up with increased military production. But we are going to be at the place, Mr. Chairman, where it will not make much difference which dollar they use—the dollar they earn or the dollar they get from us to

procure their needs. What we need is a total table of dollar-area needs, and the dollar-area earnings and then the dollar deficits.

I wondered, is not just about that same formula in force in this program?

Mr. PORTER. It is, sir. The commodity tables, as a matter of fact, are included in this thick encyclopedia I have given you. I would be glad to expand on that at any time you wish.

Mr. CHIPERFIELD. Mr. Chairman.

Mr. RUBINOFF. Mr. Chiperfield.

Mr. CHIPERFIELD. When you use this balance of payments formula which you described very well—and I was glad to have your description—I have always been worried when you pay the difference between what is exported and what is imported. Where is the incentive to cut down the needs? Why is there not a temptation to keep needs up?

I realize you screen them and all that, but I have always wondered about the soundness of such a formula. Would you comment on that?

Mr. PORTER. I think you are quite correct, Mr. Chiperfield, in your statement that there is an incentive on the part of the recipients of aid to try to keep their import levels up, and to that extent there is a danger that our aid might weaken their incentive to stand on their own feet.

Mr. CHIPERFIELD. That is the reason you have to screen those needs very carefully, of course.

Mr. PORTER. Right. I do not think our balance of payments estimate in itself is any control over the amount of aid. It simply enables you to get a better estimate of how much aid is needed. But through the administration of the funds that are given to us where we exercise the control is to provide screening of the procurement applications.

Mr. CHIPERFIELD. I would like to ask you one more question.

How do you feel the European Payments Union has worked?

Mr. PORTER. We feel it has worked quite well.

Mr. CHIPERFIELD. I would like to ask you one additional question.

Do you feel we should give a grant to the Schuman plan?

Mr. PORTER. We have given a great deal of thought to that, but we reached the conclusion that they probably should not.

Mr. CHIPERFIELD. Would you believe a loan would be better?

Mr. PORTER. Yes. I would personally feel a loan would be more desirable than a grant to the Schuman plan as a central institution.

Mr. CHIPERFIELD. Thank you very much.

Mr. RUBINOFF. Mr. Smith.

Mr. SMITH. Mr. Porter, is there much unemployment in these countries that are receiving aid?

Mr. PORTER. There is considerable unemployment in Italy, some in Greece, some in Western Germany. In fact, there is still a substantial amount in Western Germany. In the Northern European countries, no. There is very little in France.

Mr. VORYS. In Austria?

Mr. PORTER. Some in Austria, and some in Belgium, I would say.

Mr. SMITH. I would like to ask you the question I have asked these other men who preceded you. I think possibly you had an interest in this, namely, why are not the workers of these countries sharing in the increased productivity? Have you made any study?

Mr. PORTER. Yes, we have.

Mr. SMITH. Has the ECA made some study of it?

Mr. PORTER. Right, and I would be very glad to comment on that now.

Mr. SMITH. I wish you would.

Mr. PORTER. We believe that one of the most important jobs that we have ahead of us this year is to encourage a substantial increase in productivity which can come about in several ways. It is mostly through technical assistance by sending the best of American management, and some of our best labor leaders, to work with Europeans in increasing output with the equipment that they already have. In a few instances it might result in the introduction of some new equipment, but most of it is straight technical assistance.

However, we also believe if we are to get an adequate response on the part of the workers in a country like France, that it is necessary to share, or the benefits of increased productivity should be shared with the workers. In fact, we look to a three-way sharing of the benefits—to management, to the workers, and to the consumers through lower prices.

Mr. SMITH. You would not think that it would be advisable to subsidize the workers? I am as interested as you are, I am sure, in this increased standard of living for these people.

Mr. PORTER. Yes.

Mr. SMITH. How some of them live is a mystery to me, and I do not think that that story is generally known by the American people. It certainly was not known to me until we got into this matter, and until I, as a matter of fact, went to Europe and to France just a few weeks ago.

Now, when I look at these figures you gave us this afternoon about the national income for 1951 per capita, it is more revealing.

As I said the other day, until we put our finger on that and begin to do some thinking on trying to solve the problem, I do not think we are going to make much progress in the fight we are making against communism. I do not see how we can do it until we do something for the people.

Mr. PORTER. I entirely agree with you, Mr. Smith. In the agreements which we will have with any firm when we undertake to increase the productivity for that firm, there will be an agreement that the benefits will be shared with the workers, and also that the manufacturer will undertake to reduce prices as he is able to increase his productivity.

Mr. SMITH. Have you explored that in any way? For instance, I could see where it would just run head on into a terrific resistance on the part of management and on the part of those who are selling to the consumer. Do you think there is a reasonable chance that industry is going to be willing to take over there?

Mr. PORTER. I think there is a reasonable chance that some parts of industry will do it. Mr. Joyce, who is our Assistant Administrator for Production, is himself an experienced industrialist, and is president of the Joyce Shoe Co. He has just come back from about 5 weeks in Europe, during which time he met with many dozens of European industrialists. He had very encouraging discussions with a younger group of French industrialists.

It also became quite apparent to him there would be very strong resistance from some of the industrialists whose theory of management

is to get a large profit on a small turn-over, and who deliberately restrict production, and therefore are not very much interested in a higher productivity.

However, I think by working with the more progressive industrialists in France and in Italy, and especially among some of the younger industrialist leaders, we will be able to break down this restrictionism which has stifled European production for so many years.

Considerable progress, as you probably know, has already been made in England, where for the past 2 years we have had what is known as the Anglo-American Productivity Council, with Phil Reed, of General Electric, as the principal American member. The British industrialist who is his counterpart, Sir Norman Kipping, is one of the outstanding industrial leaders of Great Britain.

We have also had an A. F. of L. man and a CIO man serving on the American team of this Anglo-American Productivity Council. The results in England have been quite encouraging.

Mr. CHIPERFIELD. Will the gentleman yield?

Mr. SMITH. Yes.

Mr. CHIPERFIELD. We were told a story in England about a man who made shoes. He came over and studied our ways and increased the production of his shoes, and was resented very much by the others.

Mr. SMITH. That is right.

Mr. CHIPERFIELD. Do you remember that story?

Mr. SMITH. Surely.

Mr. PORTER. That is quite true. We have had French industrialists tell us their credit would be immediately cut off if they were to undertake a productivity program, which they would like to undertake. I think we have a very hard battle there in breaking through these old restrictive habits, but we still believe it can be done.

Mr. JAVITS. May I ask this question, Mr. Chairman?

Mr. RIBICOFF. Yes.

Mr. JAVITS. Would it not be a way to break this if we find a way to make credit available ourselves instead of through government machinery or the local banking system, which would block you, and often does, as you say yourself? That is, find some way of making credit available directly to business organizations which are going to give you this kind of a quid pro quo. Perhaps we ought to operate to some extent through the International Bank, which has shown an ability to set up banks in countries like Turkey, such as industrial loan banks.

Mr. PORTER. We have contemplated it, Mr. Javits, as a possibility out of the counterpart fund. That is particularly the 5-percent counterpart fund which is available for our exclusive control.

In addition to that, we have also contemplated perhaps directly supplying manufacturers with raw materials who have been threatened that their raw materials would be cut off if they increased wages.

Mr. SMITH. Will the gentleman yield?

Mr. JAVITS. Certainly.

Mr. SMITH. I think you would be interested in knowing, Mr. Javits, that it was suggested to Paul Hoffman's organization by a Frenchman that this matter of credit was so important that the Ford Foundation do something along that very line, because the banking interests in France have been stopping or preventing the flow of credit to those firms that want it.

Mr. Hoffman's response was that he did not think that was their field. But there is a field there for someone.

Mr. PORTER. We have given serious thought to that.

Mr. JAVITS. It leads to the fact, as I see it, that the governments, I am sure, without asking you, will assure you that everything is O. K. and they are taking care of it. We know they are not, and our own representatives have found they are not.

Perhaps instead of just talking about getting tough we can still speak very amiable—and I believe that has been the appellation applied to our ECA representatives that they are amiable—we can still speak very amiable, but lay it on the line. After all, that is far more eloquent. You do not talk tough, but just have to be tough and take the governments at their word and say, "All right. If you assure us it is being done or going to be done, let us just do it."

Mr. PORTER. Well, sir, of course we want to persuade the governments to go all the way with us in this, but we have reached the conclusion ourselves that if the governments are not willing to go all the way, that we should nonetheless go ahead with the productivity program, dealing directly with those progressive industrialists who are prepared to take advantage of modern machinery and modern ways of doing things to increase their total output and to share the benefits with their employees.

Mr. JAVITS. I hope you will bear in mind when you do that too, that as in our relations with countries, so in our relations with a firm. If we do it and if we are going to carry them along, we have to remember that we have to see them through it, because they are likely to be, for a while anyhow, very much in disfavor with their competitors. If they think we are going to give them just a short-term proposition of a single-shot deal, they are not going to play ball with us. They have to live with their competitors, and we have to make it possible for them for a while to live with us.

Mr. PORTER. We have already discovered that is one of their major fears.

Mr. SMITH. Have you given any thought as to how much you might spend in the budget for this purpose?

Mr. PORTER. Much of the expenditure will be out of counterpart. Relatively little dollar aid will be required. Such additional dollar aid as would be required would come out of our technical assistance funds, for which we are requesting \$20,000,000. The remaining dollars up to \$60,000,000, will come out of the funds requested for direct country aid.

We have also planned to use, in addition to these \$60,000,000, as much counterpart as necessary in support of the productivity program. This may go as high as \$250,000,000 equivalent in counterpart.

Mr. VORYS. What?

Mr. PORTER. \$250,000,000, or the equivalent of \$250,000,000, out of the counterpart funds.

Mr. VORYS. If somebody will yield to me, that contemplates that the counterpart fund would be spent substantially for technical assistance, and that that amount would not involve subsidies to plants or workmen or anything like that. Is that not true?

Mr. PORTER. We have not thought in terms of subsidies because we feel a subsidy would in itself be a contradiction of increased productivity. It might mean some part of this could be used for loans,

that is, for credit purposes. But that is something we have not yet faced. We are just getting this program under way.

Mr. Smith, you asked a question a moment ago about subsidies to the workers. The British Government does grant some subsidies now on food, and at least in the recent past has on lower-priced textiles. On the whole we do not encourage a subsidy because they think it is much better to try to solve the problem by an increase in wages.

Mr. SMITH. I agree.

Mr. JUDD. On that point, Mr. Porter, when you were giving the figures awhile ago of the per capita share of the national income in various countries, did you include the subsidies they get back? For example, an Englishman on the average may get \$631, but then he gets \$200 more in subsidies for his food and other items if he has a big family.

Mr. PORTER. That does not show up in this particular connection because what we have done here is take total national income and divide it by total population.

Mr. JUDD. But the discrepancy is not quite as great as the figures on our per capita income and theirs seem to suggest. Is that not true?

Mr. PORTER. The discrepancy is not quite so great for the workers in England.

Mr. JUDD. Where they have subsidies.

Mr. PORTER. That is right.

Mr. SMITH. In other words, it is more than \$631. We ought to be clear on that.

Mr. PORTER. Yes.

Mr. JUDD. He gets \$631 plus the subsidies.

Mr. PORTER. You see, when we are speaking of this \$631, this is the average per capita national income arrived at by dividing the total national income by the total number of people.

(The following information was submitted by Mr. Porter for the record.)

SUBSIDIES AND NATIONAL INCOME

The figures on national income per capita represent the total income of the economy from all sources (omitting duplications) divided by the total population. Subsidy payments have the effect of transferring income from one income-recipient to another, without increasing the total amount of real income for the economy as a whole. Thus, it may be said that subsidies are included in the figures for national income per capita.

Inclusion of subsidies in national income is indicated by the computation showing the relationship between national income and gross national product. The following table shows this computation for the United Kingdom for 1950, with partial estimates for 1951.

Item	1950	1951 ¹
Gross national product (at market prices)	\$37,985,000,000	\$40,335,000,000
Minus depreciation	3,166,000,000	3,135,000,000
Equals net national product	34,839,000,000	37,200,000,000
Minus indirect taxes	5,824,000,000	4,963,000,000
Plus subsidies	1,341,000,000	
Equals national income (at factor cost)	30,356,000,000	32,237,000,000
Population	50,800,000	51,100,000
Per capita gross national product	\$748	\$739
Per capital national income	\$598	\$631

¹ Estimated.

The figures have been converted into dollars at the rate of 1 pound equals \$2.7988.

Mr. JUDD. That is right.

Mr. PORTER. So far as the workers in England are concerned, I think that the American workers are probably not $3\frac{1}{2}$ times better off than they are; perhaps $2\frac{1}{2}$ times.

Mr. REECE. In connection with the subject of increasing productivity, I understand there have been committees brought over here to go through our plants with a view of observing our methods of production, I assume.

I am advised that a committee representing the furniture industry came over recently, and one of the professors in North Carolina was contacted with a view of making up a list of the companies which he might suggest should be visited. This he did. The list comprised five or six of the larger and what was generally recognized as very efficiently operated companies in the industry. He was then advised by the office up here that they were not the companies which it was desired that this committee should visit, and they suggested two much smaller companies, which were not as well known in the industry.

The professor then told them that, if that was the way the tour was desired to be conducted, he did not want to have anything to do with it. He was then told to have them visit the four or five or six companies which he suggested, but also take them to the two companies that had been suggested by Washington.

Would those visits be made under the auspices of the ECA or the State Department?

Mr. PORTER. I am just not informed about that particular instance, Mr. Reece. The kind of project it was would sound as though it was an ECA technical-assistance project.

Mr. REECE. But in the furniture industry it did not inspire a great deal of confidence on the part of the people in the industry in ECA or whoever was sponsoring the visits.

It would seem to me it is something that ought to be looked into by you. I do not know just what the purpose was, of course, in originally proscribing the visit to the suggested companies. The committee was to visit these, let us say, these more widely recognized companies, and then your office suggested two other companies not so well known. Evidently, the professor who had been contacted took it pretty seriously, because he was about to withdraw from the project himself.

Mr. PORTER. Yes. I will undertake to get all the facts for you about that. I am just not informed at all about that particular one. It occurs to me that possibly the two smaller furniture factories were more comparable to the kind of factories you find in Europe.

Mr. REECE. It happened to be that they had different labor relationships than the other companies did.

Mr. PORTER. Yes.

Mr. REECE. They were strongly unionized, speaking frankly, whereas the others were not.

Mr. PORTER. Yes.

Mr. REECE. That is all.

(The following was submitted for the record in answer to the inquiry by Representative B. Carroll Reece of Tennessee to Mr. Paul R. Porter regarding visit of technical-assistance group, OEEC-59.)

An OEEC group representing the furniture industry visited the United States, in connection with the ECA technical-assistance program, to study the mass pro-

duction of furniture. The American Forestry Association handled the project under a contract with ECA. The association engaged Professor Johnson of North Carolina State University to arrange plant visits and to act as a project escort to the various plants.

A list of prominent furniture manufacturers in the High Point area of North Carolina was forwarded by Professor Johnson. The ECA labor advisers raised objections to visits by the OEEC group to plants not under contract with a union and advised that small plants having contracts with unions should be substituted for some of the plants listed by Professor Johnson. We informed the American Forestry Association accordingly and suggested that the advice of the labor advisers be followed by canceling out some of the plants listed by Professor Johnson and substituting some of those suggested by our labor advisers. As it worked out, five large and two small plants were visited.

Mr. RIBICOFF. Mrs. Kelly.

Mrs. KELLY. Thank you. I prefer my question off the record?

Mr. RIBICOFF. Certainly.

(Discussion off the record.)

Mr. RIBICOFF. Does anyone else have any questions?

Mr. MERROW. Mr. Chairman.

Mr. RIBICOFF. Mr. Merrow.

Mr. MERROW. Mr. Porter, in your introductory remarks you said you would speak about the productivity goals in reference to armaments in the various countries, and as to how they were reached. I wonder if you would comment on that.

Also, in view of what has been said in reference to productivity, answer this question: Has it been difficult to get the governments to accept the productivity goals?

Mr. PORTER. So far as productivity is concerned, there has been no difficulty in getting the British to accept the goal of higher productivity. Mr. Hoffman over 2 years ago proposed to Sir Stafford Cripps, who was at that time Chancellor of the Exchequer, that there should be a productivity program, and that was very promptly accepted by the British.

We have found the continental countries have taken much less interest in productivity, although very recently we have gotten some encouraging responses from the French and from the Italians.

As to military production, we have not found any of the countries thus far who have come forward with military budgets as large as we think is desirable.

Mr. MERROW. Or as large as they could stand at the present time?

Mr. PORTER. That is right. Because what we have assumed to be desirable is equivalent to what we think they are capable of doing. We are not requesting them to do more than we think they can safely do.

I would be very glad to read to you, if you wish, our estimate of what we believe they can do in this coming year in the way of military expenditures.

Mr. MERROW. I would like to hear that; but, while we are on that particular point, is it safe to draw the conclusion that they are not doing what they should do to help themselves?

Mr. PORTER. In our judgment they are not. They are not doing enough.

Mr. MERROW. They are not doing enough. You are talking about continental Europe, I think.

Mr. JUND. Are your comments limited to two or three countries, or is that a blanket statement with regard to all NATO countries?

Mr. PORTER. It would vary, Dr. Judd, I think.

(Discussion off the record.)

Mr. PERKINS. It might be useful, I think, if I read into the record here some additional figures that we have which I think are interesting, on the percentage of gross national product which these various countries are taxing themselves.

The United Kingdom is at the top of that list, with 33.7 percent.

Mr. REECE. Which country is that?

Mr. PERKINS. The United Kingdom.

Mr. JUDD. This is not for defense, but their total budget?

Mr. PERKINS. No. Their total budget. It gives you some idea of what they are putting on their own taxpayers, and therefore you can judge what they can do by further efforts in that direction.

Norway is 31.8 percent; the Netherlands is 28.4 percent; France is 27.3 percent; Italy is 24 percent; Belgium is 19.6 percent; and Denmark is 18.8 percent.

That contrasts with what we are now taxing ourselves, as about 24 percent, which will go up probably to 26 percent if these new tax bills go through.

So that you can see most of these countries are already pretty heavily burdened.

Now, I should think it was unlikely to expect you would get a very much higher percentage of income into taxes in some of these countries.

Mr. RIBICOFF. Mr. Perkins, the way the tax is distributed there, if you had a proper type of taxation that was fair and equitable, you could probably get a lot more money without hurting the people in the great base of the population.

Mr. PERKINS. I think it becomes very questionable, when you get these high percentages of taxes, that you could get very much without putting a good deal of them on the general public. I think we found in this country that beyond a certain point you cannot get much out of soaking the rich. We do that, but still our percentage of taxation is relatively low.

Mr. RIBICOFF. The rich there pay nowhere near the proportion the wealthy groups pay in this country.

Mr. PERKINS. That is correct, I think.

Mr. JUDD. There is another factor in it, though: You take the ones with the high rates like England and Norway. The biggest items in their expenditures are the social programs that they finance out of tax funds. The Government takes their money and then gives it back to them; so, the fact is that it is not taxes for Government purposes. It is taxed away from the public to go back to the public in wealth-distribution programs or health programs, or false teeth, or whatever the thing may be. Therefore, the tax rates are not fair figures for comparison.

Mr. PERKINS. That is about what it was to come to. What this leads you to think is that the best prospect of getting any substantial further funds for defense is in the switch in their internal expenditures.

Mr. JUDD. That is right.

Mr. PERKINS. Rather than any great expectation in most of these cases that you can increase greatly the total taxation load. That becomes a very difficult thing, you know. Once you establish a social benefit it is very hard to remove it from the public, and they have a very hard problem on their hands.

I agree with Mr. Porter that most of them can and should do more, but I do not think we can expect it in the immediate future. I think we have to wait until their economies get stronger before we can hope for improvement in most of these figures.

Mr. MERROW. What seems to be difficult for me to do is to justify the authorization and the appropriation of many billions of dollars in arms assistance to these various countries when you gentlemen admit they are not doing as much as they ought to do to help themselves.

(Discussion off the record.)

Mr. PORTER. What we hope is that, through the negotiations which are now being conducted with the NATO countries, they will be induced to make a greater military effort than they are now doing.

Mr. MERROW. That is a hope, but the point I have been making all along is why should not the extent of our aid be commensurate with their help and cooperation, or why should it not be tied to it?

Mr. PORTER. Well, it is. Necessarily, this year. Because, if they do not make the military effort which we have estimated that they can make, then they are not going to be in need of as much aid, and the amount of aid we will give will be reduced.

Mr. MERROW. That will be with administrative discretion.

Mr. PORTER. Right, sir. It is impossible to know at this time precisely what military effort they are going to make and, therefore, what economic aid is needed; but I can assure you we do not intend to grant any aid unless that aid is fully justified by the facts.

Mr. MERROW. Both military and economic. You said that is true of the economic aid. But now, how about the military assistance? The same principle is going to apply on the end items; is it not? It is over \$5,000,000,000 that we are going to give in military end items.

Mr. PERKINS. Yes.

Mr. MERROW. Now, if they do not live up to expectations, does it mean that that aid is going to be curtailed, as well as the economic aid.

Mr. PERKINS. I think that is a question that we would have to consider very seriously. It depends in what items they do not live up to their expectations. If they do not raise the troops and they cannot use the military end items, of course they should not be sent. However, if they are willing to raise and train the troops and we do not send the equipment, we do not have the force in being that we are all so anxious to have.

I think that becomes a very delicate question of judgment as to what you would do under those circumstances. It also depends in what respect they fall short, and what kind of items they fall short on.

(Discussion off the record.)

Mr. MERROW. The only way this assistance, so far as I have been able to learn, is tied to what they can produce themselves is through administrative discretion; is it not?

Mr. PERKINS. I think there is no fixed rate or balance you could establish that would be safe to operate on.

Mr. RIBICOFF. Mr. Hays wanted to ask a question.

Mr. HAYS. I was going to bring up again a question which I asked General Marshall. I do it just for the purpose of emphasis. That is, in terms of sacrifice, you simply cannot measure participation on the basis of the percentage of gross national product devoted to

national government. I mean by that, if the Netherlands, for example, with 28 percent, you say?

Mr. PERKINS. Yes.

Mr. HAYS. If with her 72 percent remaining she still has a standard of living which is, we will say, half that of the American standard, then you get another factor that has to enter into it, because of the point that there is a limit beyond which no government can go in pressuring its people into further sacrifices.

I think that is something that has to be in the background of our thinking on standards of participation. That is not the final answer, of course. I mean, you do not dismiss the problem by saying their standard of living is so much lower, but it does affect the decisions.

That is a fair statement; is it not?

Mr. PERKINS. I agree with that.

Mr. HAYS. There is another point I want to develop in that connection.

It seems to me—and I keep coming back to what General Eisenhower had to say about the team spirit—it is that intangible quality that just cannot be allowed to be lost in figures and statistics.

I am expressing my own personal views here when I should be questioning, but I am at least inviting comment on it.

Here we are in a position to provide leadership in production and in economic strength, and the team spirit is vital to that; is it not? After all, the coach does not say because the left end is not doing his part, "Now, I am just not going to issue you the same equipment I am giving the right end. The right end is carrying his load, so that he is going to get the equipment, but you do not get head gear or you are not going to get shin protectors because you are not doing your part." That is the way I see it, in terms of teamwork. The coach might put him off the team, but if he is on the team he must be respected.

Mr. JAVITS. What standard of living is the balance-of-payments basis for the economic aid designed to give to the countries which are going to receive that aid? Is it the 1950 or 1951 standard, or which is it? What are you shooting at now in the coming fiscal year?

Mr. PORTER. I believe, Mr. Javits, you were out of the room when I commented on that.

Mr. JAVITS. Then do not answer it again.

Mr. PORTER. In some countries, particularly in the northern European countries, we understand or contemplate a reduction in the standard of living. In some other countries, as in Italy, where there will be a number of the unemployed drawn into war industry or defense industry, we anticipate that there will be an over-all increase in the total level of consumption, which is what happened here in the early forties.

We anticipate that the highest level of consumption will be in Italy in relation to the past year. There we estimate it at about 4 percent over the present year.

Now, bear in mind Italy has also one of the lowest per capita incomes. After defense expenditure we estimate that the national income per capita in Italy this year will be \$266.

Mr. JAVITS. Are you planning to set up any kind of a table on this which could be used in the debate?

Mr. PORTER. Yes. I have already read some of this into the record, but I would be very glad to supply you with a complete statement.

Mr. JAVITS. That would be very important. You could set up a table for us that will be used in the debate. Bear in mind this will not be classified.

Mr. PORTER. This is not classified information.

Mr. JAVITS. If we could have a table like that it would help us a lot. Also, you are going to prepare this table on the amount of gross national product which is being devoted to defense, and also which is being taxed off by the NATO countries, as you have given it to us.

Mr. PORTER. We will submit that statement for the record, Mr. Javits.

(The information requested is as follows:)

Gross national product, national income, defense expenditure, and balance remaining after defense expenditure—9 European NATO countries and the United States

(Country's fiscal year beginning in 1951)

Country	Gross national product: total	Amounts per capita (dollars)		
		Gross national product	Defense expenditure	Balance of GNP remaining after defense expenditure
	<i>Millions</i>			
Belgium-Luxemburg.....	\$4,877	764	31	733

Source: Economic Cooperation Administration, Division of Statistics and Reports, July 19, 1951.

Mr. JUDD. Mr. Chairman, going back to the question that Mr. Merrow and Mr. Hays were talking about, is not this the fact? They all want economic aid, and we can use our economic aid as a lever to get them to do certain things. A lot of them do not want the military aid, and we are in a sense coaxing them to get going on their defense programs. They are the ones who are dragging their feet and not we. Is that not true?

Mr. PORTER. I think, Mr. Judd, that they want military aid, but we feel they are not doing enough in the way of a military effort on their part; but they do want the military aid. I think you might ask General Scott if he has to coax anyone to take military aid.

Mr. RIMCOFF. General Scott is listed as a witness tomorrow. I thought he would probably develop the whole program then.

Mr. JUDD. We were told that the reason for their not building up military in the beginning was that it seemed hopeless. The odds were so great against them, that what was the use of going into a program which could not check and in a sense might provoke the very attack they were trying to avoid. So they had to be convinced they had a chance.

I think you spoke of that in your statement this morning, Mr. Perkins. You had to convince them it could be done before they were willing to make an effort which otherwise they felt amounted to something being thrown down the drain. I have come home from Europe convinced that they have turned the corner. As greater visible strength developed, the morale has evidently improved, and as the morale improves the whole effort immediately begins to accelerate.

I think you are through the worst of the doldrums in the program.

Mr. HAYS. Let me peg that to what I had to say a few moments ago. If they have not turned the corner, in other words, if the total contribution from the individual nations is not satisfactory, then the whole thing falls, of course, and we are out. But at this stage it would be folly for us not to proceed as if the team spirit is going to put the whole venture through.

I am just exploring it on the basis of some of the intangibles as well as the tangibles, but I associate myself with Dr. Judd on that, and I feel just as the members feel after their trip to Europe that even if some of the countries have dragged their feet in the past they are getting the team spirit now and this is the crucial point.

Mr. JUDD. For example, if I were a Dane with no natural defenses and with the Russians in Lubeck, what incentive in the world would there be for me to reduce standards of living and tax myself for an armament program which by itself simply cannot do any good? The Russians can walk in whenever they want to. It is only as a part of a team, that you can ask or expect them really to put their nose to the grindstone.

Mr. PERKINS. That is exactly right, and there is no question about that.

Mr. PORTER. I would like to express my agreement with what both you and Mr. Hays said. That is, I think both the morale and military corner the Europeans have turned is clear.

Mr. MERROW. Mr. Chairman, I would like to ask this question. If there were an integration in Western Europe, or if it could proceed as far as we think it ought to—and that includes the integration of Western Germany with the economy of the rest of the countries—would not their productivity then be increased by leaps and bounds?

Mr. PORTER. I do not think it would happen overnight, but I think within 2 or 3 years what you say will be true.

Mr. MERROW. Is that not the key to this whole situation in the long run?

Mr. PORTER. I feel it is, sir.

Mr. MERROW. And until we solve that problem of integration, including Western Germany, we are going to be in difficulty and we will have to continue to help with military and economic aid?

Mr. PORTER. I am not sure that the last statement is necessarily true, but I am certain that if there were integration, that the Europeans would be able to stand on their own feet more completely and more rapidly—much more rapidly than now seems to be the prospect.

Mr. MERROW. Do you think in the extending of economic aid and military aid that we can continue to exert increasing pressure to bring about integration?

Mr. PORTER. I think we can and should.

Mr. MERROW. Thank you.

Chairman RICHARDS. Mr. Porter, what do you think about this idea a good many people have around here about “umbrellairg” all of these activities under one administration and one administrator now?

Mr. PORTER. Well, Mr. Chairman, I am a member of a team and I would like to confine my remarks to those of the other members of the team. I think there are various good ways of administering the program. I think that is simply one of them.

Chairman RICHARDS. Suppose that were done now for this year's operation? Do you think it could be done without serious injury to the ECA program by shifting from one gear into another?

Mr. PORTER. So far as the ECA program is concerned, I think that is true.

Chairman RICHARDS. You think it could be done?

Mr. PORTER. I do not think it involves any injury to the ECA because, as a matter of fact, they have already shifted from the former types of aid we have given to that of support for rearmament in Europe.

Chairman RICHARDS. Yes. Of course, you are not expressing an opinion as to what type of organization would be set up or anything like that, but provided a good organization could be set up with the proper people in charge, you think it could be done without over-all injury?

Mr. PORTER. I think that so far as our own operations are concerned they could be transferred to the new organization within a very short period of time.

Chairman RICHARDS. Thank you.

I want to say right here—and I forgot to say it when we first came in today—that we have our baby member present. He has been in Congress a long time and is a distinguished Member of Congress. We are mighty glad to have him on this committee. We are sorry you have not been able to be qualified before.

Mr. LANHAM. I am sorry, Mr. Chairman, that I could not be with you sooner. It is an honor to be with you. I am sorry I had to travel such a rocky road to get here.

Chairman RICHARDS. It was not your fault.

Mr. LANHAM. It was not my fault.

Chairman RICHARDS. It is good to have you here.

Mr. RIBICOFF. Mr. Chairman, before the meeting closes, and because you were out a part of the time, I would like to state that Mr. Porter has been a very frank and candid witness. When he has not known something he has said so, and he has given the committee a lot

of information. We did not operate under the 5-minute rule when you were gone. We allowed every member to exhaust himself completely and Mr. Porter too. I think all of the committee members are satisfied that they have asked every conceivable question that they had in their minds.

Chairman RICHARDS. That is fine. I suggested when I left that because of the nature of the questioning you should proceed in that way.

Mr. RIBICOFF. That is correct.

Mr. MERROW. I concur completely with the sentiments expressed by Mr. Ribicoff.

Chairman RICHARDS. I was very much impressed. I am sorry I could not be here all the time, but I will read all of your testimony that I missed in the record.

Mr. Porter, we appreciate very much your coming up this afternoon. You have made a contribution to solid thinking on this thing, and we thank you very much for it.

Mr. PORTER. Thank you, Mr. Chairman.

Chairman RICHARDS. I think that will be all for the present. We may call you again one of these days.

The committee stands adjourned until 7:30 p. m. today.

(Whereupon, at 4:35 p. m. the committee adjourned until 7:30 p. m. the same day.)

NIGHT SESSION

The committee met in the Foreign Affairs Committee room, the Capitol, at 7:30 p. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The hearing will come to order, please.

Ladies and gentlemen, we will continue the hearings on the proposed mutual security program legislation.

Our first witness is Hon. John M. Costello, who represents the American League for an Undivided Ireland, and, by the way, he is, as you all know, an old colleague of ours.

We thought a lot of you when you were here, John, and we are glad to see you back.

Now, you go ahead and present your case, sir.

STATEMENT OF JOHN M. COSTELLO, WASHINGTON REPRESENTATIVE OF THE AMERICAN LEAGUE FOR AN UNDIVIDED IRELAND

Mr. COSTELLO. My name is John M. Costello, 3434 Porter Street, Washington, D. C. I am the Washington representative of the American League for an Undivided Ireland.

Mr. Chairman and members of the committee, I appreciate very much the opportunity to appear before you and present this statement in the name of the American League for an Undivided Ireland. This organization is an association of various Irish societies throughout the United States, and was created in order to coordinate the efforts of those societies in behalf of the complete independence and freedom of all of Ireland and the reunification of that divided country. Your committee has previously granted to us the privilege of appearing before you at prior hearings, and we are very grateful to you for your courtesy on those occasions as well as at this time.

Our organization is primarily, exclusively, and wholeheartedly interested in the abolition of the existing border in northeastern Ireland, a border which was created by an act of the British Parliament in London in 1920, without a single vote of an Irish member of that Parliament being cast in favor of the partitioning of their homeland. Not even the people in the severed six counties, cut out of the nine counties in the ancient Province of Ulster, desired the mutilation of the nation, which had been a single entity throughout its recorded history. Nevertheless, partition was forced upon Ireland through an alien government and was imposed upon the country through force of arms and the compelling power of military might.

At present your committee is considering the authorization of several billion dollars to be expended in the reconstructing of the military might of the western nations of Europe. However, it is proposed that this money shall be made available only to those countries which are signers of the Atlantic Pact. Sound military strategy is not the determinant in this case as to which nations should be aided. Spain at one end and Ireland at the other end of the western line of European defense are excluded from the benefits of military assistance. The defense line omits the two logical terminal outposts which such a line should possess.

Spain has been omitted due to Communist propaganda which has kept that country from being included, until recently, in the family of Western European countries. Yet Spain provides a strategic position at the gateway to the Mediterranean as well as a protected approach to southwestern Europe.

Ireland is the logical northern outpost for such a defense line, lying 250 miles closer to the United States than England and, with the consent of the Irish people, it could provide possible airfields and military supply bases. If England is to be a part of the western defense line, then surely Ireland, lying alongside, should likewise be included. Otherwise, in the event of war, an enemy-occupied Ireland would render English bases worthless, and a defenseless Ireland could not long withstand a hostile invasion by an enemy bent on destroying England's military usefulness.

These are matters on which this committee has already questioned our military leaders, undoubtedly, in your effort to determine the effectiveness of the financial aid which is proposed to be used in reconstructing the military might of the West. Likewise, I am sure that you have considered in what manner this new military force is to be employed. Moreover, you must have given considerable thought as to the manner in which you can assure that military assistance will be forthcoming from these western nations when the need arises.

We have witnessed the sorry spectacle of the Korean War, in which we have been engaged alongside the troops of the South Korean Republic, and practically without material assistance from any of the members of the United Nations. The token forces from small countries have been much appreciated, but the lack of cooperation on the part of larger nations gives rise to serious doubts as to the effectiveness of United Nations military actions. The insignificant number of troops and naval assistance provided by Great Britain is noteworthy—the more so, when she maintains a standing army of over 50,000 men in northeast Ireland serving no practical need other than

to emphasize the British domination of that territory and her intention to retain her conquest, by force of arms if necessary.

When we were sending troops to Korea, Britain was sending diplomats to Red China. When we were sending guns, tanks, and munitions to prevent the Communist occupation of all Korea, Britain was sending rubber, tin, and supplies to enhance the Communist occupation of all China. When we were fighting against Communist aggression in Korea, Britain was approving Communist aggression in China. What assurance do you have that this same situation may not again prevail in the event of Communist aggression in Europe? What secret treaties may at this moment regulate the affairs of the Socialist Government of Britain and those of Communist Russia?

Perhaps you have the answer to these questions. Perhaps you have the assurance of more sincere British cooperation in the event of a European conflict than we have witnessed in the Korean conflict. Perhaps you will so word this legislation that a recurrence of the Korean situation cannot come to pass.

With evident lack of confidence in our diplomatic astuteness growing throughout America today, it is incumbent upon the Congress to take a more direct hand in formulating diplomatic policy and thereby invigorate a feeling of greater confidence in the administration of our foreign affairs. This you can do in the particular field in which the American League for an Undivided Ireland is directly interested.

In drafting this legislation, you can specifically provide that no aid be granted to Great Britain so long as the partition of Ireland is maintained. Such a provision should be included in order that Ireland may become eligible to join in the Atlantic Pact and be established as the northern outpost of your defense line in Europe. So long as Britain occupies a part of Ireland, the Republic of Ireland cannot sign the Atlantic Pact, for to do so would be to recognize and acknowledge Britain's occupancy of Irish territory for 20 years under the terms of the pact. You have the assurance of former Ambassador George Garrett that the partition of Ireland should be ended and the country united. His memorandum to the Department of State should be readily available to this committee if you will but ask the Department for it.

The allegation that the Irish border question is purely a domestic affair in which the United States has no interest is mere propaganda, and Britain does not hesitate to spend a million and a half dollars in the United States for propaganda purposes, even though she does not have funds with which to meet her payments on the loans that have been made to her. The Irish problem should be of vital concern to the American people and more especially to this committee. The money to be spent for European defense should create a strategically sound defense line. Such a line cannot exist without Ireland being a part. The border in Ireland is as meaningless and as ethereal as is the thirty-eighth parallel in Korea. Neither line has geographic significance nor logical reason for its imposition on the country in question. Both borders should be eliminated. If we are ready to fight aggression across the fictitious Korean border, then we should have no hesitancy in using diplomatic and legislative means to stop the aggression across the fictitious border in Ireland.

Make it possible for Ireland to join the Atlantic Pact, include Ireland in this rearmament program, and you will at the same time

guarantee the honest cooperation and full-fledged support of Great Britain in the event of a European conflict. With Ireland allied to our side, Great Britain could not and would not dare to withhold her assistance. You can assure the good faith of Great Britain through the imminence of an Ireland allied equally with us in the protection of free nations from Communist domination.

Great Britain has not demonstrated her sincerity in defending the rights of small nations to their own choice of government and to their freedom and independence when she retains a part of Ireland in abject subservience and tolerates a tyrannical government in northeast Ireland, where civil rights are denied and civil liberties destroyed. Much confidence in Great Britain will be restored in the minds of 30 million Americans of Irish ancestry when Great Britain evidences a sincere belief in democratic practices by restoring to the 6 counties in Ireland the same measure of freedom and independence, which has been obtained by the other 26 counties. The withdrawal from the 26 counties by Great Britain is an open admittance that Great Britain had no right to occupy those counties, and that she has likewise no right to occupy the remainder of the country.

It is time that this country assumed its position of leadership in diplomatic affairs, rather than follow the path described for us by Old World powers steeped in a diplomacy that lacks morality, honesty, and forthrightness. There is much propaganda in this country that we need Great Britain as an ally in any possible European conflict. The reverse is true—Great Britain requires us for an ally; we do not need her. We must have allies in Europe, that is certain, but we do not specifically need any one country. We might find that we would be far better situated strategically with the alliance of Spain, Italy, or Greece, rather than Great Britain, in such a conflict. Moreover, we would undoubtedly find that any or all of these countries would prove a far less costly extravagance as an ally than has Great Britain.

During the last war, Great Britain received \$31 billion under lend-lease. In 1946, she received \$3,750,000,000, and under the Marshall plan \$2,700,000,000. Undoubtedly the greater amount of the present program will likewise go to Great Britain. I am confident that it would be far less expensive to align the three Mediterranean countries which are attached to Europe with us in our defense program, and yet achieve equal if not even greater benefit to ourselves from a military standpoint.

If it is the opinion of this committee that we must continue this huge expenditure of funds in Great Britain, then at least we should lay down the conditions under which Great Britain is to receive this financial aid. The primary condition should be the immediate withdrawal of British troops from Ireland and the establishment of an integrated country once again. The least we can do is to ask that Great Britain put into effect the democratic principle we are endeavoring to preserve in the rest of Europe, by eliminating the Irish border and wiping out this final act of aggression in Ireland. Certainly the Congress has the right to declare upon what conditions the funds of the American people are to be expended in Europe, and I am certain that not a single American desires to have his money expended in maintaining the present dictatorship in Northern Ireland nor British aggression in Ireland. Such a condition in this legislation will greatly

restore the faith of the American people in the ability of the Congress and in the statesmanship of this committee in particular.

Thank you.

Chairman RICHARDS. Thank you, Mr. Costello.

Mr. Vorys, do you have any questions?

Mr. VORYS. I am glad to see you back here with us, Mr. Costello.

How many troops of the Republic of Ireland are in Korea?

Mr. COSTELLO. I don't think any of them are, at all, in view of the fact that the Republic of Ireland is not a member of the United Nations since they were vetoed by Russia and denied membership on that account.

Mr. VORYS. They were not forbidden in any way to participate in the common defense; were they?

Mr. COSTELLO. No; they would not be forbidden.

Mr. VORYS. Has Ireland ever taken any action to attempt to become a member of the North Atlantic Treaty Organization?

Mr. COSTELLO. Discussions were held between representatives of this country and representatives of Ireland, with a view to joining the Atlantic Pact, but a provision of the pact specifically states that each signatory must recognize the territorial integrity of every other signer; and immediately after establishment of the Atlantic Pact, the Parliament in England, in 1949, passed an act again reiterating the claim of Great Britain to the six counties in Ireland, so that if Ireland were to sign the pact, they would be definitely recognizing Britain's claim to those six counties. And no Government of Ireland could stay in office 5 minutes if they attempted to sign away the rights of Ireland to the six counties.

Mr. VORYS. During the last war, my brother was in the Air Force and stationed in Northern Ireland. If the provision you suggest had been in our laws then, there would not have been any air bases in Northern Ireland or any place else in Ireland.

Mr. COSTELLO. Not necessarily; that does not follow. If that provision had been in our prior legislation, there might not have been any border in Ireland, and you would have had a united Ireland and a government which could have spoken for the whole of Ireland. Then I am willing to hazard a guess that Ireland would have been a participant in that war as a result of that. Whereas, under the existing situation, Ireland of necessity retained her neutrality throughout the war.

Mr. VORYS. You are suggesting that we help Ireland. Have you any assurance from the Government of Ireland, I mean could you bring us any assurance other than you have mentioned, that the Government of Ireland would help us and the free countries of the world if she were brought into the North Atlantic arrangement?

Mr. COSTELLO. Of course I have no assurance from the Government of Ireland or any officials of the Government, because, first of all, our organization is an American organization, and is operated exclusively by Americans, without any control or contact with the Irish Government.

Mr. VORYS. Do you not think we ought to be fairly sure about that before we would take any action?

Mr. COSTELLO. Well, I think that the long-standing relationship of friendship between Ireland and the United States would almost speak for itself, and the attitude of Ireland in all of the conferences in

Europe, other than in the case of the Atlantic Pact, Ireland has stood shoulder to shoulder with the United States when many of the other European nations were not doing so.

Mr. VORYS. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Mansfield?

Mr. MANSFIELD. Mr. Costello, it is a pleasure to have you again before the committee and to hear this very fine testimony from an old colleague such as you.

The gentleman from Ohio has made reference to the fact that the Republic of Ireland has had no forces in Korea. I think it ought to be brought out that the forces in Korea are United Nations forces, and as you so ably put it, Mr. Costello, the Irish have been retarded from joining the UN, despite repeated applications, because of the veto by Communist Russia.

Mr. JAVITS. Will you yield to me at that point?

Mr. MANSFIELD. If the gentleman will allow me to finish my thoughts, I will be glad to yield later.

Now, as far as the Irish Army is concerned, I understand it comprises about 12,000 men, and that there are approximately 40,000 men in the Reserve. The Irish have a very difficult time arming even the 12,000 men they have in their Regular Army, and they would like nothing better, in my opinion, than to be included in the North Atlantic Treaty Organization; to be rearmed, in part at least, by the United States, so that they could take their place in the forefront in the world-wide battle against the forces of Communist aggression; provided, however, that they could do so as a unified country and not a partitioned one.

We know also that there is no country in the world more anti-Communist than Ireland, and even if the Irish did not have any guns, they would fight to the last man before they would be overcome by the Russians.

I think, Mr. Costello, that, as usual, you have made a very strong case for the abolition of the fictitious line of partition, another thirty-eighth parallel, between Ireland and Ulster; and it is my hope that out of this committee, before too long, we will be able to have a vote on the Fogarty resolution, House Resolution No. 87. And I hope also that we will be able to get a rule and bring it to the floor, where I have no doubt in my own mind that it will be passed.

I think the position of Ireland is one which has been open and aboveboard. And in further response to a question raised by the gentleman from Ohio about Ireland not being in the last war, it is well to point out that even though Ireland was not officially in the war, 300,000 Irishmen were fighting in the armies of Great Britain, and doing their full share. When you consider 300,000 out of a population of somewhere between 3 and 4 million, that is a very high percentage, and I think will compare favorably with the contribution made by any country in the world.

Mr. VORYS. I bet there are more than 12,000 Irishmen fighting in Korea today.

Mr. COSTELLO. With the American Army, undoubtedly you are correct.

Mr. MANSFIELD. And undoubtedly some of them are in the British Army, because you cannot keep them out of a fight; when there is a fight, they get in some way or other.

The Irish have a habit of fighting among themselves, but when the Irish are attacked they have a habit of uniting.

And I sincerely hope, Mr. Costello, that your efforts and the efforts of many of us in the Congress, headed by the distinguished Congressman from Rhode Island, Mr. Fogarty, will come to fruition very, very soon.

Thank you very much for a very able statement.

Mr. COSTELLO. Thank you, Congressman, for your remarks, and I know that nothing would please the members of our league more than to know that the Fogarty resolution had an opportunity to get on the floor of the House, because we likewise feel confident that once the facts concerning the situation in Ireland are brought to the attention of the Congress, the Members undoubtedly would favor the adoption of such a resolution.

Mr. MANSFIELD. We are going to do our best to get the resolution out.

Mr. COSTELLO. You spoke about the armament of Irish troops. Ireland has no munitions factory, and therefore they have to seek defense materials from other countries. Britain is not in a position to supply Ireland with them. I do not know whether Britain would if she had surplus materials herself, but Ireland is unable to secure them from England, and so this would be the only country from which they might logically expect to obtain defense materials, even for their own defense. Suppose that there were a Russian attack made upon Ireland; the country would not be able to stop a very serious attempt by such an aggressor to invade the country.

Mr. MANSFIELD. May I say, in conclusion, Mr. Costello, that I agree with you that if there had been a united Ireland during the late World War, that Ireland would have been in there all of the way, and officially as well as unofficially, as was the case, through the enlistment of her sons in foreign armies to fight on our side.

That is all, Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton?

Mrs. BOLTON. Mr. Costello, I welcome you, along with the rest of the group. We miss you, and like to see you here. It is always a perfect delight to listen to the Irish. You have done yourselves proud, and the league has, to send you as their representative to this group. We always look forward to a moment when my colleague across the table (Mr. Mansfield) has an opportunity to express himself in true Irish fashion.

I have no questions, Mr. Chairman.

Chairman RICHARDS. That was a good question, Mrs. Bolton.

Should you get in danger here tonight, I want to assure you that there are a good many Irishmen around the table. We have 100 percent Irishmen and some 50 percent.

Mrs. BOLTON. We have just had a big Irish meeting or conference in Cleveland.

Mr. COSTELLO. I was up there in person.

Mrs. BOLTON. I thought you were.

Chairman RICHARDS. Did it end up peacefully?

Mr. COSTELLO. There wasn't even a glass broken at the banquet, not a glass.

Chairman RICHARDS. Mr. Carnahan?

Mr. CARNAHAN. Mr. Costello, I join with the other members of the committee in expressing appreciation for the excellent statement you have made, and I also want to join with the other loyal Irish and the friends of the Irish around the table in saying that Ireland has made a wonderful contribution to the free world. It is in a strategic location and has been especially during the two world wars.

I was stationed in southern Ireland during the First World War, and I certainly hope that the purely artificial line of division in Ireland can be removed, and that that country can be again united as it has been through most of its history.

Mr. COSTELLO. I appreciate the gentleman's statement.

I might add that in the First World War, Ireland suffered more casualties than did Belgium, even though Ireland was not overrun as Belgium was, and I believe Ireland contributed a larger number of troops in that war. It was all purely by voluntary method, since there was no conscription in Ireland.

Chairman RICHARDS. Mr. Smith?

Mr. SMITH. Mr. Chairman.

As I recall it, sometime last year or a year ago, the Fogarty resolution was before the House and actually passed as an amendment to a bill; and as I recall it, and the next day the administration—and I do not know who it was—called off the dogs, and the matter was reconsidered, and the Fogarty resolution went to sleep.

Mr. COSTELLO. Might I interrupt at that point, Congressman? Congressman Fogarty offered an amendment to a bill on the floor, but it was not his resolution. The amendment proposed to withhold aid to England, similar to what I am suggesting here.

Mr. SMITH. It was the same thing, in effect, was it not?

Mr. COSTELLO. But it was not actually the resolution, since the resolution is merely an expression on the part of Congress that they believe Ireland should be united.

Mr. SMITH. That is all this is, too, is it not?

Mr. COSTELLO. This might go a little further than that. This would be a case of directly withholding all material aid and military aid to Great Britain so long as the border was retained.

Mr. SMITH. Do you have any evidence, Mr. Costello, to support your statement, on page 4, to the effect that the British are spending \$14 million in the United States on propaganda?

Mr. COSTELLO. That statement is taken from a pamphlet put out by the Department of Justice. I believe it is appendix 6, in which they list the expenditures by foreign governments in this country, and they break down the expenditures by the British Broadcasting Co., their tourist program, and so on. The expenditures of three British organizations over here total \$1,500,000.

Mr. SMITH. That is on general propaganda, for all purposes?

Mr. COSTELLO. It is general British propaganda, and as a matter of fact, that is not all-inclusive, since very often the British Broadcasting Co. might, for example, have someone make a radio transcription here, for broadcast over in England, as they have done with many of our columnists in this country, news writers or radio commentators, and paying them for those broadcasts. Now I do not believe that that money is included in this list, because it is used for broadcasting in England and not in the United States. But it is a very subtle means of adding to their propaganda in this country by giving payments to

broadcasters or news writers for those broadcasts in England, thus keeping them rather friendly to the British Government in the hope they might get called upon to make a second or third broadcast for a suitable fee.

Mr. SMITH. I wanted the record to be straight, because I gained the impression from your reference to the Irish, that this was propaganda specifically directed against the Irish.

Mr. COSTELLO. Oh, no. I do not think the statement indicates that. It is merely a general statement about British propaganda in this country—as a matter of fact, I do not think that they are spending so much money against the Irish as they are in favor of Great Britain herself, in order to be included in the lion's share of all of the funds we are appropriating.

Mr. SMITH. That is all.

Chairman RICHARDS. Mr. Merrow?

Mr. MERROW. Mr. Costello, I join with my colleagues in saying it is a pleasure to have you with us. I am very much interested in your clear and lucid statement. I commend you in saying, on page 7, that certainly the Congress has the right to declare upon what conditions the funds of the American people are to be expended in Europe, and I take it that you would recommend writing conditions into legislation that must be met before these funds are received by the various countries in Europe.

Mr. COSTELLO. I think conditions of that sort should be written in. Otherwise, you might have the same situation as you had in Korea, where the United Nations are presumably involved and fighting aggression there, and yet outside of, you might say, token assistance, you have practically no genuine assistance from other countries in the United Nations, outside of the United States and the Korean Republic itself.

Mr. MERROW. And since conditions have not been spelled out specifically in legislation, you feel that now is the time to do it?

Mr. COSTELLO. Today is a good time to start.

Mr. MERROW. Thank you.

Chairman RICHARDS. Dr. Judd?

Dr. JUDD. Mr. Costello, it is nice to see you again.

I am surprised to hear that there are still 3 or 4 million Irish left in the island, in view of how many of them are in this country. My branch of the Irish family comes from south of the border, and my wife's is from the north. That is the way we solved the partition. I do not know whether that sort of thing is taking place over there too. Is there considerable interchange between the two sides, and intermarriage, do you know?

Mr. COSTELLO. Undoubtedly there is. It is quite common for interchange back and forth, but there is a customs border maintained there so that goods and articles being carried across the border may be subject to taxes, and proper duties.

Dr. JUDD. It is a little long, to wait for union by that method.

Mr. COSTELLO. I am afraid it might take another century; and the longer the border remains, the more permanent it is. Prior to 30 years ago, there had never been any division before, and they had always been looked upon as one country.

Dr. JUDD. Recently, I have found myself described as a member of a mythical China lobby, and as near as I can find out, it does not have

anything like the amount of money that you report some of these other lobbies have. I wondered if I could not get a job in a more remunerative one than the one I am said to be in at present without a job. Is the business doing pretty well, John?

Mr. COSTELLO. The China lobby?

Dr. JUDD. No; the—

Mr. COSTELLO. If you are referring to the Irish lobby, as such, I am afraid that this particular organization is not heavily burdened with finances, and in fact, the Irish are usually rather generous with speech but not always in a position to be generous with cash.

Dr. JUDD. Anyway, it is nice to have you here again. Thank you.

Chairman RICHARDS. Mr. Javits?

Mr. JAVITS. Mr. Costello, I am very glad to see you here, and I might say that my Irish lineage is very direct: my mother was born in Galilee, in Palestine. I have a very lively interest in your problem, because I see many similarities between the unification of Ireland and the unification which has come about with so much bloodshed and work and heroism in Israel.

I tried to interject in the very distinguished statement made by my colleague, Mr. Mansfield, what I thought was an important point, which I would like to mention now, and I hope he will agree that it is; and that is that the resolution of the Security Council of June 27, 1950, dealing with the Korean action, invited members of the United Nations to furnish assistance, and did not invite nonmembers of the United Nations. So, while perhaps Eire could have volunteered, it is fair to say that no such call was made by the UN.

Mr. Costello, do you want us to take what you are presenting as a serious problem of statesmanship for the United States, or do you want us to take it as some cause that people who are anxious to curry favor with those of Irish descent should embrace?

Mr. COSTELLO. I do not think it should be undertaken purely as a political move or something to obtain votes in the country, and so on.

Mr. JAVITS. You want the unification of Ireland to stand on its own feet as a problem of American statesmanship?

Mr. COSTELLO. It is a situation there of gross injustice that should not continue. Great Britain has occupied Ireland over a period of 7 to 8 centuries, and throughout that entire time the Irish have never submitted to British domination, and they have never been at rest under British rule. And, so, at no time can you say that the British really controlled Ireland. They had to govern always by force of arms.

Finally, it reached the point that, following the First World War, after all of their pledges of giving freedom to or home rule to the Irish people, when it came time to redeem those pledges, the Irish again had to fight in order to force the British to live up to the promises they had made during the war. And, so, they created then the division in Ireland, giving independent status to 26 counties, but still maintained control over the remaining 6; and, to my way of thinking, the fact that they removed themselves from the 26 counties is definite indication that they knew they had no right to be there, and it is a confession of their guilt. Therefore, they should remove themselves from the remaining six counties.

Mr. JAVITS. Is it fair to say that what you want us to do is to accept and adopt, as a principle of our conduct, the principle you advocate

of unification of Ireland, and that that is the first and primary point; and that the means by which it should be accomplished, whether by an effort to cut off funds from Great Britain or by strong expressions of our desire, as through the Fogarty resolution, is the next question which you consider to be more largely in our own judgment? Is that right?

Mr. COSTELLO. Our primary interest is in seeing that border eliminated and the country united. Now, the method or the best means to be pursued in doing that, of course, would be entirely up to the judgment of this committee.

Mr. JAVITS. Do you feel that a big point will have been gained by those who stand with you in your position, as I do, if the Fogarty resolution is adopted?

Mr. COSTELLO. Yes; I do, because I think if the committee were to report the Fogarty resolution, and the House were to pass that resolution, it would be a very clear indication that the Congress of the United States at least felt that an injustice existed there that should be remedied.

Mr. JAVITS. Now, would you mind answering one other question, and, if you find it difficult, just say so, but I have been under a great deal of attack because I have espoused the justice of the unification of Ireland, and one of the great issues that has been presented to me is whether, if all Ireland was unified, there would be complete religious freedom in the country. Would you be good enough to speak to that?

Mr. COSTELLO. I think the best answer to that is the situation in the 26 counties. We feel this is not a religious question at all, although it so happens the majority of the Protestants are located in the six counties. But in the 26 counties you have a Protestant population amounting to about 6 percent, and yet Protestants occupy 20 percent of the governmental positions in the country. They hold a very large percentage, about 20 percent of the business positions of prominence. And I do not think that you have found a single case of any religious intolerance demonstrated on the part of the Government or the people in Ireland. In fact, the Irish Constitution prohibits religious discrimination.

I think that you will find that statements made by Jewish rabbis in Dublin, where there is an outstanding synagogue, and by the various Protestant ministers and bishops in Ireland, where they have repeatedly made written or verbal statements to the effect that they have not suffered a single bit of discrimination because of religion.

Now, if there were going to be that tendency, with a very small minority of 6 percent, it would have been evidenced long before.

Mr. JAVITS. Thank you.

Chairman RICHARDS. Mrs. Kelly?

Mrs. KELLY. Mr. Chairman.

I welcome Mr. Costello before this committee. I am sure that you realize that I am sympathetic with this cause, and I not only support your statement but I want to support the statement of my colleague, Mr. Mansfield.

There is one point I would like to bring out at this time; that I do want to emphasize the fact that the peoples of this country over 100 years ago recognized the threat of communism to the world. It took this country almost 100 years later to recognize this real threat, in 1948, when Vishinsky, on the floor of the United Nations, denounced

our great leaders. I thank God to this day for Vishinsky denouncing our leaders. I only hope this committee will vote out favorably the Fogarty amendment, so that action can be taken on the floor. I do not want to be compelled to vote for a rider on an important bill, the Mutual Security bill; and I am sure that, no matter what the outcome of the Fogarty resolution is, the rider will not be attached to the mutual security bill if action is taken by this committee on an appropriate resolution. And I hope that the committee will bear that in mind.

I thank you.

Mr. COSTELLO. It is my thought, in making a suggestion regarding this sort of amendment, that it will augment your security in seeing to it that Ireland, too, might become a part of that defense program. I think that that would happen very rapidly if such provision were written into this particular legislation, for I am quite sure the British Government would not stand idly by, but would act promptly to eliminate the border if it prevented their receiving defense aid.

Chairman RICHARDS. Mr. Reece?

Mr. REECE. I have no questions, but I do want to say that Mr. Costello's occasional appearances before congressional committees in part compensates for his having left the Congress.

Chairman RICHARDS. Thank you very much.

Mr. COSTELLO. Mr. Dalton, a member of the executive committee, had hoped to be present and be a witness, but he was out at Cleveland at the conference there. When he returned to New York and was notified of this hearing he was unable to come down, and he requests permission to put his statement into the record at this point.

Chairman RICHARDS. We are sorry Mr. Dalton could not be with us, and without objection that will be done. Thank you very much. (The statement referred to is as follows:)

STATEMENT OF RICHARD F. DALTON, AMERICAN LEAGUE FOR AN UNDIVIDED IRELAND

First, I should like to express my thanks to the committee for the opportunity afforded me to be heard.

Second, I should like to express my thanks to the secretary of the committee, Mr. Boyd Crawford, for his patience and courtesy in reaching me by telephone under difficult circumstances.

Mr. Chairman and gentlemen of the committee, I am opposed, as a citizen and as a taxpayer, to any recommendations for allocations of American money for any European purpose—defense, or alleged security, or other—for so long as England persists in her present international attitudes and remains in the present disesteem in which England is held by the bulk of our citizenship.

My opposition stems from a firm belief that any further American moneys advanced to or spent for the account of England, under England's present set-up, will simply be so many more good American dollars thrown down a bottomless pit.

It is common knowledge that England, with more than 50,000,000 of population resident within an area no larger than our own State of Illinois, is unable (under England's present set-up) to adequately support, house, or even feed that population. It is notorious that England, even to and within the past year of trouble in Korea, has furnished materials and supplies of war utility to the actual or potential enemies of the United States of America. The fact that England may try to excuse herself because of her dire economic necessities affords but cold comfort to mothers and fathers who lost sons in Korea.

It is now openly published that within this same period England has expended more than 2½ million dollars on just two of England's pet propaganda projects in the United States of America.

Yet, England has persistently refused to clear up her own outrage to democratic processes in her own immediate neighborhood—Ireland.

England has refused, and continues to refuse, to evidence by her deeds those principles which would win her the respect and the confidence of the civilized world.

England has maintained her invasion of Ireland for 782 years, and there is a powerful school of thought in England today which holds to the theory that England's present-day invasion of Ireland can be reextended, and that England can once again reduce the whole of Ireland to the status of a Province, relegated to the task of supplying food for England's table.

This is amply proved by the fact that England keeps our American State Department impregnated with the schooling that matters pertaining to the six counties of northeastern Ireland are "the internal affairs of a friendly power, with which the United States of America may not interfere."

Such pseudo-superiority offends some 30 million ethnic Irish in the United States of America, and is probably the prime cause of the low estate to which England has fallen in American public opinion. The Irish are vocal; the Irish are eloquent; the Irish are forceful in proclaiming their rights. The Irish are bitterly resentful in denouncing their wrongs. They are denouncing England now wherever Irishmen and Irishwomen are gathered together.

Then, too, to all appearances, our English-influenced Department of State is very effective in keeping detailed information of the true state of affairs in Ireland from the knowledge and official action of President Truman.

President Truman's speech just 2 weeks ago (Washington Monument, July 4, 1951), ties in squarely with the actual aspirations and struggles for complete independence of the people of Ireland; it places, in words, the United States of America with those, however small, who seek and fight for liberty. That speech idealizes liberty; that speech spurns and condemns tyranny.

As an old-time Democrat since my boyhood, I find myself unable to believe that these are not sincere words from the President.

But still I have to remember that President Truman refused to receive a splendid delegation of Gold Star Mothers who went to Washington in 1948 bearing a monster petition with hundreds of thousands of signatures, and addressed, as was the constitutional right: "To the President and Congress of the United States of America."

The petition was in Ireland's behalf. Its wording is available.

And so that petition had to go over to a then Republican House of Representatives, and it was to Congressman Joseph W. Martin, then Speaker of the House, that those Gold Star Mothers had to make their plea for American intervention in behalf of Ireland's unity and complete independence.

Well, Irish-American opinion has advanced a long way since then, and England has sunk very low in American public esteem since then, and perhaps the State Department would not again insist that Ireland's affairs are the domestic concern of England if the Fogarty resolution in the House, or the Dirksen resolution in the Senate, should reach the stage of public debate in the full view of the American voters.

But, to come squarely to the business of the day, Mr. Chairman, I respectfully remind you that the last Government of the Republic of Ireland, through its then Minister for External Affairs, Mr. Sean MacBride, made a plain statement to the Government of the United States of America as to why Ireland cannot join the North Atlantic Pact for so long as England continues her invasion of the northeasterly six counties of Ireland. I respectfully remind you that a national election has occurred since then in the 26 counties of Ireland over which the Republic of Ireland presently exercises *de facto* as well as *de jure* jurisdiction.

I respectfully remind you that in this recent election all parties deemed the reunification of Ireland a matter above and beyond party politics. Such reunification was considered desirable and necessary by unanimous consent of the people of Ireland, and was not even a necessary subject of debate.

I respectfully remind you that as a result of that election the party of Eamon de Valera has been returned to power, and that in one of his first utterances after being elected Taoiseach (Prime Minister) Mr. de Valera said: "Ireland to be free must be one."

I respectfully remind you that Mr. de Valera reiterated the policy which has been enunciated by Mr. MacBride, and reasserted the practical political statement that Ireland could not join the North Atlantic Pact while England continues her invasion of six counties of Ireland or of any part of Ireland.

I respectfully remind you that the absence of Ireland from the Atlantic Pact leaves open a gap of more than 270 miles in the West European military and naval front, and renders ineffective, and but a frittering away, any appropriations of American money for England's buttressing.

I finally remind you that the Republic of Ireland functions under a constitution modeled upon our own American Constitution, and that the Irish Constitution guarantees (and delivers) full civic and religious liberty to every person. That any cleverly financed English propaganda in America regarding a supposed religious question in Ireland is merely propaganda with a very offensive odor in the nostrils of American voters to the number of millions.

I therefore urge that, in your considerations pertaining to the national security, you safeguard our good American dollars and refuse to recommend the expenditure of any further of them, at least until such time as England begins to rehabilitate herself in American public opinion. Her action on Ireland would be a first evidence of England's awakening.

Mr. JUDD. I might ask one question. You said, "You can assure the good faith of Great Britain through the imminence of an Ireland allied equally with us in the protection of free nations from Communist domination."

On what basis do you speak so confidently that "4,000,000 Irish can keep some 47,000,000 English in line?"

Mr. COSTELLO. The thought I had there is not that the 4,000,000 will keep Great Britain in line, but the fact that should Great Britain decide to reverse its position to join with Russia in a war against us, if we had Ireland on our side right alongside of England, we would have a very effective means of keeping England on our side in that situation. In other words, I think Ireland tied up with us would be a sort of guaranty that England would stay with us and not go across to the Communist side.

Mr. JUDD. A good forward base, in other words?

Mr. COSTELLO. A very close base.

Mr. JAVITS. Is the Fogarty resolution, which I favor very much, entirely satisfactory to you now in its present form?

Mr. COSTELLO. Yes; it is.

Mr. JAVITS. While recognizing its limited scope, we understand that.

Mr. COSTELLO. Yes; the Fogarty resolution is very general in its statement and it does meet with the approval of the American League for an Undivided Ireland.

Chairman RICHARDS. The next witness is Mr. Merwin K. Hart.

We are glad to have with us as the next witness Mr. Merwin K. Hart, president of the National Economic Council.

Have you a prepared statement, Mr. Hart?

STATEMENT OF MERWIN K. HART, PRESIDENT, NATIONAL ECONOMIC COUNCIL, INC., NEW YORK, N. Y.

Mr. HART. I appear on behalf of the National Economic Council to request that the size of the appropriations in this measure, particularly the nonmilitary appropriations, be drastically reduced.

We are convinced that for a full dozen years the spending of money by the United States on foreign ventures has been in great part excessive in amount and often ill-advised. The returns—where there have been any—have been frequently, as in our nearly \$11 billion of lend-lease to Soviet Russia, tragically on the minus side.

In the 11 years ending January 2, 1951, appropriations for foreign governments, or for the benefit of foreign peoples, have been well nigh \$100 billion. Some of this, of course, was well spent. Much of it was not. All of it came out of the savings, or the income that would have been savings, of the American people. Since much of it was

raw material or fabricated goods, the natural resources of the United States have been by just so much depleted.

The Congress, due we think to the so-called bipartisan foreign policy, must share the blame for this excessive and fantastic expenditure. But we place the greater part of the blame on the Executive, because the Executive has recommended spending without regard to the wealth, the income, or the natural resources of the United States—in some cases without more than a hope that such spending would benefit the United States, and without regard to the needs of the American people.

In a communication sent by Mr. Alfred Kohlberg to the President of the United States on August 30, 1950, he called attention to some \$35 billion worth of war matériel, including raw materials such as copper, having been destroyed or dumped into the ocean after the end of hostilities in 1945.

Miss Freda Utley says in her book, *The China Story*, on page 37:

Following Japan's surrender, shipments of lend-lease supplies to China from India were stopped, and large quantities of munitions and equipment intended for China were destroyed, or thrown into the sea. Smaller-caliber ammunition was blown up, and 120,000 tons of larger caliber dumped into the Indian Ocean. This "Operation destruction" cost the lives of 25 Americans and 125 Indians.

In a footnote on page 204 she says that the figure of 120,000 tons of large-caliber ammunition was confirmed by Gen. W. O. Reeder, now a Deputy Assistant Chief of Staff and former Foreign Liquidation Commissioner of the India-Burma theater.

We ourselves have heard from many sources so much hearsay, as well as some authentic accounts, of the extent of such destruction that we are not surprised at Mr. Kohlberg's figures. It is a mystery to us that we have rarely, if ever, read anything about this huge destruction in the newspapers, and we wonder at their silence. If the intent of all this destruction was not to weaken the United States vis-à-vis Soviet Russia, what was the intent?

We strongly recommend that this committee, before approving appropriations on this account, should investigate this destruction, why it was done and on whose orders? Is the man who issued those orders still with the government? Was not this destruction a treasonable act?

In both World Wars I and II, and since, we have appropriated money in huge amounts to aid Great Britain. Yet Britain, it must be admitted, is pursuing her own interests, just as we believe the United States should do. But let her pursue her own interests with her own money, not with ours.

When the Communist Eisler escaped and was in British hands, Britain refused to hold and return him to the United States.

While it is to the vital interest of the United States, in the opinion of this Congress, so far as I can learn, and certainly in the opinion of our military men, for the United States to establish closer relations with Spain, yet the Socialist-Labor Government of Britain has long and to date successfully used its influence to keep America and Spain apart.

Again and again, serving her own interests, Britain, although she has sent only a small number of troops to aid us in Korea, which troops have fought valiantly, is nevertheless presuming to dictate the policy of the United States with respect to Korea and China. In

these and other instances it can be seen that the aid we have given Britain does not predispose her in the least in our favor. The billions we have given Britain since 1945 have merely sustained in office a Socialist-Labor form of government, Marxist in inspiration and purpose.

Similarly, the aid we have given France and Italy has brought us little good will. Neither has it materially weakened communism in those countries, for the Communist vote in the May elections in Italy was actually greater than in her elections of 1948, and the drop in the Communist popular vote in France in the June 17 election was not nearly so great as had been forecast. Yet an important purpose of this aid was to overcome the Communist threat. And we at least thought we would have the good will of those countries.

On the other hand, while the United States has been throwing money around in countries where the good it has done is little in evidence, we have neglected until now to aid Spain. Spain is no defaulter—I am told she has never defaulted on a foreign debt. And she has actively and successfully fought the evil of world communism which the Truman administration has belatedly begun to recognize is our enemy.

I would like to say that this statement and these remarks about Spain were written by me before the headlines of yesterday in the New York Times and the Herald Tribune appeared, reporting that the Governments of Britain and France were denouncing the United States for even thinking of establishing closer relations with Spain.

Light is thrown on the attitude toward Spain of the British Labor Government, by a photograph, a photograph of the original of which I hold in my hand, and which I shall leave with the committee. I obtained the original photograph of this picture in the Foreign Office in Madrid in November 1950. This photograph, taken in Spain in 1940, shows the present Prime Minister of Britain giving with others the Communist clenched fist salute. I might throw in here that a copy of this picture on a circular that we published with a few descriptive words reached Prime Minister Churchill in England, and a friend of mine who showed it to him said that Mr. Churchill said, "My gosh, I had forgotten that, but I now remember it when it first came out." Apparently it impressed him.

This Congress last summer overrode the veto by the President of a loan to Spain of \$62½ million. Yet the administration has dragged its feet in carrying out the mandate of the Congress. It was many months before a single dollar of it was made available and more than half of the loan has not yet been made available.

I do not want to elaborate further on this Spanish situation because negotiations are apparently now going on which will bring Spain and the United States closer together. It is probably not too late, but it is late. We have not followed our own interests in that we have failed to support Spain as our strongest potential ally on the continent of Europe.

We in the National Economic Council believe that all this reckless spending has been instigated by alien influences, by Soviet Russian influence, by British influence, by French influence, by international Socialist influence. All these influences had a fascination to Mr. Roosevelt and have seemed to have an almost equal fascination to Mr. Truman.

We believe it is absolutely essential, if this country is to survive, to draw a line and from here on to appropriate no money for any foreign aid unless we are reasonably sure it will advance the interests of the defense of the United States. No commitment should be regarded as made merely because the Executive has made it, but every commitment should be subject to acceptance or rejection by the Congress. The American people are going to lose their liberty unless Congress repossesses its full powers under the Constitution.

We are greatly shocked by our Government's inertia and unawareness in the face of what Soviet Russia and her spies and agents have been able to do. Russia has carried out her conquest in China and the iron-curtain countries. She has infiltrated other countries, including even the United States, for eventual conquest.

We believe that to defend herself the United States is going to need every bit of her wealth in natural resources and manpower. We do not interpret the so-called global responsibilities of the United States as warranting us to continue to cast money about on every side, often simply in the hope that it may do some good. If we do not husband our resources with a care we have not shown in 18 years, America could lose her independence and we could find ourselves, possibly within a few years, a subject province in a world government dominated by Soviet Russia.

We therefore ask this committee not to approve a single project that is not directly connected with the defense of the United States. We urge that such spendings as proposed under point 4 be postponed indefinitely. We believe much of the propaganda in favor of such projects as point 4 is inspired far behind the scenes by those influences whose job it is to see the United States spend herself into bankruptcy. To allow ourselves to be mired deeper and deeper by point 4 would insure a continuance of the reckless spending that has characterized the past 10 years.

The National Economic Council gave a dinner last October in honor of Jan Ciechanowski, formerly Polish Ambassador to the United States and now an American citizen. Mr. Ciechanowski told that dinner group that in his opinion the most important thing in the world today was for the United States to be and to remain strong.

If the rulers of the Communist world continue to spend the greater part of their national income on armaments, while we give ours away in charity, the end will be conquest of these United States. Unfortunately, in the defense of America, good works are not worth more than bayonets.

That, Mr. Chairman, is the position of the National Economic Council. We believe that informed people will watch every vote of this committee and will approve its course only if it cuts down the foreign aid to an absolute minimum, in cases necessary for American defense.

Chairman RICHARDS. Are there any questions, ladies and gentlemen?

Mr. VORYS. Mr. Chairman, this statement gives us much food for thought, but I have heard from other sources in addition to Mr. Hart this incident about the destruction of munitions in the Indian Ocean, and I feel that we should inquire of the Defense Department the facts, and find out the answer to the three questions he proposes during the course of our consideration of this legislation.

Chairman RICHARDS. You raise those questions, but do you assert that such incidents have actually occurred Mr. Hart?

Mr. VORYS. I have heard it before Freda Utley heard it, and I think we ought to get an explanation of what did happen and why.

Chairman RICHARDS. We will have plenty of witnesses here from whom you can get those answers.

Mr. HART. I think we can say that we know of certain cases where that was done. The information comes to us in such a way that we cannot, or I cannot repeat it here without betraying a confidence, but I think it would be possible to find out where the information could be found.

Chairman RICHARDS. I assure you that before these hearings are over, we will go into that very question.

(The following information has been submitted for the record.)

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D. C., July 24, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: You will recall that during the course of Mr. Hart's testimony before the committee on July 18, 1951, reference was made to the destruction of munitions in the Indian Ocean. Mr. Vorys stated that an inquiry should be made of the Department of Defense concerning the facts involved in Mr. Hart's testimony. You will also recall that Mr. Hart referred to Gen. W. O. Reeder as having given confirmation to some of the statements contained in the testimony.

The following information is supplied by Maj. Gen. W. O. Reeder, Deputy Assistant Chief of Staff, G-4. He was signal officer, CBI theater from June 24, 1944, to May 21, 1945; Assistant Chief of Staff, G-4, India-Burma theater from May 21, 1945, until January 7, 1946; and Foreign Liquidation Commissioner, India-Burma theater from January 7, 1946, until July 15, 1946.

There were many types of property destined for the Chinese Government, in the custody of the CBI theater. There was lend-lease equipment which had been landed in the early days by diversion from the port of Rangoon. There was British lend-lease to China and Canadian mutual assistance material. With gold loans provided it by the United States, the Chinese Government had purchased diverse material, nearly all of a civilian nature, through two trading corporations; this material was received and stored in India by the CBI theater. In addition to this, it was originally the custom to ship United States military matériel given in lend-lease to China to the CBI theater, earmarked for China. In 1944 this custom was changed for administrative reasons, which follow. The Hump lift was a severe constriction in the supply line to China. The result was that much more China military lend-lease could be shipped to India than could be forwarded from India to China. Consequently, lend-lease supplies for China accumulated in India. At the same time, American troops in India and Burma were utilizing the same type of supplies and storage of material for them caused a duplication in supply and storage effort, in that full back-up for the American troops had to be maintained side by side with earmarked stock for China of the same character. Whenever a shortage occurred and it was necessary to "borrow" or reconvert to United States use some of the Chinese lend-lease, there was an elaborate administrative procedure to be accomplished and a considerable accounting load developed. Consequently, the CBI theater commander recommended and the War Department approved the following procedure: All Chinese lend-lease stocks in India and Burma were converted to United States stocks and thereafter United States military material was not put on lend-lease until actually issued or shipped to Chinese troops or to the Chinese Government. As a result, on VJ-day there was no United States lend-lease material of a character used also by United States troops in the India-Burma theater.

Shortly after VJ-day, the India-Burma theater was ordered by the War Department to effect as rapid a close-out as was consistent with orderly evacuation and disposal. Types of equipment and supplies which were to be returned to the United States were designated and disposal of the remainder was directed. There were of course many individual decisions concerned in effectuating this general

decision. One of the chief problems was material either belonging to, or earmarked for the Chinese Government. The United Kingdom and Canada were contacted by the theater to learn their wishes as to their lend-lease material for China. Both stated that it should be given to China. After tripartite negotiations between the theater, the Government of India, and the Government of China (represented in Delhi in lend-lease matters by a Mr. Chen), it was agreed to concentrate all material for China in two locations, one at Ranaghat, north of Calcutta and the other a few miles from Karachi; the Chinese Government also agreed under urging by the Government of India to accelerate the shipment of such material to China and the theater cooperated by securing ships for the shipment. Some of the material which was either the property of the Government of China or was still earmarked as lend-lease for China had deteriorated so much as to be not worthy of shipment; among such was a small amount of ammunition which was stored along with United States ammunition, principally in Kanchrapara ammunition depot. Such ammunition as the Chinese Government did not wish to ship to Ranaghat for later shipment to China was agreed to be destroyed or disposed of by the India-Burma theater. The agreement was carried out by having the Chinese execute shipping tickets to the United States for such ammunition as they did not want.

The War Department had designated certain types of ammunition to be returned to the United States and the disposal of the remainder. The directed ammunition was returned to the United States. The law governing foreign disposal of surplus required that warlike material be demilitarized before disposal. In the case of the ammunition remaining for disposal, demilitarization was a formidable task. The quantity to be demilitarized was large and the experienced personnel to do it were relatively few; furthermore, the rapidity of demobilization under the pressure of public opinion was fast thinning the ranks of the experienced. Safety was a very important consideration; in spite of the stringent precautions, there was at Kanchrapara an explosion which took the lives of 9 Americans and 55 Indians. Under such circumstances, the theater commander, Lt. Gen. R. A. Wheeler, recommended and the War Department approved, dumping as much as possible of the surplus ammunition at sea. Three ships were secured for the purpose; an area in the Bay of Bengal was agreed with the Government of India. The operation was carried on for about 2 months; each ship required about 2 weeks for loading, proceeding to the spot for dumping, dumping the ammunition, and returning to berth in Calcutta. It is believed that the three ships averaged four trips each and should have loaded about 10,000 short tons on each round trip; consequently the total dumped was about 120,000 short tons. Nothing but ammunition was dumped and of the ammunition only a very small fraction was Chinese; such Chinese ammunition had as stated above, been shipped to the theater for disposal. The average original cost of ammunition during the war was about \$1,000 per ton; on this basis the value of the ammunition dumped would approximate \$120,000,000. This dumping was carried out by troops and civilians under the command of the commanding general, Base Section No. 2, India-Burma theater. At the time the operation began this commander was Brig. Gen. Robert R. Neyland; he was succeeded before the dumping ended by Brig. Gen. W. K. Wilson.

It would be appreciated if this letter is made a part of the record.

Sincerely yours,

S. I. Scott,
Major General, U. S. Army,
Director, Office of Military Assistance.

(The following was submitted by the Department of State:)

MEMORANDUM CONCERNING DESTRUCTION OF SURPLUS AND DETERIORATED AMMUNITION IN THE CBI THEATER

The charge has frequently been made that 120,000 tons of ammunition was destroyed in the China-Burma-India theater at the end of World War II by dumping it in the Indian Ocean. This charge is sometimes varied by the declaration that the ammunition was destined for Nationalist China. The implication of the persons making the charge has been that the ammunition was destroyed for the purpose of preventing its delivery to Nationalist Chinese forces. This charge is completely untrue.

The actual facts have long since been made public. They were thoroughly covered in letters to Mr. Francis D. Flanagan, chief counsel, Senate Investigations Subcommittee, Committee on Expenditures in the Executive Departments from

Brig. Gen. C. C. Fenn, special assistant to the Secretary of Defense, and to Mr. Alfred Kohlberg from Maj. Gen. Edward F. Witsell, Adjutant General of the Army. These letters were dated December 18, 1950, and July 17, 1947. Copies of these letters are attached.

Persons making these charges usually impute responsibility to the Department of State. Secretary Acheson in a letter of July 6 to Senator Lyndon B. Johnson commented on this matter as follows:

"The role played by the Department of State in this action is effectively disposed of in General Fenn's letter. He said, 'Under such circumstances, the theater commander, Lt. Gen. R. A. Wheeler, recommended and the War Department approved dumping as much as possible of the surplus ammunition at sea.' Although it is true that the practice observed by the Foreign Liquidation Commission which was nominally under the Department of State, required that surplus materials be demilitarized before being sold or otherwise disposed of, the facts are that this dumping was carried out as a result of the recommendation of the CBI theater commander as a necessary safety measure."

The way in which this charge is usually levied implies that the entire 120,000 tons of ammunition was Chinese or was destined for Nationalist China and that its destruction gravely weakened the Chinese Nationalist cause. Secretary Acheson commented in the same letter as follows:

"The facts also establish that roughly 120 tons of this ammunition was Chinese, and so deteriorated that after an inspection by Chinese and United States Army Ordnance officers it was decided that it should be destroyed as a safety measure. A further inference that the dumping of this ammunition hampered the Chinese Nationalists is directly contradicted by the sworn statements of Secretary of Defense Marshall, who was the special representative of the President in China, and by Major General Barr, who was head of the United States military advisory group to the Nationalist Government. General Barr stated flatly that during the period that he was in China, which covered up through 1948, at no time did the Nationalist forces lose any battles for lack of equipment or ammunition."

In considering this charge, it is germane to point out that, rather than hampering the Nationalist forces, the United States policy made exceptions for China and provided extensive military aid, including a very large amount of ammunition. A detailed statement of such military aid to China was presented by Secretary Acheson to the Joint Armed Services-Foreign Relations Committee inquiring into the military situation in the Far East and appears at page 2813 ff. in part 4 of the hearings. This statement would undoubtedly be of considerable interest to the House Committee on Foreign Affairs. Secretary Acheson's statement points out that after VJ-day the Chinese Nationalists continued to get large quantities of military and economic assistance from the United States. Since VJ-day the United States has given Nationalist China about \$1 billion worth of military assistance. This has included large quantities of military equipment under lend-lease from the United States after VJ-day when China was the only country so favored. It has included the completion of the program to equip 39 divisions for the Chinese Government which was only half completed on VJ-day. That program was continued to completion by the transfer of more than \$400 million worth of ordnance and stores, tanks and military vehicles, and ammunition. It has included the equipment of the bulk of 8½ groups for the Chinese Air Force by a transfer of the total of 936 aircraft. These figures do not count the vital aid given the Chinese Nationalist Government after VJ-day by the headquarters of the United States Forces, China theater, in planning for the redeployment of the Chinese Army and the repatriation of the Japanese, nor the aid rendered by United States marines in north China in occupying key areas and maintaining control of the Government of essential lines of communication, nor for the aid provided by the United States advisory groups. These figures also do not count the large quantities of Japanese weapons and equipment which were turned over to the Chinese Nationalist forces when they were surrendered by the Japanese. This total does not include such items as 6,500 tons of small-arms and artillery ammunition which were turned over to the Nationalists by the United States marines when they left north China.

Since the question raised relates to ammunition, the following points made on pages 2815-2816 in Secretary Acheson's statement to the Senate joint committee may be of interest:

"1. The military assistance which the United States gave to the Chinese included, of course, large amounts of ammunition. While the Department of State does not have available a detailed itemization of wartime lend-lease materials, the item of ordnance and ordnance stores (\$153,333,189.94) included large amounts of ammunition. The post VJ-day lend-lease, as indicated in annex 1, includes more than \$94 million worth of ammunition.

In addition, 6,500 tons of ammunition, including more than 4¼ million rounds of small-arms ammunition, were left by the marines and Navy, at no cost to the Chinese Government, during their evacuation from north China; surplus property sold to the Chinese included in addition to other equipment and assorted ammunition of all sizes, 188,000,000 rounds of small-arms ammunition; the ammunition purchased from the \$125,000,000 grant under the China Aid Act of 1948 included 230,000,000 rounds of .30 caliber, 26,500,000 rounds of .45 caliber, 66,000 rounds of rocket ammunition, and 280,000 grenades.

"2. The Chinese Government also bought ammunition in the commercial market. Thus, in December 1947, for example, the Chinese Government signed a commercial contract for 6¼ million rounds of .50 caliber ammunition. The Chinese Nationalists also, we are informed, made substantial purchases in the commercial markets of other countries.

"3. Arsenals: Until the National Government's military collapse, which may be said to have begun in November 1948, the major arsenals in China and Manchuria were held by the Nationalists—15 major arsenals and 5 subarsenals producing considerable quantities of small arms and small-arms ammunition.

"4. From the more than a million Japanese which the Chinese Nationalists disarmed with our help, the Chinese took their ammunition as well as their arms and ammunition. The Chinese Nationalists also disarmed some 750,000 Japanese puppet troops (Chinese) and took their equipment and ammunition.

"5. It is estimated that as of VJ-day the Nationalists had a 5 to 1 superiority over the Communists in rifles and that they maintained military superiority in rifles and ammunition until after their defeats of middle and late 1948.

"There has been some attempt in this committee to prove that the Chinese Nationalists did not have adequate ammunition; that the United States was at fault in not providing the necessary ammunition; and that this lack of ammunition was responsible for the Chinese Nationalist defeats on the mainland. The attention of the committee is directed to the authoritative judgment on this question—that of General Barr. General Barr was chief of the Joint United States military advisory group; he was there in China from January 1948 to early 1949, the period when the Chinese suffered major crucial defeats which spelled the eventual doom of the Nationalist forces on the mainland, and he would appear clearly to be the man best qualified to express an opinion on the losses of the Chinese Nationalists. His reports, quoted in the record of these hearings, give his views as to the reasons for the losses of the Chinese Nationalists; it is relevant to emphasize his statement of November 16, 1948, that 'no battle has been lost since my arrival due to lack of ammunition or equipment.' In the final report of the joint United States military advisory group, there is the judgment that 'in general, troops in combat have had adequate supplies of weapons and ammunition, and their reversals are attributable to other causes than lack of equipment.'" (See China white paper, pp. 358-359.)

JULY 17, 1947.

MR. ALFRED KOHLBERG,

Vice President, American China Policy Association, Inc.,

New York 18, N. Y.

DEAR MR. KOHLBERG: This is in reply to your letter of July 8, 1947, addressed to General Eisenhower, concerning the dumping of arms and ammunition in India.

The War Department records reveal that the bulk of the combat troops supported by the United States Army in the China-Burma-India theater were Chinese. Due to the exigencies of war, the supply of ammunition requirements to the Chinese in forward areas was made almost wholly from United States Army stocks. As a result as the war progressed it became necessary for the United States Army to take over all Chinese lend-lease ammunition in the rear areas so as to integrate it into the United States supply line thereby placing it in the hands of the using troops with the least possible delay. On VJ-day, some ammunition remained in the United States supply channels which, due to its markings, could be identified as lend-lease to China.

Due to the storage conditions to which this ammunition was subjected, in many instances, in outside dumps during the seasonal monsoons, or even if placed in barchas, native storage depots, it became extremely deteriorated and corroded. Inspections by the Chinese and United States Army ammunition officers revealed that a major portion of this ammunition required destruction for safety measures. The cost of recovering the small amount of serviceable ammunition far exceeded its value. This fact had already been proved by British salvage operations on 7.92-millimeter Chinese ammunition.

This matter was discussed with representatives of the Chinese supply mission and representatives of the Chinese Army in India at which time it was decided that the most practicable disposition for this ammunition was to destroy it. This was not a unilateral decision made by the United States Army. The Chinese representatives present agreed, and a Chinese Army officer signed shipping tickets authorizing its destruction. No lend-lease credit, therefore, was given China as the supply representative in India, Mr. Chen, acknowledged China's responsibility and accepted this liability. Accordingly, as stated in your letter the ammunition was loaded aboard United States Army transport ships and dumped at sea.

This procedure was further dictated by our policy with respect to the Government of India. Chinese and United States troops in India were guests of that country. It had been agreed no ammunition would remain after their departure. To expedite the evacuation of foreign troops, the Government of India took over the disposal of the remaining balance of ammunition on April 1, 1946. Latest reports indicate this matter has just recently been concluded.

Sincerely yours,

EDWARD F. WITSELL,
*Major General,
The Adjutant General.*

DECEMBER 18, 1950.

MR. FRANCIS D. FLANAGAN,
*Chief Counsel, Senate Investigations Subcommittee,
Committee on Expenditures in the Executive Departments,
United States Senate.*

DEAR MR. FLANAGAN: In reply to your letter of December 12 making inquiry relative to dumping of munitions in what you term the China-Burma-India theater, the correct designation being the India-Burma theater at the time in question, the following is supplied by Maj. Gen. W. O. Reader, Deputy Assistant Chief of Staff, G-4. He was signal officer, CBI theater, from June 24, 1944, to May 21, 1945, Assistant Chief of Staff, G-4, India-Burma theater from May 21, 1945, until January 7, 1946, and Foreign Liquidation Commissioner, India-Burma theater from January 7, 1946, until July 15, 1946. Because of his intimate concern with the matter in question it is believed that his memory of the facts is correct as regards the major issues, though details would have to be supplied by extensive research into the theater records which are now in dead storage.

There were many types of property destined for the Chinese Government, in the custody of the CBI theater. There was lend-lease equipment which had been landed in the early days by diversion from the port of Rangoon. There was British lend-lease to China and Canadian mutual assistance material. With gold loans provided it by the United States, the Chinese Government had purchased diverse material, nearly all of a civilian nature, through two trading corporations; this material was received and stored in India by the CBI theater. In addition to this, it was originally the custom to ship United States military matériel given in lend-lease to China to the CBI theater, earmarked for China. In 1944, this custom was changed for administrative reasons, which follow. The hump lift was a severe constriction in the supply line to China. The result was that much more China military lend-lease could be shipped to India than could be forwarded from India to China. Consequently lend-lease supplies for China accumulated in India. At the same time, American troops in India and Burma were utilizing the same type of supplies and storage of material for them caused a duplication in supply and storage effort, in that full back-up for the American troops had to be maintained side by side with earmarked stock for China of the same character. Whenever a shortage occurred and it was necessary to borrow or reconvert to United States use some of the Chinese lend-lease, there was an elaborate administrative procedure to be accomplished and a considerable accounting load developed. Consequently, the CBI theater commander recommended and the War Department approved the following procedure: All Chinese lend-lease stocks in India and Burma were converted to United States stocks and thereafter United States military material was not put on lend-lease until actually issued or shipped to Chinese troops or to the Chinese Government. As a result, on VJ-day there was no United States lend-lease material of a character used also by United States troops in the India-Burma theater.

Shortly after VJ-day, the India-Burma theater was ordered by the War Department to effect as rapid a close-out as was consistent with orderly evacuation and

disposal. Types of equipment and supplies which were to be returned to the United States were designated and disposal of the remainder was directed. There were, of course, many individual decisions concerned in effectuating this general decision. One of the chief problems was material either belonging to, or earmarked for, the Chinese Government. The United Kingdom and Canada were contacted by the theater to learn their wishes as to their lend-lease material for China. Both stated that it should be given to China. After tripartite negotiations between the theater, the Government of India, and the Government of China (represented in Delhi in lend-lease matters by a Mr. Chen), it was agreed to concentrate all material for China in two locations, one at Banaghat, north of Calcutta, and the other a few miles from Karachi; the Chinese Government also agreed under urging by the Government of India to accelerate the shipment of such material to China and the theater cooperated by securing ships for the shipment. Some of the material which was either the property of the Government of China or was still earmarked as lend-lease for China had deteriorated so much as to be not worthy of shipment; among such was a small amount of ammunition which was stored along with United States ammunition, principally in Kanchrapara ammunition depot. Such ammunition as the Chinese Government did not wish to ship to Banaghat for later shipment to China was agreed to be destroyed or disposed of by the India-Burma theater. The agreement was carried out by having Chinese execute shipping tickets to the United States for such ammunition as they did not want.

The War Department had designated certain types of ammunition to be returned to the United States and the disposal of the remainder. The directed ammunition was returned to the United States. The law governing foreign disposal of surplus required that warlike material be demilitarized before disposal. In the case of the ammunition remaining for disposal, demilitarization was a formidable task. The quantity to be demilitarized was large and the experienced personnel to do it were relatively few; furthermore the rapidity of demobilization under the pressure of public opinion was fast thinning the ranks of the experienced. Safety was a very important consideration; in spite of the stringent precautions, there was at Kanchrapara an explosion which took the lives of 9 Americans and 55 Indians. Under such circumstances, the theater commander, Lt. Gen. R. A. Wheeler, recommended and the War Department approved, dumping as much as possible of the surplus ammunition at sea. Three ships were secured for the purpose; an area in the Bay of Bengal was agreed with the Government of India. The operation was carried on for about 2 months; each ship required about 2 weeks for loading, proceeding to the spot for dumping, dumping the ammunition, and returning to berth in Calcutta. It is believed that the three ships averaged four trips each and should have loaded about 10,000 short tons on each round trip; consequently, the total dumped was about 120,000 short tons. Nothing but ammunition was dumped and of the ammunition only a very small fraction was Chinese; such Chinese ammunition had as stated above, been shipped to the theater for disposal. The average original cost of ammunition during the war was about \$1,000 per ton; on this basis the value of the ammunition dumped would approximate \$120,000,000. The dumping was carried out by troops and civilians under the command of the commanding general, Base Section No. 2, India-Burma theater. At the time the operation began this commander was Brig. Gen. Robert R. Neyland; he was succeeded before the dumping ended by Brig. Gen. W. K. Wilson.

Sincerely yours,

C. C. FENN,
Brigadier General, United States Army, Retired,
Special Assistant to the Secretary.

Chairman RICHARDS. Are there any other questions?

Dr. JUDD. Mr. Chairman, I would like to say for the record that I do not think the statement in the second paragraph is quite accurate. The second sentence of your second paragraph says, "The returns—where there have been any—have been frequently, as in our nearly \$11 billion of lend-lease to Soviet Russia, tragically on the minus side."

Personally, I do not think we ever spent any \$11 billion that saved more American lives than did those \$11 billion lend-lease that we gave to the Soviet Union. The error was not in assisting the Soviet Union against a common enemy; the error, and that is the thing that was

tragic, was in assuming that because Russia for her own reasons and we for our defense were fighting Hitler together, they were also democratic and wanted the kind of world that we wanted, and would cooperate with us after the war to build it. That was a tragic error, but it was not in giving lend-lease assistance to Russia. It was in assuming that she wanted to cooperate with us after the war and basing our foreign policy on the illusion that she was a peace-loving democracy.

Mr. HART. The reason we have put this statement in here is that we believe if we had withheld lend-lease from Soviet Russia, Hitler and Stalin would have worn themselves out and Hitler would have been disposed of and Stalin would have been so weakened that he would have been stopped in his tracks. That is our theory.

Dr. JUND. I do not believe you can assume Hitler would have been disposed of, because without our assistance just at the timely moment, I suspect he would have overrun Russia. Whether he could have controlled it and occupied it afterward is another question. But it was touch and go for many weeks even with our assistance to the Soviet Union. I do not want to argue the point.

Chairman RICHARDS. Thank you very much, Mr. Hart. We appreciate your coming here to testify.

Mr. HART. Thank you, Mr. Chairman.

Chairman RICHARDS. The next witness is the Honorable Tracy S. Voorhees.

STATEMENT OF TRACY S. VOORHEES, VICE CHAIRMAN OF THE COMMITTEE ON THE PRESENT DANGER

Chairman RICHARDS. We are glad to have you here, Mr. Voorhees. Mr. Voorhees represents the Committee on the Present Danger. I believe you are vice chairman of that organization.

Mr. VOORHEES. Vice chairman of that organization, yes.

Chairman RICHARDS. Would you mind telling the committee your background in the political field, and in the private field, and so forth?

Mr. VOORHEES. If the committee please, I have no political background. I was until Pearl Harbor a lawyer in New York.

Since then I served in the Army during the war, and after that remained in various jobs for the War Department until a year ago.

Chairman RICHARDS. What was your position with the War Department?

Mr. VOORHEES. I was for a time special assistant to the Secretary of War, and then Food Administrator for the Occupied Areas, in charge of feeding Germany and Japan during the famine years; and then Assistant Secretary and still later Under Secretary of the Army.

Chairman RICHARDS. I did not mean to say political field. I know that you are anything but a politician, but I was thinking at that time about your connection with the Government when you were here.

Have you a prepared statement, sir?

Mr. VOORHEES. At the request of the clerk of the committee, I did prepare a statement, and I have it here and I can either use that statement or speak extemporaneously.

Chairman RICHARDS. You go ahead in your own way, whichever way you prefer.

Mr. Voorhees. Both for myself and for the members of the Committee on the Present Danger, permit me, first, to express our appreciation of the opportunity to present our views before this committee.

The Committee on the Present Danger, formed last fall and consisting of 55 members, is a nonpartisan, nonpolitical group of private citizens. It was formed because of a deep conviction that the United States is gravely threatened by Soviet aggression. It believes that it is still possible to avert all-out war if the danger is realized in time and if the steps necessary are taken promptly by the United States and its allies to make major aggression against them an unprofitable gamble.

The committee believes—basing this upon the substantially unanimous opinion of our responsible military leaders—that the defense of the United States requires a joint defense of Europe, and to that end the firm support of General Eisenhower's mission in Europe. It believes that this must be done without neglect of the Far East. The above program the committee considers to be one necessary for national survival.

Dr. James B. Conant, the chairman of our committee, is temporarily absent on a trip to the Pacific, and as vice chairman, I accordingly tonight appear in his place to supplement the testimony given by Mr. Paul Hoffman, also a member of the Committee on the Present Danger and of its subcommittee on foreign aid.

Beginning last February, the committee undertook an intensive study of the subject of foreign aid and its organization. This work was prosecuted actively by studies made, both in Europe and here, until a month ago when a public report was made. This consisted of a brief statement by the committee, accompanied by a summary report by its subcommittee on foreign aid, and—published separately—a detailed study of the subject. Copies of these two pamphlets have been furnished to you. I think that those have been sent to you, but they were attached to the statement sent to the committee this afternoon.

The first, or shorter pamphlet, contains a list of the members of the committee; and then the report of the subcommittee on foreign aid and the objectives of the committee.

Chairman RICHARDS. Of course, we cannot put this whole pamphlet in the record, but they are very good documents, and I have read them both pretty carefully. However, I think we should put the list of the members you have there in the record, because a great many prominent citizens are there. Without objection, that will be done.

(The list referred to is as follows:)

COMMITTEE ON THE PRESENT DANGER

Julius Ochs Adler
 Raymond B. Allen
 Frank Altschul
 Dillon Anderson
 William Douglas Arant
 James Phinney Baxter III
 Laird Bell
 Barry Bingham
 Harry A. Bullis
 Vannevar Bush
 Will L. Clayton
 Robert Cutler
 R. Ammi Cutler
 Mrs. Dwight Davis
 E. L. Degolyer
 Harold W. Dodds
 Charles Dollard
 William J. Donovan
 Goldthwaite H. Dorr
 David Dubinsky
 Leonard K. Firestone
 Truman K. Gibson, Jr.
 Miss Meta Glass
 Arthur J. Goldberg
 Samuel Goldwyn
 W. W. Grant
 Edward S. Greenbaum

Caryl P. Haskins
 Paul G. Hoffman
 Monte M. Lemann
 William L. Marbury
 Stanley Marcus

 W. W. Waymack
 Henry M. Wriston
 J. D. Zellerbach

James B. Conant, chairman
 Tracy S. Voorhees, vice chairman

Mr. VOORHEES. The committee consists of Republicans and Democrats, some members of the clergy, representatives of labor, citizens who were interested in various phases of the war effort in World War II, some atomic scientists, and about nine college presidents. I do not think that there is anyone on the committee who is in active political life, except that I read in the Philadelphia papers that one of the clergymen is running for mayor of Philadelphia.

Mr. REECE. You are not hinting that if some members of your committee were in political life, that it would be a reflection on the organization? For one, I am getting tired of people, by inference, conveying the impression that a man engaged in politics is not patriotic, and the fact that membership to someone who might run for political office would reflect upon your committee. I do not think it would detract from it in any way.

Mr. VOORHEES. The presence of such a man as a member would be an honor, sir, and I did not intend any such thought as you suggest. May I say that the only reason we did not include persons in active political life was that we felt that if we had people who were in active political life, it might be said that they had some political motive in advocating the program we were supporting. For our purpose, in which we were trying to do something which we thought was of a nonpartisan nature, we felt therefore that it would be better to have people who were not in active political life. I wish to say, sir, with very great respect, that I have the utmost admiration for you people who take the heat down here day after day, and it is not because of any lack of such respect, but merely for the reason that I stated, that we organized the committee the way we did, sir.

Mr. REECE. I am sorry if I showed any feeling. I was director of the school of business administration at New York University, and a

teacher of finance at the time I got a leave of absence to run for Congress, back in 1920, and I do not think that I am any better or any worse today than I was at that time.

Mr. VOORHEES. Congressman Reece, you have done much for your country in that period. Our reason was this: We selected only a few subjects which this committee would deal with. We tried to limit its work to these few subjects which we thought were necessary purely for the defense of the country, and which therefore should not have any partisan political approach. We felt, therefore, that it was better, in order that the committee might not be claimed to have any political purpose or any purpose for the benefit of some member of the committee, not to include people who were in active political life. That was in order that we might be able, so far as possible, to command the respect and support of members of both political parties, without our advocacy of any policy being considered as favoring either the administration on the Democratic side or the Republicans, but would be, on these foreign-affairs, matters support of a national policy.

Mr. REECE. My own feeling is that a man who holds an appointive office is just as much in political life as a man who holds an elective office, the difference being principally that he sometimes is a hitch-hiker.

Mr. VOORHEES. Maybe that is what I was.

Chairman RICHARDS. Will you go right ahead?

Mr. VOORHEES. This work on foreign aid was initiated by the committee and was done completely independently, and at the committee's expense. The committee has no interest to serve except the broad objectives above stated. Its viewpoint and interest are only those of citizens for the protection of the security of the United States in a time of great danger.

We start from the fact that the policy of making the defense of the United States in Europe under an alliance is not just an administration policy, but a national policy approved by the overwhelming Senate vote ratifying the North Atlantic Treaty. Likewise, the present foreign-aid program now before you—of which the largest part is directly or indirectly for the military strengthening of our allies under the treaty—is, we believe, a national program divorced from political considerations.

Naturally, America wishes to set up a realistic defense with as few United States troops in Europe as possible. This can be done, given time. Europe has the manpower, and our present atomic strategic bombing supremacy should give us the time—but not time to waste. It, therefore, makes sense to supplement what Europe can do alone toward creating and equipping this joint force. This supplement is the largest part of the foreign-aid request now before you.

Apart from this rearmament, our aid for Europe's economic recovery under the Marshall plan would be now virtually completed a year ahead of schedule. The so-called economic aid for Europe in the present request is, with minor exceptions, in reality indirect military aid. Literally, it is economic aid for a military purpose. Whether aid is given in dollars to make possible increased European military production there, or is furnished through military end-items from here, is a difference of method merely, not of purpose. Both kinds of aid are to supplement the ability of each recipient nation to meet its agreed troop basis as a member of the North Atlantic alliance.

Therefore, in this planned aid to Europe, all aid is essentially part of one program for one purpose; all aid is to supplement what the local economies can do; all aid is essentially for a military purpose. This unity of the program should be recognized by creating an administrative set-up adapted to these conditions.

The existing split in administration is an historical accident resulting from earlier particular programs: ECA for European economic recovery; military aid through the State Department, first for Greece and Turkey, then for the North Atlantic countries; and technical economic assistance--point IV--in the State Department.

Since Korea, so-called military aid has come to constitute three-fourths of the program. But the previously existing split-up administrative organizations still continue, subject to a recently created form of committee government or coordination by a committee headed by an official of the State Department. Experience has shown that committee direction and split administration cannot produce fast, decisive, and economical results in such an operation. This is a business enterprise. It should be put on a business basis, both for economy and to get results in time.

Fortunately, we have an invaluable precedent which has worked well in the similar job involved in the Marshall plan. It was worked out 3 years ago last spring after exhaustive consideration in Congress, and it has functioned well. That precedent should, we believe, be applied to the present even greater task. Under it, foreign policy would be made by State, but the business operation of managing the aid program in accordance with such foreign policy would be in a single agency formed for this purpose. It would bear the same relationship to State that ECA does—one in which no dispute ever had to be taken to the President.

As to defense, its relationship would be, as Mr. Hoffman testified, quoting from the report in which he participated, "essentially the same as defense's present relationship to State in the mutual defense assistance program." When the first MDAP appropriations were made, they were assigned by the President to the State Department. Such appropriations have been principally used for purchase of military end-items in this country. This procurement was carried out by State through the Defense Department, and the money was transferred to Defense for such purpose. As to military end items procured in the United States, this would be followed in the plan we propose except that it would be the new agency, instead of State, which would be turning over the money to Defense for the procurement. But the agency would, of course, try to develop more sources of production in Europe.

The common sense, down to hard rock, reasons why there should be one such administrator for all foreign aid seem to us to include the following:

1. One man should have the job—just as the ECA Chief has had it—of finding out how much United States aid each country really needs to supplement its own budget and resources in order to meet its agreed troop basis. The American people should provide only the amounts—whether in end-items or in dollars—beyond that which the convalescent, but still not too strong, European economies can pay by reasonable action through their own budgets.

ECA provided its total aid, pursuant to the congressional mandate in the statute, under bilateral agreements which required that the recipient countries do their part. So the new Administrator should be required by the statute to make an over-all bilateral agreement with each recipient as a condition of all United States aid.

Lacking this, we have had in the past two separate appraisals of the amount of aid required: one economic by ECA; one the number of military end-items by State or Defense. Yet the total amount of each kind of aid should be proportioned to the other. Together they should be the amount required to make up the total deficit which the recipient country could not bear alone and still meet its troop basis.

2. The second thing which the Administrator should do, if this whole matter is to be put on a business basis, is to have, what Mr. Hoffman called a loud voice in determining what military products can be produced in Europe itself instead of sending United States end-items. This is necessary to make intelligent use of the European economies themselves. What has happened to date is that most of the so-called military aid has simply been contracted for in the United States, further overtaxing our economy and increasing inflationary pressures here. The German economy, strong as it is, has, for example, not been significantly used. It is not a Defense Department function—and Defense is not equipped—to go through the various European economies to develop their production. This can only be done by an agency with economic missions in each country, as ECA has, which the new administration would take over. Then—using the illustration contained in a question asked Mr. Hoffman yesterday by a member of this committee—and I do that from memory; I haven't a copy of the record—if one European country can make minesweepers and another can make small arms, and each needs the product of the other, the aid can be administered and the undertakings incorporated in the bilateral agreements in such manner as to use all such production fully. This would be done instead of, as stated in the question yesterday, supplying both minesweepers and the small arms from the United States because the other countries could not agree between themselves.

Basic in such a unified approach is that there would be no hard and fast division in advance between the amount of so-called military aid—now really United States end items—and so-called economic aid—now dollar assistance. The Administrator should be directed by the statute to promote, so far as can reasonably be done considering all factors, the production of Europe, and to use the power of the purse strings, as ECA did in its program, to see that this will be truly a mutual-assistance program, not just a United States give-away program. In this way we can give Europe the chance to earn dollars. We can increase the total output, decrease the United States cost, and make Europe a more active partner in the enterprise rather than a recipient. Also, in this way we can provide for Europe to produce the spare parts and servicing for United States end items furnished to them, averting a continuing drain on United States aid for this purpose.

Of course, the judgment of the Defense Department and of General Eisenhower as to the speed necessary for timely delivery, the security factors, the requirements and specifications, would have to guide the Administrator.

3. I believe that the Administrator should be required by the statute to administer the total aid to any individual member nation with particular regard to the recommendations of the supreme commander. Congressman Herter has already drawn attention to this matter. At present, apparently the supreme commander lacks a sufficiently authoritative voice in the equipping of the armies being created under his command. To correct this, the over-all bilateral agreement covering all aid to a country could be of the greatest value. The total assistance, whether called military or economic, would then flow in accordance with the needs of the supreme commander and the progress the recipient countries make to carry out their undertakings—both those in the bilateral agreements with the Administrator, and those consisting of commitments relative to the joint force under General Eisenhower. If the United States is going to furnish billions of aid for Europe to make possible a strong early defense, why should it not do so in a way to back up the judgment of the general it sent there to direct and create such defense?

4. The Administrator should see—just as ECA did in Europe—that each country furnishes maximum aid to other countries. There is no more wasteful method than separate dollar appropriations, separately administered, for aid to different areas with each recipient country looking to the United States for what it needs. In the Marshall plan, and limited solely to economic aid in that area, such mutual assistance was exploited effectively by ECA as the statute directed. But such countries also trade with the underdeveloped areas. To whatever extent is possible, aid which one country requires should be conditioned upon its supplying aid of kinds which it can furnish which other recipient areas require, whatever their geographical location. This is not only a sound measure for economy, but it is consistent with the dignity and sovereignty of the nations themselves. Frequently, they have evidenced a strong desire to earn their way. Japan, which last year had received \$250 million of economic aid, requires none this year, largely because of the earnings it has made through vigorous support of the United Nations war in Korea. I am informed that a high official of the German Government was this month knocking on doors in Washington asking for an opportunity to earn through production for the defense effort. In southeast Asia, Japan at low cost can furnish much of the economic aid and also technical assistance required. In doing so, she could keep herself solvent if the Korean fighting stops, and do so without United States aid. While the United States economy is overtaxed, there is definite gain in resistance to inflation here by such methods. Also enormous dollar savings are possible. In one instance in the Far East, such literally mutual aid reduced the net cost of certain United States military installations to less than 10 percent of what had been previously spent for similar construction. If the United States is going to run this long hard race of world leadership, it must do it efficiently on a business basis. At least, so we believe.

Finally, such Administrator would answer the problem dramatized by the Kem amendment. He would at once become in effect the mutual defense assistance officer contemplated in Congressman Battle's bill just approved by this committee. Here again, with the desired principle stated by the Congress in the legislation, the Administrator could, through the bilateral agreements and exercising

discretion in each case, apply the desire of Congress to control unreasonable trade which would have on balance military value to the Communist build-up.

In the above, I have for clarity referred substantially only to assistance for military purposes. This is not due to lack of interest in the underdeveloped areas, or the point 4 program. Over the long range that program is an essential part of our defense and successful world leadership against communism.

The heart of the matter is that the United States, to assert leadership which is thrust upon it and which is necessary for its own defense, must carry a heavy load for a long period. But this must not be a heavier load than necessary, and it can be made lighter only by sound, centralized business administration conducted on a nonpartisan, non-political basis, under the control of one pair of strong hands holding the purse.

The administrative change could be accomplished without serious disrupting going organizations. ECA has the bulk of the personnel and organization required, including the missions in the recipient countries. With them would be merged personnel from the military defense assistance program and point 4 in State. As liaison officers, there would be military personnel now engaged in these programs in the Defense Department. With the new and broader mandate, there would be no need to start from scratch or seriously to disrupt going operations.

As to the size of the appropriation, since we must make our defense in Europe, and since we have no guaranteed minimum time in which to create it, speed is essential. General Marshall has, I understand, indicated that foreign military aid appropriations for 2 or 3 years of the general order of magnitude of the present request will be necessary. Since the object is military, since speed is important, and since the present request constitutes, according to General Marshall's testimony, only one-third or one-half of the total which will be required, clearly there is no true economy in cutting down the present request. The obligating authority should be given to get as rapidly as possible the equipment required for the troop basis which our military command considers necessary to constitute a realistic European defense.

We are apparently planning to spend about \$60 billion on our own Defense Establishment. The present foreign-aid bill, through which we plan to develop the military strength of our allies, is just as truly a defense cost as our own Defense Military Establishment. Further, since our allies are contributing troops, this constitutes, as I believe Mr. Foster has testified, a lower defense cost for the same amount of military strength. We can no more afford to fail to strengthen our allies by the foreign aid requested than we can fail to provide the funds necessary for our Army, Navy, and Air Force.

The total request for foreign aid is only 12 percent of our total security budget. If we can afford the latter we cannot afford not to provide the former, which is an essential part of it. Put in other words, if we are to have a realistic defense and do not give this aid to our allies, we may need 12 United States divisions or 20 divisions in Europe instead of the 6 now planned.

It is for these reasons that the Committee on the Present Danger, after careful study, endorses an appropriation of the general order of magnitude requested.

Finally, let me quote with especial emphasis the last paragraph of our subcommittee's report, which it entitled "The Overriding Consideration."

While the foregoing seems the soundest organizational structure, the consideration of supreme importance is that this country give the aid to General Eisenhower in setting up the forces in Europe called for in the joint defense of the free world and also give such other aid as is vital elsewhere. Therefore, while we recommend an organization which we believe will be more economical in operation and sounder in structure than the split administration now existing, we also recommend that an appropriation of the order of magnitude proposed be supported unreservedly under whatever form of organization the Congress determines to be most effective. For organization, while important, must be considered as secondary to the over-all objective of furnishing the sinews necessary, in whatever form, to enable our allies to participate with full effectiveness in the joint defense and to take the broader measures in all areas required to win the peace.

Chairman RICHARDS. Thank you, Mr. Voorhees. That is a very interesting and bold statement.

Mr. Mansfield, we will proceed under the 5-minute rule.

Mr. MANSFIELD. Mr. Voorhees, I want to join the chairman in complimenting you on a very able statement. I am especially interested in the possibility of one organization administering these aid programs and am very happy to see how much detail you have gone into explaining the point of view of the Committee on the Present Danger. I wish if it were possible that you would furnish the committee more in the way of an organizational set-up for such an organization, if your committee can do so.

Mr. VOORHEES. We will be very happy to try to do so, sir.

Mr. MANSFIELD. I was also pleased to note your reference to point 4, because, as Mr. Rockefeller pointed out yesterday, this country is fast becoming a have-not country and we are losing our resources. He pointed out as an example just how short we were in manganese and how dependent we were on other countries outside this hemisphere.

I should like to add to what he said, and point out that as far as copper is concerned, and copper is synonymous with the rise of civilization, as far as this country goes we will be out of copper in 75 years except for one camp, and that is Butte, Mont. I bring that to your attention not because it happens to be in my district, but because of the fact that it is the only major mining camp in a copper sense which at that time will be producing in this country, and because that emphasizes that in copper and other metals, as well as in manganese, we are becoming more and more dependent upon outside sources, and one way to overcome this deficiency is through the development of a sound point 4 program which will enable us to be assured of these sources of supply as we become weaker in them.

Thank you very much, Mr. Voorhees, for a fine statement.

Mr. VOORHEES. I had the pleasure of being present at the direct testimony but not during the questioning of Mr. Rockefeller yesterday, and it seemed to me that his was a completely unanswerable statement as to the underdeveloped areas. In our detailed study which is the longer document there, which is furnished to you, at page 20, there is a discussion of the underdeveloped areas, beginning at page 20. Participating in that study was Dr. Theodore Schultz, who is the man who headed the study which was made for the United Nations, which pointed out that the underdeveloped areas of the world require foreign

capital totaling at least \$10 billion per year, if the productive capabilities are to be fully developed. Clearly what we are now trying to attempt is a very modest approach toward that. But I think that our committee has fully appreciated the importance of these areas. In spending more of my time today on the question of the military approach, I want to be very clear that I was not intentionally neglecting the other subject in which our committee was equally interested.

Mr. VORYS. Your committee has done a very great service, Mr. Voorhees, in helping us to think through this organization problem. What puzzles me is this, and you know all about it; you lived through the birth pangs of unification in the military department, where we said we are not going to have our military all scattered out, and you are now taking part in the proposed birth pangs of a duplication of our nonmilitary foreign affairs. This is not a temporary thing. This is a 10-, 20-, or 30-year business. It is a long-term activity. It seems to me what you are driving at is that we have a better State Department, a better department for foreign affairs, to handle the nonmilitary foreign affairs of the country, the economic foreign affairs, and to have a voice of control in our military affairs.

I know you have studied a great deal about it. One thing you mention here is that the new administrator should be required by statute to make an over-all bilateral agreement with each recipient. Both MDAP and ECA require bilateral agreements, and I have got them here and they are quite broad. Do you mean additional bilateral agreements?

Mr. VOORHEES. No, sir. What I referred to was the great importance in achieving ECA's objectives for economic recovery through its bilateral agreements. As it stands now, speaking rather colloquially, it is as though each European nation could go to mama for its economic aid, and papa for its military aid. If we are going to get the maximum effort from the recipient nations, our aid should be conditioned upon one agreement between our Nation and the recipient nation, under which it would be spelled out not merely what that nation is to do for economic recovery as ECA has done in its agreements, but what that nation must do in the whole joint defense effort. An illustration is that such agreements could include the principle that trade which on net balance is of military value to the Communist should not be carried on. We recognize that this principle is a tremendously complicated thing to administer. All Congress can do is to state the principle in the act, just as the only thing ECA can do in the bilateral agreements is to state the general principles.

But if you consider what could be done by fully developing an over-all bilateral agreement for all aid, and then conditioning the flow of all our aid upon that and upon the degree of performance of the obligations, the degree of support of the supreme command, the resulting gain in cooperation could be tremendous.

Mr. VORYS. But we have got those agreements now.

Mr. VOORHEES. We have bilateral agreements made with two separate agencies at the present time. I might put it this way: We started with the great debate in the spring of 1948, as to how the Marshall plan should be set up, and it was there determined and was the will of Congress, and it has worked, that there should be a separate agency which would do the operational job. I have before me, and I was reading this afternoon, the details of that ECA legislation, and how ECA would be fitted in with the State Department's policies.

Actually it is the Secretary of State who signs the bilateral agreements. However, it is the ECA Administrator who recommends their terms. In each country the head of the ECA mission has been junior to the ambassador. The ambassador has been the senior man.

Mr. VORYS. That is right.

Mr. VOORHEES. And there have been very few complaints.

I had some familiarity with that situation when I was in the Army, and was working primarily in the occupied areas, the arrangement worked very well.

Now, it seemed to us as though that precedent which has worked with ECA could be carried out effectively in this broader field.

Mr. VORYS. At the present time there is a three-man team, in the NATO countries, that is State, ECA, and military.

Now, would you cut that down to just one or two?

Mr. VOORHEES. Of course, you have your ambassador who has got to be your top man. You cannot have an ambassador in any country who is not the top man.

Mr. VORYS. You all agree on that.

Mr. VOORHEES. We are urging that this ECA-State relationship be followed as to all aid, because it has worked successfully. The ECA mission head would of course be subordinate to the ambassador. Although the ECA mission head reports directly to the Administrator, he also has to keep the ambassador fully informed of what he is doing and proposes to do. And he is limited to actual operations. The ambassador carries on the diplomatic negotiations.

Now as to the military matters you of course have a military attaché or a military mission are also under the Ambassador.

Mr. VORYS. He is a part of the whole MDAP. But my time is up, and I am reminded by my colleague.

Mr. BATTLE. Thank you for a very excellent statement. I want to say that I have a very close personal friend in Mr. Douglas Arant of Birmingham, Ala., who is a member of the Committee on the Present Danger, and if all of the members of this committee are of the same high caliber, you are destined for great things.

In following up Mr. Vorys' line of thought, do I understand that you are advocating one agency for all foreign aid?

Mr. VOORHEES. Yes, sir.

Mr. BATTLE. On an independent status?

Mr. VOORHEES. Yes, sir.

Mr. BATTLE. And would this administrator have cabinet status?

Mr. VOORHEES. Under the report of our subcommittee which is before you it is recommended that he have Cabinet status.

Mr. BATTLE. And he would have charge of both the military and economic aid?

Mr. VOORHEES. Yes; sir; he would perform essentially the same work which is now performed both by the ECA and by the State Department. That is ECA in economic aid and the State in military aid, and of course all procurement of military items in this country would have to be done by Defense. The agency's relationship to Defense would be substantially the same as the present relationship of State to Defense.

Mr. BATTLE. Mr. Vorys was talking about our country teams in foreign nations, headed by our Ambassador. According to your plan would the military and economic directors come under the Ambassador?

Mr. VOORHEES. Yes, sir; that is right. The ECA Act provided expressly that ECA mission heads would be junior to the Ambassador and that would have to be so.

Mr. BATTLE. Would there be a military administrator with the same status as the economic administrator?

Mr. VOORHEES. There would of course have to be advisory members. When you get over there you are in a little different situation in that you have an international organization under an American Supreme Commander. Of course the ideal thing, if we could just get away from all formalities and catchwords of "economic aid" or "military aid," would be to have aid from the United States, provided in a way to back up our American Supreme Commander over there, and that is the very simple thing that we really want done.

He is an international officer but there is no particular reason why we as Americans in supplying United States aid from United States taxpayers' dollars could not provide it in such a way as we want to help him get on with the job for the joint defense. Of course, a very great deal could be done to weld our aid organization in with that NATO organization at the present time. I don't know whether you perhaps have before you the organization over there. It is a surprising thing. Perhaps it has been inserted in your record already, and if it has not, it might possibly be of interest. The Supreme Commander is on about the fourth level from the top.

Mr. BATTLE. We spent a week in Europe recently trying to figure out the organization outlined by this chart.

Mr. VOORHEES. It was quite beyond me, although I had been more or less inured to charts over in the Pentagon and had seen lots of them, some of which I could understand. But I cannot understand this one. The simplification of that would be a very essential thing to make our defense effort in Europe successful.

Mr. BATTLE. The main reason this thing works is due to some mighty good personnel overseas, and not because of the organization.

Mr. VOORHEES. I should like to say that our study came to the conclusion, and it was stated in our report, that the only reason this worked was because of the high quality of the personnel, both over there and here and their determination to cooperate with each other in spite of the organization.

Mr. MANSFIELD. Will the gentleman yield there for just a moment?

Mr. BATTLE. Yes, sir.

Mr. MANSFIELD. Mr. Voorhees, following Mr. Battle's line of questioning, and taking this chart into consideration, do you think that your committee could in its wisdom work out a proposed chart for a reorganization on a single project scale?

Mr. VOORHEES. I am not sure it could do it "in its wisdom," but it will do its best if you wish. One of the things might be to bring in the Supreme Commander from right field and make him the pitcher. It is an amazing thing, but the public believes that General Eisenhower, because of the title "Supreme Commander," has a position over there which in fact he does not have at all.

Mr. BATTLE. I want to ask one more question, if my time is not taken up. I would like to thank you for mentioning the Battle bill, and say it is really a committee bill and not mine, but do you think that the principles of that legislation are sound so far as the control of east-west trade is concerned?

Mr. VOORHEES. I am not a sufficient expert to answer as to the detail of it. We are making and have almost completed quite a detailed study of that subject which, with your permission, we will furnish to the members of this committee within a few days.

Mr. BATTLE. We might insert that information in the record, Mr. Chairman.

(The material referred to is as follows:)

**LIMITATION OF TRADE OF THE FREE WORLD WITH THE SOVIET BLOC AS A
CONDITION OF UNITED STATES FOREIGN AID**

The controversy over the Kean amendment, and the prospect of stringent limitations being placed in any new foreign-aid law upon the trade of recipient countries with the Soviet bloc, have focused interest upon the subject of such trade and its control.

I. STATEMENT OF THE PROBLEM

It has been the policy of the United States under the Marshall plan and other foreign-aid programs to make such aid conditional upon the undertaking of certain broad commitments by the recipient countries. These commitments have been consistent with a due regard for the sovereignty of the countries undertaking them. They have generally been designed to assure the effective use of the resources of each country for its own economic recovery and in cooperation with other countries in the common recovery effort. They have been based on the common-sense principle that a country could be considered eligible for aid only if it were prepared to make effective use of it and to refrain from actions inconsistent with the purpose for which the aid was given.

The economic recovery goal—apart from rearmament needs—has virtually been reached in Europe. The primary purpose of future aid to that area is to build up ability to resist the threat of Communist aggression. Continued aid to other areas of the world has a related object. Prevention of Communist subversion in such areas is still a necessary purpose also.

The United States has the right to expect that the nations receiving aid will support the common effort by positive action to help themselves and each other. Particularly, we have a right to expect that they will not engage in trade with the Soviet bloc which would undermine the common security by strengthening the military position of the potential aggressor relative to the free world. This should preclude shipment of goods which would directly support the military effort of the Soviet bloc. Honest differences of opinion can and do arise, however, in the case of trade involving goods having a less obvious and direct bearing on military strength.

Since economic strength is a basic component of military strength, all trade has some military implications. For example, the military effort of a country may be greatly aided by furnishing consumer goods essential to the morale and efficiency of its labor force. The principle, however, cuts both ways, as imports from the bloc similarly help to maintain or build up the strength of the free world. The question, therefore, is not whether particular exports are beneficial to the Soviet bloc (it may be assumed that they are) but whether the balance of advantage is favorable or unfavorable to the free world. The answer to this question requires careful weighing of economic, political, and psychological factors. It is a complex, difficult, and constantly changing series of problems with many facets. As such it cannot be dealt with rigidly by legislation. Legislation can state the principle. Imaginative and forceful administration with a right to use discretion and to act flexibly to meet countless particular situations as they arise must supply the answers. If surgical operations on trade are to be performed, they require a surgeon's skill.

II. DIMENSIONS OF THE PROBLEM

The value of commodity exports from the free world to the Soviet bloc (the U. S. S. R. and its European satellites plus Communist China) appears to have totaled between \$1.6 and \$1.7 billion in 1950. Imports to the free world from the bloc totaled between \$1.7 and \$1.8 billion in the same period. The United States and Canada exported slightly more than \$200 million worth of goods to Iron-curtain countries and imported just under \$300 million worth of goods from them.

In 1950. The exports of the Western European countries to the bloc were valued at roughly \$1.1 billion, as against approximately \$1.2 billion worth of imports from the area. The remainder of the trade—between \$300 million and \$400 million worth of exports and between \$200 million and \$300 million worth of imports—was accounted for by the rest of the free world.

Trade of Western Europe

The above figures show that Western Europe accounts for some two-thirds of the trade between the free world and the Soviet-dominated areas. About 90 percent of such European trade is between the naturally complementary economies of Eastern and Western Europe.

Estimates based on official reports indicate that the value of Western European commodity exports to iron-curtain countries totaled slightly less than \$1.1 billion in 1950, of which approximately \$900 million was accounted for by exports to Eastern Europe. In return, Western Europe imported goods having a total value of approximately \$1.2 billion from these countries, of which roughly \$1.1 billion came from Eastern Europe. These figures represented approximately 5 percent of the total export and import trade of Western Europe in the past year.

The estimated dollar value of the exports and imports of the Western European countries accounting for most of the trade with all iron-curtain countries is shown in the table below. The countries appear in order to size of total exports to the Soviet bloc. The United Kingdom is the principal trader, by this standard. The trade of Western Germany which is second in line is probably substantially understated, since a recent congressional investigation reported a large volume of unrecorded trade between the western and eastern zones of that country.

TABLE I.—Trade of major Western European countries with Soviet bloc, 1950¹

(In millions)

	Exports	Imports		Exports	Imports
United Kingdom.....	\$197	\$321	Italy.....	\$67	\$61
Western Germany.....	105	96	France.....	58	59
Sweden.....	107	90	Denmark.....	47	81
Switzerland.....	86	61	Austria.....	47	54
Belgium.....	86	88	Norway.....	33	44
Netherlands.....	68	102	Turkey.....	18	20

¹ Basic figures on trade between Eastern and Western Europe were derived from Recovery Guides for April 1951, issued by the Economic Cooperation Administration. Adjustments were made to exclude estimated trade with Yugoslavia and to include an estimate of trade with Communist China. Trade with Finland is included in these figures, although such trade would ordinarily not be included in the trade of the bloc.

The ratio of a country's trade with the Soviet bloc to its total trade is a better indicator than the absolute volume of such trade of the degree to which its trade is oriented toward that area. In table II the major trading countries of Western Europe are listed in descending order of magnitude of the percent of total exports accounted for by exports to the Soviet bloc. Austria, under four-power occupation, heads the list, with 15.4 percent of its total exports and 12.5 percent of its total imports in 1950 accounted for by trade with the Soviet bloc. The National Security Council has already determined that the terms of the Kem amendment (banning aid to any country exporting "arms or armament or military matériel or articles or commodities which * * * may be used in the manufacture of arms armament, or military matériel" to Soviet-dominated areas) should not be applied to Austria. It has issued a similar determination with respect to Norway, which appears fourth on the list in table II. Sweden and Switzerland, respectively second and third on the list, are members of the Organization for European Economic Cooperation but are not members of the North Atlantic Treaty Organization and are not dependent on United States aid. Western Germany, which appears well down on the list, would probably move up if illicit trade were included in the estimate. The United Kingdom, the leading exporter in terms of the absolute volume of trade, is next to last—followed only by France in terms of volume relative to total trade.

TABLE II.—*Trade of major Western European countries with Soviet bloc as percent of total trade*

	Percent of total exports	Percent of total imports		Percent of total exports	Percent of total imports
Austria.....	15.4	12.5	Italy.....	5.6	4.3
Sweden.....	9.7	7.6	Western Germany.....	5.4	2.5
Switzerland.....	9.5	5.8	Belgium.....	5.3	3.0
Norway.....	8.5	6.5	Netherlands.....	4.9	5.0
Turkey.....	7.8	8.1	United Kingdom.....	3.1	4.7
Denmark.....	7.1	9.6	France.....	1.9	2.0

The commodity composition of trade between Western and Eastern Europe follows closely the prewar pattern, with manufactured industrial products predominating in exports to the east and food and industrial raw materials comprising the bulk of imports from that area. In 1949, Western Europe exported machinery to the east valued at almost \$200 million, or 26 percent of the value of total exports to that area. Textiles accounted for an additional \$100 million, or 13 percent of the total export volume. Other major commodity exports were chemicals and products (\$54 million), iron and steel products (\$58 million), and nonferrous metals and manufactures (\$43 million). Altogether the above items totaled roughly 60 percent of the aggregate exports. On the other side 60 percent of Western European imports from the east were accounted for by foodstuffs (principally grains), timber, and mineral fuels (chiefly coal). About 1.1 million metric tons of bread grains have been imported annually from Eastern Europe in recent years. Imports of coarse grains have varied from 1.1 to 1.5 million metric tons. Coal imports principally from Poland and Czechoslovakia, totaling 10 to 13 million metric tons per year, have been an important supplement to Western Europe's fuel and power resources. The bloc supplies 5 percent of Western Europe's total consumption of timber (sawn softwood and pit props). Eastern Germany exported about 330,000 metric tons of potash (in terms of contained plant food) to Western Europe in 1949, and 190,000 tons in 1950. Western Europe is deficient in this import fertilizer material. The dollar value of United States and Western European imports of manganese and chromite from Eastern Europe is small relative to the total volume of trade but significant because of limited world supplies of these commodities.

While, as illustrated above, trade between Western and Eastern Europe is for the most part an exchange of fabricated articles for foodstuffs and industrial raw materials, there are several notable exceptions to this general rule. In 1949, Eastern Europe imported \$41 million worth of foodstuffs from Western Europe (compared with \$250 million worth of foodstuffs imported by Western Europe from the east) and exported \$53 million worth of machinery to the same area. Eastern Europe's exports of transportation equipment to Western Europe almost equaled its imports of similar equipment from that area in 1949.

It is estimated that Western Europe exported approximately \$130 million worth of goods to Communist China in 1950 and imported about \$110 million worth of Chinese goods in the same period. The major exports were metals and metal products, chemicals, machinery, vehicles, and textiles. Because much of China's import trade moves through Hong Kong and Macao, it is not possible to identify sources accurately. The United Kingdom was the source of roughly 60 percent of Western Europe's exports to the China area. Western Germany accounted for another 20 percent. The remainder was scattered among other Western European countries.

The commodity composition of China's exports to Western Europe was much more diversified than its imports from the area. Oils and oilseed (including tung oil, soybeans, and peanuts) accounted for 30 percent of the total value. Other important commodities were hog bristles, silk and silk noils, feathers, and tungsten.

Trade of other free world countries with the Soviet bloc

The dollar volume of trade between other free world countries and the Soviet bloc is small relative to that of Western Europe. In 1950, countries other than the United States, Canada, and Western Europe exported between \$300 and \$400 million worth of commodities to the bloc and imported \$200 to \$300 million worth of commodities from it. The bloc's deficit with these areas was presumably

financed from earnings in trade with other areas, especially the United States and the United Kingdom, and possibly from the proceeds of gold exports.

While the volume of trade was relatively small, the commodities involved are most important to the economy of the Soviet bloc. The bloc's principal imports from this area in 1950 included wood from Australia, New Zealand, South Africa, Argentina, and Uruguay; cotton from Pakistan, Egypt, and Brazil; crude rubber from Malaya and Indonesia; jute from India and Pakistan; tin from Malaya; and machinery, metal products, and textiles from Japan. In return, Czechoslovakia was an important source of machinery and equipment for many of these countries; China's exports to the area included foodstuffs (soybeans, rice, and peanuts), coal, iron ore, silk, and ramie; other satellites and the U. S. S. R. furnished grains, timber, paper and pulp, potash, and some machinery and equipment.

The relative vulnerability of the free world and the Soviet bloc

Three major considerations must be noted at the outset in any attempt to appraise the relative vulnerability of these two groups of countries to the curtailment or termination of trade between them.

(1) Since both groups have huge total populations, encompass immense land areas, and have broadly diversified natural resources, it is probable that neither would be decisively crippled by cutting off the supply of any commodity. Substitutes or increased production from local resources are available in many cases; in other cases, scarcities may be offset by curtailing less essential uses.

(2) Most trade between the two areas is based on bilateral agreements resulting from shrewd bargaining for "hard" goods, i. e. goods which are especially important to the prospective purchaser, with "soft" or less essential goods accepted by one in return for concessions by the other. The reduction or elimination of a "hard" export by one side is likely to result in reciprocal action by the other. The United States, it is true, has been able to continue importing substantial quantities of goods from the Soviet bloc despite a severe reduction in exports to that area. Since settlement was made in dollars, the bloc was thereby enabled to purchase essential commodities elsewhere. This alternative is not open to most other nations. With basic commodities becoming increasingly scarcer than the dollars with which to purchase them, it may not remain open much longer even for the United States.

(3) Differences in the approach to trade of the two areas reflect basic differences in their respective economic and political structures. The countries of the Soviet bloc are generally not highly industrialized but are using the methods of the police state to promote ambitious programs of economic development aimed at industrial self-sufficiency. The curtailment or cessation of imports from the free world would not create major unemployment problems but would probably slow down the rate of industrial expansion. The more complex and freer economies of the rest of the world, on the other hand, would have to face the threat of unemployment due to the loss of markets and reduced living standards due to the loss of sources of food and raw materials.

In view of the above, we may conclude that any reduction in trade will have some adverse effect on both sides, but that no reduction will decisively cripple either. It is probable that reducing or eliminating the following exports from the free world (other than implements of war, atomic energy, and certain other strategic raw materials, which are already banned) would have the most damaging effects on the economies of the Soviet bloc:

(1) *Machinery*.—Curtailing or ending the flow of replacement parts for machinery and equipment already installed as well as of new machinery would directly reduce the rate of industrial rehabilitation and expansion in many Soviet bloc countries, especially in Communist China.

(2) *Rubber*.—The Soviet bloc produces very little natural rubber although it has developed a large capacity to manufacture the synthetic product and may by this time have a substantial stockpile of imports. The denial of exports from the free world might, in time, restrict the bloc's rate of industrial expansion or its military effort, or both.

(3) *Textiles and textile fibers*.—About 30 percent of the bloc's consumption of wool depends on imports. While Russia exports cotton and China is a major world producer of both raw cotton and finished textiles, the bloc as a whole depends on imports for about 20 percent of total cotton textile consumption. The bloc also imports substantial quantities of rayon. Since the basic fibers are partly substitutable for one another and since imports of finished textiles can release domestic raw materials for other uses, effective control of the bloc's imports of these materials would require control of both raw materials and finished products.

Such controls might appreciably affect living standards and industrial efficiency in several of the major Soviet-dominated countries.

The above-described effects of trade reductions on the Soviet bloc have, of course, to be weighed against the effects of reciprocal reduction on the free world economies.

In a few cases (e. g., exports of fish from Norway and Iceland) it would be extremely difficult to find alternative markets. Some transitional unemployment might be encountered in industries producing machinery and metal products in Western Europe and Japan, but it should be possible to take up the slack in most cases to meet the increased demands of western rearmament and in promoting the development of the underdeveloped areas. In the short run, at least, most of the primary commodities now exported to the Soviet bloc by the underdeveloped areas can find adequate markets in the free world.

The reduction or elimination of the flow of certain major supplies from the Soviet bloc to the free world would have a serious effect on the economies of Western Europe and Japan by impairing present levels of recovery or impeding continued industrial expansion. The following principal examples may be cited:

(1) *Foods*.—Western Europe would need to find alternative sources of imports of more than a million tons of bread grains and up to 1.5 million tons of coarse grains, now coming annually from Eastern Europe. In the current year, the United States could furnish the bread grains and, by reducing stocks and consumption by livestock, most of the coarse grains. Similarly, Japan's current deficiency in fats and protein foods cannot be made up except by increased imports from China or further drawing on limited United States supplies. In each case, increased dependence on the United States would result in a widening of the dollar gap, and increased burdens on inland and ocean transportation facilities.

(2) *Timber*.—The United States and Canada, the only feasible alternative sources of timber imported into Western Europe from the East could make the required quantities available only by further cut-backs in domestic consumption, further burdening of transportation facilities, and increased dollar aid.

(3) *Coal*.—Continued expansion of the fuel and power resources of Western Europe and Japan, essential to the common defense effort, requires increased imports of coal. Cutting off imports now coming from Eastern Europe and Communist China would further expand requirements from the United States. While supplies are available here, increased exports to these areas would add to heavy present burdens on inland transport and ocean shipping facilities and would widen the dollar gap of both areas.

III. POST-WAR UNITED STATES POLICY WITH RESPECT TO TRADE WITH THE SOVIET BLOC

In the immediate postwar years, the United States does not appear to have applied any special restrictions on its own trade with the U. S. S. R. or satellite countries. In December 1947, the acting Secretary of State testified before the Senate Appropriations Committee that "The situation up to the present time is that trade with Russia moves under the same general provisions applicable to other countries that have normal trade relations with us."

In March 1948, however, the United States imposed severe restrictions on exports to the U. S. S. R. and satellite areas in the interests of security. These restrictions have sharply reduced the volume of exports going to those areas, especially in the case of the U. S. S. R. Commodity exports to that country, which totaled \$149 million in value in 1947, were reduced to \$28 million in 1948, \$7 million in 1949 and to less than \$1 million in 1950. Exports to European satellite countries were cut back somewhat less sharply, from \$191 million in 1947 to \$96 million in 1948, \$55 million in 1949, and \$26 million in 1950. Some restrictions were apparently applied to exports to China after the Nationalists had been driven from the mainland and the restrictions applicable to the U. S. S. R. and satellites were applied, beginning in March 1950.

Until recently, no attempt was made to control imports into the United States from the Soviet bloc. Congress has directed the cancellation of all concessions granted to the Soviet bloc since the beginning of the reciprocal trade agreement program. This will become effective upon expiration of the required notification period. While imports from the U. S. S. R. have been reduced from a high of \$87 million in 1948 to approximately \$40 million in each of the last 2 years, imports from other countries of the bloc have been maintained or increased. The result has been that the balance of commodity trade, which was strongly favorable to the United States in 1947, changed to a small balance in favor of the bloc in 1949

and a substantial balance in its favor in 1950. The hard currency accruing to the bloc as a result is undoubtedly useful in a world that is still short of dollars.

In line with the action to restrict exports from the United States to iron curtain countries, the United States also tried to prevent certain items reaching them from other countries. The Foreign Assistance Act of 1948 (sec. 117(d)) provided that:

"The Administrator is directed to refuse delivery insofar as practicable to participating countries of commodities which go into the production of any commodity for delivery to any nonparticipating European country which commodity would be refused export licenses to those countries by the United States in the interest of National security."

While this provision was strictly applicable only to exports containing commodities financed with ECA funds, most of the Western European countries subsequently embargoed shipments to the Soviet bloc of arms, ammunition, implements of war, and atomic energy materials. Since late in 1949, these countries have undertaken additional measures of cooperation in the control of exports to the Soviet bloc of commodities having primary strategic significance. Control measures have been expanded and strengthened since the invasion of South Korea. At the present time, it is reported that these countries embargo 90 percent of all the items regarded by the United States as of primary strategic significance.

Although urging the countries participating in the Marshall plan to control the export of strategic commodities to the Soviet bloc, the United States has until recently encouraged all other trade between the areas. It was assumed in the estimates of the original plan that a substantial expansion of trade between Eastern and Western Europe was essential to the economic recovery of the Western European area. All participating countries were urged to reduce the dollar gap by finding non-dollar sources of supply for United States goods financed by the ECA. Other areas receiving United States aid were urged to do the same (e. g., Japan, under the supervision of the Department of the Army). As stated by the Administrator of ECA in testimony before the Senate Appropriations Committee "East-West trade has always been of great importance to Western Europe and it reduces tremendously the financial burden of European recovery on the United States. ECA has therefore encouraged it."

The volume of trade between the nations of the free world and the Soviet bloc still remained low, relative to prewar. This appears to have been largely due to: poor crops in Eastern Europe in 1947 and 1948; the policy of the Soviet bloc nations to limit imports of nonessential consumer goods, in favor of imports of basic materials, machinery, and equipment needed for industrial recovery; the limited export availability of machinery and other capital goods in Western Europe in the period when major emphasis was being placed on the rehabilitation of their own industrial facilities; and efforts to redirect much of the satellite trade toward the U. S. S. R. By 1949, the peak postwar year, trade between Eastern and Western Europe had reached a volume of approximately \$1.25 billion each way but was, in real terms, probably not much more than 40 percent of the prewar volume. The dollar volume, and probably the real volume as well, fell slightly during 1950.

Much of the trade between the free world and the Soviet bloc might, in retrospect, be regarded as prejudicial to security, since it undoubtedly enabled the iron curtain countries to expand industrial output at a more rapid rate than might otherwise have been possible. That trade, however, also made it possible for Western Europe and Japan to achieve recovery goals with less United States aid and in a shorter time than might otherwise have been required.

Furthermore, the policies which permitted such trade to continue must be considered in the context of our general outlook and expectations at that time. They were clearly consistent with our earlier invitation to all European countries, both East and West, to join in a cooperative recovery program. They were consistent with our urging those participating in the program to reduce their "dollar gap" as rapidly as feasible. They were consistent with the primary emphasis placed on economic recovery until the aggression in Korea. Even the Mutual Defense Assistance Act, passed late in 1949, declared that "the Congress recognizes that economic recovery is essential to international peace and security and must be given clear priority." Finally, such trade policies were consistent with our belief that the Kremlin would not risk a third world war and that the major menace with which we had immediately to cope was that of subversion.

Mounting evidence of the Kremlin's aggressive designs, highlighted by proof of Soviet possession of the atom bomb and by aggression by satellite in Korea, has forced the free world to revise drastically its estimate of the imminence of the mili-

tary threat. To meet that threat the military strength of the non-Soviet world is being rapidly built up. The maintenance of economic strength has become more, rather than less, important, for it has come to be recognized that it is an integral part of military defense. So the situation calls for positive measures to bolster the economic basis of military power and to that end for the avoidance of measures which would impair that power either absolutely or relative to the strength of the Soviet bloc.

These new developments have greatly increased the concern of the administration, the Congress, and the governments of other free nations as to the relation of trade with the Soviet bloc to the economic defense of the free world.

As noted earlier, most Western European countries have, since Korea, embargoed the shipment of an increased number of strategic commodities to Soviet-dominated areas. The United Nations has also voted a complete embargo on shipment of strategic materials to Communist China.

These actions, taken largely as the result of suggestions by the United States, reflect substantial progress in the control of an important sector of trade with the Soviet bloc. They appear to be inadequate in several major respects:

(1) Present control measures are still in various respects unsatisfactory, either because they are not sufficiently comprehensive or because they are not effectively administered. The President stated in his message objecting to section 1302 of the third supplemental appropriation bill (the Kern amendment) that "there are still a number of trade situations with which we are not yet satisfied." Further the United Nations embargo on exports to China was intended only to deal with the immediate situation in Korea, not with the long-run problem considered here.

(2) Administrative responsibility for dealing with this trade in relation to our foreign-aid programs is not fixed. As pointed out in the report of Special Subcommittee of the Committee on Foreign Affairs on control of exports to the Soviet Bloc " * * * no individual, organization, or agency has been given this big job to do or can be held accountable for the results." The report noted that ECA and most of the other executive agencies participate in the work but that "it is a sort of byproduct for each of them."

Section 1304 of Public Law 843, Eighty-first Congress (the Cannon amendment approved September 27, 1950) provides that:

"During any period in which the Armed Forces of the United States are actively engaged in hostilities while carrying out any decision of the Security Council of the United Nations, no economic or financial assistance shall be provided, out of any funds appropriated to carry out the purposes of the Economic Cooperation Act of 1948, as amended, or any other Act to provide economic or financial assistance (other than military assistance) to foreign countries, to any country whose trade with the Union of Soviet Socialist Republics or any of its satellite countries (including Communist China and Communist North Korea) is found by the National Security Council to be contrary to the security interests of the United States."

The National Security Council has set up a Special Committee on East-West Trade charged with keeping trade between the Soviet bloc and countries receiving United States economic and financial assistance under constant surveillance and recommending appropriate action to the Council. On December 21, 1950, the Council announced its decision that it would be contrary to United States security interests to cut off aid to any country.

This legislation met some of the requirements for sound policy. It directed the National Security Council to act only after a finding that the trade of a given country with the Soviet bloc is "contrary to the security interests of the United States" and, therefore, allowed for a weighing of both exports and imports in any decision as to its effect on our security. It also appears to recognize, by implication, that our security interest in trade with the Soviet bloc is not confined solely to trade in commodities declared to be of primary strategic importance from the point of view of our own military defense. It has, on the other hand, several major defects:

(1) It is applicable only in periods when the United States is "actively engaged in hostilities while carrying out any decision of the Security Council of the United Nations * * *." It would cease to be effective until the unlikely event of another United Nations intervention recommended by the Security Council. What is needed is a policy which will be workable for as long as the present Soviet threat to the free world continues, especially in the absence of active hostilities.

(2) It is applicable only to "economic and financial assistance." Military assistance is specifically exempted. If a trade ban is justified, it is illogical and may be self-defeating to restrict the sanction only to economic assistance.

(3) It does not correct the administrative defect noted by the House Foreign Affairs Subcommittee, i. e. the failure to fix administrative responsibility for carrying out the purposes of the act. It is true that the act places the responsibility in the National Security Council. This Council, however, is--and should remain--an interdepartmental body charged with the formulation and coordination of general policies relating to United States security. It is not equipped to execute such policies except through the several participating departments, and therefore tends to diffuse responsibility rather than to center it in one agency.

The Cannon amendment was repealed in the Third Supplemental Appropriation Act of 1951 and section 1302 of that act (the Kern amendment) was substituted for it. This legislation provides as follows:

"During any period in which the Armed Forces of the United States are actively engaged in hostilities while carrying out any decision of the Security Council of the United Nations, no economic or financial assistance shall be provided, out of any funds appropriated to carry out the purposes of the Economic Cooperation Act of 1918, as amended, or any other act to provide economic, or financial assistance (other than military assistance) to foreign countries, to any country which exports or knowingly permits the exportation of, to the Union of Soviet Socialist Republics or any of its satellite countries (including Communist China and Communist North Korea), arms, armaments, or military matériel or articles or commodities which the Secretary of Defense shall have certified to the Administrator of Economic Cooperation may be used in the manufacture of arms, armaments, or military matériel, or shipment of which to the Soviet bloc is embargoed by the United States in the interest of national security."

The legislation further provides for certification by each nation receiving aid from the United States that it has, subsequent to the fifteenth day following the enactment, met all the requirements of the act (although such certification does not relieve the ECA Administrator or any other officer of the Government from responsibility for enforcement of the provisions); for exceptions to be made upon the "official determination of the National Security Council that such exception is in the security interest of the United States"; and for immediate reports to be made by the Council to six committees of the Congress when such exceptions are made.

This amendment appears to fix the major responsibility for the execution of the policy laid down on the Administrator of ECA, subject to the power of the National Security Council to grant exceptions to its provisions. In other respects, however, it has defects which appear even graver than those of the Cannon amendment:

(1) Like the Cannon amendment, it applies only to "economic and financial assistance" and only during periods when the United States is "actively engaged in hostilities while carrying out any decision of the Security Council of the United Nations."

(2) The categories of commodities involved are so broad as to require that practically all trade between the Soviet bloc and countries receiving assistance from the United States be stopped. It is true that the National Security Council is given the power to grant exceptions to the sweeping provisions of the legislation in the interest of security, but, to make the legislation workable, the exceptions themselves may have to be so broad as to render the legislation ineffective. Obviously, a clearer expression of the intent of Congress is needed.

A bill (H. R. 4550), recently introduced in the House of Representatives by Mr. Battle, meets part of the defects of the earlier legislation. This bill (the proposed Mutual Defense Assistance Control Act of 1951) declares it to be the policy of the United States "to apply an embargo on the shipment of arms, ammunition, and implements of war, atomic materials, petroleum, transportation equipment of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war to any nation or combination of nations threatening the security of the United States" and to refuse military, economic, or financial assistance to any nation unless it applies an embargo on such shipments to any nation or combination of nations threatening the security of the United States.

It provides further that the President may direct the continuance of such assistance to a country which permits shipments of items other than arms, ammunition, implements of war, and atomic energy materials when unusual circumstances indicate that the cessation of aid would clearly be detrimental to the security of the United States. Finally, it directs that the United States shall negotiate with countries receiving assistance arrangements for such countries to control exports to the Soviet bloc of other commodities not included in the mandatory embargo

list but the export of which, in the opinion of the Mutual Defense Assistance Officer, should be controlled.

Administration of the act would be under a Mutual Defense Assistance Officer appointed by the President by and with the consent of the Senate, and charged with determining the items which should be included in the embargo lists, after "full and complete consideration of the views of the Departments of State, Defense, and Commerce; the Economic Cooperation Administration; and any other appropriate agencies;" continuously adjusting such list to current conditions; recommending the termination of all aid to any nation failing to comply with the provisions of the bill within 60 days after the termination of the embargo list; and recommending negotiations with countries receiving assistance with respect to other commodities not included in the embargo list. He would also be charged with coordinating the activities of all United States departments and agencies concerned with security controls over exports from other countries, making a continuing study of control measures undertaken by foreign governments in accordance with the provisions of the bill, reporting to Congress not less than once each 6 months recommending action where appropriate, and making available technical assistance on export control procedures to any nation desiring it.

While the Battle bill meets certain of the criteria of a sound policy with respect to this important problem, it appears to have two major defects.

(1) It would separate the administration of the control of trade with the Soviet bloc from the administration of foreign aid. The mandate for the administration of foreign aid should be so to apply such aid as most effectively to promote the security of the United States and of the free world. The use of aid as a means of obtaining security controls over exports by recipient nations would appear to be implied in that mandate, even if not specifically required by the Congress. Further, the single agency administering foreign aid and trade controls would be in the best position to determine the effect of terminating aid on account of U. S. security interests and to appraise the need for measures to offset the economic effect of such controls in cooperating countries. However, the present administration of foreign aid is itself not unified and is probably the source of the administrative defect in the Battle bill.

(2) The bill provides only for the drastic sanction of completely cutting off aid in the event of noncooperation in security controls. It is silent on other less drastic or more positive measures which might help to accomplish the desired result. It therefore leaves uncovered the potentially large number of cases where cooperation with United States security controls may be unsatisfactory but where the security interests of the United States would still not permit a termination of aid.

IV. TOWARD A SOUNDER POLICY AND MORE EFFECTIVE ADMINISTRATION

There is no specific formula for dealing in advance with the complex and changing problems of trade between the free world and the Soviet bloc. Legislation designed to limit such trade must therefore be confined to general principles. However, the basic facts that should guide such legislation are clear.

Trade is a two-way street

This fact must be taken fully into account in any attempt to deal with the problem.

East-West tension is likely to be prolonged

This fact argues for the development of a policy which will receive the support of our own people and our allies over the long pull. Short-range measures—however beneficial for specific purposes—designed to deal with specific cases of Soviet-inspired aggression, such as the United Nations embargo on shipments to China and the Cannon and Kenn amendments, do not meet this requirement. Neither would yearly appropriations of additional aid funds to compensate for earnings lost as a result of reduced trade.

All-out war with the Soviet bloc is not inevitable

Since our basic approach to all foreign policy is founded on this assumption, we should avoid actions which are not clearly essential for our own security and which might stand in the way of an eventual peaceful settlement. Unnecessary stoppages of trade tend to widen the breach between East and West and to consolidate economically the Soviet bloc itself.

Limitation of objectionable trade must be done, not unilaterally, but jointly with other free world nations

Effective control of trade with the Soviet bloc in the interest of the common security requires the cooperation of other free nations sharing our concern over the threat of Soviet aggression. Honest differences of opinion may arise, of course, as to the need for particular measures, but there should be no disagreement on the basic objectives of the policy. Further, agreements as to controls are likely to be reached more readily if negotiations are with groups of nations rather than individual countries. One nation is not likely to adopt strict export controls in the absence of reasonable assurance that a competitor nation will also adopt them. Also, groups of nations, such as the Organization for European Economic Cooperation and the Defense Production Board of the North Atlantic Treaty Organization, can do a great deal toward developing and sharing alternative markets and sources of supply for goods now involved in trade with the Soviet bloc. Certainly, the joint defense production effort in Europe should be able to furnish markets for much of the output of metal products and machinery now going to the Soviet bloc. Further, these countries should be able to furnish necessary machinery and equipment to underdeveloped areas in exchange for food and raw materials.

The same policy should apply to military and economic aid

If United States aid is to be used to secure cooperation in security export controls, both economic and military aid should be included. In the first place, it would not appear logical to deny a small amount of economic and financial aid to a country because of noncooperation in such controls while continuing military aid to it. Moreover, such action would probably be self-defeating, since the denial of economic aid could be expected to reduce the country's own military effort and increase its need for aid in the form of military equipment, if the military goals—in which we have a vital interest—are to be reached. In that case, the total position of the country would have been changed little, but we would have added to the burdens of our own defense industries.

The same standard of performance cannot be expected of all nations

■ We have a right to expect that nations associated with us for defense, as in Europe, will share our concern for the economic bases of such defense. Allowing for honest differences of judgment as to the measures required, and for variations in internal political situations, they should be expected to enforce trade controls where needed for their own and the common security. The natural way to achieve this is to include cooperation in trade controls and in other measures for economic defense in bilateral agreements with these countries which should cover both economic and military aid. In the under-developed areas, on the other hand, many of which are torn by internal struggles between eastern and western influences, the withdrawal of aid because of trade with the Soviet bloc would mean outright surrender to the very Soviet influences we wish to eradicate. In these and other areas where we seek limited objectives with relatively small amounts of aid, we might be wiser to concentrate on such objectives, and to use other means to exert influence on trade policies. Finally control of trade between western and eastern Germany must be managed with great care because of the understandable reluctance of western firms to sever completely long-standing relationships with the East and because it might serve as a pretext for the reimposition of the Berlin blockade.

Other less drastic and more positive measures are also needed

The power to terminate aid to any nation as a sanction for noncooperation in security export controls is a drastic remedy that should be used only as a last resort. In fact, its use would suggest the failure rather than the success of the general policy. Other means can and should be used in situations where the degree of cooperation is not satisfactory but where total security considerations require the continuation of aid. Examples of such supplementary measures are:

(1) The curtailment of aid and denial of its use for certain specific purposes might be used where cutting off aid altogether is not feasible.

(2) Aid might be increased in the case of cooperating countries to help soften the internal impact of trade controls.

(3) Control over counterpart funds might be used as a sanction for noncooperation or as a means of financing the cost of diversion of industries from Soviet bloc markets and sources of supply.

(4) Longer range economic planning for the industrialized and the under-developed areas should be encouraged and would be most important in the gradual development of controls which will be workable over the long pull. General

agreements to restrain wild fluctuations in the prices of primary commodities and to guarantee markets for them—as in the case of the International Wheat Agreement—might go a long way toward diverting supplies from the Soviet bloc. Similarly, cooperative efforts in the underdeveloped areas would help to maintain the economic growth and stability of Western Europe and Japan despite a reduction in trade with the Soviet bloc. The other free nations are justifiably concerned about these longer-range problems in which their own stability and security are intimately involved. Year-to-year appropriations of aid to offset failure to solve these problems is not an adequate alternative for us or for them. Before important segments of trade are cut off, there should be reasonable assurance of compensating expansions elsewhere over a longer period of time.

Effective administration is essential

It is obviously impossible for the Congress or the Executive to lay down a policy in advance which will cover in detail all the complex problems which arise in the administration of a program to control trade with the Soviet bloc. Such policy must be stated in general terms, with adequate discretion permitted in its execution. The latter will require continuous study of the problem, negotiation with foreign countries, and adjustments to meet changing political, economic, and military developments. Responsibility for it should be centered in a single agency of the Government under bilateral agreements governing all aid furnished on a grant basis.

The Committee on the Present Danger has recommended that all foreign aid should be placed in a single agency of the Government independent of but working closely with other departments. The mandate of the administrator of this agency would be so to apply aid to foreign areas as to make the maximum contribution to the common security. Even in the absence of express congressional direction, our effort to secure a measure of control over trade with the Soviet bloc is implied in this mandate. There would not appear to be any good reason to separate that effort from other phases of the administration of our foreign-aid programs. Further, all other measures which can and should be used for the same purposes are within the control of the present ECA Administrator and should not be taken away from the proposed new foreign-aid administrator. It would not appear logical to place responsibility for the application of the final sanction in another agency, especially since such sanction would be used infrequently, if at all, and only as a last resort after other measures have failed.

The recommendation made here would of course not preclude the appointment of a mutual defense assistance officer, as proposed in the Battle bill, provided he were part of the office of the foreign-aid administrator. It would also not preclude a large measure of participation in general policy aspects of the problem by the agencies represented in the National Security Council. Since the decision to apply a limited sanction or to cut off aid completely in the case of any foreign country would involve important questions of foreign and military policy, the administrator would be required to consult with the other agencies before taking action, just as he would be required to consult with them on many other matters relating to his administration of the foreign-aid program.

Mr. HAYS (presiding). All right, Mrs. Bolton.

Mrs. BOLTON. Mr. Voorhees, we are delighted to have you. It has been a pleasure to see the faithfulness with which you have attended these somewhat prolonged hearings. Am I right in interpreting the spirit behind your committee to be that you feel with great seriousness that we are in a situation out of which we must work ourselves; that it is not just going to stop, that wishful thinking is not going to get us out of anything, and therefore we have no choice. We are in it and the only thing we can do is to use the best intelligence we have and our wits and any genius we have left to so strengthen the country and the other countries of the free world, that we will be able to meet whatever situation arises. Am I right in that statement?

Mr. VOORHEES. I think that that is a fair statement, and that is the way our committee feels.

Mrs. BOLTON. That is the background of the reason of your being interested in this matter?

Mr. VOORHEES. And I may say the rather optimistic feeling that there is so much potential strength that we have, that if we mobilize it in time we will not have to have world war III.

As I say, my great anxiety about this subject arose when I was Under Secretary of the Army. I made intensive studies of the situation. We have this tremendous atomic strategic bombing supremacy, but without any assurance that it is going to continue indefinitely and in fact with the high probability that it may not. While we have complete supremacy, if we could take the steps to make it unprofitable to attack Western Europe by erecting a real ground defense there, making an attack on it too big a gamble, then we would have done the biggest thing to prevent world war III. In this, of course, I do not mean neglecting the Far East, either.

Mrs. BOLTON. There is just one little matter to bring up. You make quite a point of the necessity for using the production capacity of the countries of Europe, which I agree very definitely, but in the testimony in the hearings we had with Mr. Marshall and some of the other people in the Defense Department, I am left with the feeling that they are very reluctant to have that happen, that they want to have the end-items built here, and have complete supervision over them and then send them over.

Would you have any suggestions of how to correct that particular problem?

Mr. VOORHEES. That is just the reason that we have urged so strongly a unified administration under which all aid would be given and under which the United States would write the conditions of the aid much more precisely than is done at the present time. We could as to a certain amount of that aid say to the recipient nation: "This will be given to you for the purpose of specific production for the common defense."

Mrs. BOLTON. Do you think we could get the agreement of the Defense Department?

Mr. VOORHEES. I have no doubt that that can be done. As it stands now, Defense is buying for foreign aid the same tanks and the same other things that we are buying for United States forces, to a very large extent. You cannot tell until a unit comes off the production line whether Defense is going to say, "Well, this is one we will give to foreign aid," or "this is one we are going to give to this United States division."

Now, with this tremendous backlog of orders—which is unavoidable as of course it takes a long time to get into mass production, is that it is going to be quite a while before we get these products. I think we ought to go ahead fully with the production here to the extent we can. But if we also can get the German economy or the Italian economy, which are not now fully used at all, and can get some of these other countries whose productivity is now not adequately used to produce more military equipment, they of course can then earn a considerable part of the dollars which we would otherwise have to give them. On these products we would have no shipping costs. And the costs on many of these items are very much lower over there than they are here. There can be a tremendous saving. Also it takes these countries in as real partners in the enterprise.

Mrs. BOLTON. Thank you so much, and I will yield back a little of my time and help make up the 12 minutes.

Mr. HAYS (presiding). Mr. Carnahan.

Mr. CARNAHAN. Mr. Voorhees, I want to add my appreciation to you for bringing this most excellent statement to the committee, and I also am very grateful that your committee has been formed, because certainly a committee of this type can give careful and intelligent study and at least nonpolitical study to the present danger, and I think even the name of your committee is commendable. Certainly I believe that the realities of the present danger should be brought more forcefully to our attention, and I note that at least some of your membership are stating that the free world will never be attained by the application of military force, that it will only be attained by waging the peace. Now if that is the case, why do you seemingly place so much emphasis on military aid and you say on page 3 of your statement that the so-called economic aid for Europe in the present request is with minor exceptions military aid.

Mr. VOORHEES. The reason we are placing the emphasis on military aid now is because there cannot be any development of freedom unless there is protection of Europe against slavery to the Soviet. We believe that there is a limited time to do this. Not even Dr. Vannevar Bush and other atomic scientists like Dr. J. Robert Oppenheimer and Dr. Conant—who happen all to be members of our committee—can guess, and I do not believe anyone knows how long the time is during which we will have this overwhelming atomic supremacy.

But we have it now and it gives a protection over us, during which we can create a defense of the free world. It may be 2 years or 3 years or maybe it is 4 or 5, and nobody knows, but during that time it could be done. Now, this can be done only by a joint effort. It cannot be done by the United States alone. These are the reasons we have emphasized military aid immediately, in order to get our own iron curtain built up—if you please to call it that—something which will protect the free world so that it can stay free. Then we can go on and advance the other things in which we believe as free men.

The reason we said what we did on page 3 of the statement to which you refer is that the Marshall plan has been successful to the extent that in Western Europe—with the exception of a few countries, of which Austria is an illustration—we have pretty nearly given them the amount of aid for their economic recovery which would be requisite to accomplish the Marshall-plan goal if they did not have to undertake the new burdens of rearmament. Therefore we said, since they could get along if it were not for the rearmament, even the economic aid which we give them in future is really to supplement their capacity to rearm and so is really military aid. For it would not be necessary if they did not have to rearm.

Mr. CARNAHAN. But you are assuming that their economies have recovered to the point where they are capable of supporting military equipment, and military strength.

Mr. VOORHEES. I am assuming, if you please, that their economies have recovered to an extent that they could be self-sustaining if they did not have to go into the rearmament program, but if they do have to have a great military effort, their economies are not adequate to provide through their own budgets to furnish the men and to furnish the equipment. It is therefore to make up that deficit, that we have to furnish this aid.

Mr. CARNAHAN. Won't we really be furnishing economic aid rather than military aid on the assumption that you cannot build military strength unless you have an economy that will support it?

Mr. VOORHEES. Well, that certainly is true, sir. But the best illustration of that that I have heard was one given by Dr. Robert Oppenheimer when he was talking to a small group the other night of members of our committee and some others. He said that military aid and the economic aid are like putting fluid into a vessel through two separate tubes. In other words, here is a country which could perhaps support five divisions, and it might not be able to equip them very adequately. But on the other hand, it might have the manpower for 10 divisions, and if we could furnish the equipment or furnish the country in question with the additional dollar aid, let us say, so that it could produce such equipment, we might get 10 really well equipped divisions, and maybe General Eisenhower could get a night's sleep.

Mr. SMITH. Mr. Voorhees, am I to assume that your Committee on Present Danger considers Europe the present danger?

Mr. VOORHEES. Not the only present danger, by any means. I think that we would say that the greatest present danger is that the Russian Army would overrun Western Europe, which it could do, because there is no defense to stop it. It is only the balance being maintained between the overpowering force of the Russian Army which could run over Western Europe on the one hand, and our atomic supremacy which could destroy Russia back of the Russian Army if it did. So that they now do not dare to do it.

Now, it is our belief that that is the greatest prize which Russian imperialism could seek, and that is over the next 3 to 5 years the greatest single danger. But I have tried to emphasize that that does not mean that we should neglect other areas to do it. We have certainly got to hold in the Far East, too, because as we have seen in Korea, if we had collapsed there, nobody knows what would have happened.

Mr. SMITH. We are spreading ourselves pretty thinly, do you not think so?

Mr. VOORHEES. Well, sir, I served in the Pentagon off and on for most of the time, except when I was overseas, for something like 8 years. We have got a military command, and I think while we have got that military command, we ought to give that command backing on purely military judgments. From my service with them there, based on what I saw and speaking purely objectively, my deep conviction is that they are certainly fully alert to the danger of spreading our strength too thin. On the other hand, there is a very great danger that we will lose essential ground that we can never get back. If we had not taken the action in Greece and Turkey at the time we did in 1946, we would have lost the whole eastern end of the Mediterranean. We would then not have been worried about Iran today because that would have gone and a whole lot more with it. If we had not undertaken the Berlin airlift, and fought that blockade off, and if we had not stayed in Korea, we would have an entirely different world today. So, I believe, we have got to be ready to move in selected areas, but that we cannot hold everywhere. We must select the things that we can do, and in proportion to our strength, but we can increase our strength so that we can do a lot more. That is what we are urging should be done.

Mr. SMITH. A part of our problem is that we are having a pretty hard time convincing some of our friends what they ought to do.

Mr. VOORHEES. Yes, sir.

Mr. SMITH. You have been around here very faithfully while these hearings have been going on, and I think that you have heard me express myself with reference to the dangers I see about the failure of these nations to cooperate from the standpoint of sharing with the workers in those countries the industrial productive increase.

Now, somebody is getting the profits or the money out of this spending program, and the money that we have been pouring in and yet the standards of living are low. It goes back to the part of the question or the statement made by my friend from Missouri, Mr. Carnahan, to the effect that you have got to have something to build on, and right now it appears that we are building on shifting sands.

Thank you very much.

Mr. RIBICOFF. Mr. Voorhees, I think your committee has done a very effective job. I have watched it from its inception, through the newspapers and the radio broadcasts, and I am just curious, what has been the response to that campaign?

Mr. VOORHEES. I am not able to appraise it. I do not think anybody can appraise a radio program except a commercial program where they take these soundings of them. I talked with Dr. Conant just before he took his trip to Australia, and he felt in general that it had made a useful contribution.

Mr. RIBICOFF. Do you get pretty good newspaper coverage throughout the country?

Mr. VOORHEES. Of course, it varied a very great deal. Several of those broadcasts, notably Dr. Vannevar Bush's, had front-page stories all through the country. These broadcasts were carried on national hook-ups, and were carried on several hundred radio stations.

One advertisement on universal military service, was the only time we ever used any paid advertising, except a few very small ads, on the radio broadcasts. All the rest of the publicity on the radio and in the press was given to us free. It was all done at very small expense—and I thought it was rather remarkable that our efforts received the attention they did because this is not an easy subject in which to interest people. It is not as though one had the excitement of a Pearl Harbor to get the people interested.

That very fact is one of the dangers we face.

Mr. RIBICOFF. In talking about your point of shifting the burden of production, military production, to the countries who are going to use it, I more or less concur in that point of view, but how much do you think, of the proposed \$6 billion-plus, could be effectively shifted to these other countries?

Mr. VOORHEES. Sir, I could not give an intelligent answer as to the extent possible. I do not think anyone could tell until we went to work at it with a sound organization to make the effort.

Mr. RIBICOFF. I just want to ask another question, and you can answer the two together. Now, it is obvious that any amount that is authorized or appropriated, in the \$6 billion-plus, will take a considerable time from the time the law is passed to the production finding its way to Europe, and probably that which finds its way to Europe first will be part of the production that already has been contracted for from past military appropriations.

Now, how long do you think it would take if you got started on military production of some of these items in the European countries?

Mr. VOORHEES. I think that that is something that is today pure speculation. It depends upon the item. Take the question of trucks, for example, or any large or small vehicles for that matter. These countries can make such things and make them very fast. They can do a wonderful job. Did you ever happen to see some of these German busses? They are wonderful. In other words, there are many things, including small arms, which these countries could make very rapidly. There are many things that they could make there of very great value which would take some weight off of our economy here.

Mr. RIBICOFF. In other words, if this \$6 billion-plus, includes items such as trucks, would it be wise for us to make them in the United States, with the present state of our production and conversion, when such items could be made in Germany or France or Italy?

Mr. VOORHEES. My recollection is that we had some contract, or we had a provision in one of the military budgets here this year, for something like 293,000 jeeps. That is quite a lot of jeeps. This figure may be wrong, as I am only giving my recollection after several months. It seems to me that jeeps could be made over there. Jeeps are not a secret weapon.

Mr. RIBICOFF. Let us say that some of these plants started an item from the blueprint stage. Considering the labor situation here as against Italy at the present time, let us say, and considering the plant capacity here and the plant capacity that is open in Italy, do you think it would take more or less time to get going on those items in Italy as against the United States?

Mr. VOORHEES. Sir, it depends entirely upon the items. Some would take longer.

As to Italy—one of our members who participated actively in the Committee's study was there last fall. He reported that Italy had about 85,000—I am giving the figures from memory—skilled personnel to make airplanes, and that there were some 80,000 of these unemployed. We could not, perhaps, make complete airplanes in Italy because of the provisions of the treaty, but we could certainly make a lot of the parts and assemble them somewhere else.

Mr. HAYS (presiding). Mr. Merrow.

Mr. MERROW. Mr. Voorhees, I compliment you upon a most able statement.

On page 6, you have stated that the Administrator should be directed by the statute to promote, so far as can reasonably be done, considering all factors, the production of Europe and to use the power of the purse strings as ECA did in its program, to see that this will be truly a mutual-assistance program and not just a United States give-away program.

Now, would you commend in more detail as to how the power of the purse strings should be used to increase the productivity of Europe as a whole?

Mr. VOORHEES. I shall try, sir.

Right now, the program is split right down the middle. We have an ECA program for which up to date the legislative mandate has been to promote economic recovery in Europe. We have a military-aid program, which has largely consisted of sending United States end-

items to Europe. And we have, in the proposal before you, \$6½ billion for military aid, most of which will be end items. That proposal assumes something which shouldn't, we believe, be assumed. That is, instead of \$6½ billion of military aid largely in end items, that figure ought to be reduced as much as possible, and much more aid given in the form of dollars, so that they could produce many items themselves. That is because they could be produced much less expensively, and it would enable these nations to earn dollars which we might otherwise have to give to them for economic aid.

Mr. MERROW. You would increase the economic aid and cut down the end-item aid; is that right?

Mr. VOORHEES. I call it all economic aid for a military purpose. That is really the object we are striving for now. And I would certainly try to have them produce as much as possible.

Here, sir, we have orders backed up in United States plants. It will take a long time, on these critical items, to deliver these things. And we have an economy certainly overtaxed, and with tremendous dangers of inflation, presenting problems immediately before the Congress at the present time, and most difficult problems.

Surely, if these nations that are allied with us, and these other nations that we are trying to keep free, have got potential productivity, we ought to manage our aid in such a way as to try to develop that productivity to the utmost. And these nations want to do it.

Mr. MERROW. Do you mean that you would use the power of the purse strings to bring about a greater integration of Europe, to increase this productivity?

Mr. VOORHEES. I did not mean to interfere politically. I think we should do that only by persuasion, and not by leverage from our aid program. But, to illustrate, we can produce things in Germany which can be done without a violation of the different agreements as to military production there, many things and parts for other items. I think it is a great deal better to manage our aid under a basic policy which will have that done there and let them earn the dollars than it is to ship the stuff from the United States.

In the next place, if we have countries which are holding back, as some of them are, and not making a real effort to do as much as General Eisenhower feels that they ought to do, it seems to me that we ought to hold back on all kinds of aid, retarding it until they perform. Using Mr. Hoffman's words yesterday, we should "follow the dollar", and I think he also said "guide the dollar" to make sure that we get the full value out of it. I believe that we have got to make this program really a mutual thing.

And one other thing that I wish to emphasize is the business of using the so-called economic aid—that is, the dollar aid—to develop their production of parts. If we supply this enormous amount of end items from the United States, and then have to continue to service them from the United States, produce the parts and send them over, it is a continuing liability. Certainly, they ought to be able to take that over themselves.

Mr. BATTLE. As a matter of fact, we have some very able men who are working on that very problem, and they are going to be before this committee. Is that not right, Dr. Judd?

Dr. JUDD. I hope they are going to be before us, with better answers than they had over there.

Mr. BATTLE. Well, they are working on the particular problems, and they are scheduled to come before this committee.

Mr. MERROW. I am glad that you said you would use the power of the purse strings to bring about greater economic cooperation, leaving aside the political issue.

Mr. VOORHEES. Yes, sir.

Mrs. KELLY. I have a special interest in Mr. Voorhees' appearance before this committee, not only because of his civic interest but he comes from Brooklyn, my home town.

I want to ask a question. Have you an organization chart of your plan?

Mr. VOORHEES. We have not put it in organization chart form. I will try to, if you wish, and it would be relatively easy to do, I think. I could only do it generally, of course, as the detailed organization would have to be worked out later.

Mrs. KELLY. I agree with Mr. Vorys that your proposed set-up is more or less a reorganization of the State Department, and I would like to have the committee turn to pages 17 and 18 of your statement.

In that, on page 17, you claim that the present ECA organization would be the core of the new set-up, and then, under the next paragraph:

The Administrator would necessarily carry on his function of the budgeting, programing, and actual application in both political, military, financial and economic fields.

Now, does that not assume the policy function of the State Department?

Mr. VOORHEES. Well, the statement there says:

The Administrator would necessarily carry on his function of the budgeting, programing and actual application of this aid within the four corners of the established policies of the Government.

That is a lawyer's phrase: "Within the four corners." It means subject to the established policies of the Government—"political, military, financial and economic." In other words, the theory, as I understood it, as we have all understood it, of the ECA Act, was that the State Department handled the foreign policy; that the ECA Administrator conducted the operations of applying the aid, and that he had to do that in accordance with—or, as we phrased it, "within the four corners of"—the foreign policy of the United States.

In section 105 of the ECA Act, (a), which defines the functions of the Administrator, they are "to review and appraise the requirements, to formulate the programs, to provide for the efficient execution of the programs, and to terminate the programs." Those are the main things.

Then the act provides that, in order to strengthen and make more effective the conduct of the foreign relations of the United States, the Administrator and the Secretary of State must keep each other currently informed, and whenever the Secretary of State believes that any action or proposed action is inconsistent with the foreign policy he shall take it up and, if he cannot adjust it satisfactorily, bring it immediately to the President for decision, and so forth.

Those were the provisions which Mr. Hoffman referred to yesterday, which have worked successfully. And it is our belief—similar to the comment that the Hoover Commission made—that State would set

the policy but that the actual operation of such a program would, subject to such policy, be done by a separate agency.

Mrs. KELLY. With your knowledge of the office of the Secretary of the Army, would this organization be acceptable to the military?

Mr. VOORHEES. I think you could go to the Pentagon and get all kinds of different views. I have discussed it with General Marshall and with Mr. Lovett. I would not purport to quote their views about it. There is a strong feeling in the Defense Department and a natural feeling, and one that I share, against a civilian Ministry of Munitions, as the Defense Establishment feels it should do its own procurement. But we propose here that the Defense Department would continue the military procurement, and there is no intention of interfering with that at all.

The things which I think the heads of the Department are probably most interested in are that the Defense Department would continue the procurement, that it would determine the security factors as to what could be produced in Europe, and the specifications and quantities. This would be worked out jointly between the Defense Department and the NATO organization.

Mrs. KELLY. Under this plan, then, we, as members of Congress, could point to this Administrator if anything went wrong in either the military—not planning or carrying out of the operations in Europe—or the ECA set-up?

Mr. VOORHEES. I do not think that you can centralize responsibility to quite that extent. I think every Department would have to do its part to make any program work. I am sure, however, that the relationship between such new administrator and the Defense Department would be essentially the same as it is now between State and Defense. For State now in effect has the appropriation, and turns it over to the Defense Department to procure. That should be done in the same way from the Administrator to the Defense Department as to United States procurement.

Dr. JUDD. Continuing that, does not the present act—I do not have it here before me—say that the Administrator shall have access to the facilities of the various Government agencies by writing a letter to the head of an agency and asking him to make them available, if possible, within the limits of his other responsibilities, or something like that?

Mr. VOORHEES. Yes. He can call on the other departments of Government for assistance and so forth. That was to prevent, as Senator Vandenberg worked it out, a duplicating set-up.

Dr. JUDD. And the Defense Department would like to have all this procurement coordinated, because then it can better program its own needs without having ECA go in, for instance, and buy an awful lot of stuff from a given factory which would deprive our own Defense Department of the products of that factory, and throw a whole program out of balance?

Mr. VOORHEES. You could not possibly do the thing by having ECA conducting separate United States procurement.

Dr. JUDD. Is there not this other reason for separating the two agencies, in addition to the fact that the two functions, policy and operation, are different functions. The State Department was set up for one sort of function, and its personnel is chosen and the conditions of employment are based on that. The seniority rule and the long

tenure that operate in the old-line agencies do not apply to the ECA sort of an operation nearly so much. If you put it under State, would you not inevitably have two teams within the State Department? In fact they have two already, sometimes quarreling a little bit, the Foreign Service officers and the rest of the personnel. And here you would have a third body of employees in State with different terms of service and different conditions of recruitment and employment, and in fact a different character of person. It seems to me that this would greatly complicate the frictions and magnify the difficulties within the Department, and would not help the program.

Mr. VOORHEES. If I understand your statement correctly, I thought that that was what the Hoover Commission had in mind in emphasizing that the State Department should have the policy function, and that these operating functions should be carried out in other ways.

Now, I had quite an extensive experience in that kind of operation when the Army had charge of the occupied areas. Certainly the occupations of Germany and Japan, and for a long time Korea, were a terrific operational responsibility with all kinds of implications for foreign policy. As to them clearly our foreign policy had to be laid down by the State Department, but equally clear the State Department could not have done the job of running the occupation of Germany and Japan. We are talking about arming Germany and Japan in these days, and I think if a pretty good job had not been done over there by our Army administrators in Germany and Japan, we would not be talking about those things.

Dr. JUDD. I merely want to bring out that there were some sound organizational reasons for this separation.

Mr. VOORHEES. I personally believe that what was developed for the ECA program was sound organization—proved by the fact that has it worked well. If we have something that has really worked well and we have got a similar job, why don't we use the same kind of organizational relationship with State for the new and larger program.

Dr. JUDD. Now, on the matter of production abroad, I brought this up at a meeting of the whole production staff for Western Europe at a meeting in Paris, and I said exactly what you have said: An airplane or a tank or other complicated piece of machinery, has major parts which must be built here, but some other parts can be built just as well over there. Why can we not make what we need to make, and have the others being made over there and we send them over ours to be assembled there, and with cheaper labor on the whole? Our own Army objects to that, because they do not want to be dependent on anyone else. They want to be completely self-sufficient when it comes to weapons that we are going to use, and they do not want to have to get any part from some foreign country.

Mr. VOORHEES. Let us not carry it to the extent of equipment for the United States forces, although some of that might possibly be done. But let us carry it to the forces of our allies. In this joint European army, we are only talking about 6 United States Divisions, and we are talking about a 35-division army, or something like that. It is equipping those divisions of our allies about which I am primarily talking.

Dr. JUDD. Does your experience in the Defense Department confirm this observation, that Defense naturally thinks in terms of winning

battles and it wants to get whatever it needs most quickly and most efficiently. And the easiest way is to get American plants and personnel to do it and by and large you have to crowd them all of the time to turn anything over to anybody else. Is that not right?

Mr. VOORHEES. In general I think that there is much in what you say. I worked with the Defense Department personnel, military and civilian, in various capacities for a long time, and I have great respect for them. But their function insofar as procurement is concerned is procurement for American military forces. What they know how to do is to place contracts with American factories. It is not part of their ordinary business to go out and place a lot of contracts in Europe and it is naturally hard to do. Placing such orders is part of the economic assistance to Europe and so related to the ECA function, and we have not, I believe, had a sound organization to promote that sufficiently. That is what we are trying to urge should be done.

Dr. JUDD. That is one place where the civilian part of the Government like the Congress properly should use influence, because we have got to think not just of supporting the Army, we have got to think of maintaining the type of society we want the United States to be. In many situations I do not think it is interfering in their affairs to constantly keep emphasizing and urging that they move in that direction. I remember that when they went into Greece to help defend it against the Communists, and it would have been much easier to ship over American boys to do it than to train and supervise Greeks, we had the darnedest fight to keep the limitation on American personnel, because one, the harder way but the better way was to have it done by Greeks, whom we assisted and trained, and two, if we defeated the Communists but not through the Greeks, there would be a vacuum when we left. If the Army had had its way, it would have shipped over a few American divisions and finished it right off. That would be the quickest way for them to achieve the mission assigned to them, but we have other missions that we must keep in mind.

Mr. VOORHEES. We had got a political and long continuing objective aside from just the immediate military one.

Chairman RICHARDS. I just wanted to say, Mr. Voorhees, that Mr. Herter was very much interested in this problem, and had hoped he could be here tonight. I do not know whether you heard about his only sister being very ill in California, and he had to leave this afternoon by plane.

Mr. VORYS. I wonder if we could have Boyd arrange to send something from the committee.

Chairman RICHARDS. I know that will be satisfactory to the other members of the committee.

Mr. FULTON. The question on setting up the new organization, is whether it is a permanent organization or a temporary organization. If it is going to be a longtime organization, we must then look to see what functions of it are temporary in nature. Next, if we look to see what functions are temporary in nature, they should be then minor functions of the organization and not major. In the policy and administration of the organization we should take that into account.

So looking at this problem, if we combine then the military procurement program with the dollar or economic aid to these countries,

we will find that it is probably going to be a major program of economic aid and a very short term program of military procurement. I am sure it is not the intention of this committee to keep up a repair parts system and supply organization going, and we want these countries finally to stand on their own feet in a joint defense effort.

If we look at the program for economic aid, we see that merging into a point 4 program finally and emerging from the purely military aspects of the current economic program.

If that is the case, then I wonder whether we are not becoming subject to the criticism on this merging of the administrations into one, that this is actually dollar military diplomacy, a combination of the two. Does that seem to you to be a good line of reasoning arriving at possibly a basis for a bad propaganda statement?

Mr. VOORHEES. With great respect, I do not think it is subject to that criticism. We are now through the State Department, through transfer of funds to the Defense Department, procuring military end-items. That may be dollar diplomacy but it is one of the soundest pieces of diplomacy that we have ever engaged in to give military aid to these nations. The organization which we are talking about would not have to have any more people than the State Department now has to do that work because the United States procurement would still be done entirely through the Defense Department.

Now, I would hope that this program of military procurement as I envisage the picture would be a 2 to 3 year program, and then that part of it would be through. That would mean that the Defense Department would not be placing further orders for that purpose in large amounts. But by that time, you would have real divisions, really equipped. Equipping a division is a capital item. You do not have to do that every year. You would for that time have the European economy further restored and have partners with confidence in a real defense there, so that these people would believe that they could stay free.

Mr. FULTON. Now, may I give two points without asking you for your answer now. In your statement on foreign aid at the bottom of page 18:

At the country level the relationship with the State Department would be through the Ambassador, and with the Defense Department through the local military mission.

I think that is a divided responsibility. I do not think it would work because it is on two various levels. One is a policy level and the other is a purely lower administrative level.

Then, at the bottom of page 18, you say:

In view of General Eisenhower's international position any formal participation by him or his staff in the unified administration would appear impracticable.

I would disagree with that.

And then again reading over to that paragraph when you say:

But a primary function of the administrator should be (a) to see that General Eisenhower is kept currently supplied with information as to the budgeting, programming and execution of the provisions for aid in the NATO area, and (b) to satisfy General Eisenhower in his administration of these matters.

I do not think that you can divorce him that much from participation in administration.

In conclusion, could I say to you that I agree with my good friend Carroll Reece. I believe your committee misuses the word "political" in your statement, which is the source of his difficulty. You are not close in your definition of political, because its first meaning is, pertaining to politics, that is the conduct of government. The second meaning is pertaining to settled form of organization. Thirdly, it means pertaining to the organization of parties and individuals to bring pressure on those who control the matters of state, and fourthly, it means partisanship practiced by politicians in their parties. And your committee, I am afraid, have adopted that fourth meaning several times when you could have used any one of the other three meanings.

For example, on page 2, you say, "We believe a national program divorced from political considerations," and so forth. In describing this program, without further description as to your intention, the word "political" is meaningless. If you mean that it is a national program divorced from partisanship or partisan pressures, that is a different thing. But if it is divorced from the conduct of Government or divorced from a settled and orderly organization, it becomes a meaningless statement. I do feel then that with that criticism you should look your statement over to find just what you mean when you are talking of program and political approach.

Mr. VOORHEES. I would like to say that I think that your criticism of our phraseology in using the word "political" is very well taken, as Mr. Reece's was. We used the word "political" in what I believe you described as the fourth sense of the term. We did so perhaps inaccurately, and have no pride of authorship over the words. I would be glad to accept the correction, and make the change you suggest.

The main thing that we had in mind was this, that as a group of citizens we did want to have it very clear that we were not seeking anything for ourselves in this work; that we were trying to be nonpartisan, I think perhaps that is a better word, that we were trying by nonpartisan activities to seek bipartisan support of these measures which we believe are necessary for our national survival.

Mr. FULTON. What would you think would be the effect of a limitation of the State Department solely to a policy making consultative organization as distinguished from an administrative agency carrying anything out? Do you not think it would all end just in a debating society?

Mr. VOORHEES. I do not think its broad powers should be reduced at all. I am urging that they should be continued just as they are, and as they have been while ECA was doing the operating job on foreign aid.

Mr. FULTON. Why could not you just expand the present ECA organization under a different name?

Mr. VOORHEES. That is essentially what we are recommending here. But it would take in the MDAP personnel who are now in the State Department, although I do not believe they belong there, and the point 4 personnel now in the State Department—although I do not believe they belong there.

Mr. FULTON. You could not do it without taking the MDAP and point 4 people from the State Department?

Mr. VOORHEES. That is what I suggested.

Mr. FULTON. Thank you.

Mr. HAYS. Applying your principle of administration to agriculture, you would not disturb the service that is rendered, for example, by Col. Stanley Andrews in the Foreign Agricultural Relations Division, and that would continue in pretty much the same status, would it not?

Mr. VOORHEES. Absolutely. I had a long discussion with Colonel Andrews just 3 or 4 days ago, and of course he worked very, very closely with us in the Army on occupied areas problems. His function is giving advisory guidance. That is just the kind of thing that the FCA Administrator was authorized to call on other departments for. Such aid is absolutely invaluable and should be continued as to any foreign-aid program.

Mr. HAYS. It occurred to me that that was a good illustration.

Mr. VOORHEES. What the Department of Agriculture did in its advice and aid, in enabling the Army to succeed with its occupation of Germany and Japan is a great chapter which has not been written.

Mr. HAYS. And it could become operational through loan of personnel.

Mr. VOORHEES. Oh, yes.

Mr. HAYS. But still under the Agriculture Department.

Mr. VOORHEES. Stanley has various people now on loan in connection with our foreign aid, particularly in the underdeveloped area programs.

Mr. HAYS. That is all.

Mr. REECE. Your committee is composed of some very eminent citizens, and it has a very patriotic and fine purpose to which it has contributed a great deal, but it occurred to me as to how the committee is financed.

Mr. VOORHEES. I would be very glad to tell you, sir. It was formed following my telling Dr. Conant something of the problems that I knew of of almost a year ago of the defense of Western Europe. This was just as dangerous a situation before Korea, let me say, as it was after Korea. He felt that it would be useful to organize such a committee as a citizens group. I told him if he would furnish the distinguished leadership, which he could if he thought seriously enough of it to do that, that I would be glad to contribute my services, and do the pick and shovel work. No member of the committee receives anything in the way of compensation at all, so that the costs have not been so great. The committee has probably received altogether something like \$80,000, of which its members have contributed or underwritten something over half, considerably over half. It never has made any public appeal for money. We have privately asked individuals to contribute. That has been the way it has been financed.

The expenses have been very modest, and we have felt that we should keep them modest. And every expense that we have has been reported to the Congress. You have got it down here.

Mr. REECE. I assumed that was the case but I thought it would be well to have that information on the record.

Mr. VOORHEES. I am very glad that you asked the question.

Mr. REECE. There is no contribution from any foreign source.

Mr. VOORHEES. Of course not, sir. These have been solely contributions from a relatively few patriotic Americans outside the committee, and the members of the committee themselves.

Mr. REECE. You have done considerable research work in connection with your association with this committee, and you had very prominent connections with the Government over a period of years in which you have rendered very fine service, which leads me to dare to ask this question: Six years ago we had won a complete and overwhelming victory. We had probably the greatest military machine in all history. We produced more material and supplies than all other nations combined. We stood at the pinnacle of history. All of the leading nations looked to us for support, many of them for inspiration and some for guidance.

Today that position is more dramatically reversed than has been illustrated, I think, during any period of history. Civilization itself is endangered and our own security is threatened, and we now stand cringing, figuratively, before the threat of the nation which a few years ago was largely depending upon us for its own existence.

Now, what policies do you think we have followed or what policies have we failed to follow which have brought about this striking reversal in position?

Mr. VOORHEES. Well, that is a pretty large question. But I think that we Americans have been accustomed to expecting to be able to live at peace; that when war was brought to us so that we could not get away from it, we then each time threw everything we had into it, expecting to be able to win a victory quickly and then go back to our ways of peace. We did this in and after World War I, and after World War II. What was done each time represented the wish and the then current spirit of the American people—to bring the boys home and throw the equipment anywhere. We left it to rot because our people would not be satisfied to leave the boys there. I had nothing directly to do with that at that time, except some matters relating to the care of our ill and wounded as they came back. But I saw the situation there in the Pentagon. It was simply overwhelmed by the wish of the American people to demobilize and get the boys back. It was unquestionably a colossal mistake.

One of the most interesting statements of it, you perhaps have seen it, was Jimmy Reston's article in the New York Times last Sunday, where he said that the normal procedure would be to have the victory and then the celebration and then the hangover, but that the Americans frequently wanted to change the order and have the celebration before the victory, and if this occurred, then the hangover became much greater. And longer lasting, and that that is what we are having now.

Mr. REECE. None of us have sympathy with the fact that we demobilized too rapidly, but I do not feel, however, that that responsibility ought to be put on the American people or on Congress. In the first instance, the military has as its primary responsibility the security of the Nation. The military is in being and lives for one purpose, and that is to guard the security of the United States of America at all hazards, the hazard of their lives and the hazards of their reputation. That is its one great purpose and responsibility; it should have taken the responsibility of urging the course which it thought best safeguarded our interests.

But, anyway, does the mere fact that we demobilized too rapidly account in itself for this tremendous rise in strength and position of Soviet Russia?

Mr. VOORHEES. I think so, sir. Russia did not demobilize. She continued to build up her strength, and we demobilized, and that is what you have today. And then, even at the time the Marshall plan came, we did not correctly appraise the military danger. We thought it was a danger principally of subversion.

Mr. REECE. Then you see no policy that we followed or none that we failed to follow that accounts for this reversal in position except the fact that we demobilized too rapidly despite the fact that through concessions we permitted Russia to gain control of more than a third of the earth's surface, including strategic areas, and at the same time gave it much strategic material for its war machine.

Mr. VOORHEES. We wanted peace, and thought we had peace, and we went off to the races.

Chairman RICHARDS. When you say "we," you mean the United States, the American people, and the Congress of the United States, and the Democrats and Republicans, with just a few exceptions; is that right?

Mr. VOORHEES. All of us, everyone of us.

Dr. JUDD. That just isn't so. There were plenty of people shouting from the house tops not to do it, and we were called warmongers.

Mr. VOORHEES. Personally I think it was an overwhelming surge of emotion to get back to the comfortable ways of peace, and I do not think it could have been resisted.

Chairman RICHARDS. You have run over there a little, Mr. Reece.

Mr. MANSFIELD. May I make a statement?

Mr. REECE. May I interject just one statement. Really I would not attempt to infer that so far as the anxiety to get the boys home was desired that it arose in any one party more than the other; it was just a frailty of human nature. But I think the responsibility for resisting whatever impulse manifested itself along that line lies primarily with the military. The military does not give in either in battle or in peace when the security of this Nation is involved. As I said a while ago, that is its purpose and that is its responsibility when the security of our Nation is involved. Thank you very much.

Mr. MANSFIELD. Mr. Chairman, I want to say something in that respect. As one Member of Congress who received a lot of letters from the men overseas, and from their parents and their relatives, I am just as much to blame in my capacity as the military was in its capacity because I did what I could to bring the men home. It was a mistake, and I hope I will never do it again. But I recall people on the floor, Democrats and Republicans alike, who yelled for demobilization to get the boys home, and it was the worst mistake we ever made.

Mr. BATTLE. May I make a remark?

Mr. JUDD. Of course, you are here 5 years late, Mr. Voorhees. You did not organize until last fall, and there were people who were worrying and warning about this danger since 1946, particularly the so-called China lobby. What it predicted is precisely what happened. I am grateful for the help you are now giving those who have been on the firing line so long on that menace.

Now, I want to emphasize what two or three others have mentioned, the hope that you yourself or your group will produce not only a diagram of the organization you think will be most effective, but being a good lawyer and probably a good draftsman, it would be helpful if you could give us a draft of the legislation that would be

necessary, amendments of the ECA Act, to carry out the kind of modifications you believe would be most effective.

Mr. VOORHEES. We are working on that, but we had thought it might appear presumptuous to present it unless somebody asked us to do it.

Chairman RICHARDS. I also asked for the same thing.

Dr. JUDD. Mr. Chairman, I did not bring the question up earlier because you were not here but yesterday when Mr. Hoffman was testifying, you asked this question which he referred to Mr. Voorhees but there was not time for his answer. You said, "Should he say so many of these end items should be manufactured abroad and so many in this country? Should he have authority to that extent?" And Mr. Hoffman said, "Mr. Voorhees knows more about that than I do."

Could you elaborate on that now, Mr. Voorhees?

Mr. VOORHEES. If he had the appropriation which he would turn over to defense for the procurement here, he would at the same time of course try to see what could be done with production in Europe, and he would be the one who could find out what production could be carried on there. But you would have to rely on defense for the requirements, quantities, and specifications, and if the Administrator were himself actually placing any orders abroad, probably defense would have to place the orders. But you might not have to do it by the United States directly placing the orders. You might be able to do the thing by furnishing the dollar aid for the specific purpose and letting the foreign country place the order. This would be more compatible with its sovereignty. But the Administrator could use this power to get the production going there, through utilizing the stimulus of the aid.

I think the thing which is most unsound now is the rigid bifurcation of the program into military and economic aid, under which we try to make a determination in advance of something which we cannot intelligently do in advance. Instead, it should be put on a basis where one man could estimate the total amount of total aid which is necessary for a country. If we treat it as two separate things, it involves incalculable waste.

Dr. JUDD. Would not it be advantageous for him to be able to shift from the economic to the military, and vice versa, depending on needs, as cannot be done if the organizations are separate?

Mr. VOORHEES. It seems to me just a common business sense.

Dr. JUDD. I have one other question. One of our ambassadors overseas said that he felt that we ought not to make a change in this ECA organization until the stated time for its expiration, June 30, 1952. He gave two reasons. One was that ECA has become a symbol to the people of Europe of our interest in their economic and social well-being and living conditions. The Communists on the other side have always said that is a propaganda facade up in front, and America is not really interested in you Italians, she is interested in military operations against her rival, the Soviet Union. They have not convinced many people that ECA was a blind for giving assistance to the military.

If now, as you rightly say on page 2, this economic aid should be largely in support of military purposes, do you think that the advantages of using ECA openly and avowedly for military purposes would be sufficiently advantageous to offset the disadvantages, propa-

gandawise, that are certain to come from the Soviets being able to say, "Just as we told you all of these years, it was always a phony."

Mr. VOORHEES. Whatever you do they will use it for propaganda. What we need is to have the best organization to get the best results as fast as possible, and this is the business way to do it.

Dr. JUDD. This is the ambassador in a country where they have got the Commies on their doorstep all of the time, and we do not want to do anything to increase their effectiveness and influence in that country.

Mr. VOORHEES. It is a factor, but the biggest need that there is is to have strength, and as soon as these nations find that they have strength, then we will have a different story.

Dr. JUDD. I agree with you and that is why I wanted you to say it on the record.

Mr. VOORHEES. Thank you very much.

Chairman RICHARDS. You have made a very able presentation. Thank you.

Mr. VOORHEES. Thank you very much.

Chairman RICHARDS. Col. Robert E. Rodes is the next witness.

You have a pretty long statement here. Do you want to read that statement, or would you prefer to file it for the record and touch on certain points and high lights of it? You may do it whichever way you wish.

COMMITTEE ON THE PRESENT DANGER,
Washington, D. C., August 3, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives, Washington 25, D. C.

DEAR MR. RICHARDS: Pursuant to your request, we have prepared and submit herewith a suggested draft of a bill for foreign aid. Accompanying this is a brief explanatory memorandum and also a chart showing the Washington organization under such a bill.

We are working upon and will submit separately next week a chart of a proposed United States organization in Europe to carry out the purposes set forth in the proposed bill.

The annexed proposed bill is in general consistent with, and certain of the provisions are identical with, the proposals introduced yesterday in the Senate by Senators Smith and Saltonstall.

Thirty-five copies each of the bill, the memorandum, and the chart are transmitted herewith to provide a copy for each member of the committee and several for the staff.

Subject to intermittent absences from the city, I am, of course, available should you feel that I can be of any further assistance.

Sincerely yours,

TRACY S. VOORHEES,
Vice Chairman.

COMMITTEE ON THE PRESENT DANGER,
Washington, D. C., August 3, 1951.

MEMORANDUM ACCOMPANYING DRAFT OF FOREIGN AID BILL

The chairman of the House Foreign Affairs Committee and certain members of the committee asked that we draft a bill embodying the recommendations made in the testimony of members of the Committee on the Present Danger on the subject of Foreign Aid. For this purpose, the committee retained as special counsel Mr. Gerald D. Morgan because of his long experience in the drafting of legislation. The proposed bill is submitted herewith.

The bill provides for a unified administration of foreign aid patterned in general upon the type of organization provided for in the Economic Cooperation Act. The proposed relationship of the Administrator to the Secretaries of State and

Defense is, therefore, similar to the relationship of the ECA Administrator to State.

The bill would transfer to a Mutual Security Administrator the powers and functions now exercised by the ECA Administrator and by the directors of the Mutual Defense Assistance Program and the Technical Cooperation Program. It also deals similarly with the Institute of Inter-American Affairs.

The bill would terminate the ECA as such. However, it would transfer all of ECA's property, positions and personnel to the new Administration, subject to the right of the new Administrator within 90 days to release any personnel not required. In this way, the ECA personnel in this country and abroad, including the special missions, would, without new Civil Service processing, retain their positions—except those found unnecessary.

The provisions for coordination with the Secretaries of State and Defense follow the provisions for coordination between the ECA Administrator and the Secretary of State in the Economic Cooperation Act. These have worked so successfully that no dispute has ever had to be taken to the President for decision.

The bill would provide for a United States special representative in Europe and for special missions in the countries receiving aid. These missions would, in turn, be assisted by military advisory groups. The chief of each such special mission would rank, as the chief of the ECA special mission has ranked, immediately below the Ambassador to the country.

The procurement of military items would be through the Department of Defense. The Administrator would determine, with the concurrence of the Secretary of Defense, the measure and forms of aid for military purposes necessary for the respective countries.

The Administrator would, for the countries receiving aid, be the claimant agent for United States materials and facilities which are allocated for export by United States Government agencies. If allocations are made on an over-all, instead of a country-by-country basis, for the countries receiving aid, the Administrator would make the suballocations among such countries.

Consolidated bilateral agreements with each recipient country are provided for.¹ These would include—where applicable—the provisions of the ECA bilateral agreements and the Mutual Defense Assistance bilateral agreements. They also would contain certain additional provisions. The latter include the substance of the Battle bill, just passed by the House, dealing with limitation of trade with Communist areas. Provisions for deposit of "counter part funds" are made except as to aid furnished in the form of military end-items.

There is a new provision for termination of assistance.

In title II, dealing with authorization of appropriations, the amounts are not divided, as was the President's request, into "economic aid" and "military aid," but are divided on an area basis. This is because in the European area aid to most of the countries is for a military purpose, and whether it is so-called "economic" or so-called "military" aid is a question solely of method not of object.

The aggregate amount of appropriations which would be authorized in this bill is identical with the amount requested by the President and which would be authorized in the Administration bill (introduced in the Senate as S. 1762).

Military aid for Greece and Turkey has been transferred to the authorization for Europe. The authorization for Europe now includes the \$5,293,000,000 for "military aid" and the \$1,675,000,000 for "economic aid" for Europe from the Administration bill, plus \$350,000,000 (estimated)² of military aid for Greece and Turkey. The later figure is transferred from the authorization for the Near East and Africa contained in the Administration bill. Aid for the European area would thus total \$7,318,000,000.

The authorization for the Near East and Africa includes \$65,000,000 for "military aid" (the \$415,000,000 included in the Administration bill less the \$350,000,000 transferred to Europe as above explained) and \$125,000,000 for "economic aid" (as provided in the Administration bill). This makes the total figure \$190,000,000.

The Administration bill provides that not to exceed 10 percent of the \$415,000,000 authorized for military aid to Greece, Turkey, and Iran may be used for military aid to other Near East areas. Since Greece and Turkey are now included

¹ Because of the broad experience which the present United States special representative in Europe has had with the administration of counterpart funds, we took advantage of his presence in Washington to consult with him as to this technical aspect of the bill.

² The estimate for military aid for Greece and Turkey is derived from an analysis of past programs, since we are informed by the State Department that the exact amount presently requested for this purpose is classified.

in the aid for Europe in the annexed bill, the form of such provision is changed to permit a transfer of not to exceed \$50,000,000 from Europe for Near East areas.

TRACY S. VOORHEES,
Vice Chairman.

A BILL To promote the foreign policy and provide for the defense and general welfare of the United States by furnishing assistance to friendly nations in the interest of international security.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mutual Security Act of 1951".

FINDINGS AND PURPOSES

SEC. 2. (a) The United States, dedicated to the purposes and principles of the United Nations Charter and to the promotion of peace and security in furtherance thereof, has heretofore joined with, and rendered assistance to, other countries so dedicated in programs of economic support and recovery, notably a program for European recovery to restore and maintain in Europe the principles of individual liberty, free institutions, and genuine independence through the establishment of sound economic conditions and stable international economic relationships. The United States has likewise joined with, and rendered assistance to, other such countries in programs of individual and collective self-defense against the threat of military aggression and internal subversion. The United States has further initiated programs of technical assistance to, and promotion of capital investment in, economically underdeveloped areas to enable such areas to develop their resources and improve their working and living conditions. An essential element of all of such programs has been the principle of continuous and effective self-help and mutual aid.

The Congress hereby finds that the existence of large military forces under the control of aggressive rulers hostile to freedom, and the proven readiness of those rulers to support and engage in open military aggression as well as political subversion against free peoples, constitute an ever-increasing threat to the security and independence of the United States and of the free world.

Except for the necessity of intensifying and accelerating the program of individual and collective self-defense in the North Atlantic area because of this increased threat, the necessity for continued economic assistance to countries of Europe would in most areas have terminated. The increased threat to the security and independence of the nations of the free world, however, has made necessary the continuation of both the Mutual Defense Assistance and economic programs, and has in large measure bound together the originally separate purposes of each into a single purpose—to help create or restore in the free world the strength and security required to prevent aggression and to achieve a stable and lasting peace.

(b) It is the purpose and policy of this Act (1) to provide for the continuation of the Mutual Defense Assistance Program and to provide such other assistance as may be necessary to render to the countries participating therein economic support essential to an increased military effort; (2) to provide for assistance necessary to continue the economic recovery of Austria, the Federal Republic of Germany, the Free Territory of Trieste, Greece, and Iceland; (3) to continue the program of technical assistance and promotion of capital investment in underdeveloped areas of the world; and (4) to furnish such assistance authorized by law to devastated areas and to refugees.

(c) It is further declared to be the purpose of this Act to reorganize the major foreign assistance activities of the United States under a single agency in order to promote more efficient conduct and improved coordination of such activities with each other and with the foreign policy and national security objectives of the United States.

(d) The purposes of the various foreign assistance Acts heretofore enacted, and of the various titles therein, shall be deemed to include the purposes of this Act, to the extent that they are inconsistent with the purposes of this Act, to be amended and superseded by the statement of purposes in this Act.

TITLE I—MUTUAL SECURITY ASSISTANCE

ADMINISTRATION

SEC. 101. There is hereby established, with headquarters in the District of Columbia, an agency to be known as the Mutual Security Administration (hereinafter sometimes called the "Administration"). It shall be headed by an Adminis-

trator for Mutual Security (hereinafter referred to as the "Administrator") who shall be appointed by the President by and with the advice and consent of the Senate, and shall be responsible to the President for carrying out the purposes and provisions of this Act. The Administrator shall have a status in the executive branch of the Government comparable to that of the head of an executive department, and shall receive compensation at the same rate.

DEPUTY ADMINISTRATOR AND ASSISTANT ADMINISTRATORS

Sec. 102. There shall be a Deputy Administrator for Mutual Security, appointed by the President by and with the advice and consent of the Senate; and four Assistant Administrators for Mutual Security, appointed by the President by and with the advice and consent of the Senate, one of whom may be a member of the Armed Forces. The Deputy Administrator shall receive compensation at the same rate as that payable to an Under Secretary of an executive department, and the Assistant Administrators at the same rate as that payable to an Assistant Secretary of an executive department, except that if one of the Assistant Administrators is a member of the Armed Forces he shall receive only such additional compensation as, when added to his pay and allowances as a member of the Armed Forces, will equal that of the other Assistant Administrators.

TERMINATION OF AGENCIES. TRANSFER OF POWER, AND SO FORTH

Sec. 103. (a) Except as otherwise provided in this Act, there shall be transferred to the Administrator (1) the powers and functions conferred upon the Administrator for Economic Cooperation by the Economic Cooperation Act of 1948, as amended, and the Far Eastern Economic Assistance Act of 1950, as amended; (2) the powers conferred upon the President by the Mutual Defense Assistance Act of 1949, as amended, the Act for International Development, and the Act of May 22, 1947, except the power to conclude international agreements, the power to make appointments by and with the advice and consent of the Senate and such other powers as the President may reserve for exercise by himself; and (3) the powers and functions of the Secretary of State under the Institute of Inter-American Affairs Act. Sections 5 and 8 of the Institute of Inter-American Affairs Act are hereby amended by striking out "Department of State" wherever it occurs and inserting in lieu thereof "Mutual Security Administration."

(b) The following agencies and offices shall cease to exist:

(1) The Economic Cooperation Administration and the offices of Administrator and Deputy Administrator for Economic Cooperation;

(2) The office of United States Special Representative in Europe and of Deputy United States Special Representative in Europe created by the Economic Cooperation Act of 1948, as amended;

(3) The Public Advisory Board created under section 107 of the Economic Cooperation Act of 1948, as amended;

(4) The Advisory Board created by section 409 of the Act for International Development;

(5) The office created under section 413 (a) of the Act for International Development;

(6) The offices created by section 406 (a) of the Mutual Defense Assistance Act of 1949, as amended.

(c) All records, property, positions, and personnel used primarily in the administration of the powers and functions transferred to the Administrator by subsection (a) shall be transferred to the Mutual Security Administration, except that any personnel which the Administrator, within a period not exceeding three months following the date upon which subsection (a) takes effect, decides not to retain shall be retransferred to other agencies of the Government or separated from the service. All appropriations, allocations, and other funds that are available or are to become available for carrying out any of the powers or functions transferred to the Administrator by subsection (a) shall be available for the carrying out of such powers and functions by the Administrator.

(d) Subsections (a), (b), and (c) of this section shall take effect on the day following the date upon which the Administrator first appointed under this Act takes office, or on the thirtieth day after the date of the enactment of this Act, whichever first occurs; except that, if the President makes a nomination (or a recess appointment) of an individual as the first Administrator during such thirty-day period and the first Administrator does not take office until after the expiration of such period, the effectiveness of such subsections shall be postponed until such Administrator takes office.

(c) Notwithstanding the provisions of section 4 (a) of the Bretton Woods Agreements Act, as amended, section 101 (a) of the National Security Act of 1917, as amended, and section 635 (a) of the Export-Import Bank Act of 1915, as amended, the Administrator shall serve ex officio, for so long as the Mutual Security Administration shall continue to exist, as a member of the National Security Council, the National Advisory Council on International Monetary and Financial Problems, and the Board of Directors of the Export-Import Bank of Washington.

INTERAGENCY COORDINATION

SEC. 104. The Administrator, the Secretary of State, and the Secretary of Defense shall each keep the others fully and currently informed on all matters, including prospective action, relating to any program under this Act, which are pertinent to the respective duties of the others. Whenever any action, proposed action, or failure to act on the part of the Administrator appears to the Secretary of State to be inconsistent with the foreign policy objectives of the United States, or appears to the Secretary of Defense to be inconsistent with national defense objectives, and differences of view cannot be settled by consultation with the Administrator, the matter shall be referred to the President for final decision. Whenever the Administrator believes that any action, proposed action, or failure to act on the part of the Secretary of State or the Secretary of Defense is inconsistent with the purposes of this Act and if differences of view cannot be settled by consultation with the Secretary of State or Defense, as the case may be, the matter shall be referred to the President for final decision.

ADVISORY BOARD

SEC. 105. (a) There is hereby created an Advisory Board on Mutual Security Assistance (hereinafter referred to as the "Board") which shall advise and consult with the Administrator with respect to general or basic policy matters arising in connection with the Administrator's discharge of his responsibilities. The Board shall consist of the Administrator, who shall be the Chairman, and not to exceed sixteen additional members to be appointed by the President, by and with the advice and consent of the Senate, and who shall be selected from among citizens of the United States of broad and varied experience in matters affecting the public interest, other than officers and employees of the United States (including any agency or instrumentality of the United States) who, as such, regularly receive compensation for current services. Not more than a majority of two of the appointed members shall be appointed to the Board from the same political party. The Board shall meet at least once a month, and at other times at the call of the Administrator, or when three or more members of the Board request the Administrator to call a meeting. Members of the Board, other than the Administrator, shall receive out of funds made available for the purposes of this Act, a per diem allowance of \$50 for each day spent away from their homes or regular places of business for the purpose of attendance at meetings of the Board, or at conferences held upon the call of the Administrator, and in necessary travel, and while so engaged they may be paid actual travel expenses and not to exceed \$10 per diem in lieu of subsistence and other expenses.

(b) The Administrator may appoint such other advisory committees as he may determine to be necessary or desirable in order to effectuate the purposes of this Act.

OVERSEAS ADMINISTRATION

SEC. 106. (a) There shall be a United States Special Representative for Europe (hereinafter called the "Special Representative"), who shall be appointed by the President, by and with the advice and consent of the Senate, and who shall be entitled to receive the same compensation and allowances as a chief of mission, class 1, within the meaning of the Act of August 13, 1946 (60 Stat. 999), and have the rank of ambassador extraordinary and plenipotentiary. In addition to such other functions as he may be directed by, or with the approval of, the President to perform, he, or such person as he may designate to represent him, shall be the chief representative of the United States Government to the Organization for European Economic Cooperation, and the representative of the United States Government on the Finance and Economic Board and the Defense Production Board of the North Atlantic Treaty Organization. He may also be designated as the United States representative on the Economic Commission for Europe. In matters relating to the carrying out of the purposes of this Act, he shall receive his instructions from the Administrator and such instructions shall be prepared

and transmitted to him in accordance with procedures agreed upon between the Administrator and the Secretaries of State and Defense in order to assure appropriate coordination. He shall coordinate the activities of the chiefs of special missions in the European area provided for in subsection (e) of this section. He shall keep the Administrator, the Secretary of State, the Secretary of Defense, the chiefs of the United States diplomatic missions, and the chiefs of special missions currently informed concerning his activities. He shall consult with the chiefs of all such missions, who shall give him such cooperation as he may require for the performance of his duties under this Act.

(b) There shall be a Deputy United States Special Representative for Europe (hereinafter called the "Deputy Special Representative") who shall (1) be appointed by the President, by and with advice and consent of the Senate, (2) be entitled to receive the same compensation and allowances as a chief of mission, class 3, within the meaning of the Act of August 13, 1946 (60 Stat. 999), and (3) have the rank of ambassador extraordinary and plenipotentiary. The Deputy Special Representative shall perform such functions as the Special Representative shall designate, and shall be Acting United States Special Representative for Europe during the absence or disability, or in the event of a vacancy in the office, of the Special Representative.

(c) The Special Representative shall be assisted by a joint military advisory group appointed by the Secretary of Defense. It shall be the duty of such advisory group to coordinate the activities of the military advisory groups attached to the special missions (provided in subsection (f) of this section) in the European area, to assist the Special Representative in appraising and screening programs of United States assistance recommended by the special missions, and to advise the Special Representative as to the military capabilities and requirements of all countries in the European area which receive assistance under this Act for military purposes, or may become eligible for such assistance.

(d) The President may appoint, by and with the advice and consent of the Senate, a Special United States Representative for the Near East and a Special United States Representative for the Far East, if required to further the purposes of this Act. Such representatives shall receive the same compensation and have the same rank as, and to the extent appropriate, shall perform duties with respect to the regions to which they are assigned comparable to those of the United States Special Representative for Europe.

(e) Except as provided in subsection (i) of this section, there shall be established for each country receiving assistance under the terms of this Act, and there may be established for any country cooperating in regional economic or military programs in support of the purposes of this Act, a special mission for mutual security assistance under the direction of a chief, which shall be responsible for assuring the performance within such country of operations under this Act. The chief of such special mission shall be appointed by the Administrator, shall receive his instructions from the Administrator, and shall report to the Administrator on the performance of the duties assigned to him. The chief of such special mission shall take rank immediately after the chief of the United States diplomatic mission in such country.

(f) The chief of the special mission in each country receiving assistance under this Act for military purposes shall be assisted by a military advisory group appointed by the Secretary of Defense. It shall be the function of such military advisory group to advise the chief of such mission as to the military capabilities and requirements of the country, and to assist in reviewing and appraising requests for assistance for military purposes received from the authorities of the country.

(g) The chief of the special mission shall keep the chief of the United States diplomatic mission fully and currently informed on all matters, including prospective action, arising within the scope of the operations of the special mission, and the chief of the diplomatic mission shall keep the chief of the special mission fully and currently informed on matters relative to the conduct of the duties of the chief of the special mission. The chief of the United States diplomatic mission shall be responsible for assuring that the operations of the special mission are consistent with the foreign policy objectives of the United States in such country, and in the event that the chief of the United States diplomatic mission believes any action, proposed action, or failure to act on the part of the special mission to be inconsistent with such foreign policy objectives, he shall so advise the chief of the special mission and the United States special Representative in the region to which he is assigned. If differences of view are not adjusted by con-

sultation, the matter shall be referred to the Secretary of State and the Administrator for decision.

(h) The Secretary of State shall provide such office space, facilities, and other administrative services for the United States Special Representative for Europe and his staff, and for the special missions in each country, as may be agreed between the Secretary of State and the Administrator.

(i) The Administrator may, where he deems it appropriate and with the approval of the Secretary of State, direct that the functions of the chief of the special mission in any country be assumed by the chief of the United States diplomatic mission in that country.

Sec. 107. In the case of aid under this Act for a military purpose, the Secretary of Defense shall certify to the Administrator, from time to time, the military defense objectives for recipient countries. The Administrator, in continuing consultation with the Department of Defense and with other interested departments and agencies, shall estimate the extent to which the recipient countries will, in the absence of aid under this Act, unavoidably fall short of the objectives so certified, and with the concurrence of the Secretary of Defense, determine the measure and forms of aid which are necessary to enable such countries to accomplish such objectives most effectively within necessary time limits. When such aid is in the form of military items or of related technical assistance and advice, the Administrator shall allocated to the Department of Defense funds for procuring and furnishing such military items and related technical assistance and advice.

Sec. 108. Notwithstanding any of the provisions of the Defense Production Act of 1950, as amended—

(a) The Administrator shall have responsibility for representing, before the authorities in the executive branch of the Government charged with the administration of title I of such Act, the needs of all countries receiving assistance under this Act, and of such other countries as the President may direct, for United States materials and facilities.

(b) Allocations under such Act of United States materials and facilities for foreign countries receiving assistance under this Act and for foreign assistance programs in such countries to the extent that they are made on an over-all, and not on a country-by-country, basis, shall be apportioned by the Administrator among such countries.

CONSOLIDATED AGREEMENTS

Sec. 109. (a) After the date of the enactment of this Act, the powers of the President and the Secretary of State to conclude international agreements in furtherance of the purposes of the Act of May 22, 1947, as amended, the Foreign Assistance Act of 1948, as amended, the Mutual Defense Assistance Act of 1949, as amended, the Far Eastern Economic Assistance Act of 1950, as amended, the Foreign Assistance Act of 1950, as amended, the Institute of Inter-American Affairs Act, and this Act shall be exercised, as respects any individual country, by concluding a single over-all agreement with such country (which agreement may be amended from time to time) covering all assistance to be received by that country under such Acts.

(b) The Secretary of State after consultation with the Administrator is directed, as rapidly as is desirable and feasible, by negotiation with the various foreign countries, to bring about the consolidation of all existing agreements with each such country receiving assistance under any of the foregoing Acts, so that there will be a single over-all agreement with such country (which agreement may be amended from time to time) covering all assistance to be received by such country under such Acts.

(c) Any agreement concluded pursuant to subsection (a) or (b) of this section shall, where applicable, make appropriate provision for—

(1) promotion of production to enable the country to further, to the maximum practicable extent, the support of necessary military forces and joint programs of economic or military cooperation;

(2) cooperation with the United States and other nations of the free world to control exports to any nation or combination of nations endangering the security of the United States and other free countries to the end that trade with such nations will not add to the strength of potential aggressor nations relative to that of the free world; to that end placing absolute and effective embargoes upon the shipment to such potential aggressors of arms, ammunition, implements of war, atomic energy materials, petroleum, transportation equipment of strategic value, and items of primary strategic significance

used in the production of arms, ammunition, and implements of war: *Provided*, That the Administrator, with the approval of the President, may furnish assistance to a country which permits shipment of items other than arms, ammunition, implements of war, and atomic energy materials when unusual circumstances indicate that the withholding of aid would clearly be detrimental to the security of the United States: *Provided further*, That the Administrator shall negotiate with individual countries and groups of countries receiving assistance under the terms of this Act arrangements to control exports to any country or combination of countries endangering the security of the United States or of other free countries of other commodities the export of which, in his opinion, should be controlled; and

(3) placing in a special account deposits in the currency of such country, in commensurate amounts and under such terms and conditions as the Administrator may prescribe, in respect of aid furnished to such country on a grant basis pursuant to any of the Acts referred to in subsection (a): *Provided*, That the obligation to make such deposits shall not apply with respect to aid in the form of military items or related technical assistance or advice furnished pursuant to the Mutual Defense Assistance Act of 1949, as amended: *Provided further*, That the obligation to make such deposits may be waived, in the discretion of the Administrator, with respect to technical information or assistance furnished under section 111 (a) (3) of the Economic Cooperation Act of 1948, as amended, or with respect to ocean transportation furnished on United States flag vessels under section 111 of said Economic Cooperation Act of 1948, as amended, in an amount not exceeding the amount, as determined by the Administrator, by which the charges for such transportation exceed the cost of such transportation at world-market rates: *Provided further*, That the obligation to make such deposits may be waived, in the discretion of the Administrator, with respect to any aid furnished under any of the Acts referred to in subsection (a) other than the Economic Cooperation Act of 1948, as amended, or the Mutual Defense Assistance Act of 1949, as amended: *Provided further*, That, in the case of deposits made in respect of aid furnished pursuant to the Economic Cooperation Act of 1948, as amended, and the Mutual Defense Assistance Act of 1949, as amended, such deposits, together with the unencumbered portions of any deposits which may have been made pursuant to section 115 (b) (6) of the Economic Cooperation Act of 1948, as amended, shall be used within such country or otherwise for strengthening military defenses (including the promotion of the production of items required for military defense and the development of military facilities); for exploring and developing sources of scarce materials; for increasing agricultural and industrial productivity; for the development of any central institution or other organization formed by two or more participating countries to further the purposes set forth in section 111 (d) of said Economic Cooperation Act of 1948, as amended; for local currency administrative and operating expenditure of the United States incident to operations under the Economic Cooperation Act of 1948, as amended, and the Mutual Defense Assistance Act of 1949, as amended, and for expenditures for materials which are required by the United States as a result of deficiencies or potential deficiencies in its own resources (and no less than 5 per centum of each such deposit shall be allocated to the use of the United States Government for the purpose of such local currency administrative and operating expenditures and such expenditures for materials); and for such other purposes consistent with the policies and purposes of the Acts referred to in this proviso as, in the judgment of the Administrator, are warranted by special circumstances: *Provided further*, That, in the case of deposits made in respect of aid furnished under any of the acts referred to in subsection (a) other than the Economic Cooperation Act of 1948, as amended, or the Mutual Defense Assistance Act of 1949, as amended, such deposits, together with the unencumbered portions of any deposits which may have been made under international agreements concluded pursuant to such acts, shall be used for projects which are in furtherance of the policies and purposes of such acts, respectively: *Provided further*, That the use of such deposits shall in every case be subject to agreement between such country and the Administrator, who shall act in this connection after consultation with the National Advisory Council on international monetary and financial problems and the Advisory Board provided for in section 105 (a) of this title: *Provided further*, That any unencumbered balance of deposits remaining upon the termination of aid to such country shall be disposed of

for such purposes as may, subject to approval by act or joint resolution of Congress, be agreed to between such country and the Government of the United States of America.

The provisions so required, where applicable, to be included in agreements with recipient countries made pursuant to subsection (a) or subsection (b) shall be in addition to the provisions required by the Economic Cooperation Act of 1948, as amended, the Mutual Defense Assistance Act of 1949, as amended, the Far Eastern Economic Assistance Act of 1950, as amended, and the Act for International Development; except that to the extent that the provisions required by such Acts are inconsistent with the provisions required by this section, this section shall govern.

TERMINATION OF ASSISTANCE

Sec. 110 (a). The Administrator shall terminate the provision of all or part of any assistance authorized by this Act to any country under any of the following circumstances:

(1) when requested to do so by that country;

(2) when the Administrator determines, after consultation with the Secretaries of State and Defense that (A) such country is not adhering to its agreement with the United States under which assistance is being furnished, or is diverting from the purposes of this Act assistance provided hereunder, and that, in the circumstances, remedial action other than termination will not more effectively promote the purposes of this Act, or (B) that such assistance no longer contributes effectively to the purposes of this Act;

(3) when the President directs such termination upon finding that provision of assistance would contravene any decision of the Security Council of the United Nations, or if the President otherwise determines that provision of assistance to any nation would be inconsistent with the obligation of the United States under the Charter of the United Nations to refrain from giving assistance to any nation against which the United Nations is taking preventive or enforcement action or in respect of which the General Assembly finds that the continuance of such assistance is unnecessary or undesirable;

(4) upon passage of a concurrent resolution by the Congress resolving that such assistance should be terminated.

(b) Termination of assistance to any country under this Act shall include the termination of deliveries of all supplies scheduled under the aid program for such country and not yet delivered but funds made available under this Act shall remain available for twelve months from the date of such termination for the necessary expenses of liquidating contracts, obligations, and operations under this Act.

TITLE II—AUTHORIZATION OF APPROPRIATIONS

EUROPEAN AREA

Sec. 201. In order to further the purposes of this Act in the European area, there are hereby authorized to be appropriated to the President for the fiscal year 1952: \$7,318,000,000 for assistance, pursuant to the provisions of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1511-1604), and the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1501-1522), to countries which are parties to the North Atlantic Treaty, Greece, Turkey, and other countries of Europe. Military equipment, materials, and services may be furnished under this section to countries which are parties to the North Atlantic Treaty, to Greece and Turkey, and to any other country of Europe which the President determines to be of direct importance to the defense of the North Atlantic area and whose increased ability to defend itself the President determines will contribute to the preservation of the peace and the security of the North Atlantic area and is essential to the security of the United States. In addition, unexpended balances of appropriations heretofore made for carrying out the purposes of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1571-1604), the Act of May 22, 1947, as amended (22 U. S. C. 1401-1410), and the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1502), through assistance to any of the countries covered by this section are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section: *Provided*, That the Administrator shall so allocate funds appropriated under the authority of this section as to promote the maximum feasible expansion of the capacity of Europe to produce military equipment required for the joint defense and to furnish spare parts and

servicing for equipment furnished from United States sources, subject to the necessity for delivery of such equipment within the time required by the plans for the joint defense and to security considerations which, in the judgment of the Secretary of Defense, preclude production of certain items of military equipment outside the United States.

NEAR EAST AND AFRICA

SEC. 202. (a) In order to further the purposes of this Act in Africa and the Near East, there are hereby authorized to be appropriated to the President, for the fiscal year 1952, \$190,000,000 for assistance to countries in Africa and the Near East pursuant to the provisions of the Mutual Defense Assistance Act of 1949, as amended, and the Economic Cooperation Act of 1948, as amended. Not more than \$125,000,000 of the funds appropriated under the authority of this section shall be available for economic and technical assistance for other than military purposes in these areas, of which not to exceed \$50,000,000 may be contributed to the United Nations Palestine Refugee Agency under the terms of the United Nations Palestine Refugee Aid Act of 1950: *Provided*, That whenever the President shall determine that it would more effectively contribute to the purposes of the United Nations Palestine Refugee Aid Act of 1950, he may allocate any part of such funds to the Mutual Security Administration to be utilized in furtherance of the purposes of such Act, and any amounts so allocated shall be credited upon the agreed amount of the United States contribution to the United Nations Palestine Refugee Agency.

In addition, unexpended balances of appropriations heretofore made for assistance to Iran pursuant to the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1601), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriations authorized by this section.

(b) Amounts appropriated pursuant to the authorization in this section shall be available for military equipment, materials, and services for Iran, or for any other country of the Near East area, whenever the President determines, with respect to such other country, that the utilization of funds for that purpose is essential for the purposes of this Act, and he may utilize, in addition to funds made available pursuant to this section, not to exceed \$50,000,000 of the funds made available pursuant to section 201 of this title. Assistance under this section to any country other than Iran may be furnished only upon the determination of the President that (1) the strategic location of the recipient country makes it essential to the defense of the Near East area, (2) such assistance is of critical importance to the defense of the free nations, and (3) the immediately increased ability of the recipient country to defend itself contributes to the preservation of the peace and security of the area and is important to the security of the United States.

ASIA AND THE PACIFIC

SEC. 203. (a) In order to further the purposes of this Act in the general area of China (including the Republic of the Philippines and the Republic of Korea), there are hereby authorized to be appropriated to the President, for the fiscal year 1952, not to exceed \$930,000,000 for assistance, pursuant to the Mutual Defense Assistance Act of 1949, as amended, the Economic Cooperation Act of 1948, as amended, and the Act for International Development in those portions of such area which the President determines to be not under Communist control. Not more than \$375,000,000 of the amount made available may be used for economic and technical assistance for other than military purposes, including not to exceed \$112,500,000 which may be made available for contribution to the United Nations Korean Reconstruction Agency. In addition, unexpended balances of appropriations heretofore made for carrying out the provisions of title III of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1602-1604), the China Area Aid Act of 1950 (22 U. S. C. 1517), and the Far Eastern Economic Assistance Act of 1950, as amended (22 U. S. C. 1551, 1552, 1543), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section.

(b) The sums made available for Korea pursuant to sub-section (a) may be contributed from time to time on behalf of the United States in such amounts as the President determines to be appropriate to support those functions of the United Nations Korean Reconstruction Agency which the military situation in Korea permits the Agency to undertake pursuant to arrangements between the Agency and the United Nations Unified Command in Korea. In computing the aggregate amount of such contributions by the United States, there shall be

included the value of goods and services made available to Korea by any department or agency of the United States for relief and economic assistance after the assumption of responsibility for relief and rehabilitation operations in Korea by the United Nations Korean Reconstruction Agency: *Provided*, That, whenever the President shall determine that it would more effectively contribute to the purposes of this Act, he may allocate any part of such funds to the Mutual Security Administration to be utilized for assistance to Korea, and any amounts so allocated shall be credited upon any agreed amount of the United States' contribution to the United Nations Korean Reconstruction Agency.

(c) Not to exceed \$50,000,000 of funds appropriated pursuant to this section (excluding balances of appropriations continued available) may be accounted for by certification by the President of the amounts expended and that it is inadvisable to specify the nature of such expenditures.

(d) Unencumbered balances of sums heretofore or hereafter deposited in the special account established pursuant to paragraph (2) of article (V) of the agreement of December 10, 1948, between the United States of America and the Republic of Korea (62 Stat., part 3, 3783) shall be used in Korea and as may be agreed to between the Government of the United States and the Republic of Korea.

AMERICAN REPUBLICS

SEC. 204. In order to further the purposes of this Act in the other American Republics, there are hereby authorized to be appropriated to the President, for the fiscal year 1952, \$62,000,000, of which not more than \$22,000,000 may be made available for economic and technical assistance under the provisions of the Act for International Development and of the Institute of Inter-American Affairs Act, as amended, to countries of such area for other than military purposes: *Provided*, That military equipment, materials, and services may be furnished under this section under the terms of the Mutual Defense Assistance Act of 1949, as amended, only in accordance with defense plans which are found by the President to require the recipient country to participate in missions important to the defense of the Western Hemisphere. Any such assistance shall be subject to agreements designed to assure that the assistance will be used to promote the defense of the Western Hemisphere; and after agreement by the United States and the country concerned with respect to such missions, military assistance hereunder shall be furnished only in accordance with such agreement.

GENERAL PROVISIONS

SEC. 205. (a) Whenever the Administrator determines it to be necessary for the purposes of this Act, not to exceed 10 per centum of the funds made available under any section of this title (exclusive of the funds transferred pursuant to sec. 202 (b)) may be transferred to and consolidated with funds made available under any other title of this Act in order to furnish, to a different area, assistance of the kind for which such funds were available before transfer.

(b) The President, pursuant to section 404 of the Act for International Development, may make contributions on behalf of the United States to such technical cooperation programs of the United Nations and the Organization of American States as he determines will further the purposes of this Act in a total amount not exceeding \$13,000,000 from funds made available under authority of this title and the use of such contributions shall not be limited to the area covered by the section of the title from which the funds were taken.

(c) Funds made available in section 201 for carrying out the provisions of this Act shall be available for the administrative expenses of carrying out this Act, including expenses incident to United States participation in international security organizations and expenses of domestic programs in support of technical assistance activities. Any currency of any nation received by the United States for its own use in connection with assistance furnished by the United States may be used by any agency of the Government without reimbursement from any appropriation for administrative and operating expenses of carrying out the purposes of this Act. Funds made available for carrying out the purposes of this Act in the Federal Republic of Germany may, as authorized in subsection 114 (h) of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1512 (h)), be transferred by the President to the Mutual Security Administration or any other department or agency for the expenses necessary to meet the responsibilities and obligations of the United States in the Federal Republic of Germany.

(d) Upon a determination by the Administrator for Mutual Security Assistance that it will further the purposes of this Act, not to exceed \$10,000,000 of the

funds made available pursuant to section 202 of this Act and not to exceed \$25,000,000 of funds made available pursuant to section 203 of this Act may be advanced to countries covered by said sections in return for equivalent amounts of the currency of such countries being made available to meet local currency needs of the aid programs in such countries pursuant to agreements made in advance with the United States; *Provided*, That except when otherwise prescribed by the Administrator for Mutual Assistance as necessary to the effective accomplishment of the aid programs in such countries, all funds so advanced shall be held under procedures set out in such agreements until used to pay for goods and services approved by the United States or until repaid to the United States for reimbursement to the appropriation from which drawn.

(c) In order to assist in carrying out the provisions of this Act, not to exceed \$50,000,000 of funds made available under the authority of this Act may be used to acquire local currency for the purpose of increasing the production of materials in which the United States is deficient.

TITLE III—MISCELLANEOUS PROVISIONS

SEC. 301. The Administrator for Mutual Security Assistance so long as funds appropriated for the purposes of this Act continue to be available for obligation, shall transmit to the Congress reports covering each six months of operations in furtherance of the purposes of this Act, except information the disclosure of which he deems incompatible with the security of the United States. The first such report shall cover the six-month period commencing on the date this Act becomes effective. Reports provided for under this section shall be transmitted to the Secretary of the Senate or the Clerk of the House of Representatives, as the case may be, if the Senate or the House of Representatives, as the case may be, is not in session.

SEC. 302. Whenever, in connection with the furnishing of assistance in furtherance of this Act—

(1) use within the United States, without authorization by the owner, shall be made of an invention, or

(2) damage to such owner shall result from the disclosure of information by reason of acts of the United States or its officers or employees, the exclusive remedy of the owner of such invention or information shall be by suit against the United States in the Court of Claims for reasonable and entire compensation for unauthorized use or disclosure. In any such suit the United States may avail itself of any and all defenses, general or special, that might be pleaded by any defendant in a like action. In addition, in any suit for damages for use or disclosure of such information, any written description, model, drawing or other recorded teaching in the files of any department or agency of the Government, which—

(1) has a provable date before the disclosure to the United States by the owner thereof of the information upon which the suit is based, and

(2) constitutes a sufficient description of the information disclosed upon which the suit is based to enable others to practice or employ such information, unless such teaching consists of information obtained directly or indirectly from the owner of the information upon which the suit is based, shall constitute a complete defense for the Government provided by law, such teaching shall not impair the property in such information.

(c) Before such suit against the United States has been instituted, the head of the appropriate department or agency of the Government, which has furnished military assistance in furtherance of the purposes of this Act, is authorized and empowered to enter into an agreement with the claimant, in full settlement and compromise of any claim against the United States hereunder.

(d) This section shall not confer a right of action on anyone or his successor or assignee who, when he makes such a claim, is in the employment or service of the United States, or who, while in the employment or service of the United States, discovered, invented, or developed any invention or information on which such claim is based.

(e) The term "invention" means an invention covered by a patent issued by the United States.

(f) The term "information" means information originated by or peculiarly within the knowledge of the owner thereof and those in privity with him, which is not available to the public and is subject to protection as property under recognized legal principles.

SEC. 303. The proviso in the first sentence of section 403 (d) of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1574 (d)) is hereby

amended to read as follows: "Provided, That after June 30, 1950, such limitation shall be increased by \$250,000,000 and after June 30, 1951, by an additional \$450,000,000".

Sec. 304. Section 414 of the Act for International Development (22 U. S. C. 1557 (1)) is amended by inserting between the words "Act" and "until", the words "for a period to exceed three months".

Sec. 305. Assistance to any nation by means of funds authorized under this Act may, notwithstanding the date specified in section 122 of the Economic Cooperation Act of 1948, as amended (22 U. S. C. 1520), continue, subject to the provisions of this Act, as long as such funds remain available for such assistance, unless sooner terminated in accordance with the requirements of section 110 of this Act.

Sec. 306. Section 408 (e) of the Mutual Defense Assistance Act of 1949, as amended (22 U. S. C. 1580), is hereby amended by adding in the first proviso thereof, after the words "of which it is a part", the words "or in United Nations collective security arrangements and measures", and by changing the figure at the end thereof to "\$500,000,000".

Sec. 307. Whoever offers or gives to anyone who is now or in the past two years has been an employee or officer of the United States any commission, payment, or gift, in connection with the procurement of equipment, materials, or services under this Act, and whoever, being or having been an employee or officer of the United States in the past two years, solicits, accepts, or offers to accept any such commission, payment, or gift, shall upon conviction thereof be subject to a fine of not to exceed \$10,000 or imprisonment for not to exceed three years, or both.

STATEMENT OF ROBERT EMMET RODES, WASHINGTON, D. C.

Colonel RODES. I would like to go over it, because I think some of the things in it might bring out questions; at least I hope they will.

Chairman RICHARDS. Colonel, where do you live?

Colonel RODES. I live in New York City at the present time.

Chairman RICHARDS. I thought you lived in North Africa.

Colonel RODES. I have a business over in North Africa, or I did have until the State Department arranged for me not to run it any more.

Chairman RICHARDS. So you came to New York City?

Colonel RODES. No, sir; I came to Washington, thinking that if I told what I knew, it would take about 2 weeks to have someone fix our problem up.

Chairman RICHARDS. And that is what you are here for, to tell what you know?

Colonel RODES. That is correct.

Chairman RICHARDS. What relation has that to the bill we have before us?

Colonel RODES. This trouble first started when ECA started, and the French Government found that they could use United States public dollars to do what was being done with private dollars. That is the relation to the bill.

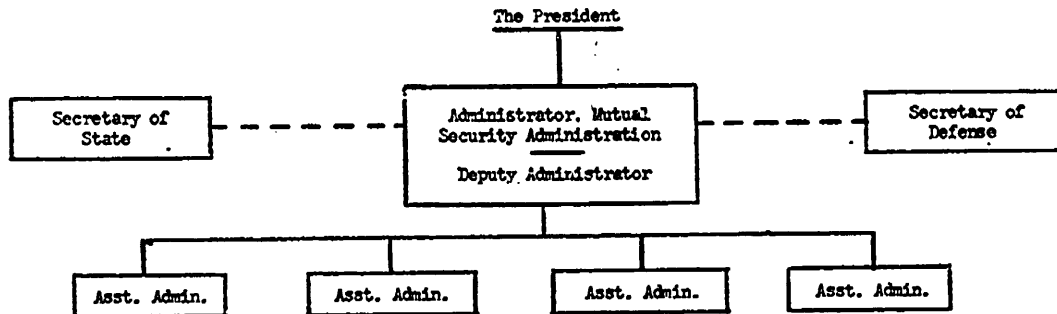

What I am hoping is that legislation which was passed last year to end that, and was set aside by the Department of State on two different occasions, will be passed in such a way this year that it can't possibly be set aside, and that no loophole will be found in it that will allow the Department of State to do the sort of thing that they have done with legislation, to your knowledge, in the past year.

Chairman RICHARDS. In other words, you want safeguards in the bill to prevent the things that are being done in Morocco to American citizens?

Colonel RODES. Yes, sir. To American citizens—

Chairman RICHARDS. Now, you mean?

Mutual Security Administration (Wash)

- Notes: (1) The Administrator will have Cabinet rank and will serve as a member of the National Security Council.
- (2) One of the Assistant Administrators may be a military man; four are provided to permit reasonable flexibility in assignments by function or by area.

———— Supervisory Relationship
----- Consultative Relationship

Colonel RODES. Yes, sir; and to the United States, and to our laws, and to our Constitution.

Chairman RICHARDS. All right, sir; go ahead.

Colonel RODES. Well, first, I would like to say this: that at the present time I am carrying out a tour of active military duty in connection with my Reserve status. I am a lieutenant colonel in the Engineer Reserve.

I was asked by the Army, since it is stated here that I am a colonel, to state that I am here in an entirely private capacity; and that nothing that I may say here has any connection with the Army or anything except my civilian activities.

Chairman RICHARDS. How long is your tour of duty to be?

Colonel RODES. My tour of duty will be 3 months; a month longer, now.

Morocco is a sovereign nation under the rule of a Sultan. The Sultan of Morocco agreed by treaty in 1836 to accord the United States equal treatment with any other nation and guaranteed an open door for our trade. In 1906, Morocco signed the Treaty of Algieras with 12 other nations, including the United States and France. All signatory nations, their trade and their citizens, have equal treatment under this treaty. Each of the signatories promises to honor this equality and recognize Morocco's previous treaty commitments, including the 1836 United States-Moroccan treaty. The Algieras Treaty also fixes customs and tax rates and procedures, and forbids monopolies.

In 1912, France entered into a protectorate agreement—Treaty of Fez—with the Sultan which gave both nations certain advantages but did not alter either the Sultan's sovereignty or the treaty status of other nations.

In 1917, as a friendly gesture to our ally, we recognized the protectorate. The recognition terms stipulated that American rights in Morocco would be unchanged and stated that only the United States Senate could alter them. France accepted these terms "with satisfaction" and "sincere appreciation."

France subrogated, to Spain, protectorate rights over the northern portion of Morocco. A small portion around Tangier already was under international political rule.

None of these arrangements changed the status of Moroccan trade or customs as defined in the Treaty of Algieras. The United Nations found, in 1950, that:

The customs status of Morocco is based on the following principles: Freedom of trade, and equal treatment among all countries (the act of Algieras), customs unity within the entire Sherifian (Moroccan) Empire and uniform customs tariffs for all nations; however, the duty on imports cannot exceed 10 percent ad valorem (p. 118, vol. II, United Nations Report on Non-Self-Governing Territories, Lake Success, 1950).

That is extremely clear. It always has been generally admitted by the French and our State Department. In discussions of trade possibilities in Morocco, the Department always advised Americans of our treaty-guaranteed equal-trade privileges, of business opportunities and of treaty prohibitions against unequal taxes and customs. A number of Americans went into business in Morocco after World War II. They included many veterans who had served in Morocco,

had seen an opportunity there and returned with agencies for American firms.

In 1947, the French became jealous of this group and decided to drive them out, setting aside every treaty requirement in the process. Every possible administrative trick was used. Special customs and taxes were levied. French concerns received illegal monopolies. In 1948, an embargo and a free list of United States goods were published. Products which enter freely usually are controlled by French agents or cartels. Those sold in free competition are embargoed. Exports to America were curbed and now are at an all-time low; in spite of the fact that Moroccan exports are about 400 percent over prewar, those to the United States are just a little bit below prewar. The reason is that they can get dollars free, and to get other currencies they have to give merchandise.

French cartels, which never were legal in Morocco and which France agreed to end, in the Byrnes-Blum pact of 1946, were given special privileges, even in the use of United States funds.

The Department of State admitted these abuses. It protested them until Mr. Acheson became Secretary. After that, it decided that some of them were "justified by Morocco's dollar shortage."

Each time legislation to remedy the abuses became imminent, however, the Department made profuse assurances that negotiations to remedy them were under way. None of these "negotiations" has brought results.

The Senate passed an amendment to last year's ECA Extension Act which denied counterpart funds to "any recipient country so long as any dependent area of such country fails to comply with any treaty between the United States and such dependent area." The amendment also stipulated that:

The terms of any treaty to which the United States and any participating country are parties shall remain in full force and effect until superseded by a new treaty, ratified by the Senate, unless prior thereto it expires by its own terms.

The Department of State and the ECA Administrator assured the conferees that new "consultative machinery" would make the amendment unnecessary.

I think, Mr. Chairman, you remember that. You were on that conference which was told that new "consultative machinery" would make the amendment unnecessary. The Connally amendment was adopted instead. If it had been applied honestly, several of the abuses would have been ended. Here is a draft of a memorandum which was discussed in the Department of State as action that might be taken in consequence of the Connally amendment. In my opinion, it was justified by the amendment. I do not know whether a similar memorandum was sent out. If it was, it was entirely without result. I think that that would be very enlightening, and I would appreciate it if it could be put in your record.

Chairman RICHARDS. What was that document that you wanted to put in the record?

Colonel RODES. This memorandum here. After the Connally amendment was passed, the amendment with which you are familiar, a discussion took place in the Department of State as to what action should be taken—this was a rough draft discussed as a memorandum which should be sent to our Minister at Tangier in connection with the Connally amendment.

Chairman RICHARDS. Was it sent?

Colonel RODES. I do not know.

Chairman RICHARDS. Was it adopted?

Colonel RODES. I do not believe it was. If it was, it did not achieve any results.

Chairman RICHARDS. I cannot see why that should go in the record.

Colonel RODES. All right, sir.

Two months later the Senate Appropriations Committee learned that the "consultative machinery" was not working and that no action whatever had been taken or would be taken on the Connally amendment except to protect our oil interests in Britain. The committee reported out an amendment to force treaty compliance.

The Senate considered the following memorandum:

MOROCCO AMENDMENT—H. R. 7786

(P. 448, line 25, of bill)

This amendment withholds ECA funds from France if after November 1, 1950 French Morocco continues to disregard her United States treaties.

A similar amendment to the ECA authorization asserted in addition that treaties with ECA recipients could be altered only with Senate ratification. It was defeated in the House by 18 votes but passed the Senate. It was defeated in conference when the conferees were told that "consultative machinery" in Morocco had cured the situation and that the Connally amendment would be invoked if the new arrangement should fail.

Americans in Morocco, their trade organizations and their American Legion post insist that there has been no improvement and that conditions are worse than ever. This is partially confirmed by the State Department itself in its report of June 6, 1950 to the Appropriations Committee (p. 261 hearings report):

"Our consul at Rabat has done an excellent and conscientious job in bringing about such solutions as are possible from the consultative meetings. The administrative tactics of the French officials, however, continue to delay the results and to multiply the minor discriminations * * * the consultative machinery has not been successful in solving larger problems touching French policy * * *."

The Moroccan difficulties began when French officials launched a campaign to drive about 40 independent American businessmen, mostly veterans, out of French Morocco.

The success of this campaign required the nullifying of treaties which guaranteed Americans trading equality; forbade monopolies; limited taxes and customs and prescribed methods of assessment—in short, made the usual colonial favoritism and corruption impossible. Recent French acts demonstrate the wisdom of these treaty provisions and the necessity of preserving them.

Previous French attempts to set treaty terms aside had always been resisted by the Department of State, which prior to 1949 insisted that such action would require Senate approval. Even in the early part of 1949, the present campaign was protested by the Department and Americans were promised full redress.

After 2 years of determined French refusals to its demands, the Department adopted the line of least resistance and sought excuses for French anti-American acts. The general excuse advanced is "Morocco's dollar shortage." This cannot be even vaguely connected with any treaty violations except import embargoes, and these have actually hurt Morocco's dollar position.

The embargoes began in January 1949, supplanting free competition begun in March 1948. They raised Morocco's dollar imports to an almost record high, lowered her dollar exports to a postwar low. The real effect was to transfer dollar trade from the United States and American traders to foreign countries and Frenchmen. While foreign nations' share of Morocco's dollar trade more than doubled, that of the United States decreased 35 percent. The embargoed products were selected solely because Americans had successfully dealt in them. Thus, DDT, cotton textiles, and refrigerators are banned, while unlimited dollar purchases of tea, radios, and cigars are permitted.

Assistant Secretary of State Gross wrote last year:

"The Department has repeatedly recognized that American businessmen have specific legitimate grievances that should be remedied" (Congressional Record, August 4, 1949, p. 10975).

Among grievances still outstanding are: Taxes and customs described by the Department variously as "illegal," "arbitrary," and "discriminatory," have not been repaid, although recovery has been promised by the Department for over 2 years. Illegal seizures in kind, and taxes which the Department told Americans "you are in no way required to pay" still continue. French cartels and other treaty-forbidden monopolies are becoming more powerful. A decree limits all bus operations by Americans to 320 seats, while their French competitors are granted unused licenses for thousands of seating capacity. Embargoes which the Department formally wrote the Moroccan Government it would not accept, prevent export of many products to the United States. An ever-increasing list of countries are given preference over the United States in two-way trade with Morocco, despite treaties to the contrary. Among these are Argentina, Bulgaria, Czechoslovakia, Egypt, Hungary, and Spain, all of whom have bilateral agreements with Morocco which give them a preferred position over the United States.

If the Department intended to act under the Connally amendment, it would have done so 3 months ago when the amendment was passed. If it were in good faith in insisting that its heretofore futile measures will cure the Morocco situation, it should have no objection to the present amendment which becomes effective only if, by November 1, 1950, all other measures have failed. With the time already elapsed, it will have had 6 months in which to fulfill its most recent promise to end Moroccan abuses.

Chairman RICHARDS. As I remember it, you were opposed to the Connally amendment.

Colonel RODES. I was, because I did not believe that anything that gave the Department of State any discretion would be carried out. If a statement of the sense of Congress were to have results, Congress certainly had stated it the year before. They had not stated it in as formal a manner, but they certainly stated it. The joker in the Connally amendment was that the Department of State would have to certify to ECA that abuses were going on. The Department merely refrained from certifying. The ECA Administrator said if he received such a certification, he would act; but the Department of State did not give the certification.

Identical promises of redress have been made by the State Department for over a year, each time legislation was pending. Now, for the fourth time—still quoting the statement made last year to the Senate—it seeks to avoid an unequivocal congressional mandate requiring action in Morocco. If it is successful, the situation will continue to fester until new legislation is passed.

The Senate voted by 43 to 29, and the conferees accepted, an amendment intended to give France her option of observing the Moroccan treaties or of foregoing ECA aid.

The Legal Division of the Department drafted a memorandum on treaty violations which was based, I believe, in part on the following rough draft which I discussed with them on September 20, 1950. It was discussed with the Legal department of the Department of State, and at that time they stated no objection to it, in any of the facts stated in it. This is a rough draft of suggested memorandum to the President;

1. Amendment No. 476 to the General Appropriations Act of 1951 reads:

Provided, etc. * * *

2. Pertinent terms of the principal treaties between the United States and Morocco are—

(a) The Treaty of Peace and Friendship of 1836 which provides—article XIV: "Commerce with the United States shall be on the same footing as that with the

most favored nation"; article XXIV: "Whatever indulgence in trade or otherwise shall be granted to any of the Christian nations the citizens of the United States shall be equally entitled to them"; and article XVII: "[United States] merchants may buy and sell all sorts of merchandise but such as are prohibited to the other Christian nations."

(b) The Madrid Convention (1880), signed and ratified by 13 nations including the United States, France, Spain, and Morocco, article 17 of which recognizes "the right to the treatment of the most favored nation" as belonging to all the participating nations;

(c) The general act of Algeiras concluded in 1906 by the same nations which established the principle of the "open door" and "economic liberty without inequality" (for all signatory nations); recognizes all previous treaties; prohibits concessions and monopolies unless established by competitive bidding; limits taxes and customs and sets up a procedure for the appraisal and assessment of the latter.

3. In 1912 France, by the Treaty of Fez, concluded a protectorate arrangement with the Sultan of Morocco under which French personnel acting for and on behalf of the Sultan were to accomplish certain administrative reforms and France received the right to carry out all the Sultan's negotiations with foreign nations. In 1913 France delegated its protectorate arrangement to Spain for the portion of Morocco now known as the Spanish zone.

4. In 1917 the United States recognized the French protectorate with full reservation for all rights and privileges acquired under previous treaties, which France, under the act of Algeiras was committed to respect. The United States has never recognized the Treaty of Fez nor the separation of the Spanish and French zones of Morocco. Our policy has always been to consider Morocco as a single autonomous country under the rule of a Sultan.

5. Since the inception of the protectorates France and Spain have repeatedly attempted to derive commercial and economic advantage from their status as protectors. The United States has always opposed their efforts as being contrary to the terms of the foregoing treaties and beyond the letter or the intent of our recognition. (An excellent summary of the United States position begins on p. 488, Foreign Relations, 1929, vol. III.)

6. In determining which acts of the Moroccan Protectorate constitute failures to comply with treaties between the United States and Morocco, it would appear that present consideration need be given only to violations for which evidence has been received and with respect to which complaints have been lodged with the Department and which were bases of complaints that led the Senate Appropriations Committee to recommend the legislation under discussion. Such violations are:

(a) Maintenance of monopolies or limitation of free competition in transportation, and in trade through cartels or otherwise. Such arrangements are in direct contravention of the principle of "economic liberty without inequality." They have the effect of giving a favored position to French nationals. The transport monopolies are patent violations of the anti-monopoly provisions of the act of Algeiras. Apart from the Moroccan treaties the United States has always opposed the cartel system and Franco agreed to give it up in article 4, paragraph 3, of the Byrnes-Blum pact. Treaty compliance should include the admission of the unrestricted right of any American to enter, expand, and freely compete in any business in Morocco for which monopolies are not granted in full compliance with treaties.

(b) Certain "consumption taxes," notably those on lubricating oil and tires, were increased unilaterally in 1948 when 90 percent of these two products were furnished by the United States. They are in effect an increase in customs duty. No product imported principally from France pays a similar tax. Even luxuries such as jewelry, furs, and leather goods pay only the regular 12½ percent duty fixed by treaty. This tax has been protested by the United States since early in 1948 and in September of 1948 the United States diplomatic agent was informed by the chief of the Moroccan Diplomatic Cabinet that its collection would cease and that sums paid by Americans on the two products would be reimbursed. This was not done. Cessation of these taxes and their reimbursement are essential to treaty compliance.

(c) According to the act of Algeiras customs are to be based on valuations determined on an annual or semiannual basis and publicized in advance. The French zone of Morocco makes local appraisals at the time of arrival. In many cases such appraisals were on a dual basis of valuation which would have been impossible if treaty provisions had been observed. The result was

that Americans often paid substantially more than their French competitors for identical or similar products. Compliance with the act of Algeciras would include reversion to appraisals according to its terms and reimbursement to Americans of overcharges resulting from dual standards of appraisal. The act also provides that importers dissatisfied with evaluations may settle customs charges by ceding one-eighth of their product. Compliance with this provision should be required. It now is refused."

In that connection, I imported merchandise into Morocco at \$48 a ton and it was assessed \$250 a ton. I made a formal protest to the consulate, but only half of the merchandise had been taken out of the dock. They immediately assessed the other half \$500 a ton and told me they did not like my attitude.

(d) Importers of refined sugar are forced to cede 50 percent of their imports at a loss to the Government who in turn sells it to the sugar cartel. This is an increase in custom duty fixed by the act of Algeciras. It gives additional protection to cartel members who own local refineries and permits the cartel to maintain prices which are substantially above world market prices.

In that connection, the Communists in Morocco were saying for a long time that the United States and the French sugar cartel had arranged for Moroccans to pay twice the world price for sugar. It was the only piece of Communist propaganda that I ever saw that was entirely accurate.

Similar cessions were required during 1948 and a part of 1949 for coffee and tea. All cessions should be abandoned and importers should be justly recompensed for those previously required, as a part of treaty compliance.

(e) Morocco now places restrictions on export and import trade with the United States which do not apply equally to trade with France and all other nations. Such inequality is contrary to the most-favored-nation terms of all three treaties and to articles XVII and XXIV of the treaty of 1836. The Department in its argument against the amendment informed the Senate Appropriations Committee that "The treaty of 1836 requires equality of treatment to trade between both France and the United States. This means that purchases in the United States for dollars may not be more restricted than purchases in France for francs." These remarks apply equally to exports. All of the restrictions should be abandoned in order to comply with the treaties in question.

(f) France requires Morocco to maintain free convertibility at parity of its currency with that of France. While the end result of this arrangement is a preferential arrangement for French trade and investments it is not necessarily in itself a treaty violation. However, Morocco should be informed that cases in which United States citizens or trade are placed at a disadvantage which is contrary to the principle of complete equality, the de facto linking of the two currencies will not be admitted as a valid reason for such disadvantage.

That linking of the two currencies was one of the most unjust things that I ever saw.

Mr. VOYRS. You do not claim it was a violation of the treaty, though.

Colonel RODES. I do not claim that but in its implementation, if it is used as an excuse to make a difference in trade, then it does become a treaty violation. What actually happened was that when Morocco's currency had about 10 times the intrinsic value of that of France, when Morocco had a balanced budget and virtually no debt, France suggested that the two currencies be linked at parity. The Sultan of Morocco, who has sole legislative authority in Morocco, refused to sign the decree, but the French enforced it anyway, as a simple fiat that has absolutely no legal right of existence.

However, the final decision was to evade the law. The following statement shows how this was done:

**STATEMENT RELATIVE TO CONTINUANCE OF ECONOMIC ASSISTANCE TO FRANCE
AND OF VIOLATIONS OF UNITED STATES TREATIES BY MOROCCO**

Public Law No. 759 denies economic assistance funds to "any nation of which a dependent area fails in the opinion of the President to comply with any treaty to which the United States and such dependent area are parties." This was intended to end violations of United States treaties by the French protectorate of Morocco. Before passing this proviso, both the Senate and the committee of conference considered and disagreed with the Department of State's claims that the treaties had been altered by Executive acts and that certain of these acts had implied congressional approval.¹

France instituted suit in the International Court of Justice to establish that compliance with the Moroccan treaties should not be required. Her case is based primarily upon the arguments which the Department of State advanced to Congress and with which Congress disagreed.²

One French contention is that the United States recognition of the French protectorate over Morocco gave special privileges to French organizations and trade in that country. The recognition was a purely executive act. It made full reservation for United States treaty rights, stating that they could not be changed without advice and consent of the Senate.

Furthermore, the recognition was without quid pro quo for the United States. It was purely a friendly gesture to bolster French morale and international prestige in her trying days of early 1917. Its terms were "accepted with satisfaction enhanced by the motives which inspired them," by Ambassador Jusserand, who also expressed his Government's "sincere appreciation of the decision of the Government of the United States to recognize our protectorate in Morocco" and added: "The terms in which you were so good as to notify it to us enhanced the value of this token of good will and my Government is confident that the traditional and sincere friendship between our two countries will be increased by this recognition."³

France now contends to the Court:

"Since the Government of the United States has recognized in a formal manner the protectorate of France over Morocco by the notes of January 2 and October 20, 1917, the Government of the French Republic could not admit claims which would in fact have the result of preventing it from fulfilling the mission which it has assumed."⁴

A similar French claim was effectively opposed by the United States in 1929 in a note⁵ which recalled all of the circumstances and terms of the conditional recognition of the protectorate and which concluded:

"It is obvious from a perusal of the above documents that the United States merely extended political recognition to the French protectorate over Morocco, leaving the question of a possible modification of its treaty rights, which would require ratification by and with the advice and consent of the United States Senate, for future negotiations between the two governments and it is equally obvious that the distinction was clearly understood by the French Government. It need hardly be remarked that no such negotiations have ever been carried out or ratified.

"In consequence, it is apparent that the treaty rights of the United States in Morocco remain as defined in the Act of Algeciras and previous treaties."

The Department of State has announced that the President will not make a determination relative to treaty compliance by Morocco and will continue French aid until the Court renders its verdict.⁶ By stipulation between the United States and France, this will require at least until November 1951.⁷ The arrangement between France and the Department of State nullifies the appropriation restriction which was clearly intended to give France her option of foregoing United States

economic assistance or of ceasing treaty violations in Morocco of which Americans had complained.

The Department of State justifies its position by claiming that the United States is committed to the mandatory jurisdiction of the International Court of Justice.¹⁰ The adherence of the United States to the mandatory jurisdiction of the Court specifically excepts "disputes arising under a multilateral treaty unless all parties to the treaty affected by the decision are also parties to the case before the Court."¹¹ This clearly would avoid mandatory jurisdiction in any suit by France alone, arising out of the Act of Algeiras, a multilateral treaty. Furthermore, France's own adherence to the Court's jurisdiction, on February 3, 1949, specifically excluded consideration by the Court of situations arising prior to that date. This would have permitted the United States to refuse the Court's consideration of Moroccan treaty violations which began in 1917.¹²

The United Nations states that:

"The customs status of Morocco is based on the following principles: Freedom of trade and equal treatment among all countries (the Act of Algeiras), customs unity within the entire Sherifian (Moroccan) Empire and uniform customs tariffs for all nations; however, the duty on imports cannot exceed 10 percent ad valorem."¹³

The Department of State admitted to the Senate Appropriations Committee that "The United States enjoys certain rights in Morocco, including * * * most-favored-nation treatment for United States commerce and 'economic liberty without any inequality,'" and stated further, "The Treaty of 1836 requires equality of treatment to trade between Morocco and both France and the United States."¹⁴

Moroccan acts complained of by Americans are violations of the foregoing principles, to which the United Nations and the Department of State both find that France is bound.

Treaty compliance would include cessation of all attempts to place French trade on a more favorable basis than that of the United States in Morocco; elimination of favored positions enjoyed by French cartels and other French-owned monopolies forbidden by the Act of Algeiras; collection of customs as prescribed by the Act of Algeiras and refund of sums collected in contravention of its terms.

The special restrictions on United States trade and unauthorized methods of customs appraisal are not practiced in the International Zone of Morocco (Tangier) It follows that they could not be continued effectively without the customs barrier which France maintains between the two zones, despite the treaty requirement of empire-wide customs unity.

It is apparent that France in instituting her suit had the fullest cooperation of the United States Department of State and that this cooperation was the Department's method of continuing a situation which the Department had defended before Congress and against which Congress legislated. This persistent attitude in the State Department and the apparent inaccuracy of its statement as to its commitment to accept the Court's jurisdiction justify doubts as to whether the Department will effectively protect the interests of the United States in preparing its defense and whether it will seriously attempt to bring about the complete treaty compliance to which the United States is entitled and which should be relinquished only by a renegotiation of the treaties in question with advice and consent of the Senate as required by the Constitution.

The French suit does not claim and, if successful, will not establish that there is full compliance with all terms of United States-Moroccan treaties, the sole condition which entitles France to United States aid.

Colonel RODES. Footnote No. 9 is particularly pertinent to the subject. It establishes that treaty violations which have been protested by the Department of State are continuing, that the Department of State gave its full assent to the French suit prior to its filing, and that the United States could if it wished avoid the Court's mandatory jurisdiction.

What I would like to say very briefly is that this law which was passed stated very bluntly that there would be no economic aid for

any country of which a dependent area fails to comply with treaties of the United States. In conference the words "in the opinion of the President" were placed after "fails" because someone had to determine the facts. The Department of State then arranged with France at the last minute, after some more of the usual negotiations which never have any results, that France would bring its suit against us in the International Court of Justice, the first time we have ever been sued there, to establish that the treaties which had bound the two countries for a long time should not be enforced. They decided that until the International Court of Justice had rendered its decision, they could not determine whether these treaty violations, which they were on record as having protested time after time, actually existed and that France would get aid just as if no legislation had ever been passed. That is the status at the present time.

I have pointed out the Department of State's double-dealing in this matter. I have a letter here which I wrote to Senator George on this.

Chairman RICHARDS. You consider it a part of your statement?

Colonel RODES. Yes, sir; I do.

Chairman RICHARDS. Without objection that will be inserted in the record.

(Letter referred to is as follows:)

MAY 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I have often claimed that certain State Department decisions cannot be justified by facts, and have given data indicating that the Department resorts to untruths in attempting to explain such decisions.

An example is in recent testimony of Mr. Winthrop Brown before your committee, found on pages 1201 and 1202 of volume II of your hearings. This unequivocally refutes previous statements made by the Department in attempting to justify its refusal to comply with an appropriation restriction which, in effect, gives France the option of abiding by certain United States treaties or of giving up United States economic assistance. The Department arranged for France to sue the United States at The Hague and to continue aid until the Court reaches a decision.

In justification, the Department stated that "The United States is committed to submit to the compulsory jurisdiction of the Court in cases of this type." (Quoted from State Department Press Release No. 1111 of October 27, 1950, circulated to interested members of the Senate as well as to the press and the public.) I pointed out that "The declaration (ratification) accepting World Court jurisdiction excepts 'disputes arising under a multilateral treaty unless all parties to the treaty affected by the decision are also parties to the case before the Court' (8. Doc. 123, 1946, p. 156)" and that "Since all signatories of the Act of Algiers are affected and only France and the United States are parties to the suit, we are not required to submit to the Court's jurisdiction."

Under Secretary Webb was even more emphatic in his letter of November 28, 1950, to the Commerce and Industry Association of New York, in which he stated: "It should be noted that the United States is subject to the compulsory jurisdiction of the Court in cases of this kind and that the French action in submitting an application to the Court leaves the United States with no alternative but to agree to this means of settling the dispute." This letter was reproduced and is currently being distributed with other material "explaining" the Department's decision in the Morocco case.

In the March issue of the American Bar Association Journal its editor in charge, Richard Young, indicates that the State Department contention may be challenged on a second score. He states:

"In thus according to the proceedings at The Hague, the United States showed no desire to take advantage of a possible loophole in the compulsory jurisdiction of the Court asserted by France. France, in accepting that jurisdiction by a

declaration ratified on February 3, 1949, excluded therefrom disputes arising from facts or situations existing prior to that date. The United States might conceivably have claimed that under this exception proceedings could not have been instituted against France on the Moroccan question, as a situation existing prior to February 3, 1949; and that therefore, for lack of the reciprocity required, France could not hold the United States bound on the Moroccan question under the United States' acceptance of compulsory jurisdiction."

The Department's Statement to your committee, submitted by Mr. Brown, supports both Mr. Young's findings and my own, in the following excerpts: "the United States of America recognizes as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the International Court of Justice * * *

"This declaration accepting compulsory jurisdiction * * * specified that the declaration should not apply to—* * * (c) disputes arising under a multilateral treaty, unless (1) all parties to the treaty affected by the decision are also parties to the case before the Court * * *

"The GATT is a multilateral agreement. Hence, under reservation (c) the United States would not be obliged to accept the Court's jurisdiction unless all parties to the GATT affected by the decision were also parties to the case before the Court, or unless the United States specially agreed to the Court's jurisdiction."

I hope that you and your colleagues will bear this example in mind in evaluating more involved, less easily checked, statements issued by the Department.

Yours sincerely,

ROBERT EMMET RODES.

Colonel RODES. This World Court scheme is a grave threat to our constitutional system. If the Court can determine that the United States is bound by State Department acts which conflict with treaties, obviously it can determine that such acts are binding when no treaty exists. This means that the Department of State can commit the United States by writing a simple note to a foreign government, letting the Government bring suit at The Hague to enforce the note, and making a weak defense of the suit. The result can be a binding court decision which can bring United Nations sanctions on the United States if it is not carried out. A simple diplomatic agreement might acquire the force of domestic law without any legislative body having passed on it.

Here is a report by the Senate "watchdog" committee, entitled "Violation of United States Treaty Rights in Morocco," and "submitted in the belief that the Senate will find it useful in case it decides that the will of Congress should be carried out." It refutes the contention that "dollar shortage" caused the treaty violations or is improved by them and finds that "this manner of circumventing the will of Congress appears to be highly irregular." This is already in public print and I would like to leave it just for your files.

Chairman RICHARDS. You refer to it in your statement, do you not?

Colonel RODES. Yes, sir. I would like to leave it for your files.

Chairman RICHARDS. That will be done.

Colonel RODES. I believe that all of you feel that the Department of State and France are proving more stubborn in this matter than its intrinsic importance warrants. That is undoubtedly correct.

There are two factors involved. One is colonialism, and the other is socialism.

France keeps indigenous populations of her colonial areas in a low economic state. This permits her to use cheap, ignorant colonial labor to produce cheap raw materials for French industries. She makes them buy French manufactured goods at inflated prices. She

also is increasing her nationalization in industry and mines and many other social schemes.

The free competition which Moroccan treaties guarantee threatens the colonial system. Inevitably it will result in an unequivocal comparison of free enterprise in Morocco with regimentation, socialism, and near peonage as practiced in France's outright colonies. Neither France nor our Department of State want this. They have determined to disregard Morocco's legal independence and make her an outright colony. (France already controls four times as much land per capita as we do. Why any American should help them increase their holdings is hard to understand.)

Although we are supposed to oppose both colonialism and socialism, the Department of State backs both of these practices for France and England. Incidentally, this procolonial attitude of the Department has lost us hundreds of millions of former friends.

French officials now are trying the same tricks on our Army contractors and military personnel connected with our bases. Our State Department, again, is unable or unwilling to remedy the situation. Whether the Department is capitulating or negotiating the results are always the same.

This matter can be cured only in one way—by unequivocal legislation which will make the Department act. This would be by two amendments:

"1. Any treaty to which the United States and any nation recipient of economic assistance authorized hereunder are parties shall remain in full force and effect until superseded by a new treaty unless prior thereto it expires by its own terms.

That is merely a statement of policy that a State Department official may not write a note which sets aside a treaty.

Now, going to the basis of that, when treaties are considered, the pros and cons, what we gain and what we give are weighed one against the other. If after that is done the State Department on its own may determine that the foreign nation need not give us what we have bargained for, or that we will increase what we have agreed to give, then all of the conditions of ratification become valueless. You might just as well tell them in the first place to "go ahead and make your own deal, because you can change the deal any time you wish." They have actually done that in this case and France has based its suit primarily on a claim that the State Department by its simple notes has changed our treaties.

Then the second amendment is as follows:

2. If rights of United States citizens and trade in any dependent area of any recipient nation are defined by treaties to which the United States and such dependent area are parties—

this sounds a little complicated, but it merely narrows it down to Morocco, without naming it—

and if United States citizens have complained that such dependent area is failing to comply with such treaties and if the United States has made representations based on such complaints, then the recipient nation shall not be eligible for economic assistance hereunder until (a) the Secretary of State shall certify that the recipient nation and the dependent area are complying fully with such treaties and that the recipient nation has agreed to reimburse on or before January 1, 1952, or not more than sixty days after the receipt of proper claims, amounts by which taxes and customs collected from United States citizens subsequent to January 1, 1947, exceed amounts which would have been collected had treaty terms been observed and (b) that in making the certification required by (a) he has

assumed that the treaties in question as ratified by the Senate are in full force and have not been altered by any Executive act. The Administrator is authorized to release counterpart funds for the payments prescribed in (a).

If you do this you will warn nations to treat our citizens fairly. You will teach them that no matter how successful they are in browbeating or hoodwinking our State Department, they still must deal with Congress and the American people. You will establish an oasis of free enterprise in a desert of regimentation and show the whole African Continent what our system can do. You will give a set-back to colonialism and to the prevalent belief among colonial peoples that western success will mean a resurgence of the old system which has kept them down so long.

Chairman RICHARDS. Thank you, Mr. Rodes. I want to ask you one or two questions. What is your interest in this subject?

Colonel RODES. I have a business in Morocco and I know about 35 people, most of them veterans, who went out there, as I did, and started export and import businesses, encouraged by the United States. Many of them started with the veterans' preference that they had in buying export quotas. They worked like the devil for 2 or 3 years and got good businesses going, and then they had almost everything wiped out, entirely illegally, just by a stroke of the pen.

Chairman RICHARDS. When were you last in Morocco?

Colonel RODES. I was last in Morocco in March of 1949.

Chairman RICHARDS. Over 2 years.

Colonel RODES. That is correct.

Chairman RICHARDS. You have a business there?

Colonel RODES. It is on ice.

Chairman RICHARDS. What is the address of the business?

Colonel RODES. 2 Route de Bouscoura.

Chairman RICHARDS. Do you have any property or financial holdings there other than that business on ice?

Colonel RODES. No, sir, I have not except a beach house, and a Quonset hut that is set up on a lot there. It is fixed up as a residence that I can use if I wish. I also have some money that is owing me, and I have about \$20,000 in taxes and customs which the State Department told me to pay under protest which I did pay under protest. Until recently I have been promised periodically that I would get them back.

Chairman RICHARDS. I believe the last time you appeared here was last June?

Colonel RODES. Yes, sir.

Chairman RICHARDS. You represented the American Trade Association at that time.

Colonel RODES. Yes, sir.

Chairman RICHARDS. What has become of that organization?

Colonel RODES. The American Trade Association has been merged at my advice with the American Chamber of Commerce. At the time that the American Trade Association was formed, three different individuals who were not Americans had the charter of the American Chamber of Commerce, which a member of the United States Chamber of Commerce sewed up in such a way that it could not be used. That situation was arranged after I got over here, and the American Chamber of Commerce, a member of the United States Chamber of

Commerce, exists. There is now no longer any reason for the existence of the American Trade Association.

Chairman RICHARDS. What is the attitude of the American Chamber of Commerce in regard to your position?

Colonel RODES. The attitude of the American Chamber of Commerce is very much for me. As a matter of fact, they wrote a letter to the President protesting this whole matter, a letter to the President outling their views of what would constitute treaty compliance, that should be required by the Appropriations amendment. That more or less recommends the same lines of action that I proposed.

I would be glad to put that letter in the record.

Chairman RICHARDS. Do you want to introduce any evidence to the effect that the American Chamber of Commerce supports your position here?

Colonel RODES. I would like to send you that letter to be placed in the record, which shows that our position coincides.

Chairman RICHARDS. They do not endorse your position, do they?

Colonel RODES. It would be difficult to say whether they do or not. I have no direct mandate from the American Chamber of Commerce; I have from two different officers of the American Chamber of Commerce who were former officers of the American Trade Association.

Mr. VORYS. I think if the gentleman gets a letter it will speak for itself, rather than asking him to speak in advance as to what the letter would be.

Chairman RICHARDS. If you have a letter that supports your contention, we will be glad, without objection, to put it in the record.

Colonel RODES. Thank you, sir.

While we are at that, I would like to bring out this: That material has been circulated by the State Department to the effect that the American Chamber of Commerce did not support my position. In doing that they quoted from a letter of July 11, which someone in the Chamber of Commerce apparently was induced to write when they had representatives out there who were promising that they were going to get everything arranged. They promulgated that around the end of November. Meanwhile the Chamber of Commerce sent a strong letter to the President asking exactly what I had been asking, yet when the Department of State promulgated this material to the Senate and elsewhere, they had full knowledge of the existence of this other letter, and said nothing about it.

Mr. REECE. Is that the letter that you want sent up for the record?

Colonel RODES. Yes, sir.

Mr. VORYS. It seems to me that we ought to ask for a full explanation from the Department of State, and place it at this point in the record. I do not know whether we will have time to take oral testimony. I would be glad if it were agreeable to the Chairman to have Mr. Rodas see that material and give his comment on what the Department of State says.

Now, of course, I have felt each time that Mr. Rodas has asked the Congress—

Chairman RICHARDS. If we want evidence on that we ought to have the Department of State give its position.

Mr. VORYS. I was going to suggest that we have the Department of State submit its statement and put it in the record at this point

after his, and then permit Mr. Rodas to give an additional statement if he so desired.

Chairman RICHARDS. I will ask the clerk to get a statement from the Department of State on that, and Mr. Rodas has already been given permission by unanimous consent to insert his statement. The reason I asked that question, I knew that there was a certain statement to the effect that the United States Chamber of Commerce did not support your position.

Colonel RODAS. I am awfully glad you brought that up because that is one of the best pieces of evidence I know of of the State Department's lack of good faith in this matter. They promulgated that material and they knew of the existence of this letter, because a copy had been sent to them, but at the same time they made it appear that the Chamber of Commerce had the same attitude which it adopted when the Department sent people over there to promise them that they would arrange everything by negotiation.

Chairman RICHARDS. I do not want to prolong this thing; the American Trade Association, how many members has it? Where did this organization originate?

Colonel RODAS. The American Trade Association was formed of 37 members in Morocco.

Chairman RICHARDS. You formed it, did you not?

Colonel RODAS. I did not form it; no, sir. It was formed by a group that got together. I was more or less senior there, and they asked me to take the chairmanship which I consented to do.

Chairman RICHARDS. Let me ask you another thing. The American Legion came in there and they had 25 or 30 members?

Colonel RODAS. The American Legion had 40 members.

Chairman RICHARDS. And you were the prime mover in organizing the American Legion there?

Colonel RODAS. No, sir; I was a charter member.

Chairman RICHARDS. Were you an official?

Colonel RODAS. I was commander, but I was not there when it was organized, and I did not vote for myself, naturally.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. Do I understand this, Mr. Rodas, that a case has been brought in the International Court of Justice and do I understand by your statement that that is a phony case?

Colonel RODAS. Yes, sir; absolutely; and I think if you read the statement—

Mr. VORYS. I have just read your statement, and that is an extremely serious charge.

Colonel RODAS. Sir, I do not believe you can make too serious a charge about the way this thing was handled. If you started and traced this whole thing through, and if the chairman here would appoint a subcommittee and allow them to go through this for a total of about 30 or 40 hours, I think it would reveal more than you have ever dreamed could possibly exist. You had a reorganization here, and that reorganization gave the State Department five or six additional Secretaries of State. That reorganization stated that those Secretaries would each have complete jurisdiction in his own geographical area; that he might call on other members of the Department of State and other agencies for advice, but he never need get their concurrence. That was done and George McGee became Assistant

Secretary of State for African and Near Eastern Affairs. In spite of that, 3 months later, Willard Throp still maintained what they called action control over this.

Mr. VORYS. Please do not take our time by telling me about a departmental argument as to who is handling a particular matter in the State Department. I asked you about your charge here, that a case has been brought in the International Court of Justice, which you claim is substantially a fraudulent case. If it is, if that serious charge were true, I do not see how Congress could correct it by passing a law.

Colonel RODES. I do not think it is possible for them to correct that particular thing, but what they can do is this: they can determine the condition under which their funds will be expended. France is not trying to prove that she is complying with the treaties. What she is actually doing is bringing suit against the United States for economic aid. In other words, we decided that under certain conditions we would give France economic aid, and France said that those conditions should not be met. They are bringing suit in the International Court of Justice in effect to determine that—not to establish that they are complying with the treaties, which was the sole condition on which the aid was granted.

Mr. VORYS. But that sovereignty having been changed, the treaties are by these various acts changed; is that not correct? That is what your statement says.

Colonel RODES. They claim they have the Department of State's permission not to comply with the treaties and that permission should be valid, and that is why I would like—I do not want to repeat it, but the whole background is in the statement there.

Mr. REECE. When you get the report from the Department of State, it will complete the picture, more or less, I should think.

Chairman RICHARDS. Are there any other questions? If not, thank you, Mr. Rodés.

AMERICAN CHAMBER OF COMMERCE OF MOROCCO,
Casablanca, October 3, 1950.

The PRESIDENT,

The White House, Washington, D. C.

DEAR MR. PRESIDENT: Amendment No. 476 of the General Appropriation Act of 1951 reads:

"Provided further, That after November 1, 1950, no funds herein appropriated shall be made available to any nation of which a dependent area falls in the opinion of the President to comply with any treaty to which the United States and such dependent area are parties."

A letter from this chamber dated May 12, 1950, appears on page A4160 of the Congressional Record of May 24, 1950. It gives details of certain violations of United States treaties of which the Moroccan Government was guilty. Some of these still continue.

United States treaties with Morocco guarantees "economic liberty without inequality." They limit customs duties to 12 percent; prescribe impartial customs evaluations; restrict taxes; preclude monopolies with certain specified exceptions; and, above all, prohibit any restrictions on Moroccan import or export trade unless the restrictions apply identically to trade with all nations including France and Spain.

The import restrictions imposed by the edict of December 28, 1948, which was accepted by the Department of State, have affected Americans more than Frenchmen or any others.

French businessmen established in French Morocco before the war control the great part of exclusive representation of American marks, and are therefore for the large part able to obtain the lion's share of official dollars for their imports, while Americans, in business only since the last war, have an insignificant share in

the dollars available to Morocco for imports from the United States. Again, Frenchmen are at the same time representatives of French manufactured goods, which they can import payable in francs. Americans do not have any exclusive representation of French goods, or other non-American goods.

Since the application of the afore-mentioned edict, some American veteran businessmen in Morocco, who were earning a living importing with their own dollars, or with dollars obtained outside of Morocco payable locally, were obliged to relinquish their business and return home. Others remained here, but found themselves almost completely denuded of their business activities. Several of the latter who have made substantial investments locally, gradually see their life savings dwindling until eventually they, too, will have to return home without funds.

One spectacular problem created is that of personal automobiles. Americans have always been accustomed to drive comfortable American cars. Since the restriction of American automobiles into French Morocco in 1918, several Americans on returning from home last year brought in with them their personal automobiles purchased with their own dollars while on vacation in the United States. When they returned here with their cars, they were obliged by the customs to sign an agreement to ship out their personal car within a certain period of time. Tired from their long voyage they had no alternative but to sign such an agreement, knowing fully well that it would force them to ship out their car and be left without transportation, which was essential to carry on their business. The deadline arrived and Americans were obliged to get their cars out, which they did, some of them even paying a fine of approximately \$25 for keeping their cars after the date of agreement. Some of these Americans are now forced to drive two-by-four French cars, whether they like it or not. It is really humiliating to see an American who used to drive a Buick or a Cadillac crawl along in a small non-American automobile.

In recent discussions between the appropriate French officials at Rabat, the capital, and members of the American Legion, the latter were told that they might be authorized to bring in a personal car, provided they sign an agreement not to dispose of it before 2 years. The spirit in such a provision is not flattering to us American citizens, especially when our business reputation locally shows an irreproachable conduct.

In view of the foregoing, it is respectfully pointed out that Morocco is failing to comply with her treaties with the United States as long as she shall not—

- (1) End restrictions imposed on two-way trade with the United States which are not applied identically to trade with every other nation;
- (2) Compute and collect customs in complete conformity with the procedures and rates established by treaty;
- (3) Cease the requirement for 3 percent guaranty for the importation of tea;
- (4) Discontinue entry taxes and "cessions" in kind which are imposed in addition to customs;
- (5) Conclude arrangements for prompt reimbursement of taxes and customs collected in excess of those allowed by treaty and for just compensation for "cessions" in kind;
- (6) Cease all attempts to create or maintain monopolies in trade or transportation through cartels or otherwise, or to give a favored competitive position to any organization unless specifically permitted by treaty;
- (7) Permit American citizens residing and doing business in French Morocco to import anything they desire for personal or household use.

Request the Department of State's immediate intervention to permit American citizens to import personal automobiles payable in dollars from their accounts in the United States. This question is very pressing, as several Americans are handicapped in their business, for lack of personal transportation.

Our attitude is not anti-French, it is one of justice, cooperation, fairness, and the furtherance of American interests. This is the policy of the American Chamber of Commerce of Morocco, based on the policy of the United States Chamber of Commerce at Washington, D. C.

It is hoped that officials of your Staff charged with making a determination of fact in connection with Moroccan treaty compliance will agree that each of the six violations listed above should be eliminated as a condition of further assistance to France.

Respectfully yours,

Gus. G. STRATTON, *President.*

LEHARA SALES CORP.,
New York, N. Y., July 20, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Foreign Affairs Committee of the House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: We are informed by Col. Robert Rodes that you raised the question of whether the American Chamber of Commerce of Morocco is in sympathy with legislation to assure equality for American trade and citizens in Morocco, to force return of taxes and customs collected illegally from Americans, and to assure that future collections will be in keeping with the existing treaties.

Our representative in Morocco, Maj. W. R. Simone, is vice president of the chamber of commerce in question and keeps us reasonably well informed of what goes on in the chamber, in Moroccan circles, and American and consular circles. The writer visited Casablanca last year and became personally familiar with some of the problems and personalities confronting American business activities there.

The American Chamber of Commerce of Morocco has a membership of about 180 individuals. The majority are not United States citizens. Some are French nationals who have the agency for a single American product and depend entirely upon official allocations of foreign exchange for their business. Others are naturalized citizens who usually are timid about offending the American consulate. In view of this it is difficult for the chamber to take a firm and decisive stand on any issue.

Last spring we received a copy of a communication from the Department of State to the New York Commerce and Industry Association, of which we are members. This indicated that the Casablanca chamber was not entirely in sympathy with the legislative remedies which are advocated by Colonel Rodes. We communicated with Major Simone, who stated that the consulate had insinuated to the chamber that it pass a resolution discrediting Mr. Rodes and opposing the legislation, including that already on the statute books.

Recently we received a cable from our representative, Maj. W. R. Simone, advising us that a strong group in the chamber was 100 percent back of Colonel Rodes.

That is certainly our own position and that of Major Simone who, as we have stated, is the chamber's vice president. The last official expression from the chamber, to our knowledge, was to the President of the United States, in October 1950. It stated that it was in favor of full enforcement of legislation to force treaty compliance by withholding ECA funds from France. It confirmed the chamber's letter of May 12, 1950, which listed treaty violations and asked for legislation to end them. This letter expressed the opinion of the entire membership. It appears on page A4169 of the Congressional Record of May 21, 1950.

While the Department of State may prevent some persons from voicing their disgust with the Moroccan situation, any claim that even a few Americans are satisfied with it is not justified by the facts as we know them.

We would appreciate your informing your colleagues of the foregoing.

Very truly yours,

LEHARA SALES CORPORATION,
C. F. MOULTON, Vice President.

The committee stands adjourned until 10 o'clock tomorrow morning.

(At 11:15 p. m. a recess was taken until Thursday, July 19, 1951, at 10 a. m.)

STATEMENT SUBMITTED BY THE DEPARTMENT OF STATE ON INTERNATIONAL COURT OF JUSTICE, RIGHTS OF NATIONALS OF THE UNITED STATES IN MOROCCO (FRANCE/UNITED STATES)

Mr. Rodes charges that the suit instituted by the French Government against the United States in the International Court of Justice was a maneuver instigated by the Department of State for the purpose of evading the intent of Congress, as expressed in the Hickenlooper amendment. Mr. Rodes accuses the Department of State of "double dealing" and states that the suit is a "phony."

The extent and validity of United States treaty rights in Morocco have long been a subject of dispute between the two Governments. Between World Wars I and II differences over the interpretation of these rights were frequent, particularly those rights pertaining to freedom of trade. Following World War II, and

prior to the enactment of the Hickenlooper amendment, the French Government repeatedly proposed that the question of United States treaty rights in Morocco be submitted to the International Court of Justice. Such proposals were made in June 1949 and July 1949, and in December 1949 the French Government went so far as to communicate to this Government the text of an application (substantially identical to the one actually presented to the Court in October 1950) which it had instructed its Ambassador at The Hague to file with the Court.

The Department of State was reluctant to resort to litigation to resolve the basic dispute as long as it was possible to reach a satisfactory working agreement through negotiation between the two Governments. Extraordinary world economic conditions and the enactment of the European recovery program required that the United States consent to forgo temporarily the enforcement to the letter of its rights asserted under the treaties. In return for this the United States insisted upon and obtained from the French in December 1949 an agreement containing specific measures to protect the business interests of Americans in Morocco under the exceptional circumstances of the postwar period.

After the enactment of the Hickenlooper amendment in 1950, however, the Department of State was no longer in a position to oppose submission of the dispute to the International Court of Justice, since the amendment prevented this Government from continuing beyond November 1, 1950, the agreement reached in December 1949, and indeed prevented it from settling by negotiation any further questions which might arise. Moreover, it would have inflicted a severe penalty on France without giving that country an opportunity to obtain an impartial judgment on the basic legal questions which it had long sought. The United States has traditionally upheld arbitration as the proper means of settlement of disputes. The Department of State, therefore, had no recourse but to agree to the Court action.

Mr. Rhodes also states that he doubts whether the Department of State will make an effective effort to protect United States interests in this case. This allegation is unfounded. The Department is now prosecuting the case to the best of its ability and will continue to do so. In the interests of presenting the strongest possible case, the Department has invited interested Americans (including Mr. Rhodes) to assist the Department in preparing the United States brief.

The Court, on November 22, 1950, fixed the time limits for the written proceedings as follows: for the memorial of the French Government, March 1, 1951; for the countermemorial of the United States, July 1, 1951; for the reply of the French Government, September 1, 1951; and for the rejoinder of the United States, November 1, 1951. The French Government filed its memorial as required. The Department of State found, however, that the French Government had failed to identify properly in its pleadings the parties on whose behalf the proceedings were brought. Since the interests of Morocco and France were both involved in the case, the United States wished both countries as well as the United States to be parties to the case and to be bound by the Court's judgment. The Department of State tried to obtain clarification of this matter from the French Government, but was unsuccessful. The United States, therefore, on June 21 filed a preliminary objection asking the Court to rule on the identity of the party or parties which had instituted the proceedings and would be bound by the judgment of the Court. The time schedule will be readjusted after the Court has ruled on this matter. Pending a decision by the Court on this preliminary objection, however, the United States has reserved all its rights and interests in the case.

STATEMENT BY ROBERT E. RODES IN REPLY TO STATE DEPARTMENT STATEMENT ON UNITED STATES/FRANCE CASE BEFORE THE HAGUE

Prior to 1947 French attempts against United States treaties in Morocco did not allege differences in interpretation. They were flagrant infringements, usually in the nature of probing actions attempted each time we changed consuls. They were abandoned each time the United States reminded France that our conditional recognition of their protectorate fully preserved our treaty status, with the implication that the recognition, if misunderstood, could be withdrawn.

The first suggestion by France that the matter be taken to The Hague followed our show of weakness when Secretary Acheson, in Paris early in June 1949, abandoned the Moroccan compromise arrangement which his officials, in March 1949, had promised to obtain (p. 555, Committee on Foreign Affairs hearings on H. R. 7378).

France abandoned litigation attempts when the United States pointed out that the Sultan of Morocco would have to be party to any suit involving the Multilateral Act (Treaty) of Algieras and that only the Sultan could institute a suit arising from the United States-Morocco Treaty of 1836. Legally the Sultan rules Morocco and French acts of usurpation would hardly be recognized in the International Court of Justice. The Sultan has always respected his treaties to the maximum extent permitted by the French. Moroccans insist that he opposes this present suit.

The proposed litigation involved only Americans' immunity from Moroccan laws until such laws are reviewed by the United States. This heretofore well recognized immunity is of unquestioned legality as long as France, Spain, and Britain retain similar privileges. However, it has no bearing on specific treaty terms which prohibit monopolies, fix taxes and customs, and guarantee the "open door" and identical treatment for United States and French citizens and trade. France now refuses to honor any of these terms.

The continuing validity of these terms has been stated unequivocally for publication by the Governor General of Morocco (Alphonse Juin), by the presidents of both the French and the Moroccan Chambers of Commerce of Casablanca, by France in a report to the United Nations, and by the United Nations, itself. On October 4, 1949, Assistant Secretary of State Willard Thorp stated, under oath, "This treaty (of 1836) is still in force." The terms of both United States-Morocco treaties are lawfully observed in the International (Tangier) zone of Morocco where the international governing body has no trouble in interpreting them.

The treaty violations include most of the anti-American measures which France has attempted and the United States has blocked over the past 30 years. It is absurd to connect such practices with present "extraordinary world economic conditions." Proponents of regimentation in the Department of State claim that one measure, import embargoes, helps Morocco's dollar balance. Statistics refute this. Morocco's dollar position was greatly improved with the ending of wartime restrictions in March 1948. The embargoes began in January 1949 and the retrogression, which everyone familiar with the situation had predicted, took place. See below:

Four years of Morocco's dollar trade, 1947 to 1950

[Figures are millions of dollars. Percentages are percent of Morocco's total exports and imports]

	1947		1948		1949		1950	
	Amount	Percent	Amount	Percent	Amount	Percent	Amount	Percent
Dollar imports:								
From United States.....	55.3	19.9	34.2	13.0	35.7	12.1	26.8	8.2
Other.....	10.4	3.8	16.6	3.8	19.7	6.6	30.6	9.3
Total.....	65.7	23.7	50.8	16.8	55.4	18.7	57.4	17.5
Dollar exports.....	8.5	3.6	7.7	5.2	4.0	2.6	4.0	2.1
Dollar deficit.....	60.2	43.1	51.4	53.4

The Department refuses comment on restrictions which permit unlimited dollar purchases of luxuries including radios, cigars, the world's finest tea. Red China furnished \$10,730,000 of the 1950 imports, an increase of \$5 million over 1949. Necessities including DDT, textiles and used clothing are banned because Americans sold them. The real result of the 1949 restrictions has been that which the French always intended—to divert all Moroccan dollars and all Moroccan exports into channels from which Frenchmen profit.

The "specific measures" of the December 1949 agreement which the State Department "insisted upon" in return for abrogating our treaties were dictated by France. The slight advantages which they gave Americans on paper, were nullified by French administrative tactics. (See Department's statement in my testimony.)

The 1949 agreement specifically preserved Americans' right to trial before our own courts, their obvious right under equal treatment since Frenchmen are tried only in French courts. The agreement for litigation required France to maintain the status quo in all respects until the International Court renders its de-

cision. Shortly after the court action was instituted, France began to hail sailors and civilians from our Navy base before French courts.

Charges attributed to me in the State Department's first paragraph are substantiated by statements in its fourth paragraph. The appropriation restriction, if observed, would stop treaty violations. If, as is claimed, it prevented continuance of the agreement of December 1949, that is only because the agreement permitted violations. The charge of evading the intent of Congress is admitted, but justified by the Department's opinion that the penalty prescribed by Congress was too severe. A letter to the Secretary of State from a Senator who usually supports administration foreign policy, analyzes this action more ably than I can. It is attached.

The Department's high principles seem to apply only when they aid foreigners. If litigation is a "proper means" of settling this dispute it should have been adopted in 1948 when the Department found that French taxes and customs in Morocco were "illegal," "unjust," "arbitrary," and "discriminatory," but was unable either to stop them or to obtain refunds which it had promised to exact.

The claim of compulsory jurisdiction has no basis in fact. (See letter to Senator George in my testimony.) The present attempt to spell out a moral obligation seems intended to divert attention from the unfounded claim of legal obligation with which Department sought to mislead the public and the Congress for 6 months.

The charge that the case is not vigorously and expeditiously handled does not reflect on the Department's Legal Division, who are not allowed unhampered exercise of their profession. There is strong evidence that the attorneys will not make all available legal arguments, that such arguments must be subordinated to political considerations and that European Division personnel must be consulted so that our defense will not conflict with their policy toward France.

The invitation to assist in preparing the brief was made 8 days before the brief originally was due. It requests small firms to participate with RCA, America Cable & Radio and others in engaging common counsel. These firms have widespread operations depending on agreements with the French communications monopoly. Last fall I requested that I and my counsel be permitted to see the French brief and suggest points which the answer should cover. This was denied because the French insist that the briefs be kept secret.

The remarks about clarification of the point as to whether or not France represents the Sultan of Morocco in the Court, supports my contention that the case is not effectively defended. I pointed out in a letter dated November 3, 1950, that France lacks authority to sue in the Sultan's name and that Morocco is not a member of the Court. Shortly afterward I called on the Department's legal director and suggested, among other things, that a motion to quash be filed on the grounds that the Sultan had not signed as plaintiff. This was refused.

The result is additional delay with continued unauthorized aid to France. It would seem to be intentional and entirely consistent with the Department's policy in this matter. The way to determine whether or not Morocco is suing us is to move to quash, not to exchange conversations and notes with the plaintiff.

I also suggested a motion for summary judgment which I believe would be amply justified. This was likewise refused.

The Court time schedule on the Morocco matter could have been as short as on the Iranian oil case if the Department had wanted justice, rather than an excuse to give France a half billion dollars on terms other than those on which it was appropriated. The Department knows that the suit, even if the French are successful, cannot establish the full treaty compliance which alone would justify continued aid. Subsequent to the suit (January 26, 1951) a letter signed for Secretary Acheson by Assistant Secretary McFall admitted: "Some of the details of the provisions of the Act of Algieras are not being followed."

My communications to the Department and my statements about this matter have been made, to the best of my ability, specific, concrete and factual, and have been documented. The Department's replies and rebuttals, almost without exception, have been vaguely general, evasive, and have lacked supporting data. The Department gives every evidence of having determined to pursue a certain course of action regardless of law, justice or facts. An exchange of correspondence with the Department's legal adviser, attached, is illustrative of this situation.

A sheet giving five excerpts of State Department reports on its handling, past and present, of the Moroccan situation is attached. It gives a clear idea of why most normal Americans who must rely on the Department of State have lost all respect for it.

JANUARY 3, 1951.

Hon. DEAN ACHESON,
*The Secretary of State,
Department of State, Washington, D. C.*

DEAR MR. SECRETARY: I have long been concerned about French Morocco's refusal to abide by treaties which assure American trade and enterprise "economic liberty without any inequality" and which fix rates and procedures for taxes and customs. However, I refrained during 1949 from voting for sanctions to end this situation, believing that your Department would adjust the matter satisfactorily by negotiation. When this was not done, I supported, and the Senate approved, an amendment to the Economic Cooperation Administration Act which would have withheld "counterpart funds" from France so long as the treaty violations continue and which stated that treaties would remain in force unless altered by constitutional treaty-making authority. When your Department and the ECA Administrator insisted that this amendment was unnecessary, the Connally amendment which left full discretion with your Department was adopted in conference and became law.

My letter of June 12, 1950, stated certain acts of treaty compliance which it seems reasonable that your Department should obtain authority of the Connally amendment. Mr. McFall's answer of June 23, 1950, made it clear that your Department had decided to tolerate all of the abuses I mentioned. Mr. Hurnel's memorandum to the Appropriations Committee confirmed this decision and intimated that your Department's own agreements had modified the Moroccan treaties.

Since it was apparent that no action could be expected under the Connally amendment, I joined a preponderant majority of the Senate in voting in effect to cut off aid to France if Moroccan treaty violations continue. Even the majority leader, opposing the proviso, agreed that your Department's claim that other acts had modified the treaties, could not be accepted. The final law was aimed at those acts which "in the opinion of the President" were treaty violations.

I now learn that France is suing the United States at The Hague on the grounds, to use your Department's summary, "that the United States' treaty position in Morocco is anachronistic, that certain of our treaty rights have ceased to exist, or have been superseded by later agreements or policies." I also learn that your Department has agreed that aid to France and the Moroccan treaty violations both will continue until the Court renders its decision.

The appropriation amendment was clearly intended to give France her option of making Morocco comply with our treaties or of foregoing our economic aid. It is also evident that the intended criterion is the wording of the treaties themselves and that this was adopted after full consideration of your Department's reasons for wishing to substitute other criteria.

I do not intend at this time to explore the factual, legal and constitutional questions arising out of this suit, although I would appreciate your detailed remarks on the objections to your action filed by the American Trade Association of Morocco on November 3, 1950. However, I do believe that the suit should not nullify the legislation by continuing aid while treaty violations admitted by your Department continue.

I would appreciate very much your present opinion on the Moroccan treaty and trade situation.

Sincerely yours,

United States Senator.

NEW YORK 23, N. Y., November 3, 1950.

ADRIAN FISHER, Esq.,
*Legal Adviser, Department of State,
Washington, D. C.*

DEAR MR. FISHER: I have examined the Department's memorandum of October 27, 1950, which states that France has asked the International Court of Justice to invalidate certain terms of treaties between the United States and Morocco; that the United States has agreed to abide by the Court's decision and that meanwhile, the President will withhold opinion as to whether Morocco is complying with the treaties in question and, presumably, will permit continuation of payments to France which current legislation makes contingent upon Morocco's treaty compliance.

This memorandum raises policy questions which will be brought to the attention of appropriate authority. You are requested to consider several legal questions, any one of which would seem to justify reversal of the above decision.

BASIS OF DISPUTE

Treaty compliance would mean that Americans in Morocco could trade with the United States on a footing identical with that of citizens of any other country in trading between Morocco and their homelands; that customs and taxes would be assessed and collected as required by the Act of Algieras and that overcharges resulting from failures to comply with the act would be reimbursed; that Americans would be assured the liberty which our treaties guarantee of free competition in any Moroccan business, specifically including the right to compete with any monopoly or cartel established in contravention of treaty terms.

FRENCH HAVE NOT ESTABLISHED A PRIMA FACIE CASE

While the Department of State has held, for various reasons, that some of these measures should not be enforced, it has admitted that treaty compliance would require them. Its memorandum to the Senate Appropriations Committee stated: "The United States enjoys certain rights in Morocco including . . . most-favored-nation treatment for United States commerce and economic liberty without any inequality," and stated further: "The treaty of 1836 requires equality of treatment to trade between Morocco and both France and the United States."

French officials often have made similar statements. The following excerpt from France's 1949 report to the United Nations is found on page 118, volume II, United Nations Report on Non-Self-Governing Territories, Lake Success, 1950: "The customs status of Morocco is based on the following principles: Freedom of trade, and equal treatment among all countries (the Act of Algieras), customs unity within the entire Sherifian Empire and uniform customs tariffs for all nations; however, the duty on imports cannot exceed 10 percent ad valorem." (Statistical and other charges amounting to an additional 2½ percent are not included.)

On October 31, 1950, France in declining to give Morocco more independence stated: "Any reconsideration of the treaty of Fez (establishing the protectorate) would automatically involve the Algerias Powers, including Russia, which settled the first Morocco crisis in 1906." If the powers which relinquished their Algerias rights in exchange for France's obligations under the protectorate can insist that the latter remain unchanged, it seems clear that our rights, which were retained when we conditionally recognized the protectorate, remain as they were established at Algieras.

A dispatch on the subject of the French court action, by Michael Clark to the New York Times under Paris dateline October 13, 1950, ends: "There has been talk in French circles of taking the dispute to the International Court of Justice at The Hague, although the French are afraid that little can be expected to come of such a move."

This suit is a flimsy pretext for continuance of both aid and treaty violations in spite of legislation clearly intended to end either one or the other.

FRANCE IS NOT QUALIFIED TO SUE

The United States official conception of Morocco's status was stated under oath by Assistant Secretary Willard Thorp: "Morocco is a sovereign nation under the rule of a Sultan." This was confirmed by France when Morocco was excluded from the Atlantic Pact although Algeria, less important strategically, was included. It follows then that since the appropriations restriction involves only United States-Moroccan treaties and not treaties or other agreements with France, only Morocco can sue regarding them. Since Morocco is a nonmember nation, she can become party to the Court statute only with the approval of the United Nations General Assembly and of the Security Council. Even then, the United States should determine whether the action is really that of the treaty power, namely the Sovereign of Morocco, or is unauthorized action by French personnel legally under his jurisdiction.

In view of the fact that the entire French case stems from the forcing of free convertibility of Moroccan and French exchange, in an illegal fiat over the Sultan's disapproval, and since all Moroccans desire the "open door" which our treaties guarantee, it seems almost certain that the action would be unauthorized.

FRANCE AND MOROCCO HAVE NO CAUSE OF ACTION

If there is an aggrieved party, it is the United States. Neither France nor Morocco has any cause of action. The treaty violations which give France and her nationals economic preference in Morocco are continuing. Even if Morocco favored these measures she would have no complaint for they are in full force. The French official despatch admits that France is having her own way in enforcing regulations protested by the United States and that it is only the Hickenlooper amendment which has made the suit necessary. France's only grievance is that the United States has placed certain conditions on the continuance of Franco's ECA funds. An action based on this claim is absurd.

FRANCE OFFERS NO DEFENSE EITHER LEGAL OR EQUITABLE AGAINST CERTAIN OF THE COMPLAINTS MADE BY AMERICANS

The only complaints by Americans which France has disputed, on any basis, are those directed against Moroccan "consumption taxes" and import embargoes. She challenges the United States' heretofore admitted right to approve or disapprove such measures insofar as they affect American interests. This is beside the point. The taxes are levied on United States necessities while French luxuries are exempted. The embargoes exclude United States products while similar products from France and other nations are admitted. Approved or disapproved, these measures contravene treaty terms limiting taxes and assuring equal treatment and an "open door" for our commerce.

France does not attempt to defend her illegal customs assessment methods nor her illegal monopolies. Both of these practices have been condemned as not only illegal but arbitrary by well-qualified Moroccan and French opinion. The French admission to the United Nations that the Act of Algiers requires "customs unity within the entire Sherifian Empire" and her claim that this is in effect, makes it impossible to defend the special customs barriers and practices actually instituted unilaterally in the French zone.

THE COURT ACTION HAS NO BEARING ON THE APPROPRIATIONS LEGISLATION

The Department's memorandum accurately summarizes the French position as follows: "The French Government maintains that the United States treaty position in Morocco is anachronistic, that certain of our treaty rights have ceased to exist or have been superseded by later agreements and practices."

An identical contention was advanced by the Department in attempting to persuade Congress to defeat the restriction which it enacted. The Department's memorandum on page 258 of the Senate hearings on ECA reads in part: "It is noted that some of the complaints they (Americans) have made appear to be based on the original treaty position rather than on the failure of the French to live up to their agreement with the United States. It is apparent that misunderstandings have developed between the United States and France over our treaty position and the French appear to believe that we are clinging to outmoded rights."

This French point of view, that other arrangements might alter the treaties, was considered and discarded when the legislation was debated. Page 11513 of the Congressional Record for July 31, 1950, shows that Senator Lucas, when asked whether "even the ECA Act can set aside a treaty . . . ratified by the Senate of the United States," answered: "No. I do not agree at all that a law can set aside a treaty." He urged, nevertheless, defeat of the legislation "regardless of any technicalities which might be raised with respect to whether a treaty has been violated or has not been violated." Passage of the legislation after consideration of this proposal makes it obvious that Congress intended aid to be cut off unless Moroccan treaties are honored.

The equity and basic merit of the French contentions also was reviewed in detail before the legislation was passed. The lengthy attempted justification of the French position appended to the Department's memorandum of October 27, 1950, is identical with the material appearing on pages 258-263 of the committee's hearings report. An answer, circulated to Congress, is attached hereto.

The French make no claim that Morocco is complying with the treaties in question. They merely seek to have the Court declare that for various reasons the treaties should not be enforced. Even if the Court should make such a decision, it would not justify continued aid to France, which, after due consideration, Congress has made conditional upon treaty compliance.

TO SUMMARIZE

The Department's own findings, official French statements and France's pleadings all indicate a case which is far too flimsy to constitute even a pretext for delay in application of the legislative restriction.

France is not qualified to bring, in her own name, an action relative to United States-Moroccan treaties. If the action is brought in Morocco's name, the sultan's authorization is necessary and United Nations approval seems to be required.

Neither France nor Morocco has a cause of action as neither is prevented from continuing treaty violations. The action is, in reality, one to continue ECA grants to France without fulfillment of a condition on which the funds are authorized.

Certain of Morocco's admitted treaty violations are neither denied nor defended in France's action.

Even if France's action to invalidate the treaties should be entertained and should succeed, it will not establish the treaty compliance by Morocco which alone justifies continued aid to France.

I hope that you will carefully consider the foregoing and will change the Department's recommendation to the President accordingly.

Yours sincerely,

ROBERT EMMET RODES,
President, American Trade Association of Morocco.

DEPARTMENT OF STATE,
Washington, December 19, 1950.

MR. ROBERT EMMET RODES,
*President, American Trade Association of Morocco,
New York, N. Y.*

MY DEAR MR. RODES: The receipt is acknowledged of your letter dated November 3, 1950, dealing with the action to be taken as a result of the French submission of the Moroccan Treaty question to the International Court of Justice.

As you have requested, I have given careful consideration to the arguments presented in your letter and its attachments. It appears to me that all the points raised in your letter will properly be before the International Court of Justice when it considers the case. Even though we may not agree with the French contentions, it would hardly be appropriate for the President of the United States to take action based on a unilateral opinion on these matters while they are pending before the Court. The President has expressed agreement with this conclusion, and I do not feel that I could conscientiously recommend a different course of action.

Sincerely yours,

ADRIAN S. FISHER,
The Legal Adviser.

QUOTATIONS ARE FROM STATE DEPARTMENT RECORDS AND CORRESPONDENCE

State Department, 1929—Secretary of State to U. S. Ambassador in Paris (United States Foreign Relations, 1929, vol. III, p. 491): "The Department * * * commends your efforts to expedite action in the several matters concerning Morocco * * *. An increasing tendency of the Protectorate authorities to disregard the regime of the Open Door and to encroach upon American rights generally has been observed by the Department and apparently, if the protests which this Government has found it necessary to make to the French Government from time to time are not to be regarded as merely perfunctory by the latter, such action as that reported in the despatch under reference will occasionally be necessary."

State Department, 1948—Casablanca Consul-General to American Trade Association in Casablanca, letter of July 16, 1948: "These problems have not only been under continued study, but most of them, notably the questions of import duties, import licenses, and discrimination against American business interests, have given rise to representations to the Protectorate authorities by this office and the American Legation in Tangier, the result of which has been a partial, if not complete, improvement of the situation."

State Department 1949—Casablanca Consul-General to American Trade Association in Casablanca, letter of February 7, 1949: "Actions of the Protectorate Government which infringe upon American treaty rights, or which discriminate against Americans, have been protested, in some cases repeatedly, by this office. Needless to say, all such matters are reported to the Department of State, and when consular protests prove to be of no avail, requests are made for further instructions. The Consulate General * * * would be exceeding its own competence to make conjectures of what the results * * * will be."

Secretary of State to Senators and Members of Congress concerning the Department's public bearing on French restrictions and embargoes on American trade, letter of November 17, 1949: "You will observe that the comments of the businessmen frequently extended beyond the indicated scope of the meeting, and included statements (1) that the United States is not now fully enforcing its treaty right; (2) that certain merchandise for which there is a popular demand may not be imported; (3) that no proposals were made with respect to American investments; (4) that Americans have been subject to discrimination in the administration of the import controls."

State Department, 1950—Report to Senate Appropriations Committee, June 5, 1950: "The Department has made and is continuing to make every effort to improve the situation. As a result of recent United States representations made in Paris, it is understood that steps are being taken to create a more favorable atmosphere."

(The following was submitted for the record by the Department of State:)

MATERIAL SUBMITTED BY THE STATE DEPARTMENT ON THE MOROCCAN TRADE CONTROLS PROBLEM

1. Copy of a Background Memorandum issued by the Department of State on November 28, 1950.

2. Copy of a letter from the American Chamber of Commerce of Morocco to the American Consulate General, Casablanca, Morocco, dated July 12, 1950.

3. Copy of a letter from the American Chamber of Commerce of Morocco to the President, dated October 3, 1950.

4. Excerpt from the 1950 Annual Report of the American Chamber of Commerce of Morocco.

BACKGROUND MEMORANDUM

Morocco is divided into three zones, all of which are under sovereignty of the Sultan: (1) the International Zone of Tangier which is governed by an international administration in which the United States participates; (2) the Spanish Protectorate; and (3) the French Protectorate.

The French Protectorate, to which the United States has given recognition, was established under a treaty of 1912. United States treaty rights in French Morocco are based on a treaty of 1836 between Morocco and the United States, the Madrid Convention of 1880, and the General Act of Algiers of 1906. Under these international agreements, the United States claims certain treaty rights in Morocco including the right of extraterritorial jurisdiction, most-favored-nation treatment for United States commerce and "economic liberty without any inequality." The right to freedom in matters of commerce is subject to an exception as regards the importation of a few specified products. Morocco is the only country in the world where the United States still exercises extraterritorial jurisdiction and maintains its own consular courts. Moreover, the United States is the only country that continues to exercise such rights in French Morocco.

Because of our treaty rights, and based on custom and usage, it has been customary for the French Protectorate Government of Morocco to obtain this Government's assent before considering local laws or decrees as being applicable to American ressortissants (American citizens and persons entitled to the protection of the United States Government).

In 1939, the French Protectorate Government, in line with similar measures taken in France at the outbreak of war, instituted through various decrees a system of exchange and import controls in French Morocco. These laws had the effect of subjecting foreign exchange transactions to the control of the Protectorate Government and of requiring on import license for all imports save those from France and Algeria. At that time, this Government reserved its position with respect to those controls and withheld its assent to their application to American ressortissants. In 1944, however, we assented to the application of exchange

controls to American ressortissants. This did not cover import controls. The withholding of our assent to import controls permitted Americans who established themselves in the import and export business in Morocco following the end of World War II to import more or less freely from the United States provided they did not ask the French Protectorate for an official allocation of exchange to pay for such imports. During the period from March through December 1948, uncontrolled imports of most commodities were permitted for persons of all nationalities. The French alleged that the dollars to finance these imports were being obtained illegally in Tangier and on the black market and that these transactions exerted pressure on the value of the franc by causing dollars to move out of the hands of the French exchange control system and into Tangier and the black market.

The French Protectorate Government, therefore, promulgated a decree on December 30, 1948, which had the effect of limiting imports without an official allocation of exchange to a list of essential items (they now total 20) and subjected imports of these items to the requirement of an import license. The import controls in question apply to persons of all nationalities in Morocco and to imports from all monetary zones with the exception of imports from the franc area. French Protectorate authorities began immediately to apply this decree to American ressortissants without the assent of this Government and detained in the customs merchandise consigned to American importers.

However, it should be pointed out that these controls were put into effect in conformance with France's commitment under the European Recovery Program. The Government of France, specifically acting on behalf of the French zone of Morocco and other areas in the franc zone for which it has assumed international responsibility, agreed in signing its bilateral agreement with the United States pursuant to the Economic Cooperation Act, as required by Congress in subsection 115 (b) (2) to take:

"Financial and monetary measures necessary to stabilize its currency, establish or maintain a valid rate of exchange, to balance its governmental budget as soon as practicable and generally restore or maintain confidence in its monetary system."

Accordingly, this Government recognized the temporary necessity for these import and exchange controls while at the same time recognizing that American businessmen in Morocco had legitimate grievances against French Protectorate officials. These included certain discriminatory practices in the administration of import controls, the arbitrary valuation of imports for customs purposes, the detention of merchandise in the customs and the collection of certain consumption taxes to which this Government had not given its assent.

The problem was, therefore, discussed with French officials early in 1949, and on the basis of proposals which partially met our requests (including the release of merchandise then held in the customs), temporary assent was given to the decree of December 30, 1948, on June 10, 1949, for a period of 3 months, subject to further negotiations. Temporary assent was successively extended to December 31, 1949, during which time negotiations continued both in Morocco and with the highest French officials in Paris. On December 31, 1949, this Government gave its assent to the application of import controls to American ressortissants for an indefinite period on the basis of agreements which had been reached on that date regarding the application of the controls to Americans.

The United States Government's note of December 31, 1949, to the French Resident General giving this assent stated that the controls were considered necessary because of exceptional economic conditions and that the assent could be withdrawn on 30 days' notice. In addition, such assent was given with the statement that United States treaty rights, including the jurisdiction of our consular courts, were fully reserved.

Throughout the negotiations which led to the giving of this assent, it was the consistent endeavor of the Department of State to obtain the best possible arrangements for American importers in Morocco and to protect American interests. The agreements reached with the French include the following provisions which were designed for the benefit of American importers:

1. The addition of 11 items to the list of goods which may be imported more or less freely when no official allocation of foreign exchange is requested of the Protectorate Government. This brings to 20 the number of items which may be imported by Americans without an official allocation of exchange. (A list of these items is enclosed for your information.)

2. The establishment of a bidding procedure for all products susceptible of such a system and for which the Protectorate Government grants official allocations of foreign exchange. This provision is designed to permit Americans to participate in the controlled imports program of French Morocco on a competitive basis.

3. The establishment of specific quotas for importers not previously in business on certain other goods included in the official imports program.

4. The use of a uniform basis of valuation of imported goods for customs purposes, and, under certain conditions, the issuance of import licenses for certain categories of maintenance goods, not for resale.

5. Agreement was also reached on the establishment of a joint consultative mechanism to settle complaints made by Americans regarding the administration of the import controls and the operation of the December 31 agreement. This Government is represented on this group by the American consul at Rabat who is assisted by two of our vice consuls, one from Rabat and one from Casablanca, who act as technical advisers to the consul. The French Protectorate Government is represented by the diplomatic counselor and three other French Protectorate officials who act as his technical advisers. The group meets on an ad hoc basis, and at the request of our consul at Rabat, on an average of about once every 2 weeks for the purpose of discussing and settling complaints brought to the attention of our officials by American businessmen.

The consultative group has been effective in protecting Americans in Morocco from discriminatory practices and in settling complaints brought to its attention by American importers. Further, in June of this year, this Government sent a group, consisting of two representatives from the State Department and a representative each from the Department of Commerce and the Economic Cooperation Administration, to Morocco for the purpose of investigating the situation of American businessmen in the French Protectorate. This group met with our officials in Casablanca, Rabat, and Tangier and also met with representative American businessmen in Casablanca. This group found that many of the Americans favored working within the present agreement with the French on import controls but desired a further expansion of the free list; and that representations made to Congress by certain individuals were somewhat exaggerated. In this connection, the following excerpt from a letter dated July 12, 1950, from the American Chamber of Commerce in Morocco to the American Consulate General, Casablanca, explaining the views of that organization on this subject is quoted:

"During recent chamber meeting the entire membership was unanimous that some modification of the present import restrictions is both desirable and necessary. Whereas some members expressed a desire for a complete liberty of imports, the majority, convinced that a total liberty of imports is not feasible at present, they seem to agree that the inclusion on the list of additional goods and wares represented by them would be acceptable until such time that exchange conditions would permit free and unhampered trade."

Furthermore, some of the Americans in Morocco, who have been in business there since before the war, have made it clear that they have been able to carry on their activities successfully and are not entirely in sympathy with the views expressed by those advocating legislative remedies in Congress.

ITEMS ON FRENCH MOROCCAN "FREE" IMPORT LIST

The following items were included in the original list of goods to be imported without an allocation of official foreign exchange, published in January 1949:

- Milk, sugared or unsugared, concentrated or powdered.
- Sugar and molasses
- Coffee, green or roasted
- Green tea
- Capital equipment and spare parts
- Cement
- Ferrous and nonferrous metals
- Heavy-duty tires
- Lubricants

The following items were added to the list on December 31, 1949, as a result of our negotiations with the French:

- Raw jute fiber
- Raw cotton fiber
- Manufactured tobacco
- Certain pharmaceutical products: antibiotic, radio-active and antimalarial products in quantities authorized by the central pharmaceutical service in accordance with the need for each product
- Raw materials for soft drinks

Radio sets, including spare parts and tubes
 Passenger car tires of special sizes
 Station wagons, not to exceed in value \$2,250 factory list price
 Jeeps (all classes) and similar four-wheel drive vehicles
 Sewing machines (all kinds) including needles and spare parts
 Steel tubes and joints

JULY 12, 1950.

AMERICAN CONSULATE GENERAL,
Place de la Fraternité, Casablanca.

SIRS: In accordance with our discussions on Tuesday, June 28, and Sunday, July 3, on the extension of the list of articles provided by the edict of December 28, 1948, and subsequent provisions, there is enclosed a list of articles of American manufacture represented by members of the chamber, which the membership is desirous of having added to the list of free imports. There are hundreds of other American-manufactured goods represented by our members, some of which are presently on the free list, while others are totally excluded. The exclusion of the bulk of articles handled by our members causes irreparable business losses.

During recent chamber meetings the entire membership was unanimous that some modification of the present import restrictions is both desirable and necessary. Whereas some members expressed a desire for a complete liberty of imports, the majority, convinced that a total liberty of imports is not feasible at present, they seem to agree that the inclusion on the list of additional goods and wares represented by them would be acceptable until such time that exchange conditions would permit free and unhampered trade.

It will be noticed on the attached list that such articles as automobiles, household refrigerators, nylon stockings, whisky, and other items do not fall under the category of essential goods. The word essential can be interpreted in several ways, and consequently it is not our purpose here to discuss. However, such goods as whisky and American nylons whose importation into French Morocco is presently forbidden, enter in contraband and find their way behind the counters of stores in Casablanca, where they are sold at 30 to 40 percent higher than the current retail price prevailing in countries where no import controls exist. Therefore there appears no reason why such articles should not be imported by our membership.

The edict of December 1948 was accepted by the State Department in order to bring about an improvement in the French economy and stabilize the franc. From all indications France has recovered considerably in the past few years. If this apparent recovery is true, there is less need at present for a restriction of imports for French Morocco than there was at the time when the restrictions were put into effect.

The Chamber of Commerce of Morocco was organized for the purpose of promoting trade between the United States and French Morocco by bringing in contact American and French importers with United States manufacturers and export firms. In order to achieve our purpose we will need to request or influence legislation in the protectorate government that will permit American-manufactured goods to flow in and compete on an equal basis with European manufactures. It is therefore suggested that in future conversations with the French Government our officials think in terms of American interests, both there and at home, rather than on altruistic lines. It is further suggested that in future conversations the Mixed Commission include two members of the American Chamber of Commerce, one American and one Frenchman, the latter an exclusive agent of American firms.

Respectfully yours,

GUS G. STRATTON, *President.*

American automobiles
 American textiles
 American whisky
 American nylon stockings
 American pens and pencils
 American insecticides
 American household refrigerators

American all type of tools and machinery
 American paints

 American paper articles
 American used clothing
 American electric stoves

Submitted by the American Chamber of Commerce of Morocco.

AMERICAN CHAMBER OF COMMERCE OF MOROCCO,
October 3, 1950.

The President,

The White House, Washington, D. C.

DEAR MR. PRESIDENT: Amendment No. 476 of the General Appropriation Act of 1951 reads: "Provided further, That after November 1, 1950, no funds herein appropriated shall be made available to any nation of which a dependent area falls in the opinion of the President to comply with any treaty to which the United States and such dependent area are parties."

A letter from this chamber dated May 12, 1950 appears on page A-1169 of the Congressional Record of May 21, 1950. It gives details of certain violations of United States treaties of which the Moroccan Government was guilty. Some of these still continue.

United States treaties with Morocco guarantee "economic liberty without inequality." They limit customs duties to 12 percent, prescribe impartial customs evaluations; restrict taxes; preclude monopolies with certain specified exceptions; and, above all, prohibit any restrictions on Moroccan import or export trade unless the restrictions apply identically to trade with all nations including France and Spain.

The import restrictions imposed by the edict of December 28, 1948, which was accepted by the Department of State, have affected Americans more than Frenchmen or any others.

French businessmen established in French Morocco before the war control the great part of exclusive representation of American marks, and are therefore for the large part able to obtain the lion's share of official dollars for their imports, while Americans, in business only since the last war, have an insignificant share in the dollars available to Morocco for imports from the United States. Again, Frenchmen are at the same time representatives of French manufactured goods, which they can import payable in francs. Americans do not have any exclusive representation of French goods, or any other non-American goods.

Since the application of the aforementioned edict, some American veteran businessmen in Morocco, who were earning a living importing with their own dollars, or with dollars obtained outside of Morocco payable locally, were obliged to relinquish their business and return home. Others remained here, but found themselves almost completely denuded of their business activities. Several of the latter who have made substantial investments locally gradually see their life savings dwindling until eventually they too will have to return home without funds.

One spectacular problem created is that of the personal automobiles. Americans have always been accustomed to drive comfortable American cars. Since the restrictions of American automobiles into French Morocco in 1948, several Americans on returning from home last year brought in with them their personal automobiles purchased with their own dollars while on vacation in the United States. When they returned here with their cars, they were obliged by the customs to sign an agreement to ship out their personal car within a certain period of time. Tired from their long voyage they had no alternative but to sign such an agreement, knowing fully well that it would force them to ship out their car and be left without transportation, which was essential to carry on their business. The deadline arrived and Americans were obliged to get their cars out, which they did, some of them even paying a fine of approximately \$25 for keeping their cars after the date of agreement. Some of these Americans are now forced to drive two-by-four French cars, whether they like it or not. It is really humiliating to see an American who used to drive a Buick or a Cadillac crawl along on a small non-American automobile.

In recent discussions between the appropriate French officials at Rabat, the capital, and members of the American Legion, the latter were told that they might be authorized to bring in a personal car, provided they sign an agreement not to dispose of it before 2 years. The spirit in such a provision is not flattering to us American citizens, especially when our business reputation locally shows an irreproachable conduct.

In view of the foregoing, it is respectfully pointed out that Morocco is failing to comply with her treaties with the United States as long as she shall not—

(1) End restrictions imposed on two-way trade with the United States which are not applied identically to trade with every other nation;

(2) Compute and collect customs in complete conformity with the procedures and rates established by treaty;

(3) Cease the requirement for 3 percent guaranty for the importation of tea;
 (4) Discontinue entry taxes and "cessions" in kind which are imposed in addition to customs;

(5) Conclude arrangements for prompt reimbursement of taxes and customs collected in excess of those allowed by treaty and for just compensation for "cessions" in kind;

(6) Cease all attempts to create or maintain monopolies in trade or transportation through cartels or otherwise, or to give a favored competitive position to any organization unless specifically permitted by treaty;

(7) Permit American citizens residing and doing business in French Morocco to import anything they desire for personal or household use.

Request the Department of State's immediate intervention to permit American citizens to import personal automobiles payable in dollars from their accounts in the United States. This question is very pressing, as several Americans are handicapped in their business for lack of personal transportation.

Our attitude is not anti-French, it is one of justice, cooperation, fairness, and the furtherance of American interests. This is the policy of the American Chamber of Commerce of Morocco, based on the policy of the United States Chamber of Commerce at Washington, D. C.

It is hoped that officials of your staff charged with making a determination of fact in connection with Moroccan treaty compliance will agree that each of the six violations listed above should be eliminated as a condition of further assistance to France.

Respectfully yours,

Gus G. STRATTON, *President.*

COMMERCIAL SITUATION AND RESULTS OBTAINED

(Excerpt from the 1950 Annual Report of the American Chamber of Commerce of Morocco)

A few words on the effort made by our chamber vis-à-vis the consulate general, the Department of State, the Congress of the United States at Washington, and the residency at Rabat.

At the moment of the organization of our chamber, commercial relations between the United States and the residency were not of the best which had existed between the two countries. At that moment the climate was unfavorable. It would be superfluous to repeat the events which went before and the successive struggles of Paris and Rabat versus Washington, the American consulate, and the Congress. I take this opportunity to read you a brochure transmitted to us by the Department of State via the consulate. (Read: Affair relative to the rights of the Ressortissants of the United States in Morocco.)

Here I would like to emphasize that the attitude of the American Chamber of Commerce in Morocco in its role as intermediary, by its policy of equality and justice has helped to put a stop to the bad press and unfavorable public announcements for the two countries. Thus, during the meetings which took place at Casablanca at which were present representatives of Congress, the Department of Commerce, and the ECA from Washington, we not only gave a report which came as close as possible to the truth but we also took into consideration the interests of American and French businessmen as well as the general interest of the United States and Morocco. One could therefore justly state that our attitude of comprehension and justice contributed to the improvement of a difficult and confused situation. In the files of the chamber, the members can read the correspondence with Washington on this subject.

As for the petition of the American Chamber of Commerce of Morocco to Rabat on the subject of the extension of the free list now in force or the allocation of supplementary exchange, and following the visit of Mr. Wecherle and myself to Mr. Baraduc and Mr. Lamy, one can see that the protectorate has made an appreciable effort. Exchange has been allocated for automobiles, spare parts, refrigerators, tires, and recently for textiles. I will not say that all our needs have been answered, but, by our efforts, we have obtained relative compensation. We intend this year to make further efforts to improve the possibilities of importation from the United States.

THE MUTUAL SECURITY PROGRAM

THURSDAY, JULY 19, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we are in session for further hearings on the Mutual Security Program. We are fortunate in having with us this morning Gen. J. Lawton Collins, Chief of Staff of the United States Army, who will testify.

General, will you proceed in your own way.

STATEMENT OF GEN. J. LAWTON COLLINS, CHIEF OF STAFF, UNITED STATES ARMY

General COLLINS. Mr. Chairman and gentlemen, let me say this is the first opportunity I have had to appear before this committee. I regard it as an honor and a privilege to be here with you this morning.

Two years ago this Nation took a historic and decisive step when it embarked on a program to strengthen the military defenses of the free world. It was a step with the basic purpose of deterring aggression, as well as a move to be prepared to defend ourselves and defeat an aggressor if he should force war upon us. It was a step taken at a time when the international climate was turbulent with intermittent crises.

At that time our memories were fresh with thoughts of how seven nations in Europe had been enslaved behind the iron curtain since the end of World War II. We know even then that communism was more than a slow malignant growth strangling the liberties of men. And the events of the past year have confirmed that knowledge, and have proven beyond all doubt that the evil we face is not only an insidious creed but is a militant communism backed by force. Already the Communist empire embraces one-third of the world's population and one-fourth of its land area. We know that communism respects power alone, and if the free world is to enjoy peace, the free world must be strong.

We and our partners have persevered and grown stronger through these two fateful years. The free world looked to us for leadership and the American people have responded magnificently. But there is a natural temptation after 2 years of struggle—economic, psychological, and even military—to question the objectives, to relax the pressure, and to turn to other problems; particularly since we have had some success in our mutual defense efforts. But now, more than

ever before, we must not be lulled into complacency and indecision by any wishful thinking. We must remain steadfast on the course we have begun, for the danger persists. We should drive resolutely along our planned route toward world peace and not be diverted by any detours of Communist policy.

While I endorse the military-aid aspects of the entire mutual security program, I appear before you today as a Department of Defense witness on that part of the program pertaining to North Atlantic Treaty countries in Western Europe.

The security of Western Europe is vital to the security of the United States, and the defense of it is in effect a defense of the United States—and all the rights and freedoms that our great Nation stands for. Our objective is to generate there the strength in being and the mobilization capacity which, together with political stability, will be sufficient to deter the Communists from attempting to seize Europe's industrial power which is second only to that of the United States.

We are concerned not only with the geographical aspects, but even more important, with the defense of our way of life—the dignity of the individual, his political freedom, his freedom of worship, his standard of living.

We have drawn from Western Europe our language, our literature, and our laws—the very roots of our cultural existence. The strengths and weaknesses of European peoples are reflected in the strengths and weaknesses of the American people. Even ways of thinking are based on our common heritage. Although we do not always see eye-to-eye with our friends the compelling truth is that even if there were few bonds of friendship and no cultural ties, the nations of Western Europe would still be necessary to the survival of the free world.

The importance of the productive capacity of Western Europe should not be underestimated. If Western Europe falls under Communist domination, there will be lost to the forces of freedom the industrial efforts and scientific skills of more than 200,000,000 people. The coal and steel of the Ruhr, the Saar, and the Lille areas would be among the resources available to our enemies, and the economic scales might be tipped against us.

Today, the free nations of the world have a material productive advantage over the Communist nations, but if Western Europe were lost this advantage would be greatly reduced and in some cases overcome. Our advantage would be reduced, generally, in coal, from 3 to 1 to $\frac{1}{2}$ to 1; in steel, from 5 to 1 to $1\frac{1}{2}$ to 1; in power, from 6 to 1 to $1\frac{1}{2}$ to 1. And if Western Europe were lost, the Middle East would not be far behind and the Communists would then control half of the world's oil reserves.

If Europe and the Middle East should fall under Communist domination, the Western Hemisphere would face almost certain war or economic strangulation. The political, economic, and ultimate military conflict that would ensue is dreadful to contemplate. It is by no means certain that we could survive such a conflict; that one-seventh of the world's population could withstand six-sevenths; that we could stand for long without our European friends and their resources. The stark fact is that we need a free Europe and Europe needs us. Only our combined strengths can make us secure.

To achieve security each nation must contribute its share, and must concentrate on what it does best. Since the turn of the century, the foundation of our strength has been our great industrial capacity. Ours is not the largest country nor the most populated, but in productive capacity we lead the world.

It is through our enormous productivity that we can make a most vital contribution to the mutual defense efforts of the NATO countries. To a large degree the progress already made in our collective security effort is due to the economic and military aid provided for the North Atlantic Treaty area during the past 2 years. In addition to its material benefits, our aid is serving as a tremendous psychological stimulant to the Europeans in getting them to help themselves.

The greatest stimulus, of course, came from the establishment of General Eisenhower's headquarters and the further development of the North Atlantic Treaty Organization. These organizational gains, no matter how inspirational, are meaningless, however, without the equipment to back them up. This equipment is an important part of that program, and is essential to the morale of our allies.

I think you should know some of the general criteria used in planning the fiscal year 1952 program of military aid. The concept which underlies the entire program is that the primary responsibility rests with each country for raising, maintaining, and equipping its own forces.

Our European partners are contributing substantial quantities of the items required for the initial equipping of their forces, such as major armament feasible to produce in Europe, small arms and ammunition, all personal equipment, food, housekeeping supplies, and the like. And they also maintain posts, camps, and training areas.

American aid does not mean giving the Europeans a "shopping list." The needs of every nation are meticulously studied and every item is carefully considered. An artillery piece, or a plane, or a ship, for example, is only provided after thorough screening, analysis, and review of the requirements both abroad and here in the United States. First, we make sure that it, or a comparable item, cannot be produced in time or otherwise obtained by the country which is to receive it. Then it is viewed from the standpoint of possible adverse effect on our Nation's resources. A careful estimate is made of the recipient country's ability to absorb and properly utilize it. And finally, it becomes a firm requirement only if it fits into the over-all collective strategic plan.

Of equal importance with our shipments of supplies and equipment is our training assistance. Dollar-wise, this aid is not very large, but it is extremely important since the effective and economical use of our equipment depends upon proper training.

In this connection, during my last trip to Germany, I visited some of the Army schools which we are operating. These schools are training technicians not only for our own units but for the European countries who are receiving military aid—and I can assure you that our investment in that school system in Europe is paying tremendous dividends. For example, since 1949 in these Army schools we have trained more than 2,000 selected foreign nationals. And the Navy and Air Force have trained almost 2,500 additional students.

This aid is beginning to produce results. General Eisenhower's headquarters is no longer a command without troops. The forces—land, sea and air—are assembling from both shores of the Atlantic. And they are training alongside each other in excellent harmony. Their ranks are filling and while still short of equipment, they are now beginning to receive a steady stream of the supplies they need.

Other great strides have also been made. The terms of military service in certain countries have been lengthened, and there are indications that in some cases further increases may be adopted. Military forces are being reorganized to produce more combat units to fit into General Eisenhower's command. Europe's pre-Korea rate of military expenditures has been greatly increased and further increases are probable.

With such signs of success to reward our efforts of the past 2 years, it is only natural that we should be inclined to question the need and the scope of further aid. But we must keep our goal clearly in mind.

This is the long-range program of the free world for survival. It should not be jeopardized by short-range successes.

The wisdom and courage we demonstrate by not relaxing now may mean the difference between war and peace in the future. Communist pressure continues relentlessly, every day, world-wide, above and underground. We must meet it with inexorable purpose. In war and in peace we have learned that when dealing with Communists, strength is the final arbiter.

The fiscal year 1952 Mutual Security Program is an essential step in establishing the security of the United States. I recommend it for your favorable consideration.

Chairman RICHARDS. Thank you, General. I am sure we all agree that was a forceful statement, I notice on the bottom of page 2 you make this statement:

The security of Western Europe is vital to the security of the United States, and the defense of it is in effect a defense of the United States.

As I see it, that is the premise on which this bill comes here. Would you care to say anything else for the record about that, and give us your viewpoint as to the relative importance of this program to our own national defense?

General COLLINS. Yes, Mr. Chairman; I would be very happy to comment on that. I do not believe that you can really separate the two programs, that is, the MDAP program and our own program for the development of our own military forces, because the two are interrelated.

I personally think that we have not sufficiently stressed, particularly with the public perhaps, that we are not in Europe merely to defend Europe. Very frankly, from my point of view, I would not be too greatly interested in that. We are there primarily to protect the good old U. S. A. That is something that we must all thoroughly understand. I, as a military man, feel that we ought to build our protection as far away from the United States as it is possible to do it. So, therefore, this program is an integral part of the plans for the defense of the United States, not merely for the defense of Europe.

I think that is the key to the whole business. I think the program must be gaged and evaluated in the light of that conviction on the part of military men.

Chairman RICHARDS. Dr. Eaton.

Mr. EATON. What would happen to us if the Russian powers took over Europe?

General COLLINS. Well, of course, as I indicated in my statement, first of all, Mr. Eaton, we would be faced with a loss of roughly 200 million of the most skilled people in the world, artisans and technicians of all types.

With them would go a tremendous part of the productive capacity of the Western World. Actually Russia would gain more productive capacity if they were to overrun Europe than they now have under their control.

When you link that productive capacity with the productive capacity they already have, and the increase in trained manpower with the normal procedures followed by the despots, whether Nazis or Communists, and they are all alike as far as I am concerned, you would have a restraint on trade that would be bound to affect our standard of living at home and our entire economic well-being.

Moreover, when you link to that the potential of being able to attack England, for example, from the continent, then our ability, if war did come, to hit back at the Communists would be materially affected.

They would get harbors on the open Atlantic from which to operate submarines against us. They would be able to hit potential bases in England from which our Air Force would have to operate.

So I think from both an economic and a military standpoint it would be a tremendous threat not only to the security of the United States but to its economic well-being.

Mr. EATON. So the foundation of our foreign policy at the present time is based upon a conviction that it is the purpose of Russia to conquer the world, ending up with us?

General COLLINS. Of course, I do not determine the foreign policy. I do think that probably that is the basis.

Mr. EATON. It is a very serious thing, is it not?

General COLLINS. Yes, sir.

Mr. EATON. About the most serious we have ever faced?

General COLLINS. I think so.

Mr. EATON. Well, our duty is to inform our people and organize our resources to meet this tremendous challenge?

General COLLINS. Yes, sir.

Mr. EATON. It is awfully tough stuff for hot weather.

General COLLINS. Yes, indeed.

Chairman RICHARDS. General, we have a rule for interrogation here in the committee which we call the 5-minute rule. We will proceed under that rule this morning. Mr. Mansfield.

Mr. MANSFIELD. I have no questions. I just want to express my appreciation for a very fine statement this morning.

Chairman RICHARDS. Mr. Chipperfield.

Mr. CHIPPERFIELD. When General Bradley was here he told us the number of divisions that Russia and her satellites had. We were told the ratio as compared with NATO forces.

General, what I would like to have you explain is about what strength we would have to have to defend Western Europe, and how we could do it on the ground? Of course, I realize we have air, and also air from the Navy. How many divisions would Russia have in

Western Europe, how many would we need, and how can we do it so we will not have a Dunkirk?

General COLLINS. I would like, if it is possible, Mr. Chairman, to answer this one off the record. This is an executive session, as I understand it.

Chairman RICHARDS. This will be off the record.

(Discussion off the record.)

General COLLINS. This program also has to be checked from an economic standpoint as well as from a military standpoint.

I think it is also the reason why we have to go carefully and say, "If you do not do this, we will not do anything."

I think that has to be weighed and analyzed carefully as to what is a reasonable portion of the national wealth of a given country that could be converted now into military strength without lowering the standard of living to a point where the people would be more subject to the infiltration of communism.

Mr. CARNAHAN. Would you say if it had not been for the Marshall plan that we would perhaps not be able to build up much military strength in Europe at the present time?

General COLLINS. That is my judgment. I am no economist. I have lived in Europe for 3 or 4 years. I know something of the economy of France and Germany.

I am firmly convinced that the Marshall plan had a great deal to do with putting Europe on a more even keel, and it makes it possible now for them to gradually convert some of that economic endeavor into military production.

Mr. CARNAHAN. If that is so, why place such strong emphasis on a shift from the idea of economic assistance over to military assistance at the present time?

General COLLINS. I think they have come to the point—again, I cannot give you a positive answer on that because I am no economist—where the general opinion is that the economic stability of Europe has reached a reasonably safe point.

So that now, particularly, counterpart funds should be used more and more for the production of military equipment.

Mr. CARNAHAN. Additional military equipment will be built from the additional economic strength?

General COLLINS. We think additional economic strength has been created.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. General, we are glad to have you with us again. I want to ask a little about the schools. Are they all in Europe?

General COLLINS. We have many foreign students that attend our schools here in the United States. We do not let them go up to our war colleges. But below the war-college grade we have foreigners in all of our technical and service schools in the Army, and I think equally in the Navy and the Air Force, here at home.

These schools that I spoke of having visited personally in Europe have a little more specialized character, technical primarily, to teach, for example, the Belgians to handle our equipment.

They have been very successful. One that I visited was in Germany.

Mrs. BOLTON. What language problems do you have when the men come in?

General COLLINS. We do have language problems; but, frankly, when you are teaching technical matters, your difficulties of language can be overcome to some extent by demonstration.

They try to pick men to send to our schools that have some knowledge of English. English is becoming more and more the universal language of Europe.

Mrs. BOLTON. What I was wondering is if you were making any effort to use the language techniques that were used on the Chinese in the air school at Miami?

General COLLINS. We think in the Army and the Air Force we have developed systems of teaching languages.

Mrs. BOLTON. I know about that particular method.

General COLLINS. We are using those techniques.

Mrs. BOLTON. Dr. Richards did go down from Harvard and did teach sergeants to teach what is called Basic English which has been one of my interests for 25 years. I was wondering if it is spreading out into more of our service schools.

General COLLINS. In these particular schools in Europe, as I say, they are primarily technical in character. I do not believe we have made any great effort to teach English.

Mrs. BOLTON. It would be necessary here; would it not?

General COLLINS. Yes. We give courses to the men who come here. Out at Fort Leavenworth we run a course for the foreign students in English. So, in the early part of the year that parallels their tactical instruction.

Mrs. BOLTON. Would you be good enough to furnish me with the information as to what language techniques we are using—whether it might be the technique set up in Miami. This particular method is the greatest timesaver in the world.

Dr. Richards is so set up at Harvard that he can prepare material for different nationals and see that teachers are made available.

General COLLINS. I will be very happy to.

Mrs. BOLTON. Have I some time left, Mr. Chairman?

Chairman RICHARDS. We are not on a time limit. We are depending on the good conscience of the members.

Mrs. BOLTON. I shall try to develop one.

I wanted to ask a question on the use of the factories of Europe. Is the Army going to broaden out the attitude expressed to us somewhat here in one of our hearings; viz, that they prefer having everything assembled here and sent over there finished instead of having the factories of Europe who can produce some of the parts make those parts, and then have the assembling over there? Are you contemplating that kind of thing in reality, or is it just a dream?

General COLLINS. Well, gradually, as this program goes on, we feel that the European countries should take over the manufacture and maintenance of the equipment that we furnish them initially.

We are also going along with the production of certain types of heavy equipment in Europe that they are capable of producing.

The French, for example, have built a certain number of light tanks and a new heavy tank which we are examining with them to decide whether or not we feel it would be a good tank for them to build. We do not have the final decision on that, but since some of the raw materials come from this country we do have a say in it, at least.

Mrs. BOLTON. Has anything happened on the increase of plane production in France, for instance, to put the British jet motor into a French made plane?

General COLLINS. I cannot give you any details on that, but I do know the plan is to use both the productive capacity of France and Italy also, if I am not mistaken. The Italians used to produce some excellent planes.

Mrs. BOLTON. In the early days?

General COLLINS. Right.

Mr. BOLTON. Thank you very much, Mr. Chairman.

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. Mr. Chairman, perhaps my questions would be best asked off the record. They are about Spain, and I think perhaps a more frank answer would be had if it were off the record entirely.

Chairman RICHARDS. All right.

(Discussion off the record.)

Mr. ZABLOCKI. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. General, when you give your opinion on such things as Spain today, you cannot consider it solely from the military standpoint; can you?

General COLLINS. No, sir.

Mr. SMITH. I mean, there are political problems involved there that we sometimes find in this committee outweigh the strictly military ones.

General COLLINS. That is right. They might well outweigh them.

Mr. SMITH. Can you tell me what the approximate cost is of maintaining an American soldier overseas per year?

General COLLINS. Yes, sir. It costs something over \$4,000 per man per year. That involves everything now, not merely his pay and food but all of the communications, and everything else supporting him. That is not specifically just for a soldier overseas, but for a soldier in the Army as a whole. That also includes the proportionate cost of research and development, procurement, supplies and everything.

Chairman RICHARDS. Could I interpose a question there?

Mr. SMITH. Yes.

Chairman RICHARDS. General, do you know what the difference in cost is—and there is bound to be some—of sustaining a soldier here and overseas?

General COLLINS. Yes. I could give that to your committee, if you wished it. The Senate Foreign Affairs Committee asked me when I was a witness before them if I could give them the difference in cost of maintaining four divisions and supporting troops in Europe over what it would cost to maintain them here at home. I could give you exactly that same information.

Chairman RICHARDS. All right, sir.

Mr. SMITH. If you will, please.

(The information requested is as follows:)

ESTIMATED COSTS INVOLVED IN MAINTAINING FOUR DIVISIONS AND SUPPORTING TROOPS

1. The estimated annual cost of maintaining four divisions, including one armored division and three infantry divisions, plus necessary supporting troops, in the United States is \$755.2 million.

2. The estimated annual cost of maintaining the same force in Europe is as follows:

	<i>Millions of dollars</i>
(a) Costs in initial year:	
Maintenance cost in United States.....	\$755.2
Movement of force to Europe.....	146.5
Additional costs in maintaining force overseas.....	111.3
Total.....	<u>1,013.0</u>
(b) Annual recurring costs thereafter:	
Maintenance cost in United States.....	755.2
Additional costs in maintaining forces overseas.....	111.3
Total.....	<u>866.5</u>

3. The costs of any additional construction for housing the four divisions and supporting troops in Europe have not been included since a substantial but indeterminate portion thereof may be furnished by European governments.

Mr. SMITH. General, is not a very important question so far as the success of this program is concerned the cooperation we get from these countries and the NATO countries?

General COLLINS. Certainly.

Mr. SMITH. It is not strictly a military program on our part alone; is it?

General COLLINS. No, sir. It is not.

Mr. SMITH. One of the things that disturbs me as we consider the impact of this military preparedness on the people there is the fact that they are going to suffer a reduction in their standard of living, which to me is already pretty low.

I am wondering how we can possibly create a favorable attitude on the part of those people to get behind the program so that it will eventually achieve the objective we seek.

General COLLINS. I think I tried to answer that partially a moment ago. I think that that is why this program has to be linked for some time to come with some sort of economic assistance. In other words, you cannot do it solely in the military field alone. The two things must be combined.

I do think, however, that the well-being of Europe has certainly come up since the days of the war.

Mr. SMITH. But we have some testimony here, General to the effect that, notwithstanding the billions we have poured in under the Marshall plan, the standard of living has risen very, very little: in fact, only a few dollars per capita. Now we are going to taper off this ECA program and go into the military program, and it looks to me as though we have a terrific problem facing us on that score, because obviously the people who have engaged in this increased production are not getting a part of it.

General COLLINS. Actually, of course, that is beyond my field as a military man, but I realize the fact that the problem is there. There is no doubt about that.

Mr. SMITH. Thank you. That is all I have, Mr. Chairman.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. This will be off the record, Mr. Chairman.

Chairman RICHARDS. All right, Mr. Ribicoff.

(Discussion off the record.)

Mr. RIBICOFF. I certainly want to compliment you on your statement and your realization that we need the rest of the world as much as the rest of the world needs us.

General COLLINS. Thank you.

Mr. RIBICOFF. I think your problems in this country psychologically would be much easier if that point were hammered home more and more by all of us who have the responsibility for forming public thinking.

General COLLINS. I thoroughly agree with you.

Chairman RICHARDS. The Chair would like to state that I will let the members know when they go into the well of the House. How many have already answered the call? Then we must go down now.

General, we have to go down to answer to our names. However, there will be some members who will continue questioning.

Mr. VORYS. Off the record.

(Discussion off the record.)

General COLLINS. I would say in military planning we do not have just one plan. It really takes three general plans. That is, something you should be prepared to do next week if something happens. That is an emergency plan. Then what would you do within the next few years? We generally speak of those as midterm plans. Then we have longer-range plans. They are not developed to the same extent. There is no necessity of working up the details of a long-range plan.

It is essential that we have details for what we do next week, in an emergency plan. It is also essential that we go into quite some detail as to what we would do for our so-called midterm plans. But in all military planning you have to look well ahead, and there must be an integration between your emergency planning, phasing it into a midterm plan, and your midterm plan should be in consonance with what your long-range plan is.

Mr. VORYS. Thank you very much.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. Are there any evidences the Russians are increasing their military strength in the west since we have started this program?

General COLLINS. I would like to answer that off the record, if I may.

(Discussion off the record.)

Mr. MERROW. You spoke about the Germans being the best fighters, whether we liked it or not. Does it follow that before we can hope to remove our troops from Western Europe, it will be necessary somehow to integrate Western Germany militarily in the defense of Western Europe?

General COLLINS. That is my personal belief.

Mr. MERROW. If that were done, then the time might come when we could get away?

General COLLINS. Possibly so.

Mr. MERROW. Thank you.

Mrs. KELLY (presiding). Mr. Battle.

Mr. BATTLE. No questions.

Mrs. KELLY (presiding). Mr. Judd.

Mr. JUDD. General Collins, on your first page you say that the Communists—

* * * have proven beyond all doubt that the evil we face is not only an insidious creed but is a militant communism backed by force.

Has there ever been any doubt of that?

General COLLINS. I think there has been some doubt on the part of some of our people. There has never been any doubt about it from a military point of view, certainly. But I do think this operation in Korea clearly demonstrated the fact that it is a militant force, backed by military force.

Mr. JUDD. Have they ever taken any country by infiltration, beginning with Russia? Have they ever taken any country except by force or threat of force?

General COLLINS. Certainly not without the threat of force.

Mr. JUDD. I do not know of any they have taken over except by force, including Czechoslovakia. Every 2 men out of 50 in the factories had rifles or other small arms, and 2 men with arms can always take over 48 without arms.

General COLLINS. But that was not generally known, I believe.

Mr. JUDD. It was not?

General COLLINS. I am speaking now of what is generally known to the American public. I do not believe they did know that.

Mr. JUDD. Last night a member raised a question regarding our moving in 5 years from the peak of security to perhaps our all-time low. Do you not feel we should go ahead and educate our people, including people in the Government, to the fact that this is an armed threat? How could anybody fail to know that after reading Mao Tse-tung's books, in which he said communism could not win China without the use of armed force? He has said it a thousand times, and yet some people thought it was just an agrarian reform depending on its ideas to win for it. People did not come to that opinion spontaneously. They were led into thinking that by people who knew what they were doing. It was an attempt to lull people to sleep while the Commies built up their strength. But there was no excuse for governments to be fooled.

I am sorry that your statement seems to me to perpetuate the gigantic misconception or error that has been responsible for a lot of our troubles, and that is that Europe's industrial capacity by itself is sufficient to save her. What is it worth without raw materials, and Europe has not got them in adequate quantity. Why do we not say that every time we talk about the question?

General COLLINS. I think it would probably be well if we said it, Dr. Judd. I will plead guilty to not having included it in my statement. It was not done deliberately.

Mr. JUDD. I know, but it is a habit of mind that people have that needs to be changed. You mentioned only productive capacity, but productive capacity is only one of five factors of power, the others being morale, territory, resources, and manpower. The Communists are getting the territory, resources, and the manpower, and then what is the productive capacity worth? They want to take that over intact, not destroy it, and the way to do it is to deprive our side of raw materials, and so forth.

General COLLINS. But you cannot discount the fact that Europe does have great raw materials.

Mr. JUDD. Yes; but it does not have enough.

General COLLINS. No; but nevertheless Germany fought the last war with practically no outside material resources, and they fought it for 5 years.

Mr. JUDD. Certainly the presently underdeveloped areas cannot make it without Europe, but neither can Europe make it without them. Why do we not say that every time we talk about it? If we are strong only in Europe, they are not going to strike there, but will strike in Asia or the Middle East where we are not strong. If we build up Asia they will not strike there.

In line with what the gentleman from Connecticut said, do we not more and more have to educate our people to the hard fact that it is not just Europe alone? We are emotionally attached there, but there is more than that involved. It is industrial capacity plus raw materials, and they are not in one place.

General COLLINS. Right.

Mr. JUDD. I hope that even more vigorously you and your associates will stir people up on that point.

Thank you very much. It is nice to have you here and profit from your excellent statement.

General COLLINS. Thank you, sir.

Mrs. KELLY (presiding). Mr. Burleson.

Mr. BURLESON. My respects, General Collins.

I have often wondered, General, in your position and that of the military what it is like to play a game when you know your opponents have your signals and also the ball. I think that is exactly our situation today.

Mr. JUDD. And some of the players on your team are theirs.

Mr. BURLESON. Well, that could be true too, but that is another question.

General, it seems to me that is pretty much the case. You are facing that problem, but aside from the fact that it is our system that we are open with everything we do, do you not find it is a matter of concern under those circumstances?

General COLLINS. Yes, we are, but I remember when I was an instructor at the Army War College for many years we used to have a lecturer from Princeton University come down each year to talk. I do not recall his name now, but he made this point, and I felt like cheering each time he made the statement. He said that a democracy is the poorest type of government with which to prepare for war, but the democracy will lick the autocracy every time.

I believe that is true. In other words, with the democracy you have got to take these ills and ailments. The military man must take those. In other words, many of our plans and many of our capacities have to be spread on the printed page and, therefore, the potential enemy gets that information free of charge.

However, on the other hand, you must inform our people, and as I said earlier here, I think that has been one of our difficulties—that this effort in Europe is not merely being made for Europe, but is being made in the defense of the United States.

In order to convince them of that you have to spread a considerable bit in the public print. We military people, I think, have just got to accept that. We try to hold it to the minimum. We ask you gentlemen to do it, too. This morning, for example, I spoke quite frankly off the record, and I hope that will remain off the record. I am confident it will.

Mr. FULTON. This committee has an excellent record on that.

General COLLINS. That is what I have been told, and that is why I spoke with such frankness.

Mr. BURLESON. Some of the other committees of Congress have seemingly not been so good on that?

General COLLINS. I would not like to say anything on that.

Mr. BURLESON. The philosophy is fine. I certainly subscribe to it. However, if I were engaged in a rock-throwing fight, I would rather have the rocks and let the other fellow have the philosophy.

General COLLINS. Right.

Mr. BURLESON. An example of the disclosure of vital information appeared in the papers this morning. Here is a chart showing the arrangement of airfields, and naval bases, which Admiral Sherman has purportedly discussed with the Spanish Government. Certainly I do not mean to leave the impression that Admiral Sherman gave someone a blueprint of what he had hoped to do or what he had done. I am sure it is someone's speculation, but it is things of this sort I am talking about, and such things as the recent publicity regarding the B-36's, what our capacities are, and what our plans are likely to be. It distresses me. It just makes me sick when I see anything like that.

I do not know what can be done about it, but I just wondered if you were not rather distressed about it yourself.

General COLLINS. Well, at times we are.

Mr. BURLESON. Thank you very much.

Mrs. KELLY. Thank you, Mr. Burleson.

Mr. FULTON.

Mr. FULTON. The problem is simply one of degree. The trouble arises when the other side does not disclose and you must disclose more. Therefore, the problem is not for us to close up more, but to force the others to disclose more, because if everybody is operating in the same system, you would not have too much complaint.

General COLLINS. The difference is, in the police state, where the people do not decide policies and it is decided by a handful of men, then they do not have to explain to their people. But that is frankly one of the reasons why I have supported our efforts in the psychological field—the Voice of America, and such things as that. There is no doubt but that we must wage psychological warfare against communism, and we ought to reinforce our efforts in every way we possibly can.

Mr. FULTON. That is my point. Instead of just having the feeling that we are at a disadvantage, we should take an affirmative policy with affirmative steps that does the explaining when others are not.

General COLLINS. Right.

Mr. FULTON. So instead of cutting down the Voice of America funds to 10 percent we ought to be building it up further and ought to be educating the people as to what government means, even behind the iron curtain.

General COLLINS. Right, sir.

Mr. FULTON. I would like to point out to Mr. Ribicoff that the Finnish-Russian War ended with a verdict for Russia. So that is one exception to his democracy always winning wars in the last few hundred years.

Mr. VORYS. And Germany beat France in 1871.

Mr. FULTON. That is true.

The next thing I would like to take up is this: You military people have the responsibility in the current cease-fire negotiations. When you are dealing with a person you must know the basis upon which he deals, and he must then come to you with some degree of fairness in order for you to feel that you have confidence in dealing with him.

Now, there are certain rules of war that should be currently lived up to. One of them is the treatment of prisoners and the identification of the missing and transfer of the severely wounded and items of that kind.

When Secretary Acheson was before this committee he specifically promised me, in answer to my question, that the United States would have no cease fire unless the enemies lived up to the Geneva Convention and international rules of warfare on prisoners. Now, as far as I know neither the Chinese nor the North Koreans have lived up to this standard.

I want to call your attention to the fact, as the senior officer in charge, that it has been specifically promised to this committee by the head policy person on behalf of the President that that would be done. I do not see any reason why the whole negotiation has to go through the hoop at once. Why cannot the negotiations come up on one subject? You can then agree on that subject and you perform, for example, on the prisoners.

There is nothing that would assure this country more than to have you people come up with an agreement on the transfer of prisoners, even though we cannot agree on some long-range things at this point.

I just wanted to submit to you as a new point of view that you could have partial agreements which you satisfactorily complete, thus reassuring the other side that each of you will live up to any agreements on major things, when you can agree on minor things.

Now, going to the matter of the coordination of arms—and this is with reference to Europe—when will you get a correlation program on arms? I think many people have estimated it will take 20 years to come up with a real program. For example, there are 12 armies and they have 33 types of machine guns, in the 12 armies, and you want three standard types. On heavy artillery these armies have 90 types of heavy artillery. On light artillery they have 60 types. You want to come down to three standard types on the light artillery, and five standard types on the heavy artillery.

When you have such a tremendous problem of converting to get standardization of arms, why do we not adopt a new policy and say this: Let us train these armies on the best new equipment that we and our allies have. Let us try to get out of convincing the British to adopt our screw threads and spending 2 years or 3 years doing it. Let us demonstrate by training that our United States arms are satisfactory and good, and make quick decisions on standardization. Then let us say to these other countries that have colonial empires, like France and England, and even Italy. "Use those unstandardized arms on the outer reaches and use them up, and gradually taper them off." Why do we not do that at this time, instead of trying to get a complete arms correlation program over-all, where you have such a tremendous amount of detail and agreement to arrive at in order to get it correlated even within a certain set area like Europe?

My suggestion then is, why not treat the problem both as a geographical and time factor, moving the obsolescent arms out geographically, and cutting them off by time gradually? It is just like a program of using the old muskets in the outside territories where top weapons are not so vitally needed.

My next suggestion would be, why not bring sizable groups of the young men of our allies to this country for training as well as just training them in Germany with our arms? Let our partners see what we are doing; let them pick up some of this democracy and the things we are speaking about. Let them have an integrated training militarily along with the training in our type of democracy, so that they would feel they are fighting for real people and not for a plutocracy. Help train them in this feeling of partnership rather than their having just the feeling that we are a tremendously rich nation while they are working, for example, in the French Army at \$1.50 a month in order to protect us.

I want to compliment you on the statement that you made and assure you of the confidence we have in you and in the Army, and that is an awful lot for a Navy man to say.

General COLLINS. Thank you very much, sir.

Mrs. KELLY. Mr. Roosevelt.

Mr. ROOSEVELT. I am glad to see you here and join my other colleagues in complimenting you on your statement.

Now, this ought to be off the record.

(Discussion off the record.)

Mr. ROOSEVELT. I have another question on the record.

Is there a period when an offense by the Russians in any given 12-month period is more potential than otherwise?

For example, I remember the Hitler attack on Poland was somewhat of a surprise because we had expected if it was going to come it would be a month or 6 weeks earlier. On the other hand, Germany waited until the following spring before they broke up the cold war by invading the low countries and France.

Is there a real danger period as far as weather is concerned on this western offensive?

General COLLINS. I do not believe that you can say there is a flat rule on that. Generally speaking, it is more advantageous to start operations in the spring or early summer because then, before winter sets in, you may be able to accomplish whatever your strategic objectives are, but that might vary in different parts of the world, depending on how deep you had to penetrate before you reached your objective.

Also, the question of surprise might well come in. There are times when you might sacrifice something on that order in order to gain surprise—strategic surprise particularly.

Mr. ROOSEVELT. With regard to Yugoslavia, is there any foundation to the belief that before Russia would move on the great northern plain of Europe they would like to eliminate the danger on their southern flank, which would be Yugoslavia, and to increase the necessity of our maintaining defensive forces in Italy in order to protect our southern flank. Therefore, as a prelude to any general western European attack, the Yugoslav situation would be cleaned up by the Russians first.

General COLLINS. I wonder if I could answer that off the record?

Mr. ROOSEVELT. Yes.

(Discussion off the record.)

Mr. ROOSEVELT. General, to get back to Spain, according to this morning's paper an agreement has been reached between Generalissimo Franco and Admiral Sherman in broad outlines.

Now, I was frankly very startled to find the United States sending a naval officer to conclude what amounts to an international agreement. So, my first question is, one, why was the normal diplomatic method deviated from? My second question is, since it was deviated from, what were the instructions that Admiral Sherman was given by the Joint Chiefs of Staff?

General COLLINS. Needless to say, I cannot possibly answer those questions, Mr. Roosevelt. They are beyond my field and I would have no authority to say what instructions were given to Admiral Sherman.

Mr. ROOSEVELT. Were his instructions from the President or from the Joint Chiefs of Staff?

General COLLINS. I am sorry, but I could not answer that.

Mr. FULTON. I believe I must object to the line of questioning on the ground of security.

Mr. ROOSEVELT. I accept the objection. Frankly, though, I think the committee must get to the bottom of this thing because it has me very worried.

The next question about Spain is, assuming its military importance—

General COLLINS. I would like to say something off the record, if I may.

Mr. ROOSEVELT. Yes.

(Discussion off the record.)

Mr. ROOSEVELT. How long would it take us to develop the naval and air bases that we may be making a deal for in case of an emergency, that is, to put them in operating condition?

General COLLINS. Again I would like to answer that one off the record, if I may.

Mr. ROOSEVELT. Yes.

(Discussion off the record.)

Mr. ROOSEVELT. I might just say that one of the reasons behind that question is that I question whether, in view of the tremendous political implications as far as the solidity of the NATO nations with us is concerned at this time, I question whether, on a military ground, we have to make this move at this time, and whether we could not have put it off until a time of real emergency, assuming that the Pyrenees are not going to be our defensive line.

Of course, the question then comes up as to whether, if an emergency comes, could we move in and make our agreement with Spain and get the operating bases quickly enough.

General COLLINS. I would like to answer that off the record.

(Discussion off the record.)

Mr. ROOSEVELT. General, I have one last question, which is really a procedural question.

As I understand it, you are primarily limiting yourself to the military aspects of Western Europe.

General COLLINS. Yes, sir.

Mr. ROOSEVELT. And Admiral Sherman, or his deputy, will discuss the Middle Eastern military situation?

General COLLINS. That is right.

Mr. ROOSEVELT. That is all of my questions, Mr. Chairman.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. General, in your statement you referred to or made the statement that air coverage, strategical and tactical, I took it, was necessary to successful operations.

General COLLINS. That is right, sir.

Mr. REECE. So far as I recall you were the first representative of the armed services who has referred in an important way to the air power and its importance over there. Now, are you satisfied with the emphasis and the support which is being given in the development of both strategic and tactical air power and the bases from which to operate it?

General COLLINS. I would like to answer that off the record, if I may, Mr. Reece.

Mr. REECE. All right.

(Discussion off the record.)

Mr. REECE. Is there any significance in the fact that the importance of air power over there has been played down from the very beginning, and I think it is fair to say it has been played down.

General COLLINS. I am not sure I would agree with you on that. I do not believe it has been played down.

Mr. REECE. It has seemed to me that it has. I think the psychology in the country has been developed somewhat along that line, and it has given the people who might be reasonably advised some concern whether the air strategy is brought in as an essential to the operation.

General COLLINS. I can assure you that it is. I am perfectly happy to say that on the record.

Mr. CHIPERFIELD. Will the gentleman yield for one question?

Mr. REECE. Yes.

Mr. CHIPERFIELD. Or an observation.

General, I think the American people are not aware of the emphasis that you people are putting on air. They are worried about their boys on the ground. It seems to me there ought to be some way of letting our people know what air plans you have without giving away any security.

General COLLINS. I can assure you that so far as the Army is concerned we are working in very close relationship with our Air Force in the development of plans for increasing the complement of fighter bombers, for example, in the Air Force, and the expanded programs of the Air Force, and in the correlation of the employment of the air in connection with ground operations.

Mr. CHIPERFIELD. And the jets and attack planes too?

General COLLINS. That is right.

Mr. REECE. This should be off the record, I believe.

(Discussion off the record.)

Mr. REECE. One more question which gets back to Spain.

Of course, as you say, it is recognized that Spain's army is poorly equipped—not only inadequately, but poorly. However, the army of but few of those countries, I take it, is well equipped. So most of the armies that get ready to go into a modern action over there require a great deal of equipment from us or through our assistance. Now, Spain, as I recall it, from what General Marshall or General Bradley said, has some 30 divisions. Spain has two things that are

essential, and probably found in a higher degree there than in any of the Western European countries. That is a will to fight and a hatred of communism.

So I take it that you would not have any apprehension that if Spain were equipped but that they would use the equipment to the best advantage within their limitations.

General COLLINS. Yes, sir; when properly trained in that equipment.

Mr. REECE. It would seem to me it becomes a rather important thing. There is just a little question, I take it, in everybody's mind, as to what under certain conditions might happen in certain countries because of their political instability. That is one thing we do not have to worry about down there. I am not referring to Franco's government being a dictatorship, but it is due to the psychology of the people.

It would seem to me it is important to bring Spain into the NATO orbit as closely as the political situation would permit.

That is all. Thank you.

Chairman RICHARDS. General, we have had some testimony around here, but not enough, on the question of the end items that come out of American production which are to be used in this NATO program. We have had some information, for instance, that the French have developed a good jeep and a good tank and a good bazooka. Some people say they are better than ours.

In making your requisitions for end items and coming to that decision on such things as I have mentioned, is the main thing you take into consideration the capacity of Europe to produce, or are you primarily looking for the best equipment? That is, is the main thing you take into consideration the capacity to produce for the NATO activities, or are you primarily looking for the best weapon now, and how do those items compare with items that have been produced in Europe?

Mr. REECE. Before he answers, would you permit me to add one more question which he might answer at the same time?

Chairman RICHARDS. Yes.

Mr. REECE. To what extent is it important to keep our productive capacity here, where we know it is reasonably immune from the enemy?

General COLLINS. This is a very complicated question and I am afraid that I may not be able to give you a wholly satisfactory answer.

Generally speaking, it was imperative that we get some heavy equipment in the hands of these European forces, and they did not have the jigs, dies, fixtures, and other things that would permit the immediate construction of this equipment. So, therefore, as a first-hand proposition, we had to furnish it from this country. There was just no substitute, because it takes a long time to develop the plant and the necessary skilled laborers, and all the other resources that go to make a modern tank, for example, or a modern aircraft. You cannot just do that with a wave of the hand.

So to start with it was essential we furnish the bulk of the end items from this country. As time goes on, we believe that Europe should be able to take over the production of spare parts and maintenance of equipment and things of that character that could keep them going.

Ultimately Europe could undoubtedly produce some of these heavy-equipment items in their own plants, such as the tanks and other very good equipment France is now building.

We do not believe that over all they are quite as good as ours. However, the French have produced very fine munitions in the past, and some of the things they have put into some of their new equipment are superior.

Individual elements perhaps are superior to some of ours, and we have a means of exchanging information of that character, so that we can take advantage of those improvements.

It is important to use our own productive capacity here to a considerable extent, and just as prior to the last war the lend-lease items we built for England, for example, enabled us to build the productive capacity here at home so when the war struck we could then divert this capacity to military uses, so also the continuation of production of equipment for Europe keeps our production lines going and therefore is a valuable contribution to our own ability to step up production in the event of war.

That is not a simple answer, I will admit.

Chairman RICHARDS. You see, we think there is naturally some pride in our own effort, but granting that the French tank would be a little better, still it might be preferable to adopt our tank for all of the forces in the interests of uniformity and quantity of production. Is that right?

General COLLINS. Yes; but I think there is a limit to which you can go in that. In other words, I think that part of this is a question of morale also. If the Frenchman does produce some of his own equipment, then his morale is going to go up. I think if he feels that this is not just something he is dependent on the United States for, and that he has something he is building of his own, then I think there is a certain psychological value to that. So we have not been adamant on the business of saying to the Frenchman, "No; you cannot build this tank."

Chairman RICHARDS. You take all those factors into consideration when you make a determination; do you not?

General COLLINS. Right, sir.

Chairman RICHARDS. You also have to take into consideration then the thinking atmosphere in a certain country, and even political matters, in making a decision like that; is that right?

General COLLINS. That is right.

Chairman RICHARDS. So you do not make political decisions?

General COLLINS. No, sir.

Chairman RICHARDS. We are talking about the capacity of Belgium, as an illustration, to make the best rifles, or a gun, or weapon of a certain type—the best in the world, some people say. Now, one of the most difficult problems about this whole thing is when you sit down and talk this thing over and say, "Now, Belgium, you can do this and you can produce these things, and save a lot of money for this whole set-up," and then Belgium turns around and says, "I will do this if France does so and so, because they are equipped to do that."

Now, somebody has to make a decision about that, and somebody has to put it across. As I understand it, so far that is the plug in the pipe right now in Europe in the production of end items.

General COLLINS. That is one of them, but the other, of course, is raw materials. As Dr. Judd pointed out a while ago, they do not have all of the raw materials that are essential for the production of certain items. Some of that material we have to produce, and the question is whether we will furnish them the raw materials and let them build those things, or whether we can save money by building them here at home if we have to furnish most of the raw materials that go into them.

However, there is an administrative machinery established to weigh these various factors. It is called the Defense Production Board, headed by an American.

It happens that I attended the Brussels Conference with Mr. Pace at the time when the final arrangements were made at Brussels for the establishment of General Eisenhower's headquarters. In our discussions there the Americans pointed out particularly the tremendous importance we place on this Defense Production Board. I can assure you that the head of that Board works in close cooperation with our military people. The various complicated factors are correlated with the military planning as effectively as possible.

Chairman RICHARDS. We will go into that a little more exhaustively when General Scott gets here.

General COLLINS. Right, sir.

Chairman RICHARDS. There is another question I want to ask. One of the military men testified a day or two ago that he did not see any real objection in having different types of rifles in this Army, provided they were of the same caliber. Can any rifle shoot a bullet of the same caliber?

General COLLINS. No, sir. That is not the case. Even with 30-caliber. All of our stuff is 30-caliber, but actually you have several different kinds of ammunition of 30-caliber. It is not the summum bonum to have just one caliber, because the cartridges are different lengths, and that sort of thing.

For example, our new rifle, on which we are going into production some day, has a smaller cartridge than the present standard American rifle. It will weigh less and consequently for a given space you can carry more rounds, or for a given amount of weight you can carry so many more rounds. If you want to lighten the load which the soldier has to carry—which I am personally interested in—he can carry the same number of rounds with less weight on his back.

That new ammunition is .30 caliber, and you cannot use it in our standard M-1 rifle, since it is a different length, and the cartridge is shaped slightly differently. Yet, it is as effective a round as the present one.

Then you might say, "Why don't we start making it now?" The fact of the matter is that we have not the tools, and jigs, and dies, and fixtures, and all that sort of thing, to make that rifle, and we have a great many in stock now, and the time is not quite appropriate to change over. It may be several years; but, once again, just like this business of formulating long-term plans strategically, we have always got to keep well ahead to get a better piece of equipment, and at the right time, when it is propitious and most economical, then we are ready to go ahead with this new equipment.

Chairman RICHARDS. Anybody can see in the interests of creating an effective military force it would be better to have a standard

rifle and a standard bullet. Now, here is the decision, as I see it, that the folks over there have to make.

You say we want so many rifles and we are going to standardize this thing, and that is one of the problems you have in making an official NATO army. All right. Somebody else says Belgium can furnish these rifles. Then Belgium says, "Gentlemen, we can furnish the rifles, but they will not handle that kind of cartridge."

The decision you have to make is whether or not in the interests of military efficiency you are going to sacrifice what Belgium can contribute to the common cause in order to get standardization.

General COLLINS. That is right.

Chairman RICHARDS. Now, that is a pretty tough decision to make.

General COLLINS. Yes, sir. Particularly as it may be better to sacrifice standardization in order to get the end product right now.

Chairman RICHARDS. Yes. There is one other question I wanted to ask.

The Washington Post this morning said that we had already arranged for 80 bomber and fighter bases to ring this whole area. Have we done that?

General COLLINS. I would want to answer that off the record.

Chairman RICHARDS. All right.

(Discussion off the record.)

Chairman RICHARDS. There is one other question. I never understood what you were talking about when you talked about "balanced collective forces." I understand the "balanced forces" part of it, but I think you are talking about integrated forces. Is there a real distinction there?

General COLLINS. I do not recall in what connotation this particular term was used. Integrated forces could be used in the same sense as balanced forces. In other words, in fighter-bombers there is a certain relationship between the number of fighters we have to have and the number of fighter-bomber groups we have. In other words, it might have been used in terms of integrating the French and Germans and Belgians, and so on.

Mr. VORYS. Will the gentleman yield?

Chairman RICHARDS. Yes.

Mr. VORYS. Was there not a period when the French were asking for integrated forces? For instance, they were asking for integrating small units of Germans into French divisions.

General COLLINS. Yes.

Mr. VORYS. With the idea, which I should think will be the ultimate goal for Europe, of having a European defense force rather than a collection of national defense forces.

Chairman RICHARDS. It could be used in the sense that you are talking about.

General COLLINS. I think the chances are it was used in that sense.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. I have some questions.

Chairman RICHARDS. Mrs. Kelly has not been called on. She was sitting up here presiding for a while.

Mrs. KELLY. Mr. Chairman, I prefer my questions to be off the record.

Chairman RICHARDS. All right. Off the record.

(Discussion off the record.)

Mrs. KELLY. That is all. Thank you.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. General Collins, in 1949 Gen. Omar N. Bradley testified before our committee on the Mutual Defense Assistance Act, and he said first that the United States will be charged with the strategic bombing; secondly, the United States Navy and the Western Europe naval powers will conduct essential naval operations, including keeping the sea lanes clear; "third, we recognize that the hard core of the ground power in being will come from Europe, aided by other nations as they can mobilize."

I want to show you the committee report which prints the public statement of the testimony of General Bradley.

General COLLINS. I think that is still correct, but that does not say the United States is not going to produce some of the ground power.

Mr. VORYS. I want to remind you that exactly the same representations were made as to possible ground forces in Europe, on and off the record, to this committee in 1949, that were made before the Senate committee.

Now, on February 19, 1951, in the Senate hearings on assignment of ground forces in the European area, Senator Green said to you as follows:

Senator GREEN. Up to the present time under the conditions as you see them now and believe you can reasonably forecast them, six divisions will do the trick?

General COLLINS. Under the present world conditions, yes, sir.

Senator GREEN. Thank you.

I want to ask you whether your answer would still be the same to that question?

General COLLINS. Yes. Essentially the same. Now, practically it does not mean if world conditions change you would be necessarily limited to six divisions. I do not recall the exact line of questioning that led up to that. That had to do, however, with the number of troops we would have stationed in Europe in peacetime.

Mr. VORYS. These hearings had to do with six divisions for Europe this year, and so forth.

General COLLINS. Yes.

Mr. VORYS. That is why I thought it was sufficient merely to quote Senator Green.

General COLLINS. However, if world conditions change they might not be. You asked me if it would still be the case now. I said essentially the same. Yes.

Mr. VORYS. But you see, General Bradley's statement to us clearly indicated that the hard core would come from Europe.

General COLLINS. Still the hard core would come from Europe. Six divisions is not going to be the hard core.

Mr. VORYS. He said, "aided by other nations as they can mobilize." Which, solely quoting his public statement, is a clear statement that reinforcements from outside of Europe would come after mobilization.

General COLLINS. I do not believe he intended that at all. I cannot speak for him, but I do not believe he intended that at all. He said the hard core—the bulk—has got to come from Europe.

Mr. JUDD. Will the gentleman yield at that point?

Mr. VORYS. I yield.

Mr. JUDD. That deals with a question that I was going to ask later. When General Marshall was before us I asked him why our target

of armed forces in being was roughly twice as big as the target of Western Europe. He said that was not so and the Western Europe target was about 5,000,000 as against 3,500,000 for ourselves. I did not want to discuss details at the public meeting, but then he wrote a letter and said that while that would have to be discussed in executive meetings, he had been wrong in his statement because he thought I was talking about total mobilizable strength, and my question referred to forces in being. It is hard, in view of that Mr. Vorys and what General Bradley have said, to sell to the American people why we have to have under arms and in uniform all the time almost twice as many men as Europe, when it has one and one-half as much manpower as we have.

I realize we have other world commitments, but so do England and France.

General COLLINS. Of course, when you add it it comes up. I think you will find, although I do not have it at my fingertips, that certainly we are not going to have double the number of men under arms that the people in the western world will have under arms by any manner of means.

Mr. JUDD. The NATO countries. That was his figure and his target for the end of next year.

General COLLINS. Dr. Judd, I think the thing we must clearly understand—and I would like to reiterate it—is I am not a bit interested in going over to France to defend France. I am talking about defending the United States, and if it takes 3½ million men under arms to defend the United States, and it does today, I say we ought to maintain 3½ million under arms, irrespective of what France does. We, of course, should encourage France, and the people of the western world, to increase their effort, and I am all for that, but that does not mean we still do not have to have a strong force.

Mr. JUDD. You are missing the point. I am not complaining about the 3.5 for us, but I am saying it is not fair to represent to the people that Europe is going to provide the bulk of the armed forces when we are providing about twice as many. That is not fair.

General COLLINS. No, sir. The question asked of General Bradley was concerning ground forces—ground forces. That is what it was. General Bradley gave a factual answer. The bulk of the ground forces for the defense of Europe right now are coming from Europe, and they must come from Europe and they will come from Europe. However, that does not mean we do not have to have a navy and an air force, and we do not have to have a pretty good-sized army for our world-wide interests, including Europe.

Mr. VORYS. Will the gentleman yield?

Mr. JUDD. Yes.

General COLLINS. General Bradley did not say anything about overall numbers. The specific question asked him had to do with ground forces in Europe.

Mr. BATTLE. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. BATTLE. I do not believe the figures you gave on the size of the forces for the NATO countries includes the numbers of troops that would be available in 3 days or a few weeks. The reserves—

Mr. JUDD. It does not include our Reserves either.

Mr. BATTLE. These Reserves, who are available immediately, are being put to use in a more profitable capacity in industry under the framework of present conditions. I believe an accurate interpretation of those figures would show they would have almost immediately available a much larger-sized force than you were talking about.

Mr. JUDD. I know, but my question does not include the Reserves, in either case. I am talking about forces in being. It does not include our or their reserves. General Marshall said on the record, "The total up to 1954 is 5,000,000 on their side. I am trying to find out what the total expectation is up to July 1952—around 3,000,000, or up to 60 percent." I said, "Are you speaking of all countries not under the Communists, or NATO countries?" Then he said, "NATO." Then he sends this letter to us in which he said:

In view of my testimony in answer to Mr. Judd's question in regard to the forces of Europe, I find Mr. Judd was speaking of forces in being, whereas I was referring to planned mobilizable as well as active forces.

I do not think that is a suitable comparison. What I am trying to get is mobilizable forces on our side, compared with theirs; and our forces in being, compared with theirs.

Mr. BATTLE. Your point, of course, is that an unfavorable impression is going out over the country unnecessarily.

Mr. JUDD. That is right. It is said that the Europeans are going to do the bulk of this, and we are merely putting our finger in the dike to hold until their strength can be built up. Now I think we have to do that and we have to hold the dike until they can hold it on their own. However, the fact is that when it comes to paying the bill we have twice as many men under arms as they, and a further fact is that the people do not understand why that is.

Now, the people are just as patriotic and just as intelligent as you are, or as I am, or think I am, and they will support it just as loyally as you and I if they understand it.

Chairman RICHARDS. Let me say this. We are hoping we will not have to request General Collins to come back this afternoon, but I did hope we could go ahead right now and complete our questioning. I think everybody should be given time to do so.

Mr. LANHAM. May I ask a question?

Chairman RICHARDS. Yes, Mr. Lanham.

Mr. LANHAM. In connection with what Dr. Judd just said and your answer, General, what evidence do you have of the will on the part of the people of Europe to defend themselves, both in the way of fighting and making the necessary sacrifice in the standard of living to get ready to fight?

General COLLINS. Well, I think there are a number of indications. First of all, they have greatly increased the strength they have had in the past 2 years. When you consider that they are sitting under the guns—

Mr. LANHAM. That is what I had in mind.

General COLLINS. That calls for considerable courage. I think the very fact that they have done that is a clear indication of their will to fight and their interest in maintaining their freedom.

The steps that have been taken politically in the elections in Italy and France indicate that they mean business and their willingness to combat the spread of communism. I think another indication is the fact that with their relatively low standard of living—and it is cer-

tainly much less than ours—they have gone to considerable great expense in their military expenditures.

Now, with respect to the armies themselves, I have not seen too much of the French Army, but I have had talks with General Handy in Germany—our senior commander there. I have also talked with General Eisenhower and others in my recent trip to Europe. They have all said in France, and Italy particularly, there has been a resurgence of spirit among the younger men.

General Montgomery had come back from Italy on a recent trip, and General Eisenhower himself had come back from Italy. If I could put this off the record for a moment, I would appreciate it.

(Discussion off the record.)

General COLLINS. I would say on the record that I think from what I have observed and reports I have from officers in whom I have confidence, who are working with these armies, that there is a definite resurgence of spirit within the younger men, in the armies of Western Europe, especially France and Italy.

Chairman RICHARDS. Mr. Fulton, I promised to recognize you and then Mrs. Bolton.

Mr. FULTON. I have a short question. I believe I yielded to Mr. Lanham.

Mrs. BOLTON. Go ahead.

Mr. FULTON. On the charts that have been set up showing the position of General Eisenhower in the military set-up under NATO, for example, each chart seems to be very complicated. In addition, the charts show General Eisenhower pretty far down the line in point of authority, and really below quite a parallel row of agencies.

My question on this point is that I believe the top man for Europe, that is, the Supreme Commander, should have a higher policy level on these charts, and his views should be fitted in much higher than has been shown so far probably by agreement among the countries.

I would like to know, without any partiality toward the Army or anybody in the service, would you agree with that, that he is a little low in the order of hierarchy; and, secondly, that the policy contribution that he might be able to give is put at too low a level?

General COLLINS. No, sir. I do not believe so. Our general system in the Western World of the military man being subservient to the civil authority is carried out in the organization of NATO. General Eisenhower is put on charts, at any rate, below the Council of Ministers and the Council of Deputies.

Mr. FULTON. Yes.

General COLLINS. I think that is a reasonable proposition because the political policy must precede your military policy. But I think actually General Eisenhower has a tremendous influence, and I think he could have, if it was essential for him to step in, a tremendous amount of additional effect.

I happened to be at Brussels at the conference at Brussels when General Eisenhower was unanimously nominated by the Western Powers to be our Supreme Commander. There was no holding back there on the question of turning over to him the control of the armed forces of NATO.

Mr. FULTON. Could I point out to you just shortly that in the first or top echelon there is listed the North Atlantic Council of the Foreign Ministers, Defense Ministers and other ministers. Then there is the

Council of Deputies below that, on which Mr. Spofford is the American representative. The below that in direct descent is the Military Committee, of which Gen. Omar Bradley is the head. Then below that is the standing group, on which Gen. Omar Bradley is representative for the United States, also the United Kingdom and France—three countries. That group is located in Washington.

Then even above Eisenhower is the Military Standardization Agency, located in London.

Also above Eisenhower, and on parallel standing with the Military Committee are the Defense Production Board, which Mr. Barr is head of, and the Planning Board for Ocean Shipping, as well as the Financial and Economic Board, and even the Military Representatives Committee in Washington.

Then on the much lower line—below the civilian and policy level even for the military—comes General Eisenhower on a level with the Supreme Commander of the Atlantic, and also the Canada-United States Regional Planning Group.

I believe that other commands are possibly in prospect, which would be the equivalent of General Eisenhower.

Now, coming back to my question, I believe that the requirements that are to be set in the gaging of what the countries can supply in the way of military resources and military end items and manpower is going to be largely determined by our man in the field, and that, in this instance, is Eisenhower.

In view of that set-up, do you not think that that is putting him pretty far down below what we in this country feel about him?

General COLLINS. I do not believe so. I really do not believe so, Mr. Fulton. I think these other commands, taking, for example, the North Atlantic area—General Eisenhower does not want to be bothered about that in the first place. When it impinges on Europe, where it overlaps that and the North Sea, he is very vitally concerned. Certainly, when Admiral Fechtler takes over, if he does, he and General Eisenhower will have to discuss certain military phases in that connection.

But in my judgment General Eisenhower has an appropriate place on this chart. For example, take the Defense Production Board. Once again General Eisenhower does not want to be concerned with such details. He has a terrific amount to do as it is, and it is appropriate, I think, to establish other agencies to have supervision over their appropriate fields.

Now, the weight of General Eisenhower's judgment and recommendations, which you cannot evaluate on a chart, I think will be a dominating influence, but I do not think you can always go just by a chart in saying whether a man is in the appropriate place or not.

I personally believe he is in an appropriate position. You have to have something like the standing group, and I think it is appropriate that it be here in Washington, to exercise over-all supervision over the planning. It is a pretty complicated affair, just as in the last war with the Combined Chiefs of Staff in Britain. They were really superior to General Eisenhower, who had a somewhat comparable position in Europe then. General Eisenhower never objected to that. He was the operating commander in the field, and his hands were not unduly tied.

Mr. FULTON. Are you men, such as the Joint Chiefs of Staff, in close touch with the Standing Group?

General COLLINS. Yes. You see, General Bradley, who is on the Standing Group, is also the Chairman of the Joint Chiefs of Staff.

Mr. FULTON. I realize that.

General COLLINS. So that we have intimate contact all the time with them. His deputy sits in with the Joint Chiefs of Staff frequently. He is called in as a consultant frequently.

Mr. FULTON. Thank you very much.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. This will be off the record.

Chairman RICHARDS. All right.

(Discussion off the record.)

Mrs. BOLTON. Thank you very much.

Mr. FULTON. Would it be possible to develop an exchange program between West Point and foreign military schools, such as St. Cyr, or Sandhurst?

General COLLINS. In the past we have had a certain number of cadets at West Point from foreign countries—not many from European countries, very frankly, because I think until this past war they had a sort of paternal outlook toward Americans. They thought that maybe we could not contribute very much toward their knowledge and skill in military matters. I do not think that is the case any longer. We do have officers of certain foreign armies, not at West Point, but at certain of our service schools, where it is more important, in my judgment, than at West Point. That is done quite frequently. We also send our officers to foreign schools on an exchange basis.

Mr. FULTON. And you are expanding those programs?

General COLLINS. Yes; we are.

Mr. FULTON. I am very interested in that.

General COLLINS. We are.

Mr. ROOSEVELT. General Collins, for the record, we are setting up a war college for the NATO nation officers in Europe; are we not?

General COLLINS. It has been proposed, and as far as we are concerned, we have approved the idea. It has not yet been established. General Gruenther is personally enthusiastic about it. He was very recently on duty with our War College, and he is an exceedingly able man—General Eisenhower's Chief of Staff. They are going ahead with the establishment of a NATO War College for the training of higher staff officers for the NATO countries.

Mr. ROOSEVELT. I brought that up with General Bradley because I was fearful that perhaps the time might come when we could turn over much of the military defense leadership to the European nationals, and that we might then find a situation existed similar to 1939 in the French Army, where the old Maginot Line boys excluded the tank boys, notably General De Gaulle, from any position of authority or responsibility, with the result that the French Army was not a modern fighting army. I was fearful that we might not be able to turn it over to them commensurate with their contribution simply because they had not come along fast enough in the techniques of modern warfare. General Bradley discussed this.

Mr. VOYTS. General, you told us about your views on the overseas organization of this mutual security plan. Would you give us your

opinion of the Washington organization where, as I understand it, the control man who, under Executive order, represents the whole Government, is Mr. Cabot in the State Department? I would like to get your comment, because we have had a number of very important individuals and groups recommend that that be changed and there be an entirely new mutual defense agency created, independently, with a head man of Cabinet status.

General COLLINS. I do not believe I am really qualified, Mr. Vorys, to give you any judgment that would be worth very much to you. I do know, speaking only on the military side of the thing—I can assure you that the Joint Chiefs of Staff themselves have taken a great deal of interest in this program.

The system on the military side of it, I think, is very excellent. In other words, in each of the countries involved we have a competent group of officers who go around and actually see what these forces are doing. They are coordinated by a very able man, General Kibler, in London, who is a very competent man. There is a staff set up over there. General Handy, our senior commander, the senior Navy commander, and the senior air commander, and our representatives, are the representatives of the Joint Chiefs of Staff in Europe on American matters of this type who review these programs. They make recommendations to us over here.

We also have subordinate groups in the Department of Defense, first of all the one in the Department of Defense headed by General Scott, but in each one of our departments we have an officer. We have a very competent man in the Army. I am more familiar with him than the others. He is a Reserve officer called back to active duty, and a thoroughly competent man—General Olmstead.

These programs are all thoroughly reviewed by these military representatives. Finally a program is recommended to the Joint Chiefs of Staff. Then we review it. We have our own Joint Logistical Planning Group, our own Joint Strategic Planning Groups, and a third group, if necessary, to check these programs against the mid-term defense plan. The Joint Chiefs of Staff personally take a considerable interest in this. We personally look into it.

So, by the time the program gets through it has had a very careful, and, I think, a very sound military review.

Now, the intricacies of how that is correlated with the political and economic factors I am frankly not sufficiently familiar with to give you a judgment on.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. We had started out, as you know, with a military aid program, which was a very colorless title. Then this committee put in the Mutual Defense Assistance Program title, meaning we were all getting together and helping each other. It indicates we are working on a mutual basis and not just something from our side alone, where we are just shipping military end items over to other countries.

Have you had any trouble propagandawise on the name—Mutual Defense Assistance Program—or has it been pretty satisfactory and almost gone unnoticed?

General COLLINS. I know of no trouble.

Mr. FULTON. Then we are coming up to something that is again a propaganda matter as to the name of the program. There is a proposed name here from somebody, and it is on some of these docu-

ments, although the committee has not yet adopted it, called the Mutual Security Program. That to me is colorless and flat and can as well be used for an old-age assistance program.

If we are talking about the defense of the free world and a program to implement it, would it go beyond your scope and what you are doing in the program, to call this the Free World Defense Program?

General COLLINS. No; I should not think it would.

Mr. FULTON. Because we are going to be, by this program, stepping up the defense of the free world.

General COLLINS. I have not given very much thought to it.

Chairman RICHARDS. General, you do not care much what they call this; do you?

General COLLINS. I personally do not, although I admit the psychological factors ought to be considered in it.

Mr. FULTON. That is what I am getting at—how it would affect your people in carrying out your job.

Mr. ROOSEVELT. Are Spain and Yugoslavia part of the free world?

Mr. VORYS. Democracies. That is what they call themselves.

Chairman RICHARDS. I think you could call this program, "All in the same boat, and the devil take the hindmost."

Mr. FULTON. I think the propaganda value of the name is a very serious point.

Mr. VORYS. The State Department had a label for it—Military Mutual Security Affairs Program—and that added up to MMSAP, and they did not like that "SAP" part, so they changed it.

Chairman RICHARDS. General, thank you very much. We appreciate your coming up here. We will adjourn until 2:30.

(Whereupon, at 1:05 p. m., the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

The committee met at 2:30 p. m., in the Foreign Affairs Committee room, the Capitol, Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please. This is an executive session. Mr. Crawford, will you check on everybody here?

Ladies and gentlemen, we have with us again today Mr. Paul Porter, Assistant Administrator, ECA, who is in charge of programs and who will go into the regional features of this ECA program.

STATEMENT OF PAUL PORTER, ASSISTANT ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION—Resumed

Mr. PORTER. Mr. Chairman, before I proceed with the statement of aid proposed for particular countries, may I just inform the committee that I am prepared now to submit as a result of our discussion yesterday certain tables to be incorporated in the record.

I think it might be well if I read the tables and give them to the clerk of the committee to be included in the record, if that is agreeable, Mr. Chairman.

First, I have a table showing the aid given to each of the European countries last year, and the aid proposed for this year. I will refer to those figures later in my testimony, but I will have all of this gathered in a simple form in one table to be included in the record.

Secondly, I have a table showing military expenditure in each of the European countries as a percentage of the gross national product of that country.

Chairman RICHARDS. Last year?

Mr. PORTER. For last year, and our estimate for this year.

Thirdly, I have a table showing the estimated level of consumption for this coming fiscal year in comparison with last year.

Fourth, I have a table showing the amount of food consumption in each country, and along with that the amount of meat consumed in each country of Europe receiving aid, and also the United States.

Fifth, I have a statement showing the proportion of taxes to the gross national product in each country. I will submit those to the clerk of the committee to be incorporated in the record.

Chairman RICHARDS. Without objection, the clerk will incorporate these statements at the proper place in the record.

(The material referred to is as follows:)

Gross national product, military expenditures and military expenditures as percent of gross national product, fiscal year 1950-51

(Amounts in million dollars)

Country	Gross national product	Military expenditures (including United States military expenditures abroad)	
		Amount	Percent of of gross national product
	(1)	(2)	(3)
Austria.....	2,120	26	1.2
Belgium-Luxemburg.....	6,675	216	3.2
Denmark.....	3,385	56	1.7
France.....	27,298	2,235	8.2
Germany (Federal Republic).....	26,460	1,270	4.8
Greece.....	1,835	178	9.7
Iceland.....	100		
Italy.....	15,200	650	4.3
Netherlands.....	5,446	300	5.5
Norway.....	1,994	72	3.6
Turkey.....	3,377	192	5.7
United Kingdom.....	39,600	2,485	6.3
Total 12 participating countries.....	133,400	7,680	5.8

Per capita consumption of all foods and of meat in BRP countries and the United States, 1950-51

Country	All foods (calories per day)	Meat (pounds per year)
Austria.....	2,770	81.4
Belgium.....	2,950	92.4
Denmark.....	3,195	149.6
France.....	2,890	123.2
Germany (Federal Republic).....	2,775	79.2
Greece.....	2,600	35.2
Iceland.....	3,165	121.0
Italy.....	2,580	39.6
Netherlands.....	2,870	65.2
Norway.....	3,030	81.4
Portugal.....	2,870	39.6
Sweden.....	2,170	112.2
Turkey.....	2,680	33.0
United Kingdom.....	2,080	118.8
United States.....	3,320	176.0

(For security reasons, the following tables were not cleared for inclusion in the printed hearings: Estimated tax revenue as percent of gross national product; total assistance and total dollar aid to participating countries; projected index of per capita consumption; gross national product, military expenditures and military expenditures as percent of gross national product, fiscal year 1951-52.)

Mr. PORTER. May I also, Mr. Chairman, say that any time convenient to the committee I am prepared to discuss the following questions which were raised in your discussion yesterday: One is the amount of exports to be expected from the countries of Europe to the rest of the world, which is in response to a question raised by Mr. Herter.

Secondly, I am prepared to discuss at any time the amount and the consumption of the pipeline, in response to the question of Representative Vorys.

Mr. Vorys also asked for a discussion of the commodity breakdown of the proposed aid during this coming year. I am prepared to discuss that, or a little later Dr. Fitzgerald, who is more expert on that than I am, will be here and can discuss it.

At some time I would like to make just a few remarks on one part of the proposed legislation, which would authorize the President to transfer funds from economic assistance to end-item procurement, or vice versa, and also to make some transfer as between titles.

Yesterday I gave a step-by-step analysis of how we arrived at our estimates of economic aid that is needed.

I am also prepared, if you wish, to give you an estimate on the amount of military production in Europe since 1948, including our estimates of military production during the coming fiscal year, and also a statement on the amount of contracts which have been let in most of the countries of Western Europe, that is, contracts for military equipment.

I just wanted to inform the committee, Mr. Chairman, I will be glad to go into those topics any time they wish.

Chairman RICHARDS. Did I understand that you are prepared to testify on that point or submit a statement on each one of those points?

Mr. PORTER. As the committee wishes, either to testify in answer to questions, make an oral statement, or submit a written statement.

Chairman RICHARDS. I think the best thing to do in view of the fact that some of the members who are particularly interested in one or more of those questions, and who submitted questions on the subject yesterday are not present, is for you to go ahead with your planned testimony and we will take that question up later.

Mr. PORTER. Mr. Chairman, in discussing the proposed economic aid to each of the countries in the OEEC, do you wish to have me proceed alphabetically or do the members wish to ask about a particular country and have me respond to that particular country?

Chairman RICHARDS. I think you better go ahead on the order you have planned to testify, and we can raise questions later on any particular country.

Mr. PORTER. Yes, sir. I am quite agreeable, Mr. Chairman, to go ahead and be interrupted by questions as I proceed on each particular country, or I can go through all of them at once and have questions.

Chairman RICHARDS. In testimony of this nature I believe there will be interruptions. You may go ahead on that basis.

(Discussion off the record.)

Chairman RICHARDS. In your balance of payments estimates in regard to Austria for 1951 and 1952, you have anticipated that Austria will import \$139,500,000 from dollar sources against \$120,000,000 for the last fiscal year.

Why should Austria be encouraged to import more this year than last year when she cannot make any contribution to this over-all defense program?

Mr. PORTER. I believe, Mr. Chairman, without referring to the figures at the moment that the figures you gave refer to their imports strictly from the dollar area and not the total area.

Chairman RICHARDS. I think so.

Mr. PORTER. That increase, for the most part, is accounted for by an increase in raw materials and their prices which Austria must import.

(Discussion off the record.)

Mr. RIBICOFF. For my information, if the rest of the committee does not want it I will not burden you with it, just what economic improvement has taken place during the last year in each country, what is the present condition in each country that would require over-all aid, and what, in general terms, will that aid be; will it be machinery, food, and so forth? Will you just spend a few minutes on each country as you go along?

Mr. PORTER. Yes, sir. If there are no other questions on Austria, I will turn to Belgium and Luxemburg, taking them together.

Our net aid to those two countries last year was \$45 million. There was dollar aid amounting to a little over \$74 million. But, in turn, Belgium and Luxemburg contributed to other European countries through the European Payments Union a little over 29 million.

The net aid they received was \$45 million. This year we have an increase. There would be no need for any economic assistance to Belgium and Luxemburg this year if it were not for the assistance given to help them rearm.

The proposed economic aid during this coming year will be used to finance larger imports of raw materials and machine tools for military production.

Mr. RIBICOFF. Why should a country like Belgium, which is so prosperous and has the Belgian Congo, have to receive aid?

Mr. PORTER. This is based upon a much higher estimate of military expenditures in Belgium. If they do not undertake a military effort of the size of which we believe they are capable, they will not receive economic assistance in the amount proposed.

Mr. RIBICOFF. My guess is that Belgium is as well able to earn dollars as any other country in the world. Besides its raw materials, Belgium must have investments all over the world which bring in large amounts of dollars. I think they should be on the helping side instead of the receiving side. I was in Belgium in 1949. There was no question but that it was a prosperous country and it did not seem to be in want.

If it were not for the arms program, Belgium would definitely be on the plus side of the ledger next year. I would hope they would be on the giving end instead of the receiving end.

(Discussion off the record.)

Chairman RICHARDS. Is it not a fact that Belgium is, according to your figures, the only country that was importing from the United States, in this group, whose exports will be less next year than the last year?

I was wondering why that is—if it is due to some of the things that Mr. Ribicoff was talking about.

Mr. PORTER. I will have to check our figures before I can say that is the only country whose exports would be less.

Chairman RICHARDS. Last year you said they exported 310 million and 300 million this year. I think that is the only country in this group where that is the case. Evidently that reflects some of the conditions you are talking about.

Mr. REECE. In what respects is the Belgian economy much below the 1938 status?

Mr. PORTER. It is below the 1938 standard, you say?

Mr. REECE. In what respects is it?

Chairman RICHARDS. I wanted to know that difference, and what you think is the basic reason for that difference in estimating imports. Most of the other countries are on the rise.

Mr. PORTER. Mr. Chairman, I do not want to bluff on an answer. I will have to ask for an opportunity to refer to that later in my testimony, if I may.

(The following information has been supplied for the record.)

BELGIAN IMPORTS FROM UNITED STATES

(In reply to Mr. Richards' question)

In 1950-51 Belgium imports from the United States amounted to \$310 million and in 1951-52 it is estimated that Belgian imports from the United States will amount to \$300 million.

The basic reasons for this assumed decline in imports are as follows:

1. Belgium imports in considerable volume certain types of manufactured goods and raw materials from the United States which are not expected to be as easily available in 1951-52 as in the past. Among these are auto parts for the assembly plants in and around Antwerp, cotton, essential chemicals, fine alloy metals, machine tools. While Belgian demand for these goods to support her production program will increase, it is quite possible that the demand may not be entirely satisfied.

2. Belgium may find it necessary to impose some restrictions on types of commodities imported from the United States. Belgium has been the outstanding example of a free-enterprise, free-trade country in Europe. Direct controls on imports from the United States have been purely nominal. If the strain on the Belgian dollar position caused by rearmament makes it necessary to introduce controls on imports from the United States, the volume of imports would of course be lower in 1951-52 than in the previous year.

The \$50 million aid which has been proposed for Belgium in 1951-52 will make it possible for the Belgians to maintain the level of imports necessary to support the rearmament drive. Without such aid Belgium might be forced to curtail the import of many essential items by means of very strict direct controls on imports from the United States.

PRESENT LEVEL OF BELGIAN ECONOMY COMPARED TO 1938 LEVEL

(In reply to Mr. Reece's question)

In virtually all respects the present Belgian economy is stronger than the prewar economy.

Agricultural production is slightly higher than in the prewar period but industrial production is now about 40 to 45 percent higher than in 1938. One exception

to the bright production picture is the coal mines which have suffered from insufficient investment. Recent fresh investment and new methods borrowed from the United States have already resulted in higher production but more strenuous efforts along these lines will be needed to raise output to prewar standards.

Over-all consumption is difficult to measure, but from what we are able to check it appears to be about equal to prewar.

Mr. VORYS. Is there in here a summary of the aid figures? We received them some time ago, and I left mine at the office.

Mr. PORTER. The aid figures in the book that you have there are given in respect to each particular country. There is not a single sheet of paper showing that, but I have submitted such a list for the record.

Were there other questions with respect to the proposed aid to Belgium?

Chairman RICHARDS. Of course, I think those of us who went over to Europe on this trip had the definite impression there was less need for some of the things we are doing in this program in Belgium than anywhere else in Europe. I think probably in relation to that question you can, as you have just suggested, put your reasons in the record for that.

Mr. RIBICOFF. I think Belgium is the type of country that would be able to take what the gentleman from Ohio has been constantly talking about, if there should be aid: loan money and not give-away money. If they need \$50 million, it should be a loan rather than a gift.

(Discussion off the record.)

Mr. JUDD. In one way I do not blame the Belgians for being missed. They have done the best job over there and they get penalized for it. The ones who do the worst job, they get the most aid. Right at the end of the war the Belgians froze 80 percent of the bank accounts to avoid inflationary pressures before production was restored. They resisted socialistic hand-outs and under free enterprise they did it well, and we punish them for it.

Mr. RIBICOFF. They had a going plant at the end of the war and was the only country in Europe that had a going plant. They were making arms and everything for the Germans. The war ended and every other European country had to build from the bottom. Belgium was an immediate supplier.

Besides they have the uranium deposits in the Belgian Congo. I think it is an unfair statement.

Mr. JUDD. I do not think it is. No country in the world tightened its belt right at the start as tight as the Belgians.

Mr. VORYS. I was in Antwerp in 1945. V-1's had plastered Antwerp. You say they did not have any war damage, but it looked like war damage there.

Mr. JUDD. I would like to ask your economic experts if what I said is not true.

Mr. PORTER. I think it is substantially true, Mr. Judd. They received very great damage to the port of Antwerp, and there was considerable destruction to their manufacturing plants. They also lost quite a bit of housing. They have made a fine recovery.

There are, however, some exceptions to that. They have been very backward in the modernization of the coal mines. We have only had partial success so far in inducing them to undertake a modernization program.

In accordance with their undertakings in the Schuman plan they are making a start. The Belgian record, on the whole, is a good one in Europe.

Mr. Judd. Is it not true that after the war they froze the potential purchasing power, and they rejected a hand-out program with all of its attractive features to win votes, in order to protect the soundness of their currency and get their economy on a sound basis?

Mr. PORTER. In the period immediately following the war, they pursued an imaginative financial policy.

Mr. VORYS. I understood from our colleagues who were over there that Belgium had a manufacturing complex that could be the arsenal of Europe, but that the difficulty was that the other countries could not get Belgium to make stuff for them. What is the amount they get?

(Discussion off the record.)

Mr. VORYS. Are you going to actually make your program consist of machine tools and raw materials, and free their dollars to buy food, and so forth; is your program going to be just what they need for military production?

Mr. PORTER. As you know, Mr. Vorys, we have to take into account the total availability of dollars. It does not make a great deal of difference if the aid we give them is used to buy equipment, raw materials or the import of cotton or food, if the management of their total resources is satisfactory.

(Discussion off the record.)

Mr. PORTER. I do not think it would be wise to restrict ourselves just to the purchase of machine tools and raw materials that will go directly into military equipment.

Mr. VORYS. I thought in talking to Mr. Cabot and other witnesses earlier that one of the advantages of the ECA formula was that we could make sure they got what we thought they needed.

I think this year it is particularly true. If we only furnish them with the part of the stuff they need for military security, that would apply. I thought that was the way we were going to do it this year.

Mr. PORTER. I do not at the moment recall that part of Mr. Cabot's testimony.

Mr. VORYS. Let us say I said it.

Mr. PORTER. We could, of course, specifically earmark a particular million dollars for raw materials that would be used for a military purpose. That is not the most efficient or most effective way of directing the aid.

We calculate their total requirements, their total availability of dollars for the purchase of their imports, and that gives their net deficit for which they will need foreign assistance.

If within their total resources the Belgians maintain adequate controls over investment and consumption in order to attain a high defense expenditure, it is really immaterial whether the dollars provided by ECA are used to import essential foodstuffs or aluminum which may be used in military goods.

Mr. VORYS. Is that the end use for ECA, to make sure that is done? Is not what you are saying totally out of line with what we have been driving at for a couple of years, to make sure what we furnish is going to go into recovery purposes, and so forth? This year the purpose,

I understand, is that Belgium would not get a nickel unless it was for military production.

Mr. PORTER. That is right, sir.

Mr. VORYS. I do not follow you at all on the idea, "Well, we will furnish them so many million dollars worth of stuff and that is the most efficient way to do it."

Mr. PORTER. I do not mean to convey the impression, Mr. Vorys, that what I said, was inconsistent with the procedure of limiting procurement with ECA dollars to a specified list of commodities.

My only point is this, it does not make any difference in the end result whether the dollars that we propose to give them are used to purchase cotton and food imports or whether it is used to purchase raw materials and machine tools, because it is the total we are concerned with. We will not give them any aid unless they agree to undertake a military program of the size which we are proposing to them.

Chairman RICHARDS. That is a good argument, to put it all in one bucket and let somebody take entire control of the thing and not call it ECA or military aid or—

Mr. VORYS. Just a grab bag.

Chairman RICHARDS. I do not know but what that is right. I do not know about the grab-bag business, but that is what we have been discussing here, Mr. Judd, just like you said about pouring it in one side of the jug or pouring it in the other side of the jug.

Mr. JUDD. I think that is right. As long as they follow through to see that it goes in, our aid might go into one phase of the economy which would release their own resources for use in other parts of the economy. As long as it achieves the military objective I think that is a more flexible and better way to do it.

Mr. PORTER. Mr. Vorys, we are concerned with their total use of the resources and not just a particular segment. This does represent an evolution of our thinking of the past few years. We cannot be concerned just with that section of the economy which we finance. We must be concerned with the total use of their resources.

Chairman RICHARDS. I do not think you were here yesterday afternoon at the time in Mr. Porter's testimony when he was asked whether or not one Administrator appointed to handle this whole thing could not do a good job, and he said he did not see why he could not. That was along with his testimony here.

Mr. VORYS. I may have missed that, but here is the big question. Three years ago, when this thing started, it was balance of payments and dollar shortages, and the dollar shortage all over Europe was so big and the need was so great that there was great justification for pouring in dollar goods, and it didn't make much difference where you poured it in.

Now, that is all over. ECA is about over. All we are justified in doing now, and that is what we are told we are doing, is saying, "You do not get anything for your economy at all unless it goes right square into mutual security." So that this whole idea about the teapot, and so forth, it seems to me has vastly changed. I confess I am greatly disappointed to find that you are not grooving the ECA support to exactly the stuff, so that we can have some end use follow-up.

Mr. PORTER. I think we are tying it to their military effort, Mr. Vorys. As I stated before you came in, Belgium would not qualify for any aid this year if it were not for the military program which we hope they will undertake. If they did not undertake a military program of the size which we are proposing to them, then they would receive less aid and probably none at all.

Chairman RICHARDS. Mr. Mansfield was asking you a question.

Mr. MANSFIELD. Mr. Porter, am I right in assuming from what you just said that the ECA did give serious consideration to the possibility of withdrawing Belgium from under the ECA?

Mr. PORTER. Yes. Belgium would receive no aid at all now if it were not for the rearmament program.

Mr. MANSFIELD. Are there any other countries that you consider taking out from under the ECA this fiscal year?

Mr. PORTER. Well, we have ceased aid to four already—the United Kingdom, Portugal, Ireland, and Sweden.

Mr. MANSFIELD. Sweden is a late one then.

Mr. PORTER. We concluded aid to Sweden very recently.

Mr. MANSFIELD. Yes.

Mr. PORTER. I think it would be fair to say that by the end of this year there would be no countries receiving aid under ECA except Austria, Greece, Iceland, Western Germany, Turkey, and perhaps Denmark and Italy.

Mr. JUDD. Would not Italy be getting some under ECA?

Mr. PORTER. I think by the end of the 1952 fiscal year Italy would be just about ready to break even. We could discontinue aid to some countries even earlier.

Mr. CHIPERFIELD. How about Norway?

Mr. PORTER. I think Norway, by the end of the year, could be self-supporting if it were not for its military program.

(Discussion off the record.)

Mr. MANSFIELD. What about their balance of trade from the Congo? They have huge copper deposits down there. I understand it is an important source of uranium, and undoubtedly there are other natural resources, which puts the Belgians on a pretty sound footing, plus the fact that they are a first-class manufacturing country in certain lines of business.

Mr. PORTER. As a matter of fact, while the Congo is rich, actually the Belgians are putting more into the Congo than they are taking out, to the value of \$15½ million.

Mr. VORYS. No. You do not expect that next year. Not according to what you have here in your own table of figures.

Mr. PORTER. Oh, I was looking at the wrong column, Mr. Vorys. That was last year. This year we anticipate an even break in their trade with the Congo.

Mr. MANSFIELD. Then their deficit comes from their economy at home, that is, in Belgium itself?

Mr. PORTER. Right, sir. As a result of the increased rearmament.

Mr. MANSFIELD. Then it would appear to me that the increased rearmament would rebound to the benefit of their economy, because they will be getting items which we will supply, but in return they will, because of the peculiar nature of their economy, I assume, be able to manufacture practically all of the small arms they need.

Mr. PORTER. We anticipate they will supply not only a great deal of the small arms for their own needs, but will be able to contribute some to other countries of Europe, which we hope they can be persuaded to do on a gratis basis. We have already proposed that to them. They have not yet agreed to it, but we intend to continue to urge them to do it.

In order to make the fullest possible use of the very good manufacturing facilities in Belgium, it would be necessary greatly to increase their import of raw materials, and also to receive some additional machine tools in order to make the most efficient use of the manufacturing facilities they have.

Mr. MANSFIELD. Then that would come under the ECA amount?

Mr. PORTER. That is right.

Mr. MANSFIELD. That is all.

Chairman RICHARDS. Mr. Chipperfield.

Mr. CHIPPERFIELD. Suppose there were 12 or 13 specific programs that needed economic aid in Belgium? For instance, they might make radar, or signal equipment, or something like that, and they needed economic aid for those purposes. Then you ask them to increase their military expenses X millions of dollars. I can understand why you would want to make up for the use of those dollars in the extra military effort from what they are doing now, but why is there not a criteria whereby you add that figure, and the specific program figure, and that is what they get, and not go further and give them wheat or something else along that line that will go into their general economy.

Mr. PORTER. Let me see if I correctly understand you, Mr. Chipperfield. You mean we should add together the economic assistance plus the value of the military end-item assistance to arrive at an overall total of aid for Belgium?

Mr. CHIPPERFIELD. I am not including the military, but just including the economic. For instance, in Norway they told us they had six or seven specific programs that they would need so much for. One of them, I think, was signal equipment. They need raw materials to carry out the program. We are going to furnish the help needed under ECA. Then besides, they will have to increase their military establishment by X dollars. Then those X dollars will be taken out of their general economy. Why is not the total amount of aid needed, the sum of those two types of programs, the increased military cost plus specific programs?

Mr. PORTER. I will try to clarify that point, Mr. Chipperfield. Let us take a particular program for electronics manufacture.

The total value of that might come, let us say, to \$25,000,000, but only, let us say, \$5,000,000 of that would come from the United States. Another \$10,000,000 might come from their own resources, and a further \$10,000,000 from other European countries, which would be financed through the European Payments Union. But if we tried to tie our financing of the Norwegian deficit specifically to these particular programs, we would find that we were in a strait-jacket from the standpoint of financing them, since only a part of it would come from the United States.

Mr. CHIPPERFIELD. I was assuming no economic aid would be necessary. I was not thinking about a country where there might be a

deficit, but about a country where ECA would be cut off if it was not for the military program.

Mr. PORTER. Yes. As I said, we would not give any aid to Belgium if it were not for the rearmament program, but it is very difficult to tie our aid to these rather specific programs, because it is necessary for them to divert some of their resources which would otherwise go to earn foreign exchange through exports into this rearmament program.

So what we have to do is consider their total economic picture and relate their aid to the net deficit which is arrived at by the military effort plus the normal imports.

Mr. CHIPERFIELD. I was hoping we could get away from giving ECA aid for general purposes such as for food consumption, and we could confine it to military purposes rather than general purposes.

Mr. PORTER. I understand your purpose, Mr. Chiperfield, and I wish it were possible to relate every dollar that we give to a specific dollar's worth of arms produced in a particular country. We could do it, but I think it would be deceiving ourselves in doing so, and we would be putting ourselves into something of an administrative strait-jacket in doing it.

May I say, Mr. Chairman, I am sure members of the committee realize I am a substitute witness from the second team, and if I am not able to give a precise and comprehensive answer off the top of my head, it does not necessarily mean the problem has not been fully examined. It may more likely mean just a personal shortcoming on my part in the ability to give the answer the committee desires.

Mr. JUDD. Who is your opposite number in the first string? Mr. Bissell?

Mr. PORTER. Right. He is the first team.

Mr. VORYS. How is he coming along?

Mr. PORTER. He will be back on Monday.

Mr. JUDD. Mr. Chairman, this is as good a time as any to have this out. Why should we have to be making minesweepers for Belgium? Europe used to have more shipbuilding capacity than we did. Among all our allies over there, is there not one country that could make those minesweepers in return for Belgian small arms, and then Belgium would not have to give her small arms to somebody gratis? She would be getting minesweepers in return. Italy used to have a shipbuilding industry. They built a couple of luxury ocean liners—the *Rex*, and another. Could they not build minesweepers? They have unemployment there.

Mr. PORTER. In my opinion they can, Mr. Judd, and we have tried to put a great many more orders for end items in Europe.

(Discussion off the record.)

Mr. JUDD. Let us use Italy as an example. Will you explain to me why we should not use shipbuilding yards in Italy, even if we have to furnish the money, rather than build them here? It costs us less money to have it done there, and it does not make an extra burden on our own overemployed economy.

Mr. PORTER. That is the purpose of our economic assistance.

Mr. JUDD. We know it, but why do we not do it? Is it because you do not know the answer in this case? I wish somebody could get me the answer to it. Norway built ships, and England built ships, and Holland built ships. I do not know whether France did or not.

Mr. PORTER. We are endeavoring to get these mine sweepers you are referring to built not in Belgium, but in the Netherlands. We are trying to get that done.

Mr. JUDD. What is the answer? This is a concrete illustration. We talk in generalities, but here is a concrete problem, where Belgium can pay others in her goods if they will make mine sweepers for her.

I cannot figure out why we have to give mine sweepers to Belgium.

Mr. CHIPERFIELD. Because they wish us to give them away.

Mr. JUDD. I brought it up in Belgium half a dozen times and never got an explanation. If we could get one of the concrete questions answered I would have more confidence that I can put faith in the general answers to other questions.

Chairman RICHARDS. Mr. Porter, here is the thing that concerns me about this proposal when it goes to the House here. You have three categories I am talking about in MDAP and in ECA. You have three categories in those two over-all things. One of them is MDAP strictly, as such. That is military aid, of course. Then you have economic aid for military production. Then you have straight, honest-to-goodness ECA, as such.

Now, I have not been able to find out from these figures exactly how much is bona fide ECA aid and how much is aid for military production, exactly, that is, economic aid for military production. Of course you can get the MDAP figures because you have that.

Now, is that in the record? Does the set figure for just ECA, as such leave nothing to do with military production, in there? We go all around the end and come back here, and that amounts to military production; but I want to be able to tell the Congress when we go down on the floor of the House just how much old-fashioned ECA is in there without having anything to do with military production. Either that, or tell them it all has something to do with it.

Mr. CHIPERFIELD. Mr. Chairman, that is the reason why I asked the question a minute ago. I wanted the same thing.

Chairman RICHARDS. As I understood it, Mr. Chiperfield, you were saying why not start out on the basis that this country needs so much aid for military production, and then you accomplish that goal, and if they need something else in the other bracket then say that is on that basis.

Mr. CHIPERFIELD. That is it exactly.

Chairman RICHARDS. Somewhere I would like to have that in the record.

Mr. CHIPERFIELD. Mr. Porter says that it is impossible to put them in separate categories.

Chairman RICHARDS. I know, and we will be all mixed up too when we go down there.

Mr. PORTER. Mr. Chairman, we have given a good deal of thought to that problem over the past several months, and we have reached the conclusion that we cannot give you an honest answer as to how you would draw the line between economic aid as of the type given in the past, and economic aid for military purposes, because to do so we would have to make a lot of arbitrary assumptions which are not necessarily true. We would just have to—

Mr. JUDD. You would be kidding us.

Mr. PORTER. I think I would, Mr. Judd, and I do not believe it would be fair to give you a figure which is not an honest figure.

Mr. RIBICOFF. Mr. Chairman, I think you have a very good point. We might be spending a lot of time on this, but we have some principles to determine, and then we will not have to do it on the other countries.

Haven't all of you gotten yourself into this box which you could foresee coming, because you might have thought that the only way to sell this over-all program to the Congress is to tie military strings to it, and you are now forcing this into the military channel?

I believe this to be the wrong approach, because a lot of this is pure economic assistance out and out. I think we would be in a better position on the floor if we could say here, "Most of this is for military, but some of it is for economic." And, we ought to know it.

(Discussion off the record.)

Mr. RIBICOFF. I think if we get those problems straightened out in our own minds, ECA is better off, and we are better off for the floor.

Mr. JUDD. And which we can defend.

Mr. RIBICOFF. That is right.

(Discussion off the record.)

Mr. VORYS. That is what I mean. There is a figure there. Belgium produced some military production, I presume, right through from when they got back in 1945, did they not?

Mr. PORTER. Yes. 1946.

Mr. VORYS. And Belgium was in balance and was only getting loans or EPU money last year, no grant aid at all. Is that not right?

Mr. PORTER. Belgium received net grant assistance last year in the amount of \$45,000,000.

Mr. VORYS. Now, how much military production did they produce last year when they were in balance?

Mr. PORTER. They produced—may I give you the figures for 1949, 1950, and 1951, and our forecast for the new fiscal year?

Mr. VORYS. Yes.

(Discussion off the record.)

Mr. CHIPERFIELD. What criteria do you use in judging whether a NATO country is doing its share in the common NATO effort? Could you give us a specific country illustration?

Mr. PORTER. Yes. Let us take a case of Belgium, Mr. Chiperfield, since we are discussing that now. We begin with the commitments which the Belgians have made to NATO. That is, their commitments for the present year.

On the basis of their commitments as to the size of the ground forces, plus air forces and naval forces, their requirements are estimated by the Belgian Government and checked by our military mission in Belgium. That is the second step. The first step is their commitment.

The second step is to translate those commitments of forces into terms of equipment.

The third step then is to deduct from these total end item requirements the following things:

First, what equipment do they have already;

Secondly, what is on its way either through MDAP or being procured in other European countries;

Thirdly, what are they undertaking to produce for themselves?

At that particular point the United States military mission in Belgium consults with the ECA mission as to a judgment on what the Belgians could produce for themselves.

Mr. CHIPERFIELD. What criteria do they use for that purpose? How do you know whether they are making a real effort or not?

Mr. PORTER. Well, I was just doing this step by step.

(Discussion off the record.)

Mr. PORTER. Another criterion is, are they making full use of idle facilities or facilities that could be converted from the manufacture of nonessentials to military equipment.

Thirdly, what is the size of their military budget as an over-all estimate.

(Discussion off the record.)

Mr. PORTER. We do not believe that they have made adequate use of their facilities and that is where the ECA mission comes into the picture in estimating what could be produced.

Finally, we have the estimate of their military budget.

(Discussion off the record.)

Mr. ROOSEVELT. What is it for? Tell us what it is for.

Mr. FULTON. Would you please divide it into those two categories.

Mr. PORTER. It is very unreal to try to attribute this particular margin to specific commodities.

Mr. FULTON. What percent then is equipment, and what percent is basic commodities, approximately?

Mr. PORTER. I cannot tell you that at the moment, Mr. Fulton, because our approach here, as I would like to repeat again for the benefit of some of you who were not here earlier, is this: We are concerned with the total resources of a country. Its total fiscal, monetary and credit policies. Its total imports and total exports. It is only as we look at the whole picture that we are able to judge what a country is capable of doing, and we are trying to relate our aid to the extent to which they fulfill that of which they are capable.

Mr. FULTON. Then you are proceeding solely on a balance of payments basis. Is that not right?

Mr. PORTER. A balance of payments basis, Mr. Fulton, which takes into account the total economy which supports their military efforts on the basis I described yesterday. That is to say, the total national product; their consumption level; their investment policy; their total employment; their military budget; all of which we have made forecasts of in order to arrive at a balance of payments.

Now, as I explained yesterday, we are not accepting a balance-of-payments estimate made by the country itself. We have made our own balance-of-payments estimate on the basis of our estimate of what they are able to do with the resources which either they themselves have, or which can be added through American aid.

Mr. FULTON. Then does that balance-of-payments figure include prior indebtedness, governmental and private, which has been previously contracted? Are there any payments on prior indebtedness of the Government or private indebtedness previously contracted in that balance-of-payments figure?

Mr. PORTER. You mean a transfer of foreign exchange out of that country to some other country?

Mr. FULTON. What they owe on previous debts. Is that in there too?

Mr. PORTER. If they are servicing those debts, that is taken into the calculation.

Mr. FULTON. Are any principal amounts taken into the calculation too?

Mr. PORTER. If those are being paid they are taken into account either as an increment or as a loss of foreign exchange.

Mr. FULTON. So as to the amount that is being paid on principal on debts previously incurred within this balance-of-payments figure, we in the United States are not putting the money in for productive uses, but are paying off old debts.

Mr. ROOSEVELT. Not when you are looking at it as a whole.

Mr. VORYS. Will the gentleman yield?

Mr. FULTON. Could he answer that one?

Mr. PORTER. Well, the net effect is not changed by this since if we take into account the payment of, let us say, France to Belgium, it shows up on both sides of the ledger. If we take into account what Belgium has received and what France is paying out, one cancels the other.

Chairman RICHARDS. Mr. Porter, we have a teller vote on the floor. We will take a 10-minute recess.

(Whereupon a 10-minute recess was had.)

Chairman RICHARDS. The committee will come to order, please.

Mr. Porter, will you resume your testimony, please?

Mr. PORTER. Mr. Chairman, may I revert to a question which was asked by you and Mr. Vorys and Mr. Chipfield with respect to drawing a sharp line between economic aid, that is, economic aid for normal ECA types of assistance, on the one hand, and, on the other, the economic aid in military production.

We, of course, have anticipated that that question would be asked, and for several months we have been trying to find a way to answer it honestly.

Now, I can say a few things that will indicate where some aid is the former economic recovery type, and where some aid is strictly military. Then I will indicate the marginal area in between, where it is impossible to draw a precise line.

The aid to Austria is strictly economic aid. None of that is for military purposes. The same is true of the aid to Trieste. Of that we can be sure.

The aid to Belgium can be identified as strictly military. We can do that through the former AMP type of aid, but we think that the method which we propose will be more effective even though it is not specifically identified as military aid.

Then there comes a marginal area, which is perhaps best illustrated by the case of Italy. We can calculate the amount of economic recovery assistance that would be needed for Italy if there was no military program there. But, if we also assume that there will be a military program, then that means there will be increased employment in Italy. With the increase in the employment there is going to be increased consumption. That will result in a greater import of food and of cotton.

Now, we could make some guesses as to what that would mean, but it would just be an arbitrary guess on our part. It becomes very difficult in the case of Italy to draw a sharp line between economic recovery aid and aid necessary to get the additional military production. So, we have preferred to come to you and just say that we think

it is not possible to give a figure that we would support as being in a category with the other figures we give you.

Chairman RICHARDS. Is Austria the only country you would say would be the recipient under this bill of bona fide 100 percent ECA aid?

Mr. PORTER. Austria, Trieste, and I think we might say the same for Iceland, though there is a military contribution by Iceland in that they are providing some air bases.

Chairman RICHARDS. Yes.

Mr. PORTER. So probably the only two where we can say there is no military contribution at all would be Austria and Trieste. If we come to Greece and Turkey, obviously, a very substantial part of their aid is made necessary by military reasons.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. Does Belgium have a priorities and allocation law to channel stuff into military production and cut down on production of nondefense goods?

Mr. PORTER. I am informed, Mr. Vorys, that they do have some priorities controls which are now being put into effect. I do not believe that they are as yet comparable to those which we have in the United States.

Mr. VORYS. As to Belgium, we stopped aid to them because they upheld a judgment against ECA funds for Greece. What is the status of that matter now?

Mr. PORTER. That has been settled satisfactorily. We suspended aid to Belgium last March because a private Belgian company had gone into a Belgian court and attached some funds which had been deposited there by the Greek Government for the purchase of some steel rails and other railroad equipment amounting to a value of about \$7,200,000. We suspended aid to the Belgians, and then entered into negotiations with them that resulted in the Belgian Government in effect putting up the equivalent amount of money to enable the Greeks either to make purchases in Belgium, that is, to pay for the equipment which had been ordered, or to permit the Greeks to order some of the equipment from other countries.

Now, the Greeks had decided, in view of the delay, that they would not take all of the equipment which they had ordered, but preferred to use some of the funds to purchase other things in other countries. A satisfactory agreement was entered into between the Belgians, the Greeks, and ourselves. In short, the Belgians never officially acknowledged that their action was improper, but they have taken all the necessary steps to correct it.

We have made no allotment to Belgium since that time.

(Discussion off the record.)

Mr. VORYS. You fellows who went abroad heard about infrastructure. Give us an example of infrastructure.

Mr. PORTER. Examples would be barracks, airfields, and port installations.

General SCOTT. Those installations which are required to support an army in the field, such as communication lines, depots, airfields, and so forth, to permit the effective operation of the force in logistical installations.

Mr. PORTER. I do not know the origin of the word, but I do not think it is an American invention.

General SCOTT. It is French.

Chairman RICHARDS. Words like that do not bother me. I do not understand them and I do not ever expect to understand them.

Mr. JUDD. Are you through, Mr. Vorys?

Mr. VORYS. Yes.

(Discussion off the record.)

Chairman RICHARDS. Let us move along. We have another country, Denmark, and then we can take up some of the same questions on Denmark. We will find out whether there is anything rotten in Denmark.

Mr. PORTER. I would like to make this additional comment on the questions Dr. Judd has been raising. I think it is an undisputed fact that there is capacity in Europe for additional military production that is not fully utilized, and I think it is our job to see that it is utilized.

Mr. JUDD. That is right.

Mr. PORTER. I do not think we should send anything from the United States that can be produced there unless the time factor is overriding.

Mr. JUDD. That is right.

Chairman RICHARDS. Really, I think it is a little unfair to Mr. Porter. He was brought up here at the last minute to do a job that really was not intended to be his job. I think if he will go ahead on these countries, we can get Mr. Bissell later on to tell us how to go at this thing in each country in addition to Mr. Porter's testimony, and we will move along in that way.

Mr. VORYS. I wondered if we would go ahead alphabetically.

Chairman RICHARDS. We decided we would go along alphabetically the way we have them on the list.

Mr. PORTER. I would have preferred not to have them alphabetically because Belgium is one of the most difficult ones to develop.

Chairman RICHARDS. Maybe that is the reason you suggested we might follow another procedure. But anyway, let us go ahead and take up Denmark.

(Discussion off the record.)

Mr. PORTER. Now, it has made a very fine recovery in both industrial and agricultural production. It is having a great deal of difficulty in selling its meat, especially bacon, abroad; partly because Britain has been its chief market and the British—

Mr. VORYS. Are too poor.

(Discussion off the record.)

Mr. PORTER. One of the things we are pressing them to do is to be more aggressive in marketing their agricultural products. If they are not going to be able to market bacon, shift to some other type of agricultural production.

Are there any particular questions about Denmark that you wish me to expand on?

(Discussion off the record.)

Chairman RICHARDS. Let us take up France then, Mr. Porter.

Mr. PORTER. Right, sir.

Chairman RICHARDS. I believe that is next.

Mr. PORTER. Right. Our total aid to the French last year, all given as direct dollar assistance, was \$423,000,000.

(Discussion off the record.)

Mr. PORTER. In terms of their fiscal year, that is, on a calendar year basis, their defense expenditure during 1951 is \$2,614,000,000, as against \$1,800,000,000 in the preceding year. That is to say, approximately a 50-percent increase.

Now, France is one of the countries which we think that by the end of June 1952 would have been able to stand on its own feet if it were not for the military effort they have undertaken. You will bear in mind that France is making a contribution in the construction of bases, and the so-called infrastructure.

Mr. VORYS. Who pays for that? As long as we have this balance of payments business maybe it makes no difference, but do we pay for the land for landing strips and infrastructures?

Mr. PORTER. Mr. Halaby, would you wish to answer that?

Mr. HALABY. The answer is, "No," Mr. Vorys. That is in the process of negotiation in NATO at the present time. We do not intend to pay for land or for local utilities, such as water and power, and so forth.

Mr. VORYS. I mean, is that land for infrastructures?

Mr. HALABY. Yes, sir. That is another element in their military expenditures in addition to the military production that they are paying out of their military funds which Mr. Porter described a moment ago. It will be an increasingly large sum to support the tactical air bases that provide the air cover over the American troops and other troops. It includes all of the other elements, such as port facilities, communication net works, military roads, and so forth.

Chairman RICHARDS. Let us see, Mr. Porter. You plan to have France import \$600,000,000 from the dollar area in the next fiscal year, against \$490,000,000 of imports in the last fiscal year. At the same time you show that France would have a dollar export of \$255,000,000, and that is \$30,000,000 less than the \$285,000,000 exports last year.

Mr. PORTER. That is right.

Chairman RICHARDS. Now, why should they import more next year when I understand the general effort was just the opposite?

Mr. PORTER. The reason for that, Mr. Chairman, is we expect the French to be making very substantial diversion of their own resources to arms manufacture. They will have less goods to export because some of their manufacturing facilities will be diverted to armament manufacture. At the same time they will have to import more in order to get the raw materials that they will need for armament manufacture.

Chairman RICHARDS. I think last year you made an estimate that the dollar deficit of France would be \$549,000,000, and it turned out that it would be but \$310,000,000. I believe that is what it was and that is a pretty big difference there. I mean, your figures show it was \$310,000,000. I do not know what the cause of that was.

Mr. PORTER. That was our estimate at the time. Do I understand you to say we estimated last year their deficit would be \$549,000,000?

Chairman RICHARDS. That is right.

Mr. PORTER. And it turned out to be \$310,000,000?

Chairman RICHARDS. That is in your appropriation request last year.

Mr. PORTER. I think the principal explanation for that, Mr. Chairman, is that as you know there was a very substantial boom as a result of the events in Korea. The French were able to take advantage of that to increase their exports to a higher level than we had anticipated, and they were also slow in getting under way with their defense effort.

Chairman RICHARDS. I understand also they increased their dollar position by exporting a good bit of industrial alcohol.

Mr. PORTER. That is right.

Chairman RICHARDS. That is used in the production of synthetic rubber over here.

Mr. PORTER. That is right.

Chairman RICHARDS. Anyway, you figure that if it were not for this program we are starting with the military aid with France in a key position and in an essential spot on the whole thing, that France would be on her own now?

Mr. PORTER. Not now, but by the end of the year 1952. I think it would be a tight squeeze, but they would be able to stand on their own feet.

Chairman RICHARDS. Are there any other questions on France?
(No response.)

Chairman RICHARDS. If not, we will go to the next country.

What is the next one?

Mr. PORTER. The next one is Germany, sir.

Mr. JUDD. Does that mean just our zone?

Mr. PORTER. No. That means the Federal Republic, including everything except the eastern zone.

Our aid to Germany last year was \$384,758,000.

(Discussion off the record.)

Mr. PORTER. Germany has been making a very substantial improvement during the past year, and we anticipate that that will continue. We also believe that the Germans can do a great deal more than they have thus far done in producing arms for the other countries of Europe.

We hope to get a great deal more military production under way in Germany than is now the case.

The imports of Germany last year from the dollar area were \$540,000,000. We estimate that their imports in the current year will rise to \$710,000,000. Their exports to the dollar area last year were \$320,000,000. We estimate this year they will rise to \$377,000,000.

Mr. JUDD. They wind up with a bigger unfavorable balance in the coming year than at present. Is that right? It is 241 this year, and you estimate 420.9 next year. No, it is a little better when you consider the settlements.

Mr. PORTER. Yes. I should add a word of explanation there, Mr. Judd. We anticipate that they will earn a considerable number of dollars as a result of the United States expenditures in Germany next year. That represented, included in the figure of total capital operations last year, \$60,000,000, and this year we estimate it will be a little over \$200,000,000.

Mr. JUDD. And they got \$128,000,000 from the European Payments Union, did they not?

Mr. PORTER. Yes.

Mr. VORYS. Are you through?

Mr. JUDD. Yes.

Mr. PORTER. No. That was a payment to the European Payments Union.

Mr. JUDD. They put that into their European Payments Union?

Mr. PORTER. That is right.

Mr. JUDD. The net settlement is that they put \$128,000,000 into the European Payments Union and did not get anything out?

Mr. PORTER. This is the net payment they made into the European Payments Union—\$128,000,000.

Mr. VORYS. On that they overdrew for a little while last year?

Mr. PORTER. Yes.

Mr. JUDD. They are paying back what they overdrew?

Mr. PORTER. They went beyond the quota which had been established for them, and, therefore, they had to pay.

Mr. JUDD. Yes. That is what I said. My language may have been a little different.

Chairman RICHARDS. All right. Take the next one now.

Mr. PORTER. The next one is Greece. The total aid received by Greece last year was \$288,500,000, of which \$173,500,000 was dollar aid, and \$115,000,000 was aid received through the European Payments Union.

(Discussion off the record.)

Chairman RICHARDS. The thing that bothers me about Greece is that it has just an economically impossible situation. They did a lot worse last year from an economic standpoint than we thought they would. The estimate of the dollar deficit last year was \$148,000,000. That is what you folks estimated, I think. The actual deficit was \$181,000,000. The estimated aid was \$147,000,000, and then you spent \$172,000,000 or \$173,000,000, which was actually supplied.

I reckon that is going on forever in Greece. I do not think they will ever get to the place where they do not need economic aid or some kind of aid.

Mr. PORTER. Mr. Chairman, you will recall that last year the military common-use assistance for Greece was computed separately in the total appropriation. The \$147,000,000 which had been estimated was the economic recovery aid of the normal kind. In addition to that there was, I believe, \$56,000,000 received by Greece for common-use items, that is, for military use of equipment that could be used either for civilian or military purposes, but was used specifically for military purposes.

Greece did better, in fact, than we had estimated when we asked for aid last year.

I am fairly familiar with those figures because at that time I was the chief of our mission there. We had contemplated that Greece would receive or would need \$263,000,000 of aid, of which \$147,000,000 or almost \$148,000,000 would be of direct dollar aid, and \$115,000,000 would be obtained through the European Payments Union.

In addition to that, there was calculated that they would need \$36,000,000 worth of common-use military items, which turned out later to be approximately \$56,000,000. But the amount of direct aid which the Greeks received, exclusive of the military common-use items, was substantially less.

Chairman RICHARDS. Wait a minute. You estimated \$147,000,000. You asked for that. Now, of the \$173,000,000, what did you say was added to that in those figures?

Mr. PORTER. All right, sir. May I just get my work sheet on that, sir?

Chairman RICHARDS. Yes.

Mr. PORTER. The composition of this \$173,000,000 is \$56,500,000.

Chairman RICHARDS. What is that?

Mr. PORTER. For common use military items, which was calculated separately from the \$147,000,000 which we had estimated Greece would need for direct economic assistance of a recovery character. The balance represents \$116,800,000 of direct dollar aid.

Chairman RICHARDS. Instead of the \$147,000,000?
